An organization solely devoted to "informing the public, after true and diligent research, regarding equalities in the tax laws," with particular reference to exemptions and benefits for specialized group, the group has its general office in Chicago and lists many large associations as members on its rosters.

In his second term as president of the Independent Petroleum Association of America, William M. Vaughey is one of Mississippi's outstanding independent oil producers, and intimately connected with the development of the industry in this State.

He has also served as vice president and president of the Mississippi-Alabama Division of Mid-Continent Association.

"Chick" Montgomery was elected president of the National Association of Mutual Insurance Agents in October 1954, and feels he has visited most of 6,000 regular and 2,500 associate members in the months since.

He is the first NAMIA president, from Mississippi, and from the entire Deep South.

Tom Q. Ellises' long list of Masonic and auxiliary offices and honors covers a 40-year Masonic career of exceptional honor.

A million Royal Arch Masons look to him as General Grand High Priest, and the last Mississippi legislature passed a concurrent resolution commending him for bringing such distinction to his home State.

These six men are not, by a long shot, the only ones to draw praise and notice to the magnolia State.

When Secretary of State Heber Ladner moves up to the presidency of what is probably the oldest such State organization in the country, he'll be joining such men as Commissioner of Agriculture Si Corley, a former president and now an executive committeeman of the National Association of Commissioners, Secretaries, and Directors of Agriculture.

A. Ray Tillman of the First National Bank is former president of the Men's Garden Club of America and Woodson Jones of Jackson is now that group's national secretary.

One of the highest offices in boy scouting is held by Rex I. Brown, chairman of the Mississippi Power & Light Board, who serves on the national executive committee.

Another national executive committee member is Tommy Naylor of the department of education who serves with the national council of school house construction, while First National Bank's Orrin Swayze is third vice president of the finance-public relations association.

Nor is this surge to the South limited to Mississippi's biggest city.

W. T. Wynn, of Greenville, is president of the National Cotton Council and indications are that Van Richardson, of Greenwood, a former Hinds County boy, is strongest candidate for national president of the junior chamber of commerce.

Neither is Mississippi enjoying a sudden brief burst of acclaim born to blossom and die as rapidly as her sun-forced flowers.

Leaders are the South's newest, most profitable crop.

For evidence, if such be demanded, gaze at two of the largest and most worthwhile national youth organizations today.

These are the American Legion and the Legion Auxiliary sponsored Boys' Nation and Girls' Nation.

Know who heads these outfits?

President of Boys' Nation is Ed Perry of Bay St. Louis and president of Girls' Nation is Jerolyn Ross of Meridian.

That's who heads these groups in 1955.

Two Mississippi kids.

Change in Policy by the National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. ROOSEVELT. Mr. Speaker, on July 1, 1954, the National Labor Relations Board substantially changed its policy with respect to its jurisdiction under the commerce section of the National Labor Relations Act. Since that time, the Board has by administrative procedure limited its jurisdiction by the simple expedient of holding certain business practices not to be in interstate commerce. In practical effect this action has had the result of amending the National Labor Relations Act by administrative decree, thus flying in the face of congressional mandate and legal precedent. This procedure by the National Labor Relations Board has extensively limited the bargaining rights of organized labor, forcing labor organizations to rely on their last remaining weapon—the threat of strike.

I believe such a practice to be very dangerous to our economy and of such great importance that I desire to bring to the attention of my colleagues a letter and article by Mr. Claude Ballard, international vice president of the International Woodworkers of America, CIO.

Due to the length of Mr. Ballard's article, it will be included in the Appendix of the RECORD for the next legislative day.

Mr. Ballard's letter follows:

INTERNATIONAL WOODWORKERS
OF AMERICA, CIO,
Portland, Oreg., April 7, 1955.

The Honorable JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: The International Woodworkers of America, representing the major organized operations within the woodworking industry, wish to enlist your support in correcting abuses which have been brought on by impractical application of the power of the National Labor Relations Board to administratively determine whether operations are either in or out from under the commerce section of the National Labor Relations Act or are deliberately changing the application of the act by their administrative decisions.

We feel that there must be some correction of the present trend by the Board to eliminate a major portion of the lumber industry from coverage under the National Labor Relations Act. This threat to coverage to our people is brought on by the change of the rules under which the Board operates and the changing of the criteria under which the Board rules on whether or not an operation is under the commerce section of the act.

The ruling of the Board on these matters has changed so radically during the last year that it is impossible for anyone to determine from day to day how far they intend to carry the present trend in limiting the coverage of the act by their administrative latitude.

We feel that you should give serious consideration to correcting this trend before the labor relations in the lumbering industry are completely destroyed by the necessity of union people having to strike to maintain collective-bargaining units which have long been regarded as being covered by the Board's jurisdiction.

When these union people, who have collectively bargained with their employers over a period of years, may find themselves without certification under the Board because of the changing attitude of the Board itself with relation to coverage under the commerce section, then the only recourse these people have, if their employer does not agree to bargaining with them is to use economic strength to maintain their bargaining rights to the benefit of labor and management in this industry.

I am enclosing with my letter, a summary of three cases which I prepared for your consideration which should point out the seriousness of the situation as it affects this industry.

In addition to this material, I found in the case of the Mast Lumber Co., No. 20–CA–944, that the history of this operation indicates that the company's sales ran, in prior years, considerably over a million dollars a year, out of which approximately 60 percent was sold to lumber brokers. This trend continued through the year the Board used to make their investigation.

Knowing the brokerage business, we are firmly convinced that if the Board had made the proper investigation, they would have found this operation was under commerce, even under the present rulings of the board.

Although we are presently requesting your support solely on the basis of the effect that this present trend of the Board is having on the lumber industry, we also wish to point out that it can affect the collective bargaining relationship in other industries to at least some degree.

Upon investigation, it can certainly be determined that the lumber industry stands apart from most industries in the manner in which sales are conducted through brokers and other sales agencies, some of which are merely a part of the producing company. Many of these producing units are now under contract to this union but the certifications are threatened by the twice removed theory of the present Board.

We feel that a grave injustice is being done the lumber workers by the present trend of the Board and would enlist your support to see that the situation is corrected.

Thanking you for your cooperation in these matters, I remain,

Sincerely yours,

CLAUDE BALLARD,
International Vice President.

Whither America?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. DAVIS of Georgia. Mr. Speaker, on April 28, Hon. Hugh G. Grant, of Augusta, Ga., who was formerly United States Minister to Albania and Thailand delivered an address to the Civitan Club of Augusta.

Mr. Grant's address is both pertinent and timely. It deals with some of the most important matters confronting our Government and the world today, and I insert this address herewith as a part of my remarks:

WHITHER AMERICA?

(Address of Hugh G. Grant, former United States Minister to Albania and Thailand, before the Civitan Club of Augusta, Ga., Thursday, April 28, 1955)

Mr. President and members of the Civitan Club of Augusta, blazing daily newspaper headlines and sensational radio reports about the tiny Chinese Islands of Quemoy and Matsu, about the comings, goings, and pronouncements of Chou En-Lai, Chiang Kai-shek and our own Far Eastern experts, whether by design or not, is serving as a smoke screen for events of far greater importance to the American people right here at home. While we are assuming the leadership of the so-called free peoples of the world in the crusade against communism we are losing sight of evil forces at work, directly and indirectly, openly and secretly, on the home front to destroy our individual liberties and our American way of life.

I ask, as an American citizen deeply concerned over the welfare of his country, what will it profit America to lead the world in the quest of freedom if we lose our own liberties?

First, what of our internal economic situation, which affects every individual living American, as well as generations of Americans yet unborn? Very briefly, since there is not time for details, 10 years after our participation in the greatest war in history we are spending $60 billion annually, most of it for military purposes and foreign aid. We have a huge national debt of some $275 billion, as compared with a debt of only a little more than $1 billion in 1917, the year we joined up with the internationalists to "make the world safe for democracy." And the current debt of $275 billion, we are told, is insufficient and must be increased soon to meet our global commitments. This public debt, which no one in authority suggests should be reduced, is estimated to equal more than $5,000 for every American family in our population of 161 million. Meanwhile, we are told by the Government experts in Washington that we are in an era of great prosperity with some 61 million persons employed. But the experts soft-pedal the fact that this prosperity is based largely on the production, on a vast scale, of things needed for war. American-made arms, armaments, tanks, planes, ships, and even shoes and uniforms for foreign military units, are being scattered around the world among our allies and so-called friends, with American taxpayers footing the big bill. Some of this friendship is extremely dubious, as indicated during the Truman police action in Korea, where American battle casualties totaled more than 140,000 men, while streams of strategic war material flowed to the Red enemy from some of our major allies. And despite the enormous expenditure of American lives and wealth in Korea, our military commanders were prevented, by our allies in the United Nations, from winning this war, the first example of its kind in American history.

In 1939, the year World War II broke out in Europe, our American dollar was worth 100 cents. Today it is worth only 52 cents. In a recent issue the U. S. News & World Report said, with apparent satisfaction, that the Eisenhower policy of bringing back the sound dollar shows every sign of success, and the 52-cent dollar gives promise of holding its value in the years ahead. Think of it. A 52-cent dollar—a sound dollar. What sort of economic twaddle is this?

Very definitely linked with our economic instability are our foreign commitments which circle the globe. Specifically, 161 million Americans, occupying 3½ million square miles, are formally committed in writing to defend approximately 700 million people occupying 22 million square miles in 39 nations on 6 continents across 3 oceans. In other words, the United States has assumed the military guardianship of approximately 30 percent of the world population. Mutual-defense and assistance pacts have been filed on top of pacts, making the United States morally obligated to assist, even in war, some 25 additional nations with a population approximating 800 million people. All of this adds up to a total of some 64 nations with 1½ billion people, or 61 percent of the world population, looking to American for defense and help.

Really this gigantic and unprecedented global program, which has been developed by both Democratic and Republican administrations since the end of World War II on the theory that it is necessary for the defense of the United States, is positively fantastic. We could be playing right into the hands of the Russians. It was Lenin, leader of the Russian revolution, who said: "We shall force the United States to spend itself to destruction."

There is no end in sight to this global spending. Only 1 week ago, on the eve of the Asian-African conference at Bandung, Indonesia, to which we were not invited, President Eisenhower announced a proposed new $3½ billion foreign-aid program, two-thirds of which will be earmarked for 15 Asian nations. We are still engaged in the dubious business of trying to buy friends with American dollars. How naive we are.

A few recent newspaper headlines in regard to our foreign-aid program are revealing:

"India Calls for Talks on United States Financial Aid, Which Is Expected To Total $200 Million."

"United States To Foot Bills for Expansion of Jap Forces—United States Promises Japan $42 Million More This Year Than Last."

"Huge Fleet Supplied to Friends of United States—Navy Ships Furnished Big and Little Nations in 6 Years Total 870."

"United States Point 4 Technical Cooperation Program Costs American Taxpayers $107 Million in 1954, $116 Million This Year."

And this item from the New York Times: "Point 4 Helps Egypt Restore Grazing Land, Arid for 1,500 Years—By Keeping Goats Off,

United States Experts Spur New Forage for Herds."

And this one: "United States State Department Female Expert Organizes Women's Clubs Among Natives in New Caledonia in the South Pacific."

And from the Harvard Alumni Bulletin of April 9, comes this one: "Harvard Welcomes a Group of 41 People, Ministers, Millers, Manufacturers, Trade-Union Representatives, and Engineers, from Austria, Belgium, Denmark, France, Germany, Greece, Italy, Norway, and Turkey—Their Title, 'Productivity and Full Employment Study Group, EPA, 266,' Under the Auspices of Mr. Harold Stassen's Foreign Operations Administration in Washington"—at the expense of American taxpayers.

In addition to our pyramiding global pacts requiring huge sums of American dollars, we also have far-reaching commitments involving more big taps on the United States Treasury as a member of the United Nations organization in New York City. This organization, born in San Francisco just 10 years ago, is our baby and we are still babysitting. Supported by our national lawmakers as an instrument designed to keep peace in the world, the U. N. has developed into a huge bureaucracy, including many Socialist-minded members, American and foreign, who are out to reform the world, including us, largely at the expense of the American taxpayers.

The United Nations Educational, Scientific, and Cultural Organization (UNESCO) operates in every field of human activity—food, clothing, housing, civil rights, education, publishing, radio, television, museums, the theater and, of all things, birth control. As someone has said, "You name it and UNESCO has a plan for it." The threat of UNESCO and the United Nations Charter to the freedom of American citizens and to the sovereignty of the American Republic lies in a loophole in our Constitution which states that any treaty which the President and the Senate approves shall become the supreme law in the United States. Senator BRICKER, together with a group of alert, patriotic American citizens, are engaged now in an efforts to plug this loophole through an amendment to the Constitution. A subcommittee of the Senate Judiciary Committee is beginning hearings on the Bricker amendment this week.

An enormous propaganda campaign is under way to perpetuate and expand the power of the United Nations. Even the subcommittee of the Senate Foreign Relations Committee, which are holding hearings around the country for the announced purpose of getting the viewpoint of American citizens in regard to the United Nations, appear to be a part of this propaganda campaign. This is what I and other witnesses observed at the public hearings in Atlanta last month. The three Senators, constituting the subcommittee, voiced sentiments most favorable to the U. N. and sharply challenged some witnesses who expressed fear of the U. N. as dangerous to American sovereignty.

There are many signs that influential sponsors of the United Nations are looking ahead to some form of supergovernment. For instance, The American Association for the United Nations, through its Executive Director, Clark Eichelberger, in 1950 recommended to a Senate committee that evolution of the United Nations into a World Government be achieved by a liberal interpretation of the U. N. Charter. And, Benjamin Cohen, writing in the October 1954 issue of the Journal of the American Association of University Women, warned against pressing for controversial amendments at the U. N. Charter Revision Conference, scheduled for next year if approved by the General Assembly. Cohen argued that "the same purposes can be achieved through the normal evolutionary processes projected in the Charter." As pointed out by Senator Bricker, this would be accomplished without the consent of the American people and their elected representatives.

Senator KEFAUVER, of Tennessee, a U. N. sponsor, who heads the subcommittee which is conducting the hearings this week on the Bricker amendment, introduced in the Senate a few weeks ago a concurrent resolution designed to explore the possibility of forming not only a defense but an economic and political union of the North Atlantic Treaty Powers (NATO) which is organized within the framework of the U. N. Fourteen fellow Senators of KEFAUVER are sponsors of the concurrent resolution.

I have been talking about America's economic status, our foreign relations, and the United Nations. As pointed out, there are grave threats to American solvency through our vast international commitments, and to American sovereignty.

What about the threats to our individual liberties here at home as guaranteed by the Constitution of the United States?

There are many threats. Foremost among these is the ever increasing concentration of power over the lives of the people in Washington. For instance, there is the menace of confiscation of the earnings and private property of the people of the Nation through the Federal Government's unlimited power to levy against the personal incomes of American citizens.

There is the danger of the growing power of the executive department of the Federal Government which today even challenges the Congress in its lawful right to investigate the acts of the Federal Bureaucracy. The executive department is delving more and more into matters that have been heretofore left to the sovereign States of the Union. White House conferences are called to consider the problem of education of the youth of the States. Huge sums of money which have been paid into the Federal Treasury by the people of the States are offered as Federal grants to the States, for education, housing, municipal projects, disaster relief. Federal grants mean Federal control. This business started at the time of the great depression of 1929–30. It was regarded then as a temporary stop-gap, but it has mushroomed into a Socialistic program of Federal paternalism which is sapping the initiative of the people and at the same time destroying their individual liberties.

Another threat to American freedom is the assumption of dictatorial power by the nine political appointees, constituting the Supreme Court of the United States, which was established by the framers of the Constitution to interpret the Constitution on the basis of law, and not sociology. For instance, the decision of May 17, 1954, declaring racial segregation in the public schools of the States unconstitutional. This decision is designed to revolutionize and dictate the human behavior of some 40 million white people and 10 million Negroes.

As Charles Wallace Collins, the distinguished author of Whither Solid South, points out: "If the Supreme Court succeeds in this effort the Constitutional Republic is dead and the Constitution itself has become a tattered scrap of paper. If the Court can thus take possession of the lives of the people of the whole Southern region and doom them to racial oblivion there is no limit to which the Court can go in any direction."

Another alarming factor in connection with the Supreme Court decision is the collaboration with the Court, for political purposes (votes, if you please) by the executive department of the Government. The Eisenhower Administration through its Attorney General, Mr. Herbert Brownell, played a major role in the Supreme Court decision outlawing segregation. The Attorney General warned the Court against upholding legislation by the Congress under the 14th amendment in the field of civil rights because of the long line of precedents, and told the Court that it had the judicial power itself to declare segregation in the public schools of the States uncontitutional. And that is just what the Supreme Court did. This collaboration is a definite violation of a fundamental principle of our plan of Federal Government, namely the system of "checks and balances" between the legislative, executive, and judicial departments.

The Supreme Court decision of May 17, 1954, marks the culmination of the most insidous propaganda campaign in the history of these United States. This campaign was instigated many years ago by a minority group known as the National Association for the Advancement of Colored People, the director of which was a colored man, the late Walter White, who is said to have had only one sixty-fourth Negro blood in his veins, and who divorced his Negro wife in order to marry a white woman.

I am not disparaging the Negro race in America. The Negro is not here by choice. Through contact with American white civilization (the product of thousands of years of struggle), the Negro has achieved much in a relatively brief period of time. With the continued friendly assistance of his white neighbor the Negro will accomplish more if he is let alone by the agitators.

These agitators have been aided and abetted by foreign Communist agents, left-wing groups, scheming white politicians in both major political parties, who want the Negro bloc vote for their own purposes, and by misguided theorists styling themselves as liberals. The campaign objectives of the NAACP leaders look beyond the integration of white and Negro children in the public schools. This is only a first step. The program is designed to bring about complete racial integration throughout the United States and the elimination of all racial distinctions—miscegenation, intermarriage, the extinction of the Negro race in America. Make no mistake about it—that is the ultimate goal. I say to you southerners, you northerners, you westerners whose forebears established this Republic of white Americans.

The Supreme Court decision if followed through and accepted will start this revolutionary movement on its way. It is to the interest of both races therefore that the decision, which is a violation of the Constitution of the United States, should be resisted by the people of the sovereign States by every lawful means. Citizens should stand up and be counted on this issue regardless of personal or financial sacrifices involved. The responsible State officials cannot accomplish this task alone. They must have the full and active support of the people.

In conclusion, from many responsible sources there are strong indications that the America, which the wise leaders of the Revolutionary era established and which has been developed by our forebears, through years of toil, struggle and sacrifice, is in grave danger from evil forces both within and without. It behooves all patriotic Americans, who love their country, to be constantly alert to the dangers which threaten the Republic. There are influential persons within the country that would destroy our unique and successful system of State and Federal Government through nullifying our constitutional rights as individual citizens. There are powerful borces abroad, aided by left-wing pressure groups within the country that would suck us into an international order of world government. Such a plan would destroy our political sovereignty, squander our national wealth, and in fact, doom us to ultimate oblivian as a nation.

Danger Obvious in Price Fixing

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. ROGERS of Texas. Mr. Speaker, I insert in the RECORD today a very timely and well-thought-out editorial that appeared in the State Times, Jackson, Miss., concerning the invasion of the gas business by the Federal Government. I commend it to all Members.

The editorial follows:

DANGER OBVIOUS IN PRICE FIXING

The issues, both immediate and fundamental, are sharply defined in the natural-gas legislation now pending in Congress.

First of all, there is the question of whether the Federal Power Commission shall have control over prices charged for natural gas at the wellhead.

Fundamentally, the issue is whether the Federal Government will have authority to fix the price charged for any basic commodity while still in the hands of the producer.

It goes without saying that Mississippi is vitally concerned in the matter. We are convinced that the best interests of the State will be served by passage of the bill which clearly exempts natural-gas producers from Federal price fixing.

The matter has a long and rather complex background. In 1938, the Federal Government was given the power to regulate rates charged by interstate transmission lines. In 1950, Congress made it explicit that the price-fixing authority did not extend to the producer. This was the Kerr bill which President Truman first supported and then vetoed. Finally, in 1954, the Supreme Court ruled that the Federal Power Commission did indeed have price-fixing control over gas at the wellhead, a power which the FPC had never sought for itself.

Earlier this year, a Presidential advisory commission which had studied the entire subject of energy supplies, and policy concerning natural resources, came up with this statement:

"In the interest of a sound fuel policy, the protection of the national defense, and consumers' interest, by assuring such a continued exploration for and development of reserves as to provide an adequate supply of natural gas, we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line."

The bills now before Congress carry out the intent of that recommendation.

Opponents of the measure contend that unless wellhead prices are rigidly fixed, consumers of natural gas will be gouged by unwarranted price increases. Figures show, however, that about 10 cents of every dollar paid by natural gas consumers go to the producer. The remaining 90 cents go to the local distributor of the fuel, and to the company which transports it by pipeline from the field to the distribution point. Both of these are under governmental control, the distributor as a public utility and the transmission line as an interstate carrier.

Natural gas production, on the other hand, is a fiercely competitive field. At that point price regulation is certain by the old law of supply and demand.

The price the producer receives for his gas must be sufficient to provide the incentive for continued exploration and development of new sources. The difference between the price fixed by competition and that which might be fixed by Federal control may be decisive. If the producer is convinced that he is playing a losing game, then we are apt to see a drying up of natural gas production.

Rate regulation is necessary at some points in our complex economic system. In these instances, it clearly serves the public interest. However, where regulation extends to the prime producer, it threatens the basis of the private initiative system. If gas is to be so controlled, other fuels may not be far behind.

Rayburn To Speak Here Wednesday at REA Meeting

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. LANHAM. Mr. Speaker, on the eve of the 20th birthday anniversary of rural electrification, I am happy to insert in the RECORD an article which appeared in the Atlanta Journal and Constitution for Sunday, May 8, entitled "RAYBURN To Speak Here Wednesday at REA Meeting."

There is no way to measure the benefits that have accrued to my own State, not to mention the entire Nation, as a result of the rural electrification program which had its birth in my State.

The article follows:

RAYBURN TO SPEAK HERE WEDNESDAY AT REA MEETING

(By Jack Nelson)

The father of legislation which electrified most of the Nation's farms will address Georgia REA cooperatives at a meeting here Wednesday celebrating the Rural Electrification Administration's 20th birthday anniversary.

He is Representative SAM RAYBURN, Speaker of the United States House of Representative and author of the bill setting up the statutory authority for REA.

Congressman RAYBURN will address representatives of 41 cooperatives of the Georgia Electric Membership Corp.

The idea for the progressive and revolutionary REA was born in Georgia, a leader in development of power facilities through REA loans.

President Franklin D. Roosevelt conceived the plan during one of his early visits to the little White House at Warm Springs. He saw the need in Georgia and envisioned what electricity might mean not only to farmers in this State, but to rural people throughout the Nation.

In an address at Barnesville in 1938, President Roosevelt told how the idea for REA came to him at Warm Springs. D. M. Pollock of Monroe, president of GEMC, said Wednesday's anniversary program will include flashback touching on the address and other events concerning REA in the past 20 years.

When REA was established by President Roosevelt's executive order on May 11, 1935, only 6,956 Georgia farms, or 2.8 percent of the total, had electric service.

Today 92.7 percent of the State's farms are electrified, according to Walter Harrison of Millen, manager and former president of GEMC. Of the farms with electric service, 79.4 percent get power from REA cooperatives, Mr. Harrison said. The other electrified farms are served by private utilities.

Mr. Harrison said that 240,733 farms and rural establishments in Georgia are connected by 60,121 miles of REA lines.

REA loans to Georgia borrowers now total about $98 million.

Cold statistics also tell how the REA led the way in carrying electricity to all but about 5 percent of the Nation's farms. When REA began, only 11 percent of the farms were electrified. (REA claims systems financed by it supply 54 percent of the rural users.)

They tell how a sharp reduction in power costs followed the organization of REA. In 1935, electrical power cost farm users an average of about 10 cents a kilowatt-hour. Today the cost averages about 3 cents.

Much of the increase in farm use of electricity has come during the past 10 years. In 1944, for example, consumers bought 1,988,000 kilowatt-hours of electrical power for REA units. By 1954, usage totaled 14,309,000,000 kilowatt-hours, an increase of sevenfold.

As impressive as they are, the statistics alone can't tell the warm, human story of REA's impact on rural areas.

For that story, look at the face of the farmer whom electric power is helping to run his farm more efficiently and profitably. Or ask the farm housewife, released from many drudgeries of the farm home by electricity.

The blessings bestowed upon country folks by REA was simply, but indelibly, expressed by "Uncle" Lucius Darby, former slave who was 108 years old when his house near Elberton was serviced by REA in July 1948. He said:

"I been prayin' for years for dis light, and de Lord sent it."

Although REA is close to realizing its goal of electrical service for all farms, it still has a big job ahead. As officials see it, the job is threefold.

One is to help present REA-financed systems expand their power supplies and facilities to meet a swiftly increasing demand for farm power.

Another is to help the REA system keep pace with developments in the atomic field. Experts say the day is coming when nuclear energy will be used to provide cheaper electrical power. The REA wants farmers to get the benefits of such power when it becomes available.

The third chore is to help carry telephone service to as many rural residents as possible.

One of the pressing problems for REA in Georgia is telephone service, according to Mr. Harrison.

When REA loans for telephone facilities were first made available in 1950, only 10 percent of Georgia farms had telephones. Since then loans totaling $7,180,000 have financed 3 cooperatives and 13 independent companies in providing service for 8,843 rural customers in Georgia.

However, Mr. Harrison estimates that 80 percent of Georgia farms are still without telephone service. "The REA intends to see that the service is provided," he said.

Georgia's REA cooperatives plan to build new facilities at a cost of nearly $7 million in the 1956 fiscal year, Mr. Harrison reported.

He said a survey shows that through 1961 the coops will spend an estimated $25,279,000.

"One of our biggest jobs in the immediate future is to expand the capacity of present lines to meet the increasingly big demand for rural electricity," Mr. Harrison said. He pointed out that the average farm consumption of electrical power had increased from 116 kilowatt-hours in 1949 to 233 kilowatt-hours in 1954.

Mr. Harrison says the number one immediate objective of REA in Georgia, however, is "the development of all water power sites to provide power. We are vitally interested in this. It is necessary for REA to continue its rapid pace of progress in Georgia."

Appendix

Customs Simplification Act of 1955

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. COOPER. Mr. Speaker, under previous leave to insert in the Appendix of the CONGRESSIONAL RECORD an analysis of H. R. 6040, the Customs Simplification Act of 1955, there follows an explanation of this legislation for the information of the Members of Congress and the public. The Committee on Ways and Means has announced public hearings to be held on H. R. 6040 beginning Monday, May 23.

ANALYSIS OF H. R. 6040, THE CUSTOMS SIMPLIFICATION ACT OF 1955

The President, in his message of January 10, 1955, on the foreign economic policy of the United States, stated that the uncertainties and confusion arising from the complex system of valuation on imported articles caused unwarranted delays in the determination of customs duties and he urged the Congress to give favorable consideration to legislation for remedying this situation. Furthermore, he asked for continuing efforts to improve the procedures for customs administration. The proposed Customs Simplification Act of 1955 is designed to carry out, in part, these recommendations of the President. The Treasury Department is continuing its study and will in the future submit additional legislative proposals in line with the President's recommendations.

SECTION 1. SHORT TITLE AND EFFECTIVE DATE

This section contains a short title and provides that the act shall be effective on and after the 30th day following the date of enactment.

SECTION 2. VALUE

The present section 402 of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 402) tells how appraisers shall determine the value of imported merchandise for the purpose of assessing duties. Briefly, it provides that the "foreign value" or the "export value" shall be used, whichever is higher, but that if neither of these can be ascertained, then the "United States value," and if that also is unascertainable, then the "cost of production." In a few special cases, the rate of duty is to be based upon the "American selling price." Decisions of the appraiser are reviewable in the Customs Court. The statute then goes on to define the foreign value as the market value or price at the time of exportation to the United States "at which such or similar merchandise is freely offered for sale for home consumption to all purchasers * * * in the usual wholesale quantities and in the ordinary course of trade * * *." Costs, charges, and expenses incident to placing the merchandise ready for shipment which are not included in such value or price are to be added thereto. The export value is the price at which the merchandise is freely offered for sale to all purchasers in the usual wholesale quantities and in the ordinary course of trade for exportation to the United States, with the same charges added. The United States value is the freely offered price in the United States which is available to all purchasers, in the usual wholesale quantities and in the ordinary course of trade, with allowance for duty and other expenses, a commission not exceeding 6 percent, if any has been paid, and allowance for profit not to exceed 8 percent. The cost of production is defined as the sum of four items: (1) Cost of materials and fabrication or manipulation; (2) the usual general expenses, not less than 10 percent of (1); (3) the cost of containers and coverings and other incidental costs and charges; and (4) an addition for profit, not less than 8 percent of (1) and (2). The American selling price of an article manufactured or produced in the United States is the price at which the article is freely offered for sale for domestic consumption to all purchases.

The amendments proposed by the bill would effect the following changes in the law as above stated:

1. Eliminate the use of foreign value and make the export value the preferred method of valuation if it can be ascertained.

2. In determining United States value, the actual commissions, profits, and other deductions are to be used, not arbitrarily limited amounts.

3. In determining United States value of new lines in which there is no previously established trade, the earliest actual sales of the merchandise undergoing appraisement or similar merchandise may be considered if made before the expiration of 90 days after importation.

4. In the case of constructed value (previously called cost of production) the actual addition for general expenses, profit, etc., are to be used, not prescribed percentages which may exceed the actual figures.

5. The appraiser may use actual sales instead of offers, where both exist, in determining export value or United States value.

6. A definition of "freely sold or offered for sale" is provided for the first time. It will permit determination of an "export value," "United States value," or "American selling price" on the basis of sales or offers to wholesalers which are unrestricted, except for restrictions which are imposed or required by law, which limit the resale price or sales territory, or which do not affect the value of the merchandise to the purchaser. It will also permit the use of sales to exclusive agents and other restricted sales where such limitations do not affect the price. The present statute has been interpreted to make a "foreign value," "export value," "United States value," or "American selling price" unusable when the only offers made are subject to restrictions of the kinds stated. Furthermore, under the present law the price, in order to qualify, must be available to all purchasers, including retailers and consumers.

7. The proposed bill goes on to provide definitions for the words "ordinary course of trade," "purchasers at wholesale," and "such or similar merchandise."

8. It also defines "usual wholesale quantities" in such a manner as to mean the quantities in which the greatest aggregate quantity of the merchandise is sold, whereas under the present law the usual wholesale quantity is the quantity in which the largest number of individual transactions occur.

9. Certain references to the customs appraisers, and to appeals to reappraisement in the Customs Court, which were duplicative of other provisions, are eliminated for conciseness. No change in the functions of appraisers or court is effected.

The bill also provides that in considering any tariff adjustments by executive action, such as trade-agreement reductions under section 350 of the Tariff Act, the Tariff Commission and each officer of the executive department shall take full account of any reduction in tariff protection resulting or likely to result from these changes in valuation standards.

SECTION 3. CONVERSION OF CURRENCY

Under present law conversion of foreign currency values for customs purposes is made at the gold coin parity proclaimed quarterly by the Treasury Department, unless that parity varies by more than 5 percent from the buying rate for the currency in the New York market as certified by the Federal Reserve Bank of New York. If there is no proclaimed rate for the currency in question, or if the proclaimed rate does vary by more than 5 percent from the certified rate, then customs collectors are required to convert foreign currencies at the daily rate certified by the Federal Reserve Bank of New York. The result is that in most cases the daily certified rates are used. Consequently, each collector is required to check the daily rate for each day's importations since those rates, certified to 6 to 8 decimal places, are subject to frequent, often daily minor variations.

The amendment of section 522 of the Tariff Act of 1930 (U. S. C., 1952 edition, title 31, sec. 372) proposed by section 3 of the bill would retain the quarterly proclamation of gold coin parity. It would also continue in effect the requirement that the Federal Reserve bank certified rate be used if that rate varies by more than 5 percent from the gold coin parity. The amendment would then authorize the Secretary of the Treasury to provide by regulations for the use of the rate first certified for the quarter as long as the rate certified for the day of exportation did not vary by more than 5 percent therefrom. This would permit one customs officer to determine if the daily certified rates varied by more than 5 percent from the first effective certified rates or from the proclaimed gold coin parity and to notify all customs collectors of any such variations. In the absence of such notification each customs collector would continue to use the same certified rate throughout the quarter.

This will simplify currency conversion procedures without major alteration in the existing statutory framework.

SECTION 4. OBSOLETE PROVISIONS OF THE CUSTOMS LAWS

Section 4 is devoted to the repeal of a number of obsolete provisions of the Tariff Act. The reasons that the provisions repealed are obsolete, inoperative, or unnecessary, are set forth below.

Sections 12, 13, 14, and 15 of title 19, United States Code (subsecs. 1, 2, 3, and 4 of section 4 (a) of the bill), provide for appointment by the Secretary of the Treasury of a limited number of special agents for the purposes of checking the accounts of collectors and other customs officers for the prevention and detection of frauds upon the

revenue, and for the better guarding against frauds upon the revenue, authorize appointment of special agents to reside in foreign territory. The title "special agent" is no longer used in the customs service (see U. S. C. 1952 edition, title 5, sec. 281b (c)). The customs agents who, among other functions, perform the functions formerly exercised by the special agents now are appointed and serve under the operation of the Classification Act like other customs employees.

Sections 16, 17, and 18 of title 19, United States Code (subsecs. 5, 6, and 7) are survivals of the act of July 27, 1866 (ch. 284, secs. 4, 5, and 8, 14 Stat. 303), to reorganize the office of the customs appraiser at New York. Section 16, prescribing qualifications and a special oath for examiners at New York only, is superfluous since placement standards for the position are fixed in accordance with the Classification Act by the Civil Service Commission, and the oath requirement is met by the provisions of section 1757, Revised Statutes (U. S. C. 1952 edition, title 5, sec. 16), applicable to all Federal officers. Section 17, prohibiting employees in the office of the appraiser at New York from engaging or being employed in any commercial activity is discriminatory against this group of employees. Its repeal would leave such employees subject to the same restrictions on outside employment as other like employees. Section 18, relating to the duties applicable to the appraiser and assistant appraiser at New York, was originally enacted as a saving clause when a special statute was enacted to reorganize the office of the customs appraiser at New York (act of July 27, 1866, supra), but it now serves no useful purpose since all duties of appraisers are prescribed by section 500, Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1500).

Sections 21, 22, 23, 24, 26, and 27 (subsecs. 8, 9, 10, 11, 12, and 13) of title 19, United States Code, prescribe special oaths of office for the officers enumerated therein and designate persons who may administer such oaths. These provisions are unnecessary, since a form of oath for all Government officers is prescribed by R. S. 1557, supra. The number of copies of oaths of office to be required and their disposition can readily be prescribed by regulation; and since an employee may not receive his salary until the oath of office is taken, there seems to be no purpose in prescribing a penalty for failure to take the oath. As to the designation of persons to administer the oaths, sections 16a of title 5, United States Code, gives authority to persons designated in writing by the head of an executive department to administer the oath of office. The above sections are therefore unnecessary and obsolete.

In addition, section 26 of title 19 is obsolete (as is also sec. 379, infra, for similar reasons) in that it relates to special examiners of drugs, medicines, and chemicals, officers who are no longer appointed. The Food and Drug Administration now performs the functions formerly exercised by the special examiner of drugs, medicines, and chemicals (see U. S. C., 1952 ed., title 21, sec. 381). For these reasons, these sections should be repealed.

Section 28 of title 19, United States Code (subsec. 14), providing that the headquarters of the customs district in Florida shall be at Tampa, is unnecessary and serves no practical purpose. It is the only statutory provision expressly designating the situs of the headquarters of a customs district, and there are 45 such districts. Section 1 of the act of August 1, 1914, as amended (U. S. C., 1952 ed., title 19, sec. 2), vests authority in the President to, among other things, change from time to time the location of the headquarters customs-collection district. By Executive Order 10289 of September 17, 1951, the President designated and empowered the Secretary of the Treasury to perform this function.

Section 40 of title 19, United States Code (subsec. 15), prescribes the duties of the surveyor of customs. The title of surveyor of customs has been discontinued, except at the port of New York, and the duties there performed are those which are usually handled at any seaport by the officer in charge of the activities performed for the collector outside of the customhouse. The act of July 5, 1932 (U. S. C., 1952 ed., title 19, sec. 5a), abolished the offices of surveyor of customs at all other ports and their duties were transferred to career employees under the collector. Many of the functions prescribed by section 40 for the surveyor at New York have been obsolete for years and are no longer performed by that officer. This section should be repealed as obsolete.

Section 53 of title 19, United States Code (subsec. 16), which provides for the apportionment of compensation according to the time served, is believed to be obsolete in view of the act of June 30, 1945 (U. S. C., 1952 ed., title 5, sec. 944), which established the basic workweek, pay periods, and pay computation methods for all full-time officers and employees in the executive branch of the Government.

Sections 54 and 57 of title 19 (subsecs. 17 and 20), which relate to the furnishing of blank forms, books, stationery, blank manifests for sale, etc., are obsolete. Section 54 is superseded by provisions of the act of June 30, 1949 (U. S. C., 1952 ed., title 40, sec. 481), with respect to procurement of supplies by the General Services Administration. Section 57 is obsolete because in lieu of payment of compensation out of commissions and fees, collectors of customs are now on a fixed salary basis under the plan of reorganization of the customs service authorized by the act of August 24, 1912 (37 Stat. 434).

Section 55 of title 19 (subsec. 18) provides that collectors of customs, and comptrollers and surveyors performing the functions of collectors, shall render quarterly accounts to the Secretary of the Treasury of fines collected, moneys received as rents, etc. These functions are presently being performed under authority of other statutes, and this section is unnecessary.

Section 56 of title 19 (subsec. 19), which relates to additional hours of service at public stores in New York, was made obsolete by the Federal Employees Pay Act of 1945, as amended (U. S. C., 1952 ed., title 5, secs. 901–954), which provides for the establishment of a basic administrative workweek and for overtime compensation at prescribed rates.

Section 59 of title 19 (subsec. 21) prescribes requirements, related to section 57, supra, which date back to the time when the compensation of customs officers was primarily the proceeds of the specific fees fixed by law. Many of the functions for which fees were fixed are no longer performed. While it is believed that a table of the rates of fees demandable by law should be posted in a conspicuous place in each customhouse, convenient for public inspection, and a receipt should be given for all fees paid, this is rather a matter for handling under existing regulatory authority without statutory prescription of impracticable and inflexible requirements.

Section 61 of title 19 (subsec. 22) is inoperative and obsolete. Revised Statute 2580, from which it was derived, authorized the Secretary of the Treasury to appoint inspectors at San Antonio, Eagle Pass, and other places in Texas, at an annual salary of $2,500, to report to the Secretary of the Treasury semiannually on goods exported to Mexico. Regular customs offices are now established at necessary ports, stations, and places along the Texas-Mexican border whose officers inspect and supervise imports, as well as exports, to the extent required.

Section 62 of title 19 (subsec. 23), which was intended as a means of maintaining discipline among customs officers, authorizes suspension from duty for neglect or minor delinquency. The procedures which have been and will be followed in regard to the conduct of customs officers and employees are those prescribed in section 863, title 5, United States Code, and the regulations of the Civil Service Commission.

Section 67 of title 19 (subsec. 24), which provides for a report to each session of the Congress by the Secretary on customhouse business, is inoperative and unnecessary. The Secretary submits an annual report to the Congress in accordance with sections 262, 264, and 265, title 5, United States Code, substantially superseding the requirements of this more limited provision of the customs laws.

Section 379 of title 19 (subsec. 25) provides a method for preventing importation of adulterated drugs, etc. (see sec. 26, supra), at ports where there is no special examiner of drugs. As indicated in commenting on section 26, supra, special examiners of drugs are no longer appointed and the provisions of this section are inoperative, functions with relation to spurious or adulterated foods, drugs or cosmetics now being handled by the Food and Drug Administration of the Department of Health, Education, and Welfare under United States Code, 1952 edition, title 21, section 321, et seq. The section is obsolete and inoperative and should be repealed.

Section 390 of title 19 (subsec. 26), which provides for the adoption of a hydrometer for use in ascertaining the proof of liquors, is unnecessary. The hydrometer in use by Customs is the same as that which is approved for use of the Internal Revenue Service under section 5212 (a) of the Internal Revenue Code of 1954. The standards for spirits are the same as those applicable to spirits of domestic manufacture under paragraph 811 of the Tariff Act of 1930, as amended (U. S. C. 1952 edition, title 19, sec. 1001, par. 811).

Section 494 of title 19 (subsec. 27), which provides for the seizure of merchandize as security for fines imposed under the provisions of section 12 of the act of June 22, 1874, 18 Statutes 188, an ancestor provision of section 591 of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1591), now superseded in turn by section 542 of title 18 of the code, is absolete and unnecessary. The 1874 provisions relating to unlawful importation have been repealed and this particular provision thereof is no longer operative.

Section 526 of title 19 (subsec. 28) provides that the cost of prosecution in cases where seizure, condemnation, and sale of merchandise takes place within the United States and the value is less than $250, shall be paid from the part of the forfeiture which accrues to the United States. This section is obsolete since the subject matter is now covered by section 613 (1) of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1613 (1)).

Section 541 of title 19 (subsec. 29) authorizes the collector of each customs district to provide and use small open row- and sailboats, which shall be necessary in boarding vessels and for other purposes. Coast Guard crafts are used by customs officials for boarding purposes and section 541 is therefore obsolete.

Section 542 of title 19 (subsec. 30) authorizes the Secretary of the Treasury to use elsewhere as the exigencies of the service require, the motorboat provided for Corpus Christi, Tex. No motorboat is now provided or needed for Corpus Christi and there has been none for many years. The provision is obsolete.

Section 549 of title 31 of the code (subsec. 31) directs the comptrollers of customs and surveyors, registers of land offices, and the superintendents of mints to examine the books and accounts of their depositaries, collectors, and treasurers and to make a report to the Secretary of the Treasury. The

functions referred to are performed by the Comptroller General under the Budget and Accounting Act of 1921 (42 Stat. 23 (U. S. C. 1952 edition, title 31, secs. 41–58)), and therefore section 549 is now obsolete.

Section 579 of title 19 (subsec. 32) provides that in a suit on bond for the recovery of duties the court shall grant judgment unless the defendant makes an oath that an error was committed in the liquidation of the duties demanded. This section has been superseded by the protest provisions of section 514 of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1514).

Section 711 (7) of title 31 (subsec. 33) authorizes a permanent appropriation for the repayment to importers of the excess of deposits for unascertained customs duties, or duties or other moneys paid under protest. This section has been superseded by a permanent indefinite appropriation covering all refunds of customs collections or receipts authorized by law (see act of June 30, 1949, ch. 286, 63 Stat. 360).

Subsection 34 of section 4 (a) of the draft bill will repeal that part of the act of September 30, 1890 (c. 1126, 26 Stat. 511 (formerly codified as U. S. C. title 19, sec. 30)), which provides that such clerks and inspectors as the Secretary may designate shall be authorized to administer oaths of office. This section is related to sections 21, 22, 23, 24, 26, and 27, of title 19, which also are proposed to be repealed, supra. The section is obsolete and should be repealed.

Section 4 (b) of the bill seeks to amend subsection (f) of section 500 of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1500 (f)), which provides for the designation of an acting appraiser at ports where there is no appraiser and requires that such acting appraiser take the oath provided in section 21, title 19, supra. It is proposed to repeal the requirement that the acting appraiser take the special oath provided in said section 500 (f) since the provision for that oath is being repealed by subsection 8 of section 4 (a) of this bill. The oath prescribed by section 1757 of the Revised Statutes (U. S. C. 1952 edition, title 5, sec. 16) will be sufficient.

Section 4 (c) of the bill proposes to amend section 583 of the Tariff Act of 1930 (U. S. C. 1952 edition, title 19, sec. 1583). Section 583 provides that the customs or Coast Guard officer's certification regarding the inspection of the manifest required by that section shall be made on "the back of" the original manifest. The manifest forms now in use have the space for such certification on the front. The procedural detail as to place of certification on a manifest is a minor one that should be left to administrative regulation and it is proposed to delete the language "the back of" in that section.

The 10th of May: Rumania's Independence Day

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, the 10th of May is the national holiday of the Rumanian people. Three great events of its history are celebrated at that date.

The Rumanian people, after more than a thousand years of battles and sacrifices, have succeeded in forging their national unity and in gaining their freedom and independence. Since then—gathered around their King—they have been celebrating their national holiday, May 10, which stands for independence and unity. Today, Rumanians at home cannot celebrate any of their traditional holidays.

During their long history the Rumanians have always stood up against invaders and they have battled against hordes of barbarians pouring into Europe from the East. They have also fought against the forces of the Ottoman Empire.

Some 500 years ago the Turks succeeded in overcoming by their superior numbers the defenders of freedom. The same thing happened a few years ago when the dark forces of communism swallowed up the people of Rumania.

However, the will of the Rumanian nation was not broken. In recognition of the people's drive for freedom, the Rumanian principalities received a special status—as autonomous States—in which the Turks could not interfere. Mircea the Elder, Vlad the Impaler, Stephen the Great, Michael the Brave, John the Fierce are names of brave Rumanian rulers who have fought in the past for independence and unity.

On May 10, 1866, Charles, Prince of Hohenzollern-Signaringen, was proclaimed in Bucharest Prince of Rumania and so founded the Rumanian dynasty. It was the successful outcome of the nation's long struggle to acquire the right of electing as its sovereign a member of one of the Western nonneighboring reigning families in order to put an end to the strifes and rivalries among native candidates to the throne. This ardent wish, though it had been officially expressed as far back as 1857 by the Moldavian and Vallachian Assemblies—known as the Ad-hoc Divans, which convened as a result of the Paris Treaty of 1856, was nevertheless opposed by both the Russian and Austrian Empires, which were equally alarmed by the growth in power and prestige of the young bordering nation, which they both secretly hoped to absorb some day. Thanks to the unrelentless efforts and thanks to the wise steps taken by Rumanian patriots, and, also, to the constant diplomatic assistance of Napoleon III, all political obstacles were gradually removed, and that which was to be the prosperous and glorious reign of Charles I could be inaugurated on May 10, 1866.

Eleven years later, on May 10, 1877, during the turmoil of the Russian-Turkish War, the principality of Rumania, until then nominally a vassal of the Sultan, proclaimed her independence by severing the old and outdated bonds which still linked her with the Ottoman Empire. This independence had to be fought out on the battlefields south of the Danube, where the young Rumanian Army, as an ally of Russia, played a noteworthy part in the defeat of the Turkish forces. The Congress of Berlin of 1878 confirmed Rumania's independence and conferred Europe's official recognition, a bright page in the country's dreary history, though marred unfortunately by the loss of Bessarabia, cynically wrenched by Czar Alexander II and his government from the ally who had helped them obtain the victory over the Turks.

Another 4 years elapsed since the Rumanian people had proclaimed their independence and a further step was taken as they decided to raise their country to the rank of a kingdom. On May 10, 1881, Charles I was crowned, by the will of his people, King of Rumania. A prosperous era, which lasted over six decades, opened on that day for the nation. Its apex was attained when national unity within the historical boundaries was reached after World War I. The socially progressive country had now become a factor of peace and equilibrium in the southeast of Europe.

During all those years and up to the present time, Rumanians have cherished and revered the 10th of May as their national holiday, the anniversary of glorious events in their history, in which the achievements of the monarchy and of the people were interwoven. This date remains the symbol of the Rumanian permanency and perseverance through woes and hardships in order to reach the ultimate end of freedom and well-being.

The consciousness of the Rumanian people, concerning their unity and independence, is the result of centuries of sacrifices. Today this consciousness remains intact. It cannot be destroyed by either brutality, lies, or oppression.

Soviet Russia, through the intermediary of the Communist regime which it helped install by force, has attempted to tear out of the Rumanian history the sacred days of this nation. Today the Rumanian people are forbidden to celebrate their national holiday. Today, in Rumania, any demonstration of independence is banned. Rumanians no longer can sing their national anthem, nor can they raise the flag of their Independence Day.

However stark the present situation in Rumania may be, this nation which in the past has achieved independence rallying all its forces and courage and enthusiasm around the King, is once more closing ranks around King Michael I, who has remained a symbol of independence and unity.

The ruthless foreign rule which now oppresses the Rumanian nation has not been able to uproot the people's attachment to the traditional celebration of the 10th of May. In order to try and alter at least its significance, celebrations were shifted from the 10th to the 9th of May, the anniversary of a Soviet victory. Although flags are now hoisted on May 9, Rumanians in their captive homeland celebrate nonetheless in their hearts the following day, awaiting with faith and courage the dawn of new times when freedom shall be restored to them.

The Rumanian people have kept their courage and faith. They know that freedom cannot be destroyed. The Rumanian nation looks up with hope toward the free world.

We can assure the Rumanian people that their suffering is known to us and that we are sensitive to the trust they have bestowed upon us, the American people.

The United States will continue to help the progress of the people's free-

dom and the independence of states in the world, certain that the Rumanian people will enjoy once again their national freedom and independence.

Teen-Age Poll on Lowering the Voting Age

EXTENSION OF REMARKS
OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. SPRINGER. Mr. Speaker, recently, a bright group of high-school students in my district under the direction of Dr. Ella Leppart, of University High School, and Professor Gage, of the University of Illinois facility, compiled a poll on teen-age voting. The question was whether or not to lower the minimum voting age from 21 to 18.

This is the only complete and detailed study I know of that has been conducted by tenn-agers themselves on this important problem. We have had that matter before the House in the form of bills on many occasions. Thus far no bill has come out of committee on the matter.

I do believe it is of greatest importance for the Members of the House to read this poll in order to have not only an understanding of the poll but also the reasons given by various students as to why the voting age should be lowered from 21 to 18. This is a most interesting poll and contains some very impartial conclusions.

At this point, under unanimous consent, I include in the RECORD as a part of my remarks the summary of Teen-Age Poll on Lowering the Voting Age, including the names of the students who worked on the survey:

SUMMARY OF TEEN-AGE POLL ON LOWERING THE VOTING AGE

(Conducted by students in a United States history class, University High School, Urbana, Ill., spring 1955)

OUR AIMS

Our class conducted this poll to ascertain the opinions of high-school juniors and seniors in central Illinois about lowering the voting age. We excluded freshmen and sophomores from our sample because we did not think the problem is as pertinent to them as to uperclassmen. We polled 1,585 juniors and seniors in 10 high schools.

Since we wanted to determine the factors that influence the opinions held on the question of lowering the voting age, we included questions on sex, age, grade, number of social studies courses taken, political party preference, and place of residence.

It was also decided to compare the results of the teen-age poll with another poll. This was a survey of 103 adults in Champaign-Urbana conducted by members of our class. The two polls were planned along the same general lines so a comparison might be made. In planning the teen-age poll the class studied the form used by the Purdue opinion panel.[1] We adapted some of the questions on personal information and our major poll question from this material. We also consulted Prof. Nathaniel P. Gage, bureau of educational research, University of Illinois, on items included in the questionnaire.

In addition to the key question on lowering the voting age, we included questions to determine strength of opinion, reasons for opinion, and whether or not the voting age should be changed by Federal or State action. We were interested in finding out how well-informed teen-agers in central Illinois are on the position that President Eisenhower, ex-President Truman, Senator Douglas, and Senator Dirksen have taken on lowering the voting age. A final question asks for information on the voting requirements in Illinois.

Schools participating in the survey

	Number of students	Percent in survey
Champaign High	364	24
Clinton High	151	10
Henry High	48	3
Lakeview High	152	10
Metamora High	116	7
Urbana High	234	15
Norris City High	94	6
Roxana High	208	13
University High:		
Normal	134	8
Urbana	73	5

WHAT DO YOU THINK ABOUT LOWERING THE VOTING AGE?

A class at University High School, University of Illinois, Urbana, Ill., is conducting a poll on the question of lowering the voting age from 21 to 18.

DIRECTIONS

Please do not write your name on this paper, as names will not be used. We would like you to answer the following questions by placing a check mark (☒) in the space provided.

PERSONAL INFORMATION

1. What was your age at your last birthday? ☐ 14 or under. ☐ 15. ☐ 16. ☐ 17. ☐ 18. ☐ 19. ☐ 20 or over.

2. Are you a ☐ junior or a ☐ senior.

3. What is your sex? ☐ M. ☐ F.

4. Which of the following courses have you taken or are you now taking in high school? ☐ United States History. ☐ American Government. ☐ Problems of American Democracy. ☐ Economics. ☐ Sociology. ☐ World History.

5. What political party do you prefer? ☐ Democrat. ☐ Republican. ☐ Other. ☐ No preference.

6. What is the extent of your mother's education? ☐ Did not finish high school. ☐ Did finish high school. ☐ Attended but did not finish 4 years of college. ☐ Finished college. ☐ Don't know.

7. Where have you lived most of your life? ☐ Farm. ☐ Town under 2,500. ☐ Town over 2,500.

POLL QUESTIONS

1. Do you or do you not think that the age requirement for voting should be lowered from 21 to 18 in Illinois? ☐ Should be lowered. ☐ Should not be lowered. ☐ Undecided.

2. Please state briefly your principal reason either for or against the proposal. If you are undecided, please tell why you are undecided.

---

3. How strong is the opinion you gave in answer to question 1? ☐ Very strong. ☐ Moderate. ☐ Don't care.

4. If you are in favor of the proposal (that is, if you marked "Should be lowered" in answer to question 1), how do you think the voting age should be lowered? (If you are not in favor, disregard this question.) ☐ By an amendment to the Federal Constitution lowering the voting age in all States; or ☐ by individual State action; or ☐ undecided.

The following questions will be used to find out how much information people have about the issue of 18-year-old's voting.

This is not a test since you should not sign this paper.

5. Do any of the States now allow 18-year-olds to vote? ☐ Yes. ☐ No. ☐ Don't know.

6. What is the position of Illinois' Senator PAUL DOUGLAS on the question of 18-year-old's voting? ☐ He is in favor. ☐ He is against. ☐ Don't know.

7. What is the position of Illinois' Senator EVERETT M. DIRKSEN on this same question? ☐ He is in favor. ☐ He is against. ☐ Don't know.

8. What is the position of President Eisenhower on this same question? ☐ He is in favor. ☐ He is against. ☐ Don't know.

9. What is the position of ex-President Truman on this same question? ☐ He is in favor. ☐ He is against. ☐ Don't know.

10. What are the requirements for voting in Illinois?

---

Analysis of teen-age poll questions

[Percent]

	Total sample	Sex		Grade		Courses		Political party			
		Boy	Girl	11	12	0-1	2-6	Democratic	Republican	Other	None
1. Do you or do you not think the age requirement for voting should be lowered from 21 to 18 in Illinois?											
Should be lowered	55	57	42	53	44	36	63	33	37	1	27
Should not be lowered	31	40	50	54	42	39	61	24	38	2	32
Undecided	14	42	58	54	42	38	60	28	22	2	45

Boys in the survey sample seem to be more in favor of lowering the voting age than girls, and less uncertain about the question.

Teen-agers who expressed no party preference in the survey seem to be undecided about lowering the voting age.

[Percent]

	Total sample	Should be lowered	Should not be lowered
2. How strong is the opinion you gave in answer to question 1?			
Very strong	45	55	42
Moderate	49	43	54
Do not care	4	13	2

Teen-agers in the poll who favor lowering the voting age tend to have stronger feelings than those who are opposed.

	Number
3. What reasons do you have either for or against the proposal?	
Reasons for:	
"Old enough to fight, old enough to vote"	641
Teen-agers are well informed	234
Teen-agers are mature	101
Teen-agers are assuming adult responsibilities	87
Miscellaneous	53
No answer	37
Reasons against:	
Teen-agers are immature	244
Teen-agers are not informed	205
Teen-agers are easily influenced	118
Miscellaneous	112
Teen-agers lack interest	54
No answer	20

[Percent]

	Total sample	Political party			
		Democratic	Republican	Other	None
4. If you are in favor of the proposal, how do you think the voting age should be lowered?					
Federal amendment	65	32	37	1	28
State action	27	36	36	0	25
Undecided	6	30	25	2	40

Teen-agers in the sample do not seem to follow traditional party lines in determining the method of lowering the voting age.

Again, teen-agers who expressed no political party preference are undecided about this question.

[Percent]

	Should be lowered	Should not be lowered	Undecided
5. Extent of voting information on poll questions 5 to 10:			
Below average (0–3 right)	32	34	41
Average (4–6 right)	47	47	40
Above average (above 6 right)	21	20	18
	In favor	Opposed	Don't know
Position of Eisenhower on this question	[1] 56	10	34
Position of Truman on this question	10	[1] 58	50
Position of Douglas on this question	[1] 26	17	55
Position of Dirksen on this question	14	17	67

[1] Figures in italics are correct responses.

Percentages do not always add up to 100 percent due to rounding errors.

ADULT POLL FINDINGS

1. Do you think the age requirement for voting should be lowered from 21 to 18?

	Percent
Should be lowered	41
Should not be lowered	40
Undecided	19

2. Why do you feel this way?

For:	Percent
Old enough to fight, old enough to vote	56
Teen-agers are mature	16
Teen-agers are well informed	9
Teen-agers are assuming adult responsibilities	19
Against:	
Teen-agers are immature	67
Teen-agers are not informed	19
Teen-agers lack interest	4
Teen-agers are easily influenced	8

Gave no answer to question: 16 percent of total sample.

3. How do you think the voting age should be lowered?

	Percent
Federal amendment	57
State action	23
Undecided	20

4. How strong is your opinion on this subject?

	Percent
Very strong	30
Moderate	56
Don't care	14

The opinions of the 103 adults interviewed in Champaign-Urbana are evenly divided on the question of lowering the voting age.

The greater portion of the adults who approve of lowering the voting age favor an amendment to the Federal Constitution. Half of the remaining favor State action, while the rest are undecided.

Those in favor of lowering the voting age gave as their principal reason that if teen-agers are old enough to be drafted then they are old enough to vote. The main reason given by those adults who oppose lowering the voting age is that teen-agers are not mature enough.

Resolution Urging That Fort Leonard Wood Be Designated a Permanent Military Installation

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. CARNAHAN. Mr. Speaker, in an effor to bring to the attention of the proper authorities a serious problem in my district, I am inserting, under leave to extend my remarks, a copy of the Missouri House of Representatives Resolution 123 in the CONGRESSIONAL RECORD.

The resolution follows:

Whereas Fort Leonard Wood has served as the training area for thousands of members of the Armed Forces of the United States; and

Whereas Fort Leonard Wood is strategically located in the heart of Missouri's rugged hill country and is climatically situated so that military personnel can be trained under all weather conditions and over a varied terrain which is recognized as one of the best training areas in the United States; and

Whereas the United States has spent great sums of money on Fort Leonard Wood and has one of the greatest concentrations of earth-moving equipment in the world at Fort Wood for the training of Army engineers; and

Whereas Fort Leonard Wood has been designated and is now operating as a temporary installation; and

Whereas Fort Leonard is of great value to the Nation and to Missouri and the closing of Fort Wood would be harmful to the State and Nation: Now, therefore, be it

Resolved, That this house earnestly urge that Fort Leonard Wood be designated a permanent military installation and operated as a permanent military training center; and be it further

Resolved, That the chief clerk send copies of this resolution to the Members of Congress from Missouri.

Adopted May 3, 1955.

Mr. Speaker, I strongly urge that Fort Leonard Wood be designated a permanent Army installation. Fort Leonard Wood is one of the best equipped Army camps in the United States, yet for the want of a permanent designation this installation is operating on a costly short-time basis.

It is neither fair to the soldier nor to the State of Missouri to be constantly threatened with the disbandment of this Army installation. The soldier is adversely affected by lack of off-base housing and countless other facilities which would be provided if there was the security of permanence at this installation. The State of Missouri loses because of the reluctance in developing the area due to the temporary status of the fort. Fort Leonard Wood is one of the best in the Nation and needs development of the surrounding area which would immediately follow if provided with the proper business climate which a declaration of permanency would provide.

Senior Class of the Sunset High School, Sunset, La.

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. THOMPSON of Louisiana. Mr. Speaker, I think that one of the fundamental requirements for a continued strong and enlightened America is that more and more of our young people become better acquainted with our democratic principles of government. One way that this could be accomplished would be for every high school student to be allowed to visit the Nation's Capital to view the inspiring sights created by the leaders of this great land; to see the representatives of the people sitting in session to formulate laws for the betterment of our Republic.

One such group is visiting Washington today, Mr. Speaker, it being the senior class of the Sunset High School of Sunset, La., in my district. I feel that I must congratulate the people of Sunset, and especially my old friend, Mr. Ferdie Duos, principal of the school, and the teachers for having undertaken this tour for the students. Mrs. Floyd Domengeaux and Miss Elva Bernard are the type teachers we should strive to retain in our schools in order to continue education which maintains the high ideals of America. The names of the students on this tour, who are seniors of the Sunset High School, represent names of future leaders of our country. They are: Barbara Beaugh, Beatrice Bellmin, Norris Bourgeois, Calvin Bourque, Betty Cazaudebat, Cecilia Cormier, Joyce Courvelle, Ravis Courvelle, Florine Credeur, Earline Dalfrey, Janelle Guilbeaux, Jimmy Guilbeaux, Kathleen Guilbeaux, Nolan Guilbeaux, Dell Horaist, Nell Horaist, J. E. Leger, Eva Dell Meche, Jason Meche, Bobbie Miller, Harold Miller, Agnes Olivier, Alfred Richard, Gayle Richard, Nettie Richard, Shirley Richard, Lincoln Savoie, Lou Wilda Sibille, Nolan Stelly, Sally Thomas, and Ethel Tweedel.

Rock Creek Park

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. JOHNSON of California. Mr. Speaker, every great city lays claim to some exclusive distinction. The city of Washington of course boasts of the National Capital and all that goes with it.

But Washington possesses something else besides the home of the Government of the land of the free, something else the equal of which is known to no other city in the world. There is not a city that would refuse to trade the greatest distinction it has for the equivalent of Rock Creek Park, thousands of acres of nature at her best, stretching through the length of the city and into Maryland, area available to the people for their recreation and enjoyment. Its picnic areas, its recreation areas, its riding trails, and its abundance of bird life in the very heart of the city is something that a great city could have only because men who dared to look ahead provided the asset when it could become a public possession at other than inflated costs. Hundreds of millions of dollars would replace what is Rock Creek Park today if it were to be lost.

We, in Congress, can take pride in the fact that our predecessors provided this great park. As recently as 1930, and some are still here remember the undertaking, Congress provided for the extension of Rock Creek Park for miles into Maryland. The Capper-Cramton Act of that year was evidence that Congress not only stood ready to protect this great national and community prize but sensed a growing need for its enlargement to accommodate growing populations.

But the things which Congress thought it was providing for in the creation of Rock Creek Park and its extension, are being challenged in no uncertain way. If the planners and builders of roads and express highways can have their way, Rock Creek Park is to become the location of a great six-lane highway throughout its entire length. Already the encroachment is under way, with planning agencies giving a little way here and a little way there to the highway people who love to build roads where right-of-way is free.

Local residents in Maryland have waged a 2-year fight against abandonment of Rock Creek Park to expressways. They have thought the laws governing the park, laws passed by Congress, were adequate. Challenges are riding in the courts at the present time, but in spite of them the Maryland Roads Commission continues to cut its right of way through the park, build overpasses, and so forth.

I have introduced a joint resolution in the House which is completely similar to one introduced in the Senate and upon which the Senate Interior Affairs Committee has conducted hearings. This resolution proposes to preserve Rock Creek Park to its dedicated purposes. I hope the appropriate committee of the House will give the subject early consideration to the end that we may act with expedition and in coordination with the Senate on the subject.

I know I speak the mind of many Members of the House when I say that we ought to go all out in preserving Rock Creek Park. Those predecessors who created it are entitled to whatever action is necessary to save it.

In connection with Rock Creek Day on Sunday, May 15, I am sure that Members and readers of the CONGRESSIONAL RECORD will be interested in the following article entitled "Everybody's Invited to a Fine Park," by Irston R. Barnes, president, Audubon Society of the District of Columbia:

EVERYBODY'S INVITED TO A FINE PARK

(By Irston R. Barnes, president, Audubon Society of the District of Columbia)

Rock Creek Day is Sunday, May 15. The Rock Creek Day committee, a group of community leaders who value outdoor recreation in all its forms, invites all who appreciate Rock Creek Park to spend a part of the day engaging in a favorite pastime in the park.

The invitations are being accepted by Boy Scouts, Girl Scouts, Campfire Girls, hiking clubs, equitation enthusiasts, nature societies, and a host of other groups. And each group, planning its chosen outdoor recreation, is inviting any interested members of the public to join in.

The plan for Rock Creek Day was initiated by the Potomac Valley Conservation and Recreation Council, an information clearing house for citizens' associations, recreation clubs, nature societies, and conservation groups. The council was formed as a result of many individuals and organizations writing to this columnist and endorsing various articles devoted to the importance of preserving the C. & O. Canal, Rock Creek Park, Glover-Archbold Park, the Dyke Marsh, and other park and natural areas.

It is appropriate that we pause in the hurried round of daily living to contemplate, not simply as individuals but as members of the Washington community, what our National Capital would be like if our parks and woodlands were allowed to be eroded further by neglect or ill-advised highway building. I wish that those who loved and enjoyed the Rock Creek Valley of 100, or even 50, years ago had carried their thinking beyond the mere reservation of the park to assure its retention as they knew it.

Rock Creek, in the not distant past, was a lusty, clear, flowing stream which filled its banks and covered the great boulders that now stand amid its shrunken and discolored waters. There is simple testimony to its wild beauty.

President John Quincy Adams had a retreat in the valley where he sought refreshment from the pressures of politics in this romantic glen, listening to the singing of a thousand birds. John Burroughs, when he

resided in Washington, found Rock Creek as wild and savage, and apparently as remote from civilization, as anything one meets with in the mountain sources of the Hudson or the Delaware. And Viscount Bryce, then British Ambassador, thought Rock Creek made Washington unique: "What city in the world is there where a man * * * can within a quarter of an hour and on his own feet get in a beautiful rocky glen such as you would find in the woods of Maine or Scotland—a winding rocky glen with a broad stream foaming over its stony bed; and wild leafy woods looking down on each side."

Such was Rock Creek not many years ago, as pictured in the sober, unexaggerated testimony of responsible witnesses. What would it not be worth if we could have kept Rock Creek as these men knew it.

And how Theodore Roosevelt, if he could return today, would berate those between his day and ours who have already appropriated most of the park below Porter Street for motor roads. As a practicing apostle of physical fitness and the rugged life, he has described his joy, when he was President, in going on rough cross-country walks, perhaps down Rock Creek, which was then as wild as a stream in the White Mountains.

Louis J. Halle, author of Spring in Washington, writing in the Atlantic Naturalist, gave his evaluation of Rock Creek today in these words:

"In the midst of a city whose piles of brick and concrete and whose stretches of macadam represent the temporal devices of mankind, an area like Rock Creek represents the elements of eternity. Exposure to these elements is essential if men are to keep their contact with ultimate reality, and an area like Rock Creek Park ought consequently to be regarded as an indispensable feature of our National Capital. It is there to nourish the vision that justifies the Nation."

So as we prepare to participate in Rock Creek Day, we are joining a notable company of the great men of other days who have found in the natural majesty of Washington's setting that re-creation of body, mind, and spirit which they needed to fit them for the trials of their days.

Another United States Leader

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. SMITH of Mississippi. Mr. Speaker, Mr. Van Richardson, of Greenwood, Miss., is a candidate for president of the United States Junior Chamber of Commerce. From my knowledge of Mr. Richardson as a personal friend, I regard him as ideally suited for this challenging assignment. This regard is shared by those who know him in Mississippi, as evidenced by the following editorial from the Jackson (Miss.) State-Times:

ANOTHER UNITED STATES LEADER

By the happy circumstance of Boyd Campbell's residence here, Mississippi has among its citizens for the first time the president of the United States Chamber of Commerce. Our pride in his accomplishment is shared by all Mississippians.

Now it appears the State may provide the chief officer of another national organization, the United States Junior Chamber of Commerce. Van Richardson, of Greenwood, a native of Hinds County, by the way, is considered high on the list of possibilities for that post.

Mr. Richardson has made an outstanding record in junior chamber affairs, serving as president of the Mississippi organization and as director and vice president of the national group. He was selected as Mississippi's outstanding young man for 1953, on the basis of his business and civic achievements.

We are quite aware that junior chamber conventions are exceeded in political pressures per square inch only by the Democratic and Republican conclaves, and we don't intend to intrude in the affairs of a private organization. All we can say is, we don't believe the junior chamber could do better than select Mississippi's Van Richardson as its national president.

Anyway, it would be handy for the United States chambers, junior and senior, to have their top-level leadership within the bounds of a single State. That State, of course, should be Mississippi.

H. R. 4267

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1955

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a petition signed by a number of the members of the General Baptist Church, Maunie, Ill., who favor legislation, as proposed in House bill 4267, which would prevent the advertising of alcoholic beverages.

The petition follows:

GENERAL BAPTIST CHURCH,
Maunie, Ill., May 5, 1955.

Hon. CHARLES W. VURSELL,
Member of House of Representatives.

DEAR CONGRESSMAN VURSELL: We, your constituents, respectfully petition you to protect us in our rights as parents and as purchasers, and to help us bring up mentally and morally sound children in a way to conquer juvenile delinquency in our midst by exercising the powers of Congress to get alcoholic-beverage advertising off the air and out of the channels of interstate commerce and thus protect the rights of States to prevent advertising within their borders of commodities which have been declared unlawful either by their legislatures or by the people exercising the rights of local option granted them under State law. We also earnestly beg you to appear personally at the hearings in support of House bill 4267, Senate bill 923, and the Bryson bill, if and when introduced. Request that a brief note of this petition be made in the CONGRESSIONAL RECORD.

Mrs. Nolen Pruitt, Rev. Clifton Evans, Mrs. Theodore Phelps, Mrs. Jessie Weedman, Mrs. Donald Gaines, Maxine Evans, Rev. Bobly G. Holtzclaw, Mary Lou Simmons, Rose Parker, Lela LaMar, Mary Wells, Irene Davis, Reba Grunlee, Stella Weare, Rev. Thomas Holtzclaw, Freda Mick, Fred F. Mick, Rachel Mick, Anna Mick, Dulca Rose, Theron Bonner, Anna Bonner, Lola Cooper, Edna Fern Westergard, Estle Pardue, Roscoe Pardue, Mrs. Anna Wells, Mrs. Ethel Frashies, Mrs. Donald Youngman, Marjorie Thomas, Anna Stuky, Mr. Fred Roser, Mrs. Fred Roser, Rev. Clifton Evans, Rusch Rippy, Iona Brown, Zev Reynolds, Ione Elliott, Ida M. Gaines, Mrs. Florence Holtzclaw, Mrs. Z. W. Reynolds.

Creation of a United States Foreign Service Academy

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FLOOD. Mr. Speaker, from a military viewpoint, the United States has won all of its wars. It has not been so successful, however, in its efforts to protect the rights and advance the interests of our Nation through diplomatic negotiations. Some of our defeats in diplomacy have been tragic preludes or postludes to our Nation's great sacrifices in blood and fortune on the altars of freedom and justice.

Because of the utter destructiveness of modern nuclear weapons, winning a war may never again mean a real victory for either side—if it ever has meant true victory. Global warfare, if it ever occurs again, may mean global suicide. More than ever before it has become necessary that this Nation win through diplomacy rather than try to win through war. Maintenance of peace has become necessary for the preservation of civilization.

Why has the United States in the past sometimes won a war and lost the peace? What is the significance of our military victories and diplomatic losses in relation to the future?

Our victories in warfare have been due largely to our foresight in making suitable provisions for selecting and training men for military leadership. Our shortcomings in diplomacy have been due largely to our failure to make similar provisions for selecting and training men for our Foreign Service. The increasing need for maintenance of peaceful relationships with other nations has now made necessary the strengthening of all our forces engaged in diplomatic negotiations.

On April 11 of this year Soviet Russia suddenly offered to restore Austria's freedom on the condition that that country must remain neutral and permit no foreign bases on its soil. Soviet propaganda agencies are hinting at a similar offer to Germany—holding before the nationality-conscious German people the luring vision of a neutral, united Germany. Soviet Russia has thus taken the diplomatic initiative away from the West, and has strengthened neutralists not only in Germany but throughout the free world. It goes without saying that the importance to the United States of the rearmament of Western Germany is incalculable. Yet Soviet Russia has forced us to negotiate at her bidding concerning Austria, and may later force us to negotiate concerning Germany.

The current tensions in international relations in general and recent developments respecting Germany in particular point up the continuing need for the advancement of the interests of freedom throughout the world. Prominent political scientists have predicted that serious international tensions will continue

for many years to come. The United States must select and train its best qualified young men to work for the easement of these tensions and for the preservation of our freedom and the promotion of our national welfare through diplomacy.

I am therefore introducing a bill proposing "that in order to promote greater understanding and goodwill throughout the world and to provide for a trained force for the Foreign Service of the United States, ambassadors, ministers, and other officers, there is hereby established an academy to be known as the United States Foreign Service Academy."

Applicants accepted for training in the Academy would be required to pass entrance examinations testing their general knowledge and their intellectual capacities and aptitude for the Foreign Service. They would be selected in a manner insuring nationwide representation in the Academy.

The course of study would be designed to assure that graduates would have the ability effectively to represent the interests of the United States abroad, and would have an understanding of the foreign peoples with whom they would live and work.

In general the Academy would provide an educational system for the Foreign Service comparable to that which the Congress has established for officers of the armed services. I have pointed out circumstances which show that selection and training of officers for our Foreign Service has become of paramount importance. Let us create a Foreign Service Academy now while there is hope for the extension of international understanding, peace, and freedom throughout the world.

Philippine Trade Agreement Revision Act of 1955

EXTENSION OF REMARKS
OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. COOPER. Mr. Speaker, under previous leave to insert in the Appendix of the CONGRESSIONAL RECORD an analysis of H. R. 6059, the Philippine Trade Agreement Revision Act of 1955, there follows an explanation of this legislation for the information of the Members of Congress and the public. The Committee on Ways and Means has announced public hearings to be held on H. R. 6059 beginning on Monday, May 16.

ANALYSIS OF H. R. 6059, THE PHILIPPINE TRADE AGREEMENT REVISION ACT OF 1955

EXPLANATION OF RECOMMENDATIONS FOR MODIFICATION OF 1946 TRADE AGREEMENT BETWEEN THE UNITED STATES AND THE PHILIPPINES

Preamble

The preamble is revised to delete the reference to the war against Japan and to emphasize the need to strengthen the economy of the Philippines.

Article I

Recommendation: Replace the schedules for the disappearance of tariff preferences for Philippine articles imported into the United States and for United States articles imported into the Philippines by new schedules which are more liberal to the Philippines, as set forth below:

Percentages of customs duties applied

Calendar year	By the United States to imports from the Philippines		By the Philippines to imports from the United States	
	1946 agreement as extended	Revised agreement	1946 agreement as extended	Revised agreement
	Percent	*Percent*	*Percent*	*Percent*
1956	15	5	15	25
1957	20	5	20	25
1958	25	5	25	25
1959	30	10	30	50
1960	35	10	35	50
1961	40	10	40	50
1962	45	20	45	75
1963	50	20	50	75
1964	55	20	55	75
1965	60	40	60	90
1966	65	40	65	90
1967	70	40	70	90
1968	75	60	75	90
1969	80	60	80	90
1970	85	60	85	90
1971	90	80	90	90
1972	95	80	95	90
1973	100	80	100	90
1974	100	100	100	100

The Philippines undertakes to eliminate the present 17-percent tax on sales of foreign exchange and to replace this tax with a temporary special import levy, exempt from the preferences applicable to United States articles, which levy will be progressively reduced at the rate of 10 percent per year, beginning in the calendar year 1957. Provisions are included for the suspension of this schedule of reduction in the event Philippine revenues in any calendar year from tariffs on United States goods and from the temporary special import levy on United States goods fall below the proceeds of the foreign-exchange tax on payments for United States goods in the calendar year 1955.

Discussion: Modification of the tariff relations of the two countries so as to give the greatest possible impetus to the lagging Philippine economy was the most urgent objective of the Philippines in requesting revision of the 1946 agreement. The Philippine Economic Mission stated that free entry for American goods entering the Philippines had prevented the development of Philippine industry and had deprived the Philippine Government of revenues vitally needed for the economic development of the country. It argued that although the reciprocal preferences were intended to be equally advantageous to both countries, the Philippines for the first few years after the war had been unable to make much use of their privilege in the American market because of the havoc which the war had caused to their productive facilities, whereas American goods, and especially nonessentials, had poured into the Philippines during the first 5 years of independence. To correct this state of affairs the mission proposed a selective free-trade arrangement whereby free entry on all United States imports from the Philippines would continue through 1970 and rapidly disappear between that date and the expiration of the agreement, while free entry into the Philippines would continue to be extended through 1970 to selected American articles which were essential to Philippine needs and the remainder of American articles (constituting roughly two-thirds of the total) would become immediately subject to full Philippine duties. Revision of article I on any such basis was rejected by the United States delegation on several grounds, including the difficulty of separating American exports to the Philippines into two categories, one to be greatly benefited and the other to be greatly penalized. It was made clear that any change in this part of the agreement would have to be on a general basis. The preference schedules that were finally agreed to, as set forth above, represented the result of gradually working the Filipinos away from the extreme demands with which they began.

It is the general opinion of the United States negotiators that unless substantial satisfaction, such as the recommended modification, is given to the Philippines on the question of tariff preferences, and particularly on Philippine preferences in the United States, there is a real possibility that the Philippine Government will decide to give notice of termination of the 1946 agreement.

In return for these tariff modifications the United States delegation insisted on and obtained the undertaking described above with respect to elimination of the 17 percent exchange tax. Much of the sacrifice that will be entailed from 1957 to 1966 in meeting the higher rates of the Philippine tariff, under the reduction of preferences recommended, will be compensated by the decline in the temporary special import tax that will replace the exchange tax. A further advantage of this provision is that the exchange tax on invisibles will disappear as soon as the revision is adopted, a fact which should be generally encouraging to the establishment of new American investments in the Philippines as well as a material gain for existing investments. The disappearance of the exchange tax will at the same time remove a discrimination against American shipping which has been subject to this tax while competing air carriers have been exempt from it.

Article II

Recommendations: Amend paragraph 1 to delete any reference to rice (item C of schedule) and to remove the present absolute quotas on cigars, scrap tobacco, coconut oil, and buttons (items D to G, inclusive, of schedule). Insert a statement that the present absolute quotas on Philippine raw and refined sugars shall be without prejudice to any increases which the United States Congress might allocate to the Philippines in the future. Amend paragraph 2 to provide for a new and slower schedule for the progressive decrease of the duty-free quotas on cigars, scrap tobacco, coconut oil, and buttons. For the sake of clarity divide the schedule in the 1946 agreement into two schedules to show separately the items subject to absolute quotas and those subject to tariff quotas. Delete paragraphs 3 and 4 which specify how the allocation in the Philippines of United States quotas on Philippine products is to be made.

Discussion: The recommendation for removal of the absolute quotas on cigars, tobacco, coconut oil, and buttons is based on the following reasons: That these quotas being applicable only to the Philippines are discriminatory; that they are unnecessary for the purpose of protecting domestic industry since the United States retains the right under article III to impose quotas where there is injury or threat to a domestic industry; that the quotas on Philippine cigars and scrap tobacco are so much greater than the amounts on these articles presently exported to the United States that they are practically meaningless; and that the quota on coconut oil for the same reason is likewise without any restrictive effect on Filipino exporters and without any protective effect for American producers. A further argument, advanced by the Filipinos, was that the Philippines had been unable, because of the time required to rehabilitate their export industries, to take much advantage of the quotas in the early years following

independence. Rice has been deleted from the quota list altogether for the reason that the Philippines has been and for some time will probably continue to be an importer rather than an exporter of rice, and that if it should ever have a surplus rice production available for export, neighboring countries, notably Japan, offer a natural market for this product. No change was recommended with respect to the quota on cordage (item B of the 1946 schedule). The sugar quota was not modified, and the United States delegation repeatedly emphasized during the negotiation that this quota was not a limitation so far as the Philippines was concerned, but rather a privilege to share in a premium market for sugar where the Philippines would probably be unable to sell at all in free and open competition with other foreign countries.

The quantities specified in the 1946 schedule for cigars, scrap tobacco, coconut oil, and buttons (items D to G), although recommended for elimination as absolute quotas, were recommended for retention as the bases for calculating the duty-free tariff quotas on these articles. The progressive diminution of these duty-free quotas was slackened so that the products subject thereto might receive a benefit comparable to the slower application of United States customs duties to Philippine articles as recommended under article I, and the rates for the disappearance of the United States tariff preferences will be seen to be the same as the rates for the disappearance of the United States tariff quotas.

The Filipinos were insistent upon the elimination of the provisions specifying how United States quotas were to be allocated among the several producers in the Philippines. They felt that these provisions were an infringement of Philippine rights, and they considered also that the continued maintenance of the original quotas tended to arrest development in the respective industries by discriminating against new producers. The United States delegation reached the conclusion that these allocations had served their original purpose which was to facilitate the recovery of firms whose businesses had been destroyed by the war. It found that the American interests in these several industries were not so great as to warrant such special protection, particularly since they enjoyed general protection under other provisions of the agreement. No objection whatever to the elimination of these allocation provisions has come to the attention of the United States delegation.

Article III

Recommendations: Make reciprocal provision for the establishment of quantitative restrictions on imports to protect domestic industries from injurious competition and to safeguard monetary reserves.

Discussion: Article III of the 1946 agreement permits the United States to impose quantitative restrictions on imports from the Philippines for the protection of domestic industry, but it says nothing about the establishment of import quotas by the Philippines, either for protective or for any other reasons. Whereas the United States has found no occasion to utilize its power under this article, the Philippines has imposed numerous quantitative import restrictions, some amounting to absolute prohibitions on the importation of products of the United States. The introduction of the new reciprocal provisions should therefore give American trade a measure of protection which it has not had under the existing agreement. The article attempts to define the size of quotas which may be imposed for protective purposes and to insure the admission of at least token quantities of any commodity to protect regular channels of trade. It defines also in general terms the circumstances under which quotas may be imposed for balance of payments reasons. There is a consultation provision which should discourage arbitrary or precipitate action. This article is considered by the United States delegation as an important improvement in the agreement from the standpoint of the United States. Had there been such a provision in the original agreement, the Philippines would not have been free to adopt drastic limitations on imports of American tobacco for the purpose of protecting domestic industry.

Article IV

Recommendation: Delete paragraph 3 prohibiting the imposition of an export tax by either country upon products which it exports to the other.

Discussion: In its urgent need to raise additional revenues the Philippine Government wishes to be free to impose export taxes if it sees fit. Since the United States does not attempt to put a prohibition on the use of export taxes on other countries with which it does business, no justification is seen for retaining the prohibition in the Philippine agreement. The United States delegation has, however, pointed out the danger to the Philippines from an abuse of this power.

Article V

Recommendation:

1. Delete the entire article on currency and exchange as it appears in the 1946 agreement.

2. Insert in this place a new article V whereby the Philippines undertakes to enact legislation to complement that which was passed in the last session of the United States Congress to facilitate the reciprocal entry of traders.

Discussion: From the outset of the negotiations the Philippine Economic Mission laid stress on the need to eliminate the provision of the 1946 agreement whereby the Philippines had to get the agreement of the President of the United States to change the value of its currency or to impose controls on the transfer of funds to the United States. It maintained that this was an infringement of the right of the Philippines as a sovereign nation, and insisted on complete elimination of the article. The United States delegation endeavored to substitute for the old article reciprocal provisions with respect to exchange restrictions comparable to those used in recent treaties of friendship, commerce, and navigation to which the United States is a party, but the Philippine Mission claimed that as a member in good standing of the International Monetary Fund, the Philippines was already making all of the commitments in this field which it was willing to make. The sentiment of American business, as ascertained in the public hearings which were held and in the briefs which were submitted to the United States delegation, indicated a general willingness to see this article deleted and no strong objection thereto from any business quarter.

The new article V with respect to treaty merchant status was inserted at the request of the United States delegation to make sure that the Philippines would carry through on their side the legislation necessary to permit the two countries to enter into an agreement to facilitate the entry of traders from each country into the other. The absence of such an agreement, and indeed of any agreement with respect to immigration, is a source of genuine anxiety to Americans in the Philippines today. Action taken prior to signature of the agreement by the Republic of the Philippines with respect to proposed article V will be reflected in modification of that article, as permitted under section 203 of the proposed authorizing legislation for the revised trade agreement. Thus, if the necessary legislative and executive actions are taken by the Philippine Congress, provisions on entry of traders could, if desired, be incorporated into the revised trade agreement as article V, or, if a separate agreement on this subject is desired, the proposed new article could be deleted.

Article VI

Recommendation: Article VI in the original agreement related to immigration, and its provisions have now expired. This subject is treated in article V of the recommended revision. Article VII of the 1946 agreement, concerning parity rights, therefore, becomes article VI in the revised agreement. The recommended modifications of the parity article would delete the obsolete provisions, including part of paragraph 1 and all of paragraph 2, mutualize the rights provided in paragraph 1 with respect to the exploitation of natural resources and the operation of public utilities, and specify the reservations which the United States must make to protect existing Federal legislation and the constitutions and laws of the States, which reservations would also be mutualized.

Discussion: The Philippines has long resented the parity provisions of the 1946 agreement as an infringement of their sovereign rights, since no corresponding rights were granted in the agreement to Filipinos in the United States. The Philippine Economic Mission requested the complete termination of these provisions unless a satisfactory mutualizing formula could be found, and during the negotiations it was clear that the mission would have preferred the former. The United States delegation declined to consider termination of parity, which was regarded by American business as perhaps the most important benefit which the United States gained through the agreement. To mutualize the provisions, the reservations had to be spelled out in detail, and this has resulted in some rather complicated language. The purpose of the revision is to protect American rights already acquired under the 1946 agreement, and to continue parity rights for the duration of the agreement to the extent that the United States and the individual States of the United States are prepared to grant similar rights to Filipinos. So strongly did the Philippine mission feel about the necessity to mutualize this provision in every respect that had completely mutualizing language not been found, it is doubtful whether the parity article could have been retained.

Article VII

Recommendation: Insert here a new article providing for reciprocal nondiscrimination by either party against the citizens or enterprises of the other with respect to engaging in business activities, subject to the reservation of the constitutions and laws of the States of the United States and the mutualization of these reservations.

Discussion: The 1946 agreement contained no clear statement of rights of Americans to engage in business enterprises in the Philippines other than those referred to in the parity article, but there was a penalty provision (par. 4 of art. X), unilateral and regarded by the Philippines as harsh, whereby the President of the United States could suspend the agreement in whole or in part if the Philippines discriminated in any way against Americans or American companies. The recommendation in the final act provides for reciprocal national treatment with respect to engaging in business activities, subject to the necessary reservation of the constitutions and laws of the several States, which reservation is also mutualized. The rights of Americans already engaged in business in the Philippines are protected.

Article VIII

Recommendation: The substance of old article VIII is transferred to article IX and a new article is inserted here containing security exceptions for which there was no provision in the 1946 agreement.

Discussion: The new article contains the usual type of security exceptions included in international agreements to which the United States is a party.

Article IX

Recommendation: This article as revised contains the amended substance of article VIII of the original text. The last clause of paragraph 1 of old article VIII is deleted as obsolete. All of paragraph 2 after the first sentence relates to the allocation of quotas and is deleted in view of the recommendation under article II that all provisions for the allocation of quotas be eliminated. All of paragraph 3 is deleted as now obsolete since the work of the Philippine War Damage Commission is completed and the Commission is no longer in existence. There remain only the general provisions of paragraphs 1 and 2 with respect to implementation by the two parties of the provisions of the agreement.

Article X

Recommendation: The subject of old article IX (consultation) has been transferred to article X and amended to provide for a consultation not later than July 1, 1971, on joint problems which may arise as a result or in anticipation of the termination of the agreement.

Discussion: The added language is to ensure that at a reasonable length of time before the expiration of the agreement the two parties meet to consider what the situation will be after expiration. The important problems for American investment in the Philippines which will arise in connection with expiration of the agreement should not be left to last-minute consideration.

Article XI

Recommendation: The amended substance of article X of the existing agreement, with respect to termination, is transferred to article XI. Paragraphs 1 and 3 are deleted as obsolete. Paragraph 4 is deleted inasmuch as its purpose, which was to provide for nondiscriminatory treatment of American citizens and firms, has been put into positive reciprocal undertakings in the new article VII. Only paragraph 2 remains of the article. Add a new paragraph providing for entry into force of the revising agreement.

Discussion: Paragraph 4 of article X, because of its unilateral and penalizing character, was offensive to Philippine national pride and regarded by Filipinos as unjust. The Acting Secretary of Foreign Affairs referred to this provision in 1954 as intolerable. American business firms in the Philippines have felt that the provision gave them no positive security since it contained no assurance by the Philippine Government that the latter would in fact not discriminate against them, and the American Chamber of Commerce in Manila informed the United States delegation of its members' wish that this article be clarified. The meaning of "discriminating" was not defined, and while the United States Government understood this term to mean national treatment for Americans in most circumstances, theer were indications that the Government of the Philippines did not view it as necessarily requiring more than most-favored-nation treatment. The usefulness of the provision in the hands of the President of the United States in the event of Philippine discrimination was problematical, since it obviously would not be invoked except under great provocation, and the provision had in fact never been invoked.

The positive undertaking of the Philippine Government as contained in article VII of the recommended revision assures Americans in the Philippines of national treatment with respect to engaging in business activities and is a marked improvement over paragraph 4 of article X in the existing agreement. The portion of old article X that is retained in the revision, former paragraph 2, contains all of the termination provisions that are regarded as necessary. The new paragraph provides that the revising agreement shall enter into force on January 1, 1956.

Protocol

Recommendation: Add to the definitions of "United States article" and "Philippine article" as contained in paragraph 1 (e) and (f) a statement that such articles do not lose their status as such by reason of being imported from a country other than the Philippines or the United States or from an insular possession of the United States or by way of or via such a country or insular possession.

Discussion: The Philippine Government has been treating items manufactured in the United States and imported from Guam and from third countries as not entitled to the tariff preferences accorded United States articles under the 1946 agreement.

General

Certain stylistic changes and changes in references or citations where appropriate are also included in the proposed revising agreement.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, for the week of May 9, 1955, which recalls the ending of the European war 10 years ago:

KEENOTES

(By Representative ELIZABETH KEE)

Do you remember your thoughts on that miraculous day 10 years ago when the word came flashing through that the war in Europe had ended? Were you among those who breathed a prayer of thanks to Almighty God, and felt utopia had arrived? Or were your thoughts—happy in the victory but tinged still with fear—turned rather to the Pacific?

It is hard now to recapture the feeling of that moment when we learned of Nazi Germany's surrender. It was one of the great climactic moments of life.

It was also a moment for dreams—dreams of reunited families, of renewed ties, of doing together many things long delayed. It was a time, too, for dreams of a perfect world.

The term "postwar world" was a phrase which meant to each of us the achievement of every goal, the realization of every dream, the accomplishment of a durable peace in which people everywhere would be free and content.

Of course, no such perfect world has come into being. Life still has many heartbreaks and private tragedies; life still has the ever-present threat of war—of a more horrible kind of war than we had even imagined possible just 10 years ago.

The United Nations, to which we were going to assign the responsibility for keeping the peace and making it into that dreamed-of reality, has rather stumbled along and muddled along. East and West are divided, armed camps nervously watching one another in deepest suspicion and mistrust.

No, the dream we dreamed 10 years ago has not materialized. The human race lived through the kind of ordeal in that war which should have cleansed the soul of mankind—but, alas, we have retained our contrary and oh-so-human characteristics. We have failed to live up to dreams we fashioned for ourselves. We wanted to wish our way to world peace.

But let us look, too, at the other side of the coin. Ten years ago we won the right to try to establish a basis for enduring world peace. We brought liberation to vast areas of the earth—liberation from dictatorship and tyranny and oppression. True, there are still vast areas which are not free.

But we are free to keep working for their freedom. And we shall never be deterred from that goal. For in its achievement lies, finally, the realization of all of our own dreams of that perfect world we thought 10 years ago was then just a matter of days, or weeks, or months—at most just a few years—away.

Do you remember?

The 100th Anniversary of Louisiana's State Board of Health

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. THOMPSON of Louisiana. Mr. Speaker, the past 100 years have been memorable ones for Louisiana in the field of health. All of us—all the American people—are, in a very real sense, reaping the benefits of the advanced thinking and courageous pioneering which emanated from Louisiana on March 15, 1855. For on that date the first State board of health in this country was authorized.

The story of the development of public health administration in Louisiana from its beginning is a fascinating one, shot through with the threads of our national history—civil war, reconstruction, and the emergence of modern America as a scientific leader. A mere fragmentary historical note will serve to pay incomplete tribute to the "giants that walked the land" in those pioneer days.

Since the early struggles of Louisiana are largely to be read in the flow of events which shaped the growth of the city of New Orleans, it is to its history we must turn. Its strategic location at the foot of the Mississippi River and as a great port of entry gave rise to one of the major events in United States history—the Louisiana Purchase.

In the shaping of its own destiny, the location of New Orleans greatly favoring the recurrence of those "malignant, pestilential, and infectious diseases" which ravaged its population down to the 20th century, was most important. And as the growing trade brought to the city and State a constantly increasing and fluctuating population, the question of disease and adequate provisions for treatment and control were the major

health problems which faced the new State.

From 1793 to 1901 New Orleans is reported to have lost 41,348 inhabitants from yellow fever alone. Lack of scientific knowledge regarding the cause of this dread scourge down to the 20th century was one reason for its relentless recurrence. It was the disastrous yellow-fever epidemics of 1853 and 1854 in Louisiana which prompted a small band of pioneers to set up a bold experiment—to establish a board of health which would be responsible for the protection of the entire State. This was only 5 years after the publication of one of the most remarkable documents in the history of public health—the Shattuck report of the Massachusetts Sanitary Commission. This document recommended many public health duties which should be undertaken by the State, but which for those days, were practically revolutionary. Many of its wise recommendations, especially those pertaining to quarantine measures, were incorporated in Louisiana's public health act 336 of 1855.

Quarantine was not the only duty of the Board. Its broader duties are stated in section 6 of the act which provides:

The Board of Health shall have power to remove, or cause to be removed, any substance which they may deem detrimental to the health of the city of New Orleans, and the Commissioners of Streets shall execute their orders, whenever not in conflict with the ordinances of the city or the laws of the State; to pass and enforce sanitary ordinances for the city, provided the same are approved by the council and published as city ordinances; and impose additional duties to officers appointed under this act; to issue warrants to any constable, police officer, or sheriff in the State, to apprehend and remove such person or persons as cannot be otherwise subjected to the provisions of this act, or who shall have violated the same, and whenever it shall be necessary to do so, to issue their warrants to the sheriff of the city or parish where any vessel may be, having violated the provisions of this act, commanding him to remove said vessel at the quarantine grounds, and arrest the officers thereof.

Nearly 20 years were to elapse before other States followed suit and established State boards of health. In 1869 Massachusetts established what historians usually credit the first permanent State board of health. It must be remembered that Louisiana was vitally involved in the turmoil of the Civil War and Reconstruction periods, so that for a very brief period during the 1860's, records for the Louisiana State Board of Health are incompleted. There is, however, a recent article which carefully documents the continuity and permanency of the health board established in 1855. According to this article, published in the October, 1951 issue of the American Journal of Public Health, "at no time from 1855 on was the State of Louisiana without a law requiring the establishment of a State board of health, nor was the State without such a board of health for any appreciable period that might be considered as a gap in its continuity. The year 1898, which has sometimes been given as the date when the Louisiana State Board of Health was established, is really the date when a more comprehensive act was passed to include all the provisions for public health recommended by most of the previous boards in the 42-year period beginning with the tenure of the first State health officer, Dr. A. Forster Axson.

From 1898 on, the Louisiana State Board of Health has continued to build on the foundation laid in 1855. The 20th century brought an avalanche of new scientific knowledge to the field of public health. It provided also a great impetus to the Louisiana State Board of Health, to take advantage of the newly discovered ways of preventing disease and improving health.

The concepts of public health as we know them today have their roots, therefore, in the act of 1855, establishing State governmental responsibility for the health protection of Louisiana citizens. The success of this principle has demonstrated that State and local planning is the only foundation on which we can build toward our national health goals. Progress at the national level depends on action by the people in individual communities throughout the Nation; on their initiative, and the urgency of their demand for better health. In this light, it is not an exaggeration to pay tribute to the "giants that walked the land" in Louisiana in 1855.

The Heritage of Schiller

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the 150th anniversary of the death of Johann Christoph Friedrich von Schiller, great German poet and author of some of the world's greatest literature, including the immortal story of William Tell:

THE HERITAGE OF SCHILLER

The burden of my message on the 150th anniversary of the death of Johann Christoph Friedrich von Schiller is that in this genius we have a deeply German poet with a universal ideal. The ideal, nurtured in the German milieu of his time, was a savage love of liberty. No nation has ever been without its quota of tyranny, bigotry, and stupidity, not even the most enlightened at the peak of its enlightenment. This perfection is as rare of achievement in nations as it is in individuals. And tyranny was the target at which this brilliant poet leveled the wit, the insight, and the skill of his articulateness. He cut the tyrant and tyranny to pieces with language that spoke from the influences of German culture and that expressed qualities inside the soul of the German people. In days like these, heavy with the bitter remembrance of recent evil, this fundamental trait in the people of Germany is worthy of emphasis.

For it is as impossible to think of Schiller without thinking of Germany, as it is to think of Shakespeare without thinking of England. Or Homer without thinking of the ancient Greeks. Or Racine without thinking of France. Or Walt Whitman without thinking of America. If I had to say what do I think is Schiller's greatest service to the German people I would say it is his representation to the German people themselves, and his representation to the world of the noblest characteristics in the German character. He did it through his poetry and through his dramas. It is what I call the noblest trait which is embodied in the word "liberty." And it is his accent on liberty which, in my judgment, gives his lifework a universal ideal. For liberty has, since the beginning of man, been the goal for which man strove most mightily.

It is, of course, an interesting speculation—but only a speculation—to judge how the thinking of Schiller, getting its roots from the climate of the Germany of his time, influenced those Germans who, coming to this country, have enshrined themselves in American history. Or was it not Schiller per se, but the atmosphere that was German and influenced Schiller, which also influenced those Germans who, emigrating to America, did so much to make America great? Either way, it seems to me, the evidence should help us to dampen the fires of postwar acrimony in our own time, and build up in us that "malice toward none, and charity for all" which is the better side of civilized behavior.

Schiller is hardly a name too well known in America. But that cannot alter the fact that what he wrote not only fertilized freedom of thought everywhere, but may, indirectly, have produced profound results for the forward march of the forces of freedom. Until Schiller made of the story of William Tell, for example, the great legend that it has become it was only a fragment of the forgotten history of the Swiss and the Austrians. Today wherever almost any language is spoken the epic of William Tell is the story, on the highest dramatic plane, of man's intrepid struggle to be free. It is a part, in fact, of the universal literature of mankind. We, and no other people, except his own, can claim Schiller, for he is a German of the Germans. But I venture to guess that God—who, we have been told, moves in mysterious ways His wonders to perform—had in mind the freedom not only of Germany, but of all mankind when He gave us this universal genius as His gift. In that sense Schiller, who died 150 years ago, lives forever and for all of us.

Polish Constitution of the 3d of May

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. KLUCZYNSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a resolution adopted May 1, 1955, at the Third of May Polish Constitution anniversary celebration held in Humboldt Park, in Chicago, Ill., at the foot of the Kosciusko Monument.

RESOLUTION ADOPTED MAY 1, 1955, AT THE 3D OF MAY POLISH CONSTITUTION ANNIVERSARY CELEBRATION IN CHICAGO, ILL.

We American citizens of Polish ancestry, assembled in Humboldt Park, in Chicago, Ill., at the foot of the Kosciusko Monument, the hero of the battles for the independence of

Poland and the United States, to honor the memory of the adoption of the Constitution of the Third of May and its distinguished authors, declare:

1. Americans of Polish ancestry have time and time again demonstrated their unquestioned loyalty and devotion to the institutions and traditions of America and are ever ready to defend them.

2. The Polish Nation, as shown by the Constitution of the Third of May, has always been a champion of freedom and liberty for all the people.

3. During World War II America and Poland were comrades in arms in the battle to preserve the liberties of nations against ruthless aggression, and Poland remained throughout the war the most faithful ally of the peoples of the West.

4. We most solemnly condemn the betrayal of the people of Poland at Teheran and Yalta and their surrender to the domination of communistic Soviet Russia.

We further declare that American foreign policy should be based upon the spirit of our Founding Fathers as fully expressed in the Declaration of Independence, and the Constitution of the United States.

In making the foregoing declarations, we demand:

(1) The repudiation of the infamous and unjust Yalta pact by the Senate of the United States.

(2) The immediate closing of all Communist embassies which are now used primarily as espionage centers and are a threat to our national security.

(3) A determined, unwavering stand in all negotiations with the Communists in the Far East.

(4) An unequivocal declaration that the United States does not recognize the seizure of Polish territory nor the destruction of Polish sovereignty with the right to free unfettered self-expression as a nation and a people.

We appeal to all Americans to join in the battle to destroy materialistic communism and to reassert the dignity of individual man sought by humanity from the beginning of time.

Long live the United States.

Long live restored, integral, and independent Poland.

CHARLES ROZMAREK,
Chairman.
MICHAEL MOKRZYCKI,
Secretary.

Centennial of Organized Public Health in Louisiana

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. WILLIS. Mr. Speaker, the public-health program of the United States has saved thousands of lives and has made happier and healthier living for millions. I am proud that my home State of Louisiana has been a pioneer in this great program. This year marks the centennial anniversary of organized public health in Louisiana, and this significant event is being commemorated in connection with the annual meeting of the southern branch of the American Public Health Association with which the Louisiana Public Health Association is affiliated. Public-health workers from 16 Southern States, the District of Columbia, and Latin America are gathered in New Ordeans today for sessions continuing 4 days.

While there is some difference of opinion concerning the first official State board of health in this country, the evidence is that the first Louisiana State board of health was established in 1855 and this has become an accepted fact.

I am glad of the opportunity to call to the attention of my colleagues, the long and important part Louisiana has had in this wonderful work.

The Business Recovery

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. SPRINGER. Mr. Speaker, appended herewith is an editorial of the New York Times as of April 28 giving a further picture of the business recovery that has been made in this country in the past few months. It is a credit to the New York Times that it has followed this matter as closely as it has and has been frank in its attempt to point this out to its readers. So much was said last year about the condition of the country in election year, but it appears that very little is being said this year to reassure the people of the work the Eisenhower administration has been doing to keep the country on a high economic standard.

The editorial follows:

THE BUSINESS RECOVERY

When a country has definitely put the trough of a recession behind it and started to move upward the business statistics sometimes give the appearance of being better than they actually are. This is attributable to our habit of comparing the most recent figures with the comparable figure of the previous year. It is probably no great surprise to most persons, therefore, that the Department of Commerce in its current Monthly Survey reports that 56 percent of our durable goods concerns and 65 percent of our nondurable goods producers recorded increased sales for January-February, 1955, as compared with the corresponding 2 months of 1954.

What makes the current figures on the business situation particularly encouraging is not that they show things to be better than a year ago, but that (1) the American economy is now back at a level close to that of 1953, the best year in history, and that (2) the preponderance of evidence indicates that in the absence of unforeseeable developments the trend is going to continue upward for some time to come.

"The expansion of disposable income and the associated broadening of consumer demand," notes the Office of Business Economics of the Commerce Department, "have provided the main channel through which the recovery from the 1954 low point has spread." And it adds: "Since last summer, according to the survey, manufacturing payrolls have advanced 9 percent, on a seasonally adjusted basis, with larger employment, additional work hours and higher average hourly earnings contributing to the rise in roughly equal measure."

The Nation's gross national product touched its all-time high in the second quarter of 1953, when it was running at an annual rate of $369.9 billions. That year set an all-time record as a whole at $364.9 billions, but by the last quarter the indicated annual rate had receded to $360.5 billions. The low point of the readjustment stemming from the cessation of hostilities in the Far East was touched in the first quarter of 1954, at $355.8 billions. Thereafter it flattened out for the succeeding two quarters at $356 billions.

With the fourth quarter the gross national product showed that not only had the recession been halted, but that the expansion process had begun. In that quarter the gross national product, at $362 billions, was not only $6.5 billions above the previous quarter, but for the first time since the readjustment got underway exceeded the corresponding quarter of the year before. But in the first quarter of 1955 this figure, which represents total production of goods and services, had risen by another $7 billions. At its new level of $369 billions it not only topped the corresponding figure for the year prevoius; it exceeded every quarterly mark in 1953 except the record second quarter of that year, and was less than a billion short of even that historic mark.

That the recovery we are now witnessing is not fluff, but goes deep into the capital goods industries, was testified to earlier this week in figures published by the machine-tool industry, whose new orders reached a new 18-month high in March. The index of such orders, regarded as one of the best barometers we have of the industrial outlook, stood 26 percent above the same month a year ago. Taken with the McGraw-Hill survey of capital expenditures planned for this year and next, this goes far to confirm the growing suspicion that high level business activity may be with us for quite a while.

Keep Chelsea Naval Hospital Opened

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolutions memorializing Congress to prevent the closing of the Chelsea Naval Hospital, Chelsea, Mass.:

Resolutions memorializing Congress to prevent the closing of the Chelsea Naval Hospital in Chelsea

Whereas it is proposed to close the Chelsea Naval Hospital; and

Whereas the facilities at the Chelsea Naval Hospital have been invaluable to members of the Armed Forces and their dependents for over 10 years; and

Whereas the closing of the hospital would be detrimental to many of the retired naval personnel and would also deprive the dependents of such men and others in active service of a privilege granted to them by Congress; and

Whereas the closing of the Chelsea Naval Hospital at this time would be an uneconomic action: Therefore be it

Resolved, That the House of Representatives of the General Court of Massachusetts urgently requests that the Federal Government take such steps as may be necessary to prevent the closing of the Chelsea Naval Hospital; and be it further

Resolved, That a copy of these resolutions be sent by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of

Congress, and to each Member thereof from this Commonwealth.

House of representatives, May 2, 1955, adopted.

LAWRENCE R. GROVE,
Clerk.

A true copy. Attest:

[SEAL] EDWARD J. CRONIN,
Secretary of the Commonwealth.

West Virginia's Daughter of the Year

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BYRD. Mr. Speaker, in these busy days, it is not perhaps amiss to think at least briefly about some of the finer, and, as we might say, sweeter things of life. During the past weekend, the thoughts of each of us turned again to remember that person who, in almost every life, represents the epitome of affection and loyalty and love, and, in remembering our mothers, it was quite natural that we would also honor our wives and sisters and sweethearts, because a man never gets so far down nor so high up in the world that some woman does not love and comfort and usually sustain him.

The faith and loyalty of woman, even to the point of blindness to our faults—beginning with our mother's love for us, including that of our sisters, and not ending with our wives—because daughters and granddaughters also enter into this delightful conspiracy—is wonderful to those of us who enjoy it. The classic oath of loyalty so familiar to us all was made, not by a man but by a woman—and then about her mother-in-law.

It was Walt Whitman who said, "A man is a great thing upon the earth, and through eternity—but every jot of the greatness of man is unfolded out of woman." Woodrow Wilson stated the same thing in a different way when he said, "No man ever amounted to a snap of the finger who was not constantly surrounded by a bevy of admiirng females." So, it is most appropriate that, at this time of the year, we should pause to pay special respect to those of the fairer sex who are Members of this House. Much could be said about the services so capably performed by the gentle ladies who serve with us, and even then it would be impossible to find words to adequately express our esteem and admiration for their quiet dignity and charm, but I should like to speak briefly of the lady Member of my own delegation, Mrs. ELIZABETH KEE. You will understand my inestimable pride when I inform you, Mr. Speaker, that on Saturday evening, May 7, the West Virginia Society of the District of Columbia held its annual son and daughter banquet honoring West Virginia's outstanding son and daughter of the year 1955, and Mrs. KEE was selected as our State's most distinguished daughter. She was presented with a beautiful plaque by a former Member of this House, the Honorable Jennigs Randolph, and she also received a great number of letters and telegrams from friends. Because these messages are expressive of the confidence and the high respect reposed in this great woman by all who know and love her, I am inserting some of these in the RECORD. All who were present rejoiced that one so richly deserving had gained this signal honor. It was a tribute to her record of eminent service, and a fitting reward for her stedfast devotion to her people. It was recognition of her fervent desire to help mankind. I and my fellow Members of this House join in saying that we are happy for the high privilege of serving with West Virginia's daughter of daughters, our sister, and our true friend.

MAY 7, 1955.

Mr. JOSEPH WEEDA,
President, West Virginia State Society, Washington, D. C.:

I am happy to know that the West Virginia State Society of Washington, D. C., has chosen Mrs. ELIZABETH KEE as the outstanding daughter of the year 1955 for the State of West Virginia.

This honor could not have been more worthily bestowed, as Mrs. KEE is outstanding in ability, character, and a fervent desire to serve mankind. Please convey to her my warmest congratulations and best wishes.

SAM RAYBURN,
Speaker, House of Representatives, Congress of the United States.

MAY 6, 1955.

Mr. JOSEPH WEEDA,
President, West Virginia State Society, Washington, D. C.:

ELIZABETH KEE'S colleagues on the Veterans' Affairs Committee wish to join the West Virginia State Society in paying tribute to a fine Congresswoman and a grand person. We appreciate the contribution which she is making to our committee's work. West Virginia must be proud of her illustrious daughter.

OLIN E. TEAGUE,
Chairman, Committee on Veterans' Affairs, United States House of Representatives.

WASHINGTON, D. C., *May 7, 1955.*

Mr. JOSEPH WEEDA,
President, West Virginia State Society, Washington, D. C.:

I have learned with pleasure that you have designated the Honorable ELIZABETH KEE as West Virginia's outstanding daughter for 1955. We who work with her each day and know her well realize how richly she deserves this recognition. She has won the affection and respect of her colleagues in the Congress for her gifted and devoted service to her State and Nation. My warm congratulations to you and to her on this happy occasion.

GRACIE PFOST,
Member of Congress, from Idaho.

MAY 7, 1955.

The Honorable ELIZABETH KEE,
Care of Mr. Joe Weeda, President, West Virginia Society, Washington, D. C.:

Congratulations and my very best wishes on this glorious occasion. The West Virginia Society has shown excellent judgment in selecting you as their daughter of the year. Your friendship is precious to all who know you and this fine tribute is righly deserved.

VERA BUCHANAN,
Member of Congress.

WASHINGTON, D. C., *May 7, 1955.*

Hon. ELIZABETH KEE,
Member of Congress,
Care of Mr. Joe Weeda, President, West Virginia Society, Washington, D. C.:

West Virginia is no prouder of you tonight than all of us in the House who consider it an honor and pleasure to serve with you. Congratulations.

LEONOR K. SULLIVAN,
Third District, Missouri.

WASHINGTON, D. C., *May 6, 1955.*

Hon. JOSEPH WEEDA:

Mrs. Kilgore and I deeply regret it will be impossible for us to attend the West Virginia Society's son and daughter banquet due to the fact that we will be out of town. Please extend our heartiest congratulations to Mrs. KEE and Mr. Reuther upon their receipt of this well-deserved honor. The State of West Virginia can well be proud of these outstanding citizens.

Senator H. M. KILGORE.

MAY 4, 1955.

Mr. JOSEPH WEEDA,
President, West Virginia Society, Washington, D. C.:

Regret very much unable to be present for affair honoring Mrs. KEE and Mr. Reuther. Please extend to Mrs. KEE my sincerest congratulations for being chosen daughter of the year. It is a deserved honor. Her hometown of Bluefield is extremely proud of Mrs. KEE as West Virginia's first and only Congresswoman. Best wishes to all for a successful dinner.

A. S. BARKSDALE, Jr.,
Editor, Sunset News, Bluefield, W. Va.

WASHINGTON, D. C., *May 7, 1955.*

Mr. JOSEPH WEEDA,
President, West Virginia Society, Washington, D. C.:

The West Virginia Society is honoring the Honorable ELIZABETH KEE, Member of Congress from West Virginia, as the outstanding woman of the year. I fully expected to attend this dinner to join with others in paying respect to this very distinguished woman, who, in my judgment, is worthy of any honor that might be conferred upon her. However, circumstances beyond my control prevent me from doing so. Her services in the Congress and her dignified record reflect the high intelligence of the electorate from the district she represents.

West Virginia should be proud of ELIZABETH KEE and I wish to join with the officers and members of your society in extending felicitations to her. I express the fervent hope that she will continue to be blessed with good health to the end that we may indefinitely enjoy the fruits of her labors in the United States Congress.

THOMAS KENNEDY,
Vice President, United Mine Workers of America.

We salute the rule of life by which ELIZABETH KEE lives, so aptly expressed by the poet:

"How far away is the temple of fame?"
Said a youth at the dawn of the day.
He toiled and dreamed of a deathless name,
And the hours went by, and the evening came
Leaving him feeble, and old, and lame
To plod on his cheerless way.

"How far away is the temple of good?"
Said a youth at the dawn of the day.
And he strove in the spirit of brotherhood,
To help and succor as best he could.
The poor and unfortunate multitude,
In their hard and dreary way.

He was careless alike of praise and blame,
But after his work was done,
An angel of glory from heaven came,
And wrote on high his immortal name,
To proclaim this truth that the temple of fame,
And the temple of good are one.

For this is the lesson that history
Has taught since the world began;
That those whose memories never die,
But shine like stars in the human sky,
And brighter grow as the years go by,
Are the men who live for man.

Controlling Vaccine Distribution

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an article from the New York Herald Tribune of May 9, 1955. It is a column by Roscoe Drummond entitled "Controlling Vaccine Distribution." In my opinion Mr. Drummond's comments are particularly pertinent at this time. His analysis of the polio-vaccine situation is objective and penetrating and puts the entire problem into its proper perspective.

The article follows:

CONTROLLING VACCINE DISTRIBUTION
(By Roscoe Drummond)

WASHINGTON.—Because the Salk polio vaccine will remain in short supply for some time, it is evident that only the Federal Government can guarantee its equitable distribution to the States.

This problem will be with us again as soon as distribution is resumed, and the sooner it is faced the better.

Thus far there is an odd reluctance on the part of the administration to request and on the part of the Congress to initiate giving the Government the legal authority to enforce its distribution system.

The three basic facts seem to me to be these:

That the Federal Government alone can deal with the manufacturers of the new polio vaccine on a nationwide basis.

That the Federal Government alone can exercise the power to require the vaccine producers to carry through a visibly just system of allocation which will favor no State, no group, and no child.

That the objective of the Federal Government should be to act in behalf of all the States to guarantee each its proper quota, not to attempt to manage the distribution within the States.

Until supply of the Salk shots can catch up with demand anything less than a federally policed distribution leaves much to chance and to wishful thinking when the parents of the Nation deserve to know and to see that the Government is not sitting back with its fingers crossed.

President Eisenhower has endorsed in principle two aspects of Federal control of vaccine distribution. He has said that if the voluntary system of distribution—by which the producers promise to ship the vaccine in allocations recommended by the Federal Public Health Service—develops serious breaches, he would favor direct Federal control. He has said that if it developed that children, whose parents want them vaccinated, are not getting it because of inability to pay, he would recommend that the Government buy all the vaccine and guarantee its availability to all.

Federal purchase should not be necessary if the States discharge their responsibility. But there is a strong case to be made for giving the Federal Government the power to see that the manufacturers carry out a system of allocations by law, not merely by promise.

This would be no extra burden upon the manufacturers. It would mean that all producers would be more protected against a breach by any one.

This would attribute no moral opprobrium to the manufacturers who have promised to carry out the Federal allocations. No moral opprobrium attaches to the taxpayer because our tax laws have teeth in them.

Right now the medical profession, private charity, private industry, the States, and the Federal Government are joined in a war against polio. In time of war when a precious commodity is in short supply, its use has to be allocated first to where it is most needed. Only the National Government can guarantee an equitable national distribution of the Salk serum. This is why a considerable number of Senators, Republican and Democratic alike, are offering legislation to give the Government powers to allocate the vaccine in this emergency as it had to allocate steel in the war emergency.

The opposition of federally controlled distribution say that Federal control could not possibly increase the supply. Nobody said it would. It would only guarantee the most equitable distribution of limited supply. They say that Federal control would delay distribution. They offer no reason. The method of distribution would remain the same—manufacturer to the States. The difference would be that the Federal health service would get its information on distribution by right, not by sufference, and would have authority to act.

Senator ALEXANDER SMITH, Republican, of New Jersey, refers to "the splendid voluntary system that is now operating so effectively."

The truth is that we just don't know whether it is operating effectively or not. The public hasn't the facts and the Federal Government hasn't the facts. The Government is still not getting them fully or promptly from the manufacturers. This is part of the reason why something more needs to be done.

The need is temporary. Federal authority over distribution should be temporary. No permanent increment of Federal power is required or desirable.

Appropriations for the United Nations

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mrs. ST. GEORGE. Mr. Speaker, it has long been my pleasure to read our colleague, JOHN PHILLIPS, of California's, weekly newsletter. This letter is written for the Congressman's own constituents, but it has facts and figures of importance to all our people.

The last letter is of especial interest to all of us who have been told of late by certain groups that the United States has been, and is being, niggardly in its contributions to the United Nations. Nothing could be further from the truth. If the United Nations does not succeed, its lack of success can never be attributed to a lack of American money.

The above-mentioned letter follows:

I RISE TO REMARK
(By Hon. JOHN PHILLIPS, of California)

Last week I wrote a little about a current pressure campaign, being carried on by some good-hearted ladies of this country, to prevent any reductions in the appropriations for the United Nations, and its subsidiaries. I was sitting here at my Corona, wondering what to write about this week, and on my desk, right in front of me, is a slip of paper with an old Latin proverb on it: "It is easy to be generous with other people's property."

Do you suppose it is only a coincidence that this should turn up this morning? If anyone is worrying that good old Uncle Sam, the softest touch in all history, is not giving enough to the United Nations (which statement has nothing to do with the merits of the U. N. or its work) let me condense and recite our support, over the years:

The U. N. itself has received, from all members, $343,601,172; of which the United States contributed $144,238,394. Our percentage has decreased slightly, from 39.89 percent in 1946 to 33.33 percent this year.

UNESCO has received (in addition to the above, of course) $65,063,651, of which the United States of America contributed $27,191,299. In this organization, our share started at 44.03 percent in 1948 and is now 33.33 percent, as in U. N. itself.

We have contributed $21,178,928 to the World Health Organization, of a total of $50,372,225. Our percentage dropped from 38.77 percent in 1949 to a present 33.33 percent.

The FAO, about which I wrote last week, and which I want earnestly to keep from the domination of those influential members of the U. N., who have never taken a direct interest in its work and have not, up to now, supported it directly, has received a total of $49,020,000, of which the United States of America has contributed $14,905,467. Our percentage has risen, in this organization, from 25 percent in 1946 to 30 percent for the current year.

The ILO (International Labor Organization) has received $50,809,433 and of this the United States of America has given $21,339,691. The United States of America contribution increased from 17.53 percent in 1946, to 25 percent in 1955.

We contribute 25 percent of the money but the British managed to slip in that extra "u."

The International Civil Aviation Organization has had $24,129,192, of which we gave $6,941,464. Our share has increased from 11.95 percent in 1946 to 32.6 percent for 1955.

The International Telecommunications Union has received $11,399,692, and we gave $1,248,701 of that. Our share for 1955 is only 8.96 percent and this has changed very little since 1950, in which year we gave 8.04 percent.

Of course, we ought to do something about the weather, so the World Meteorological Organization has had $1,038,152, in 4 years, of which we gave $169,867. We are giving 11.45 percent this year, which is about par for that course, as we gave 12.67 percent in 1952.

I point with pride to the last of the regular organizations, the Universal Postal Union. It has received $2,669,031 and of this we gave $118,912. Those postal boys are pretty good bargainers, as any Congressman can tell you, and we are contributing this year 4.36 percent to this fund. The largest percentage was 4.63 percent in 1946.

All the above adds up to $508,212,548, of which the United States has given $228,332,723, which is not bad for a nation whose dollar has been cut in half, and which already has a per capita debt greater than any of the other contributors to the same funds. But don't go away. There are still more.

We will now take up contributions to voluntary and special programs. I only have the figures, for these programs, to include 1953. There should be 2 additional years, to have them comparable with the ones already given. The first is UNTA, the U. N. expanded program of technical assistance, about which I wrote last week, and which is now duplicating, in part, three other programs. This received, in 3 years only, $51,610,380, of which we gave $31,578,833.

The United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) which, for 2 years, was called U. N. Relief for Palestine Refugees, received, in 5 years, $156,437,753, of which we gave $109,450,000.

The U. N. International Children's Fund (UNICEF) has had $163,471,042 in 7 years, not including the 2 recent years, for which I do not have figures, and of this the United States of America apparently gave $54,620,834.

The U. N. Korean Reconstruction Agency (UNKRA) received $86,289,023 between 1950 and 1953, of which the United States of America gave $50,750,000.

The U. N. High Commissioner for Refugee Emergency Fund had $847,908, but I am unable to give the United States of America's share, because we did not begin to appropriate directly until 1954. We took the money from other appropriations.

The International Refugee Organization was in existence from 1947 to 1950, inclusive, or under the U. N. during that time, and received $412,691,915, of which we are shown to have paid $166,091,457.

All in all, I do not think Uncle Sam has been penurious, so the good ladies can stop worrying, and I'll end this letter with another quotation, this one from La Rochefoucauld: "What is called generosity is usually only the vanity of giving; we enjoy the vanity more than the thing given," or perhaps, more simply, just "The gift without the giver is bare."

Rumania's Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FORAND. Mr. Speaker, 78 years ago on May 10 the Nation of Rumania threw off the yoke of Turkish subjugation and proclaimed its independence. The people cherished their freedom, and during the First World War took their place at the side of the democracies in the struggle against the Central Powers. Unhappily, the chain of events of the Second World War forced a new tyranny upon the Rumanian people, the tyranny of Soviet communism.

Under their Communist overlords, the people of Rumania today are in a state of enslavement. Only "reliable" Communists are permitted to leave the country and travel, even within the country, is severely restricted. Books have been purged, and the press, the movies, and the schools are forced to become channels of Communist propaganda. Religious freedom is denied, and hundreds of priests have been thrown into prisons or concentration camps because they opposed the atheistic regime.

The ordeal of the Rumanian people under the ruthless foreign occupation of Soviet communism, their economic exploitation, and their deprivation of elemental human rights and liberties are now a matter of record. On the other hand, through Soviet political and military pressure, Rumania has been transformed, against the will of its people, into a satellite base for the aggressive schemes of Moscow.

The Soviet Union will not permit the open celebration of the 10th of May in Rumania because this day stands for the liberty and justice which the Communist conspiracy is intent upon destroying. Nevertheless, loyal Rumanians will never reconcile themselves to the loss of the liberty which their forefathers died to obtain. To them, May 10 will be a time of solemn dedication to the rebirth of freedom. On this day they have the assurances of the American people that their plight is not forgotten, and our prayers that freedom will be theirs once again.

A Tribute to Thomas Murdock Brooks and Floyd Jackson Boling

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. COOLEY. Mr. Speaker, on the evening of April 29, at a banquet in Siler City, N. C., I had the honor and the privilege of presenting portraits of two of my beloved friends to Chatham Hospital and to all of the people of Chatham County. These two friends made great and grand contributions to the building of modern hospital facilities in that progressive community and county. Such institutions are frequently referred to as Hill-Burton Hospitals. Actually, Mr. Speaker, while the Federal contribution was substantial and important, the hospital probably never would have been built but for the generosity of Tom Brooks and the untiring efforts of Jack Boling. Both of them gave freely of their time, talents, and fortunes. The building of this hospital proves just what can be accomplished if governments and people cooperate in trying to build better communities in which our citizens are to live. In presenting the portraits, which are wonderful works of art, I paid a brief tribute to Tom Brooks and Jack Boling, and here is what I said on that occasion:

Mr. Chairman, ladies, and gentlemen, last week I was in the ancient city of Rome, and I stood on the spot where the great Caesar was mortally wounded. I recalled the eloquent oration delivered by Mark Anthony over the body of his dead friend. In that speech, Mark Anthony said:

"The evil that men do lives after them—
The good is oft interred with their bones."

I have never been willing to agree with the sentiment expressed by that great orator. It occurs to me that exactly the opposite is true. This statement by Anthony, as he stood over the body of the mighty Caesar, has lived through the years, but, actually, the good that men do lives after them.

So it shall be with the two illustrious citizens to whom we, at this moment, pay homage. The good that they have done shall live after them.

Impulses of sincere affection and friendship inspire us as we meet here at this hour. We are not here to beautify the character, nor to exalt the lives of these beloved men, but rather, we are here to commune wtih the magnificent spirit which has guided and directed them through all the years of their lives.

Thomas Murdock Brooks and Floyd Jackson Boling have made great and grand contributions to the health, the welfare, and the happiness of the people of this community. By their lives, their labors, and the brilliant splendor of their mental exertions and dynamic and untiring efforts, they have endeared themselves to all the people among whom they have lived and labored. They have built lasting monuments in the hearts of the people of Chatham County. During every moment of their lives they have believed in the majesty of love—in the dignity of man—in the traditions and institutions of our country—and in the omnipotence of a good and gracious God.

I shall not violate the proprieties of this occasion by attempting to recapitulate, nor to review, their many magnificent achievements, but I shall attempt only to express the deep gratitude of this whole community to Tom Brooks and Jack Boling for the lives they have lived and the priceless contributions they have made to the great sum of human happiness, and to the alleviation of human suffering.

By their lives and their labors, Tom Brooks and Jack Boling have made thoroughfares of friendship in all of the highways and byways of Chatham County. Both of them in their hearts disdain and despise the "trappings of pride." Both of them are modest men. A nobility of purpose has inspired them, and prompted them to serve well the cause of humanity. They have enriched the world, and have helped to make it a better place in which to live.

Turning away from a multitude of things that distract and disturb us in the toiling hours of our daily work, we meet tonight in a beautiful spirit of friendship. We abandon for a while the vocations and avocations of both public and private life, and come here to honor these distinguished men.

THE GOOD THAT THEY HAVE DONE SHALL LIVE AFTER THEM

Their time, talents, and fortunes shall not have been given in vain. They shall enjoy the richest compensations of life. In magnanimous fashion they have given generously, and they shall reap abundantly the rewards they so richly deserve.

When I left Washington a few short hours ago, and looked from the plane window down upon that beautiful city—the Capital of our great country—the greatest Nation that ever thrived in all the tides of time—I contemplated for a moment the youth of our Nation, its vicissitudes and struggles, and I thought of its greatness. What has made this young Nation of ours so great and powerful? Surely it is not its lofty peaks and lovely lakes and beautiful countryside, nor its flourishing fields and factories—nor its soldiers, ships, and planes, and military might and power. The real greatness of America is in the moral fiber and fabric of a free and unfettered people who have cherished the altars of freedom throughout the years.

"Not gold but only men can make
A nation great and strong.
Men who for truth and honor's sake
Stand fast and suffer long.

"Brave men who work while others sleep,
Who dare while others fly.
They build a nation's pillars deep.
They lift them to the sky."

Tom Brooks and Jack Boling have helped to build their Nation's pillars deep, and they may take just pride in their achievements. For 14 long years Jack Boling has

been the beacon light and the guiding star in this community's efforts to establish and maintain the great institution of mercy which now adorns that lovely hillside out yonder. He has given freely of his valuable time, business ingenuity, and administrative ability, and as president of Chatham Hospital he has served with great devotion through all the years.

Tom Brooks, from an humble beginning, has become a great benefactor. He put his very life and labor, and a large part of a fortune, into the building of the magnificent structure—a home for the sick and the suffering, where all of the sciences and skills of modern medicine can be provided. All the people of this county owe to Tom Brooks and Jack Boling an everlasting debt of gratitude. Their lives have been a blessing and a benediction. We hope that Heaven will light their pathways, and the Lord of Mercy will bless and keep them.

The modern hospital facilities they have helped to provide, to maintain, and to operate, are unsurpassed by those in any other community in this great Commonwealth. To you, Tom and Jack, may I say that our hearts are filled with gratitude. We cherish your friendship, and salute you as two great Americans.

The lovely daughter of the retiring president, Jack Boling, will now unveil these works of art, and on behalf of the sponsors, I have the honor and the privilege of presenting these beautiful portraits to Chatham Hospital, to the people of Chatham County, and to generations yet unborn. They shall be hung in appropriate places on the walls of that great institution which they helped to build, in recognition and in remembrance of their grand and glorious efforts, and the contributions they have made. To them may I say again, may the Lord bless and keep you.

Mr. Speaker, the portraits of the great benefactors, Thomas Murdock Brooks and Floyd Jackson Boling, were painted by Miss Mabel Pugh, director of the art department of Peace College, in Raleigh, N. C. Miss Pugh is an artist of exceptional ability, and has been listed in Who's Who in American Art as well as Who's Who in the Southeast. Incidentally, she is the same artist who painted the portrait of the present chairman of the House Agriculture Committee, which was presented to the committee, as a great surprise to me, on February 10.

"Dear Lady"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LANE. Mr. Speaker, the health of a nation is contingent upon the morals of its youth. The morals of its youth is often reflected in the songs they sing. Therefore, it is heartening to note, that statistically, the clean, wholesome country and western song is now characterized as "pure Americana."

The Nation has recognized Ralph S. Peer—Peer International, New York City—as foremost contributor to this field; and now takes cognizance of his latest publication, "Dear Lady," a popular song with religious overtones, designed to combat suggestive and off-color ballads.

The colleges and universities of the Nation which have fostered "Dear Lady" in hopes of starting a new trend, welcome his leadership in furthering their cause.

Legion, and documentary, are the letters of approbation from leading educators, radio and television executives, and disk jockies of the country.

Grateful indeed, are the above mentioned, to RCA president Frank M. Folsom and Joseph R. Carlton, for the cooperation of RCA Victor.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LESINSKI. Mr. Speaker, throughout history Rumania has been a crossroad between East and West. Partly for this reason, up to the latter half of the 19th century Rumania remained divided among her neighbors for nearly 400 years and the Rumanians had to endure alien rule. During those centuries Rumania was part of the Ottoman Empire and it was ruled by the callous and corrupt agents of the sultans.

History often repeats painful experience, perhaps even more painful in view of modern aspirations. Today the Soviet Union, through its puppet government in Rumania, has followed a course of systematic enslavement of the Rumanian people. It has exercised economic abuse by its exploitation of the Rumanian economy. The economic programs applied by the Soviet Union have had a disastrous effect on Rumanian national stability. For if Rumania were able to deal with the outside world as an independent nation, it would have a much more favorable balance of trade and the Rumanian people would now be enjoying a more nearly decent standard of living.

It was on May 10, 1877, that the liberty-loving Rumanians were able to proclaim their independence. And in 1878 with the Treaty of Berlin, Rumania received recognition of their independence by other nations.

Thousands of Rumanians have been welcomed to this country and they have settled here as hardworking and loyal citizens. They have made a distinct contribution to the American way of life, and have contributed their portion in building and defending it.

But today, for more than a decade, Rumania itself has been sealed off from the free world, and some 16 million Rumanians live in what is practically a vast prison camp. There they are denied all forms of freedom and have been ordered to follow the Communist line. Democracy as we know it here has been banned, and tyrannous dictatorship is the order of the day.

We Americans whose forefathers have come from countries dominated by the Soviet dictatorship are continuing to strive to bring about the liberation of those oppressed peoples.

In my House Concurrent Resolution 120, introduced last week, May 3, I called for the condemnation of the violations committed by the Soviet Government. The resolution declares that measures should be taken to inform the peoples of the world of such violations. It states, and I quote:

> That all men should be publicly informed that the United States never acquiesced in, and overwhelmingly reprobates such distortion of the purpose of the agreements, which has resulted in the subjugation of free peoples in many lands, in the domination of a totalitarian despotism over whole nations.

The resolution asks that these broken promises by Soviet Communist leaders should be openly condemned before the eyes of the world.

It is my hope that all of us who are interested in freedom for all nations will be united in order that we may have an effective policy in this matter. Just as the spirit of freedom can never be destroyed, so the Rumanian people will never lose hope for freedom.

Rumania's National Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. ROOSEVELT. Mr. Speaker, today, May 10, is the most significant date in the history of the Rumanian nation. It is unique, in that it marks three distinct milestones on the Rumanian path to independence and nationhood. First, on May 10, 1866, Prince Carol, who was to become King Carol I, the first King of modern Rumania, arrived in the country from Germany. Then, on May 10, 1877, Rumania proclaimed its independence from Turkey. Having done so, Rumania fought for that independence with determination and skill. Her efforts were instrumental in bringing victory in the Russo-Turkish War of 1877–78 to Russia, and in the Treaty of Berlin in 1878 her independence was recognized. Finally, May 10 is celebrated as the anniversary of the unification of all Rumanian Provinces.

We wish that it were possible to salute this anniversary with a spirit of joyfulness. However, for the past 10 years, during one of the most fateful decades in all human history, the Rumanian people have not been masters in their own house. Instead a Communist dictatorship, staffed by the puppets of Moscow, and maintaining a full apparatus of terror, purports to act in the name of the Rumanian people.

This shabby illusion deceives no one. For all their secret police, their spies, for all their suppression of thought and religion, the Communists have not

crushed the spirit of the Rumanian nation. This has been evidenced by the solidarity of Rumanian farmers against the Government's policy of forced collectivization of agriculture. Today, Rumanian farmers have been reduced virtually to serfdom, but their spirit remains unimpaired. Rumanian intellectuals have faced prison and concentration camp rather than manufacture Communist art and literature to order.

It is incumbent on the United States to encourage this spirit of resistance, to continue its task of marshaling the resources of world opinion against final acquiescence in Russia's fait accompli. If we do so, we have reason to hope that Rumania may greet some not-too-distant May 10 in the spirit which it deserves.

The Anniversary of Rumanian Independence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FLOOD. Mr. Speaker, on May 10 the people of Rumania have been accustomed to celebrate their national holiday, an anniversary that includes a commemoration not only of their national independence but of their national unity as well. Rumanians all over the world cherish this day, but in the homeland the celebration cannot even be held, for today Rumanian independence is a figment of Communist propaganda, and Rumanian unity is the unity of the enslaved.

The Russian armies marched into Rumania in 1944 in their victorious campaigns against the Germans, and in 1945 the Russians, through the late Andrei Vishinsky, forced the Rumanian Government to accept Communist control. From that day to this Rumania has been in the grip of tyranny.

This tyranny proclaims that it works to benefit the Rumanian people. It exemplifies its beneficence by looting Rumania of its natural resources, particularly its oil, persecuting religion, refusing to permit emigration of people desiring to leave the country, forcing collectivization of agriculture on an unwilling peasantry, and suppressing all manifestations of a dissenting attitude in political and cultural affairs.

The Rumanian people want no such hypocritical benefactor. They know the Soviet tyranny for what it is, a regime of ruthless exploitation, maintained by terror, against the heartfelt desires of the people. They have manifested their opposition to that regime with the most remarkable courage and tenacity. Their resistance has rightfully earned them the admiration of all men who value freedom.

Within the last 2 years we have had several manifestations of that courage and tenacity. First, there was the instance of Mr. Georgescu, an American businessman of Rumanian birth. His sons were still in Rumania, and the Communist approached him with a request to spy for them, threatening death to his sons if he did not. Mr. Georgescu withstood this most cruel pressure, and in the end his sons were happily reunited with their family in this country. Then there was the seizure of the Rumanian legation in Bern, Switzerland, by a small group of inspired refugees, who chose to take this manner of demonstrating Rumanian contempt for the regime that claims to represent them. Diplomatic usage required action against them by the Swiss Government, but the lesson of their desperate act was not lost on the world.

On this May 10 Rumanians look to the United States to champion their cause. Unable to speak for themselves, they ask that our voice continue to be lifted in behalf of all oppressed peoples in the councils of nations. It is most important that this be done, for Moscow would like nothing better than to lull the conscience of the world into permanent acceptance of satellite slavery.

If we act in accordance with our historic principles, we will continue to be regarded as the champion of human liberty, and we may witness the dawn of a new day of freedom in Rumania, and in other nations now groaning under the yoke of Soviet oppression.

Father of Cowboy Shrine Tells His Dream

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. EDMONDSON. Mr. Speaker, on April 26 I called attention to the fact that the National Cowboy Hall of Fame is to be located in Oklahoma City, and on that occasion I issued a cordial invitation to every American to visit my native State.

Last Wednesday, the man who originated and put across the idea of this cowboy shrine, Mr. C. A. Reynolds, of Kansas City, went to Oklahoma to see for the first time the site for this memorial.

Under leave to extend my remarks, I should like to include an article about Mr. Reynolds which appeared in the Daily Oklahoman of May 6. It was written by that able country boy and reporter, Mr. Roy P. Stewart, who represented his newspaper here in the Nation's Capital for several years, and who himself played an important part in bringing the shrine to Oklahoma:

FATHER OF COWBOY SHRINE TELLS HIS DREAM
(By Roy P. Stewart)

It's sort of fitting that the National Cowboy Hall of Fame will be in Oklahoma because it was in Oklahoma 8 years ago that C. A. Reynolds conceived the idea of the shrine.

At that time, Mr. and Mrs. Reynolds were taking a motor trip and paused at the Will Rogers memorial at Claremore. As he walked around that excellent shrine to the great Oklahoman, whose humor was enjoyed around the world, Reynolds had quite a few thoughts.

Here was a magnificent memorial to a man who always spoke of himself as a cowboy, Reynolds mused. Everything Rogers did—everything he talked about—sooner or later got around to that cowboy label. So, in effect, the shrine was a memorial to a warm, human cowboy spirit.

Why not have a shrine somewhere in the West that would, without detracting the least from that for Rogers, be a tribute to the best representatives of that hardy breed who were part and parcel of America's historic heritage?

Reynolds, president of a major clothing manufacturing firm, tucked that idea in a clean drawer of his mental filing cabinet and for nearly 8 years he took it out periodically and studied it, along with talking to a great number of people.

At any point, he says, he would have been glad for anyone to take the idea and make it become a reality. Those to whom he talked, whether they were businessmen, rodeo hands at Cheyenne, or ranchers along the Pecos, thought he was the man to fan the spark and make a prairie fire out of it.

So he did. He got the governors of 17 Western States to become ex officio members of the board of the nonprofit foundation, and to appoint two members of the board of trusteees to make plans for the Hall of Fame. Reynolds went to Cooperstown, N. Y., to look at baseball's shrine and to other places.

The organization became a working unit, the location was decided at a recent Denver meeting, and now Reynolds, 2 months away from retirement as president of the H. D. Lee Co., is in town working with the Oklahoma committee on action plans.

He talked to the chamber of commerce board of directors Thursday, and Friday will address the public forum luncheon of the chamber in the Persian room of the Skirvin Tower. A small statured, likable fellow, there is something else about Reynolds you ought to know.

He is a frustrated rancher himself. He would like to wear a pair of high-heeled boots but he wouldn't wear them—and hasn't—because he has never been in a business in which boot wearing was an accepted and integral part of his costume.

Born in Ohio, son of a United Brethren minister who moved to Kansas when the boy was a year old, Reynolds homesteaded on some land in Colorado when he was old enough. He meant to be a rancher. But it took money to live on the land and money to buy cattle. He worked for day wages part of the time then got a job selling Lee clothing, meanwhile proving up his homestead.

It isn't his fault that he didn't make money with which to buy cattle—he made the money all right but before he knew what was happening to his ranch ideas, he was president of the company and still no rancher, although he still owned the Colorado land and even added to it.

Perhaps from his minister father, Reynolds inherited some evangelical zeal, although in his case it takes the part now, publicly, of seeing his dream of a national cowboy shrine become a reality. From taking a large part of his time and quite a bit of his money the past 2½ years, it will take more time in the future.

He sees a magnificent building on the site out on the expressway, a building starting perhaps in a modest way but planned so additions in the future will enhance it, not detract from its styling. He sees a place that will belong—not just to Oklahoma City—but to the Nation, in which the best of the colorful saga of American history can be preserved.

Mining Claims on National Forests

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. COOLEY. Mr. Speaker, for several years past the Committee on Agriculture has been working diligently on a problem of great concern in the field of natural resources—the problem of harmonizing the search for and development of the minerals and mining values in our national forests with the other values such as timber production, grazing, watershed protection, recreation, and wildlife development—which are also of great importance. Our efforts to solve this complicated and knotty problem were spurred on by the fact that over the years in the neighborhood of 100,000 mining claims have been filed in the national forests and without some change in the law these claims may continue into perpetuity tying up valuable timber resources and denying access to the areas covered by the claim for other public or conservation purposes.

Many of these claims are valid, having been filed by mining prospectors in a legitimate effort to discover and develop valuable minerals. Many of them, on the other hand, are clearly claims which have been filed for some other purpose than mining, usually with the objective of obtaining presumptive title in the surface of the land for some personal or commercial use entirely unassociated with mineral development.

Our study of this problem as a committee began as early as 1950 and resulted in the introduction by me in the 82d Congress on May 27, 1952, of H. R. 7023, the first comprehensive bill on this subject.

Following the introduction of that bill the committee continued its study of this problem assiduously. Conferences and meetings were held with officials of the Forest Service, with the mining industry, the lumber industry, with representatives of conservation and wildlife groups, and with other elements having a direct interest in this matter.

Our bill was revised and improved several times as the result of this work and in the 83d Congress an improved version of the bill was introduced by Congressman CLIFFORD HOPE, the then chairman of the committee.

This bill was still further improved during the 83d Congress and early in the 84th Congress improved and amended versions were introduced both by Mr. HOPE (H. R. 110) and by me (H. R. 3414).

In the meantime, organizations outside the Congress, notably the American Forestry Association, had followed the leadership of this committee and were making their own efforts to work out a bill which would present an acceptable solution to this difficult problem.

Within the past few weeks, I am happy to report, these efforts have met with apparent success and there has been worked out a bill which apparently will take care of the major part of the problem involved. It is reported to be acceptable to the mining industry, to those primarily interested in conservation, and to officials of the Government responsible for the administration of the mining laws, the national forests, and the public lands. In the hope that this bill is the solution toward which we have been working for the past 5 years, I have been happy to introduce it although the bill (H. R. 3414) will be referred to another committee—the Committee on Interior and Insular Affairs under the chairmanship of our able colleague, Representative CLAIR ENGLE, of California.

I would be happy, of course, if the Committee on Agriculture might carry through to a conclusion the work it has been engaged in for these several years, but since the bill has been broadened in its scope to include not only the national forests but also the public lands which are not under the jurisdiction of the Department of Agriculture, and since it actually amends the mining laws, the jurisdiction of the committee headed by the gentleman from California is clear and I will be most happy to further in any way I can the progress of the bill before that committee.

At this point I would like to include in the RECORD an article which will be printed in the forthcoming May edition of American Forests, the publication of the American Forestry Association, describing in some detail this measure to which I have referred:

FIRST STEP TOWARD CORRECTING ABUSES OF THE MINING LAWS

The board of directors of the American Forestry Association on April 15 passed a resolution urging all groups and individuals to join with them in strongly supporting proposals now pending in Congress that, once enacted, will enable the Agriculture and Interior Departments to wash out the bulk of invalid or fraudulent mining claims on public lands in from 6 months to a year.

Purpose of identical bills introduced in both the House and Senate last month is to revise the mining laws to permit multiple use on the surface of mining claims, both in national forests and other public lands, and to eliminate the incentive to locate mining claims for purposes other than actual mining and related activities.

The proposed measures were introduced as the result of cooperative action by the mining industry and the Interior and Agriculture Departments. The campaign originated in the American Forestry Association when it called on representatives of the three groups last February to sit down around a table and map out a solution to a problem that has been vexing both the industry and the public alike.

Today the proposals which have the support of the Interior and Agriculture Departments, the mining industry, and a growing number of conservation groups including the American Forestry Association, would:

1. Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders and make them subject to disposal by the United States under terms of the Materials Disposal Act. (This provision is similar to the Regan bill in the 82d and 83d Congs., which had the endorsement of the Forest Service.)

2. As to mining claims hereafter located, it would, prior to patent:

(a) Prohibit use of the mining claims for any purpose other than prospecting, mining, processing, and related activities.

(b) Authorize the Federal Government to manage and dispose of the timber and forage, to manage the other surface resources (except mineral deposits subject to location under the mining laws), and to use the surface of the claim for these purposes or for access to adjacent land, without endangering or materially interfering with mining operations or related activities.

(c) Bar the mining claimant from removing or using the timber or other surface resources except to the extent required for mining or related activities. Any timber cutting by the mining claimant, other than that to provide clearance, must be done in accordance with sound principles of forest management.

3. Provide an in rem procedure, similar to a quiet-title action, under which the Federal Government could expeditiously resolve title uncertainties resulting from the existence of abandoned, invalid, dormant or unidentifiable mining claims, located prior to enactment of this measure, in any given area. This procedure calls for adequate notice to mining claimants in the area involved, and a local hearing to determine any rights to surface resources that may be asserted by claim holders. If a mining claimant fails to assert rights to surface resources, or if the rights he asserts are not upheld, or if he voluntarily waives such rights, the claim would thereafter have the same status as claims hereafter located, with the Government having the right to manage and dispose of the timber and forage and to manage other surface resources in accordance with sound principles of good management.

In this manner an area in which a timber sale, for example, is contemplated could be subjected to a conclusive determination of surface rights within as short a period as 6 to 12 months.

Identical bills embodying these proposals were introduced last month in the House by Mr. DAWSON, of Utah (H. R. 5561); Mr. FJARE, of Montana (H. R. 5563); Mr. YOUNG, of Nevada (H. R. 5572); Mr. ELLSWORTH, of Oregon (H. R. 5577); Mr. COOLEY, of North Carolina (H. R. 5595); and Mr. HOPE, of Kansas (H. R. 5742). As American Forests went to press, Mr. ROGERS of Texas, chairman of the House subcommittee on mining, and perhaps still others were preparing similar bills.

In the upper House, Senator ANDERSON, of New Mexico, joined by Senators BARRETT, of Wyoming; BENNETT and WATKINS, of Utah; and AIKEN, of Vermont, introduced the same measure (S. 1713).

It is particularly significant to conservationists that those who have worked closely in the past with AFA and other groups in the effort to remedy mining law abuses—men like Representative HAROLD COOLEY, who introduced the first surface mining bill (H. R. 7023) in the 82d Congress, and Representative CLIFFORD HOPE and Senator GEORGE AIKEN, who fathered bills in the 83d Congress for corrective mining legislation, have joined in on this proposal.

These proposals represent the answer of the Interior and Agriculture Departments and the mining industry to the growing chorus of demands by the public to correct the already widespread and growing abuses of the mining laws that have been impeding sound land management. Public demands for corrective measures reached a new high last year with announcement by the Forest Service that only 2 percent of the 84,000 unpatented mining claims on national forests were producing commercial quantities of ore and that in too many cases they were being used for purposes other than mining. These 84,000 claims, the Forest Service said, cover more than 2 million acres and support over 8 billion feet of merchantable timber worth over $100 million.

Of the 37,000 claims which have actually gone to patent, only about 15 percent have produced ore in commercial quantities. These facts demonstrate, the Forest Service said, that the mining laws are being used to obtain claim or title to valuable timber, summer home sites, or access to preferred hunting or fishing grounds—activities far removed from commercial mining operations. Moreover, with the advent of the current uranium rush, the number of unpatented claims has more than doubled in recent months.

To launch a program to clear up the irregular claims situation as called for in AFA's program for American Forestry adopted last year, Lowell Besley, executive director-forester, in January contacted representatives of the Interior and Agriculture Departments and the American Mining Congress and proposed a conference to work out the problem under the auspices of the AFA.

The response to this proposal was favorable. Aided by an assist from the Chamber of Commerce of the United States, the groups concerned were brought together February 10 at the Washington office of the American Forestry Association. Purpose of the conference was to evolve a workable solution that would eliminate questionable claims while fully protecting the legitimate interests of both the public and the mining industry.

Working under the chairmanship of DeWitt Nelson, vice president of AFA and director of California's Department of Natural Resources, it quickly became apparent that industry representatives were primarily interested in leaving the present patent system undisturbed. (At present, approximately 200 claims go to patent every year.)

"Above all things, your prospector knows and is decidedly aware of one fact," one industry spokesman said. "That is if he works hard and develops his claims he can obtain a patent. To remove that incentive or to otherwise interfere with the patent system would, in our judgment, have an adverse effect not only on mining exploration and development but on the economy of the country at a time when more and more minerals are of vital importance."

While the industry took a dim view of previous suggestions that a miner, in patenting his claim, should purchase his timber rights, it did concede it was in full sympathy with a revised system that would enable Government representatives to wash out invalid claims in a short time. The industry spokesmen also reiterated that they were against use of claims for any purpose other than legitimate mining operations, and favored giving the Government the right to manage and dispose of the timber and forage on all claims hereafter located up to the time of patent. The claimant, at the same time, would be permitted to use such timber as is needed for carrying on mining activities but would be barred from removing the timber or other surface resources for other purposes.

While the Agriculture Department representatives believe that claimants should pay for timber on claims at the time of going to patent, spokesmen said that the proposals advanced by the industry as regards handling of claims was a constructive proposition and one that would materially aid in the management of public lands. At the present time, the Forest Service, for instance, cannot remove timber from claims, and in some cases claimants are actually impeding management of land—including rights-of-way—to timber and forage on holdings adjacent to their claims.

The so-called in rem or quiet-title action under which the Government could resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims was also cited as a constructive move by Agriculture spokesmen. As proposed at the conference, the new system would enable the Government to wash out invalid claims in selected areas in 6 months or a year—a development that would be a decided improvement on the laborious search-and-sue method now in effect. At the same time, it would enable the Government to determine surface rights to resources without disturbing miners' rights to the minerals in the prepatent stage.

Under Chairman Nelson's guidance, the conference arrived at a meeting of minds, and a three-man committee comprised of representatives from the two Departments and the mining industry was named to draft a bill based on the findings and conclusions of the conference.

Both Chairman Nelson and Mr. Besley praised the constructive attitude of the conference. Mr. Besley commented, "From the standpoint of those of us long interested in clearing up the mining-claim abuses on the national forests and other forest lands, this proposed legislation represents a compromise only with respect to the 'all or nothing' school of thought. We can wholeheartedly approve of everything it is designed to accomplish. It is definitely a tremendous step in the right direction. Forest Service officials estimate it will clear up 75 percent or more of the mining claim troubles on the national forests. Some think it may go even further. None of us can know for sure until we have given it a fair trial over a period of years."

The position of the mining industry has been that it does not condone the use of mining claims on public lands for other than mining purposes. Its position is and has been that it should have the continued opportunity to locate mining claims, to mine any minerals found, and to make a profit if it is fortunate enough to discover and develop commercial deposits. It seeks security of its investment through a full title to mining claims when all the requirements for patent have been met. It does not seek to prevent the use of the surface of unpatented claims for other desirable uses so long as those do not materially interfere with mining operations and related activities. This position has widespread support from public-minded citizens who recognize the need for continued development of the mineral resources needed for our economy and our national security.

From the outset, the board of directors of the AFA has made it clear that it had no intention or desire to interfere with legitimate mining operations but was solely interested in helping to clear up abuses on the part of people who were using the framework provided by the mining laws for purposes other than mining. In the opinion of the board, these abuses will be brought under control if the present proposals are enacted into law.

The United States in 1960

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the May 9, 1955, issue of Time and entitled "The United States in 1960":

THE UNITED STATES IN 1960—$6,180 A YEAR FOR THE AVERAGE FAMILY

What kind of United States economy will a youngster now getting ready for college find when he gets out? What is the prospect for 1960?

Last week, in America's Needs and Resources: A New Survey, a Twentieth Century Fund research staff headed by Economist J. Frederic Dewhurst issued a 1,148-page statistical description of the present economy, plus a projection of what the United States would be like 5 years hence. Dewhurst's key prediction, on the assumption that United States peace and prosperity will continue, is that 1960's gross national product will be $413.5 billion, up 29 percent from 1950, 16 percent from 1954. The United States, with less than 7 percent of the world's population, already produces one-third of all the world's goods and services, almost one-half of all its factory products. United States total output in the 1940's was worth $2.9 trillion; for the 1950's $4.1 trillion is expected.

The forecasts are speculative at best, but in their widely read first survey, made during the 1940's, Dewhurst and associates erred on the conservative side, forecasting 1950's GNP 7 percent below what it turned out to be.

POPULATION

The economy's predicted growth of 29 percent during the 1950's is based on population growth during the decade of 16 percent and a 12 percent growth in the labor force. Among 1960's 177 million people will be 40 percent more 5- to 9-year-olds than in 1950, 54 percent more 10- to 14-year-olds, 35 percent more oldsters over 70, but 12 percent fewer 25- to 29-year-olds (the depression babies). In 1960 there will be 42 million schoolchildren, 50 percent more than in 1950. The present decade's marriages, down 20 percent from the 1940's, will create only 13.7 percent more families. The trend to the suburbs will continue during the decade; rural nonfarm population will burgeon by more than one-third to 43 million. California in 1960 will have a population of 14.6 million, a jump of 38.3 over 1950.

PRODUCTIVITY

By 1960 there will be 69 million jobs, 7.5 million more than in 1950. A drop of 2.3 hours in the nonfarm workweek will put the average worker on a 36.5-hour week, but his productivity, while it can hardly match the last decade's 47 percent rise, is expected to be up 25 percent. National income per man-hour worked will be $2.68 (against last year's $2.41).

FARMERS

By 1960, 6,700,000 farmers, only 9.3 percent of the labor force and 670,000 fewer than in 1950, will have brought into cultivation 35 million acres of new crop land. They will produce 21 percent more food, but work only 44 hours a week, 3 less than in 1950.

WEALTH

In 1960 individuals will be saving a smaller portion (5.5 percent) of their disposable income than they do today (7.7 percent). But gross private savings (including corporate) will have climbed 33 percent in the decade to $62.5 billion, against $52.8 billion last year. Gross capital investment will also be $62.5 billion in 1960, up a healthy 37 percent from 1954.

INCOME

Spendable per-household income in 1960 will reach a comfortable $5,600 a year, up 5 percent from 1954. Before-tax income per household will be $6,180. The tax bite will ease. While Government costs will rise 15 percent, they will be paid for by soaring revenues from prosperous businesses. Personal taxes will drop from today's $32.9 billion to $29.6 billion. Social-security benefits will more than treble during the decade, reaching $4.4 billion in 1960.

SPENDING

United States consumers will be spending 24.1 percent more in 1960 than they were

spending in 1950. Some of the biggest jumps will be in luxury items. With rising living standards, the Nation's food bill would normally be expected to drop in proportion to total spending. Instead, it will precisely equal the 24.1 percent pace set in all spending. Reason: The United States housewife is buying more packaged and processed foods, and families are dining out more often. (The real significance of the ratio of food bills to total spending is a cut in the housewife's workweek.)

In 1960 Americans will eat 10 percent more citrus fruits and tomatoes than in 1950, 11 percent less nuts, dry beans, and peas. Outlays for participant recreation will be up 36.3 percent. This rise chiefly reflects the boom in parimutuel betting and pinball and slot-machine playing (whose net receipts more than trebled in a decade, to $419 million in 1952. Contributions to political and civic organizations will climb 45.8 percent. Buying of jewelry and watches will be up 37.2 percent, foreign travel 53.7 percent, medical insurance 60.6 percent, private schooling 101.4 percent, and airline travel 187.4 percent. The Nation's highways will teem with 59 million cars, 47 percent more than in 1950. Looking farther ahead, in 1975 the United States will be generating 1,400 billion kilowatt-hours of electric power, 3½ times 1950's output. Also in that year, it will use 200 billion gallons of fresh water every day, 2½ times 1950's consumption.

NEEDS

Dewhurst's researchers attempted to calculate how much more money would have to be spent to reach a "standard of living at a health and decency level." This concept is hard to pin down, even in societies with lower economic levels. With Americans it is all the more conjectural because an adequate supply of TV sets and pinball machines is harder to determine than an adequate diet level. Nevertheless, the economists figured that 1950's gap between needs and supply—$13.1 billion, or 6 percent of expenditures—would be slashed to $11.4 billion in 1960, only 4 percent of expenditures. The figures showed changes in types of shortage. Housing accounted for 30 percent of 1950's unavailable needs, only 12 percent of 1960's. But more than half of the 1960 gap will be a shortage of medical care, against 36 percent in 1950.

FOREIGN TRADE

The survey forecasts a major shift in the Nation's foreign-trade position: 1960's imports will exceed exports. Europe will continue to be troubled with a dollar deficit, but the rest of the world will enjoy a dollar surplus. Although imports will rise less than gross national product, they will reach $11 billion in 1960, a 26-percent gain during the decade. Biggest gainers will be bauxite (up 97.5 percent), crude oil (up 103 percent), and iron ore (up 300 percent). Biggest losers: tin (down 5 percent), wool (down 10 percent). Assuming that foreign aid ends, exports will edge up only 1 percent, but they will all be paid for. United States capital outflow will have doubled.

TECHNOLOGY

Are Americans prosperous simply because they stumbled upon a fabulous lode of natural resources? The book quotes the late economist, Wesley Mitchell, who pointed out that American Indians "lived in a poverty-stricken environment. For them, no coal existed, no petroleum, no metals beyond nuggets of pure copper. * * * A precarious food supply, flimsy housing, mystical medicine, and chronic warfare limited the increase in numbers." Says Dewhurst: "Technology, in fact, can be thought of as the primary resource; without it all other resources would be economically nonexistent. * * * Technological progress during the past century, especially since 1900, appears to have been more rapid in the United States than anywhere else in the world." Looking ahead, Dewhurst makes a vivid prediction: in the year 2050 a worker will produce in one 7-hour day what takes today's man a 40-hour week.

Correspondence With Walter P. Reuther Relative to Remarks by Secretary of Commerce Weeks

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. CURTIS of Missouri. Mr. Speaker, on March 18, 1955, Walter Reuther, president of the UAW–CIO, wrote to me, and probably other Congressmen, complaining about certain remarks of Secretary of Commerce Weeks. He accused Mr. Weeks of "reckless and irresponsible behavior," "distorting the truth and attempting to divide and disunite our people." Mr. Reuther said such action "deserves Presidential and congressional attention."

I certainly agree with Mr. Reuther that if the actions and remarks of Mr. Weeks warrant the grave charges Mr. Reuther has levied against them, such attention is deserved.

I am inserting at this point Mr. Reuther's letter and the enclosures to which the letter refers:

The Honorable THOMAS B. CURTIS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CURTIS: I enclose a letter and pamphlet which I have forwarded to Mr. Sinclair Weeks. I respectfully urge that you take note of the reckless and irresponsible behavior and statements to which I refer on the part of the Secretary of Commerce.

Such distortion of the truth on the part of a Cabinet Member in an attempt to divide and disunite our people deserves Presidential and congressional attention.

I think you will agree, as I suggest to Mr. Weeks in my letter to him, as Americans we should stand together to protect and respect our right to differ but our differences should be based on facts, not fancy; on knowledge, not prejudice.

WALTER P. REUTHER.

The Honorable SINCLAIR WEEKS,
Secretary of Commerce,
Washington, D. C.

DEAR SIR: Your remarks on automation in a recent speech in New York are a startling and shocking demonstration of reckless irresponsibility on the part of a Cabinet officer.

In your references to "scaremongers" who are trying to frighten automobile workers with the "bogeyman of automation," you spoke either in ignorance of the facts or with willful distortion of the facts, as other reckless propagandists, with less stature than your position gives you, have done before.

As a cabinet officer, it is your responsibility to get the facts and, having got them, to state them accurately and truthfully. It is also the responsibility of a public official of your rank to devote his energies to pulling the people of our country together on the basis of a sound, constructive program of united action to meet and overcome the economic, social and political problems that confront Americans and the free people of the world generally. The objective results of your uninformed or untruthful remarks on attitudes toward automation are to divide our people into warring economic groups.

While you did not mention the UAW–CIO or any of its officers by name, it is obvious you were referring to us because the distortions you uttered coincide exactly with the false propaganda which has emanated from other sources.

The truth about our position on automation was and is available to you from government as well as from union sources.

Let me quote to you certain passages from an introduction which I wrote to a recent UAW–CIO publication on automation:

"Automation must be met sanely and constructively so that the miracle of mass production—and the ever greater economic abundance made possible by automation—can find expression in the lives of people through improved economic security and a fuller share of happiness and human dignity.

"Sensibly, rationally, scientifically we intend to harness this radical new force in our lives, using its potential to produce an era in which well-being, justice and peace will be the universal possession of all mankind.

"Historically, the problems of mankind have been set in conflict between people, groups and nations each engaged in a struggle to divide up economic scarcity. We have had a world divided between the "haves" and the "have-nots"—those who were fed and those who were starving. Now, science and technology have at last given us the tools of economic abundance, and we are confrontaed no longer with the need to struggle to divide up scarcity.

"Economic abundance is now within our grasp if we but have the good sense to use our resources and technology, fully and effectively, within a framework of economic policies that are morally right and socially responsible.

"The UAW-CIO and its 1½ million members welcome automation, technological progress, and the promise of the peacetime use of the atom. We offer our cooperation to men and women of good will in all walks of life in a common search for policies and programs within the structure of our free society that will insure that greater technological progress will result in greater human progress.

"We in the UAW-CIO believe that we can solve the problems of UAW-CIO members as wage earners only as we work with other people in our free society in the common effort to find answers to the problems of all the people in our country—and ultimately in the world, for only as we learn to work with people everywhere in finding answers to the problems of the world community can we find answers to our own. As citizens of the atomic age, we have the tools of abundance at our disposal. We are confident that the free people of America, in cooperation with free men everywhere, will demonstrate the good sense and courage to use the tools of abundance for constructive and moral purposes."

For your convenience, I am enclosing a copy of the publication from which these quotations are taken.

I would also like to refer you to the transcript of both my prepared statement and my oral testimony before the Agriculture Committee of the House of Representatives on February 25 and also my prepared statement and my oral testimony before the Joint Economic Committee of Congress on February 10, where I elaborated in greater detail on the position of our organization on this subject. I am sure a transcript is available to you. One would think that a Cabinet officer would avail himself of the information compiled by congressional hearings before speaking on matters covered by those hearings. In fact, it would seem obvious that an official with the rank of Cabinet mem-

ber would find it incumbent upon himself to check all possible sources of information and find out what is going on in particular areas of American life before making public pronouncements that carry the weight and authority of that high office.

The difference, Mr. Secretary, between you, like other critics who have misrepresented our position, and us in the UAW-CIO, is that you are trying to run away from problems attendant upon automation, trying to sweep them out of sight under the rug, while we are stepping up to our responsibilities by exploring all the problems and possibilities and, within our abilities, taking positive action to assure the maximum social good.

It is our considered judgment that you owe to the UAW-CIO and to the American people a public apology for your intemperate and untruthful statements.

Let us as Americans stand together in fully protecting and respecting the right to differ. Let us act responsibly and base our differences upon facts, not fancy; upon knowledge, not prejudice.

Sincerely,

WALTER P. REUTHER.

Upon receipt of this communication from Mr. Reuther, I wrote to him on March 25, 1955, as follows:

Mr. WALTER P. REUTHER,
President, UAW-CIO,
Detroit, Mich.

DEAR MR. REUTHER: Thank you for your letter of March 18, 1955, enclosing a copy of your letter to Secretary Weeks in which you take exception to the remarks Secretary Weeks makes in a recent speech in New York. I have asked the Secretary to send me a copy of that speech.

I think the UAW-CIO and yourself personally have taken a fair position on the serious problem of automation. I thought your testimony before our Joint Committee on the Economic Report, which I read carefully, was fair and objective. I do not regard yours, or the position of the UAW-CIO on this matter, as that of scaremongers, nor do I regard the problem of automation a bogeyman. I think you are justified in objecting to the use of such language in reference to the position of the UAW-CIO and yourself.

I do believe, however, that the problem of automation is not a new one. It is a new term but it refers to a problem over 100 years old. I have been a great admirer of the way most of the American labor leaders have approached this problem in contrast to the way in which European labor leaders have approached it, both in the past and in the present. I wonder if you have had occasion to read a recent (1953) pamphlet entitled: "European Impressions of the American Worker," by Robert W. Smuts. This is one of a series of studies being conducted at Columbia University Graduate School of Business under the heading "Human Resource Studies." I was quite impressed with this 58-page document and hidden between the lines there is much thought on the problem of automation.

I am glad that you feel that it is important not to attempt to divide and disunite our people and that we should stand together to protect our right to differ—based upon facts not fancy; on knowledge, not prejudice, because I have felt that some of your public speeches and some of the statements of the PAC-CIO were subject to just this kind of criticism. I think this has been particularly true in your treatment of the recent Internal Revenue Code of 1954. I would call to your mind some correspondence we had about such matters as depreciation and stock dividend credits. Certainly calling a major piece of legislation like this a "rich man's tax bill" is attempting to divide our people; it is based upon fancy not fact; on prejudice not on knowledge. This does not mean that there is not ample room for honest men to disagree on the details in this piece of legislation. Certainly there is, but let's stand together as Americans to respect and protect our right to differ, granting to each other the motive which I feel we all share of trying to do our best to solve the human problems of the day in the best interests of our people and our posterity.

THOMAS B. CURTIS.

I wrote to Secretary Weeks on March 26, 1955, to get a complete transcript of the speech he delivered on March 5, 1955, to which Mr. Reuther took exception. On April 1, 1955, I received a copy of the speech from Mr. Weeks. This is it in its entirety:

TEXT OF ADDRESS BY SECRETARY OF COMMERCE SINCLAIR WEEKS AT DINNER OF THE PILGRIMS OF THE UNITED STATES, HONORING THE RIGHT HONORABLE ROBERT GORDON MENZIES, C. H., Q. C., PRIME MINISTER OF AUSTRALIA, WALDORF ASTORIA HOTEL, NEW YORK CITY, MARCH 5, 1955

It is a great pleasure to join with you in welcoming your distinguished guest, the Right Honorable Robert Gordon Menzies, Prime Minister of Australia.

I am delighted to have this opportunity of addressing your society, which since 1903 has been strengthening the bonds of friendship between the United Kingdom and the United States. Together with your sister organization in the British Isles, you have fostered a better appreciation, on both sides of the Atlantic, of our common heritage in such fundamentals as language, literature, law, and democratic government.

You have facilitated a two-way exchange of ideas and cultural achievements which has brought better understanding between the two oldest English-speaking peoples of the community of nations. With better understanding has come unity of purpose, strengthening our common devotion to freedom and our determination to help each other preserve it.

I congratulate the Pilgrims of Great Britain and the Pilgrims of the United States on this great accomplishment.

It is highly appropriate that from time to time you entertain the representatives of other English-speaking nations.

When such a representative is from the Commonwealth of Australia, which in war and peace has made contributions to international freedom and progress out of all proportion to its population and wealth, we do honor to ourselves in honoring him.

Australia is a country that always steps up and meets its responsibilities. It is doing so again today. It has realized the danger to the free world of Communist aggression in Asia and is doing something about it. It has established diplomatic missions in southeast Asia. It is giving aid to those countries through active participation in the Colombo plan whose very establishment owes much to Australian initiative.

The recent meeting at Bangkok of the Council of the Southeast Asia Treaty Organization reminds us of our joint interest in the Far East. There the foreign ministers of Australia, the United Kingdom, the United States, New Zealand, Pakistan, the Philippines, Thailand, and the representative of France, forged closer ties of defense.

In particular they recognized the insidious threat of Communist subversion and infiltration to the peace and security of the area. Henceforth, the eight governments will carry on continuing consultation and mutual assistance, each drawing upon the experience of the others in dealing with this danger.

No less important in preserving the integrity and authority of the freely-constituted governments in southeast Asia are their economic strength and the social well-being of their citizens. At Bangkok the member states inaugurated steps to increase economic cooperation, and to promote economic progress.

Of course, the Bangkok meeting is merely the latest of many successful steps free governments have taken in the past few years to deter aggression and preserve peace. I need not recite for this audience the long list of our accomplishments in mutual help and firm solidarity. You and I know that today free nations are collectively stronger than at any time in recent years.

Perhaps the utter futility of modern warfare may become more evident as time goes on. In any event, and whatever happens, the United States and Australia not only will, but must, continue to stand shoulder to shoulder.

With so much in common, we should and do enjoy most satisfactory business relations with Australia. When it comes to investing capital abroad, businessmen naturally look for a welcome on the mat, and American businessmen have always found it in Australia.

About 475 United States firms have established, acquired interest in, or otherwise participated in the development of a wide variety of Australian manufacturing industries. About 175 of these investments are in corporations classified as subsidiaries or affiliates of the American firm. The others operate under various arrangements such as licensing.

Many American companies have constructed plants in Australia today. Among these are included names which are known to you all: Standard Oil Company of New Jersey, California-Texas Oil, Ford, Chrysler, General Motors, General Electric, Goodyear Tire & Rubber, International-Harvester, Johns-Mansville, Swift Co.

United States direct investments in Australia totaled $328 million at the end of 1953, as compared with $161 million at the end of 1949. In other words, such investments have more than doubled in a 4-year period.

In connection with the investment of American capital in Australia, it is interesting to recall the words of Acting Prime Minister Sir Arthur Fadden at the opening of the new Philip Morris plant in Melbourne in January of this year, when he referred to Australia's policy of welcoming foreign capital from abroad in these words:

"The policy of the present Commonwealth Government therefore is to welcome overseas capital to Australia, particularly if it is intended for permanent investment and if it is likely to contribute to the desirable development of Australian resources."

Trade between our two countries is equally important. Wool, over the years, has been one of the leading items of trade. As a lifelong resident of New England, I have, of course, been brought up to think of Australia as an important supplier of wool for our textile industries. In this connection, I am pleased to have participated in the revamping of our wool policy last year, so as to make it more equitable both to foreign suppliers and to our own domestic wool growers.

Currently, imports from Australia are showing greater diversification. For example, the figures indicate a striking increase in the import of metals from 2 percent of total imports in 1937 to 33 percent in 1953.

As Australia develops and increases its population, it can be expected to become an increasingly important market for a diversified line of American goods.

These mutually profitable business relationships between the United States and countries such as Australia are a model for the world. They are the economic counterpart of that mutual cooperation between the English-speaking peoples of the world which

your organization has fostered for these many years.

The importance of this common interest cannot be overstressed. With it goes the interchange of not only goods but of our people and our cultures. What better way is there to develop lasting friendship and peace between nations for the common good of all.

I believe that a bright economic future is in store for Australia and the United States if we do those things which promote economic growth.

There are many steps we can take to attain long range prosperity. One of them is to encourage the advancement of technology. Scientific progress in agriculture, mining and manufacturing is giving this generation the greatest material blessings in all history, security from destruction by aggressors and the assurance of a much better future for ourselves and children.

The industrial revolution's machinery released man from muscular slavery and is supplying him with a wealth of new goods and new jobs. Today the dawning age of truly automatic machines—which we describe by the word automation—is providing man with mechanical senses of feeling, hearing and sight—in some cases even with electronic "brains."

The result of this fresh surge in productivity is a higher standard of living for everyone. New technological progress is the greatest creator of more and better paid jobs.

Yet some doubting Thomases have arisen in both countries who seem afraid to take full advantage of the new technology with its new self-regulating machinery, automatic memories and other labor-saving innovations.

Some apprehension stems from lack of knowledge; some from misleading propaganda.

Recently a new rash of opposition to and fear of new technological progress has been voiced in some circles in the United States. Here unscrupulous demagogs and economic illiterates are trying to scare people into the belief that automation is a vicious Frankenstein devouring their jobs. I am certain that this is the most stupid and the most cruel misguidance that can be given to the free workers of the free world.

Such dread of progress, however, is not new. History is filled with examples of those who erroneously thought new machines would wipe out their livelihood.

An ignorant mob invaded Hargreave's home and smashed his spinning jennies. Quill penmen rose in anger against the introduction of the printing press. Paris workers rioted against the sewing machine. English hand-knitters used sledge hammers to smash Cartright's power loom. The teamsters of Pennsylvania wrecked the first oil pipelines.

Suppose these panic-stricken deluded people had been able to stop progress? Millions of new jobs never would have been created. Untold numbers of new products never would have been manufactured for the pleasure and well-being of mankind.

Karl Marx, whose false doctrines have brought limitless misery to his dupes, bitterly condemned the machine as the soul of capitalist exploitation. Let's not permit his modern echoes to get away with similar deceptions. Let's confront wild charges about technological unemployment with facts which refute falsehoods.

As Secretary of Commerce it is my duty to study the economy and to foster measures to improve it. Here are some statistics on economic expansion in America which prove without question that machines make more and better jobs. From 1939 to 1953 the population of the United States increased 22 percent. But employment in manufacturing increased 70 percent. The machine created new industries and made new jobs.

A breakdown in figures is quite revealing. In this period jobs in electrical machinery rose from 393,000 to 1,200,000—a jump of around 200 percent. In 1910 there were 444,000 employed teamsters, draymen, and carriage drivers. In 1950 there were 1,919,000 employed motor-vehicle drivers and delivery and route men.

Some scaremongers at the moment are attempting in particular to frighten automobile workers with the bogeyman of automation. But the record shows that this industry, a pacemaker in technological advancement, employed 987,000 workers in 1953 as against only 466,000 in 1939.

Economists estimate that every job in auto manufacturing stimulates five additional jobs in occupations connected with motoring, such as mines supplying metals, farms furnishing raw materials for plastics, highway construction, motels, filling stations, and other roadside enterprises.

The late Philip Murray, the American labor leader, said, when addressing the CIO as its president in 1951, "I do not know of a single, solitary instance where a great technological gain has taken place in the United States of America that it has actually thrown people out of work. I do not know of it, I am not aware of it, because the industrial revolution that has taken place in the United States in the past 25 years has brought into the employment field an additional 20 million people."

Automation is the modern term for what has been known as labor-saving machinery. The Socialist—the irresponsible demagog—hurls the words "labor-saving machinery" in the face of inventors, scientists, managers with the accusing connotation that it must be designed to throw people out of jobs.

As a matter of fact, labor-saving machinery means exactly what it says—it saves labor. The backbreaking jobs on the farm, in the home, in the steel mills, and elsewhere in industry have, for the most part, yielded to pleasant, agreeable work on the farm, in the home, and in clean, well heated, well ventilated mills and factories producing products which but for this same labor-saving machinery the people could never have or even dream of.

Example after example can be cited to show that instead of being the destroyer of jobs, the new industrial robots are the best friends of workers, managers, and consumers.

In short, can anyone who thinks about these things believe that we have reached the end of the road of progress?

Can anyone believe that further and greater technological progress and development in the field of labor-saving machinery will fail to make jobs and advance the welfare of all the people? Of course not. My conviction, supported by every bit of available evidence, makes me sure that the road ahead is still wide open for almost unlimited further progress.

In conclusion, let me reaffirm my trust in the partnership of Australia and the United States. We have in common a colonial background from which have grown two proud, independent nations, united by fond memories and ties of warm friendship among ourselves and the United Kingdom. Nothing can sever that bond.

We cherish similar ideals and spiritual values. Thrice as Allies we have mingled the blood of our sons in battle. Our mutual desire is for good will among all the peoples of this earth. But in any grave emergency in the Pacific or elsewhere the United States and Australia not only will, but must, stand resolutely side by side.

We will not shrink in fear from encouraging further industrialization and technological progress because we know that on the expanding economic strength of the free world is based mankind's best assurance of freedom and deepest hope of a just and lasting peace.

On April 18, 1955, after carefully reading Mr. Weeks' speech, I wrote to Mr. Reuther again, as follows:

Mr. WALTER REUTHER,
President, UAW–CIO,
Detroit, Mich.

DEAR MR. REUTHER: On March 25, 1955, I replied to your letter to me (and other Congressmen) of March 18, 1955, in which you took exception to remarks made by Secretary Weeks in a speech he made in New York City, March 5, 1955, at a banquet honoring Prime Minister Menzies, of Australia. I said in my letter I would obtain a copy of Mr. Weeks' speech so I could better judge the complaints you make against it.

Having read the speech, I am somewhat amazed at your letter of March 18, 1955. Having, as I stated, read your views on automation as presented before our Joint Committee on the Economic Report, I cannot for the life of me see how you determined that Secretary Weeks was referring to your position on automation when he was referring to "scaremongers," using the "bogeyman of automation," even though he said "in particular to frighten the automobile workers," unless you had made speeches which presented a different approach than the one you took before our committee. My own assumption would be that you have retained a consistent position on the subject of automation.

I feel certain that Secretary Weeks agrees with you that automation, though essentially a good thing, does present immediate problems that require thought in their solution. We may all disagree as to the extent of these problems, and certainly as to the methods which are best suited to meet them.

Reverting back to your statement, which I so fundamentally agreed with, that it is important not to attempt to divide and disunite our people, I have found one of the most-used techniques to accomplish this undesirable end, today, is the claim of being insulted when, indeed, no insult was intended. I am certain Mr. Weeks intended no insult, and if he did, it falls flat on its face in light of the fair and objective presentation you made to our committee.

Because this matter was brought to the attention of all the Congressmen, I am inserting into the CONGRESSIONAL RECORD a copy of Mr. Weeks' speech, your letter to Mr. Weeks, and the forwarding letter to me, plus my correspondence with you. If you care to make an answer to my letters, I shall be happy to include your answer along with the rest of the material.

THOS. B. CURTIS.

I am sorry that Mr. Reuther has not availed himself of my offer to reply to my letters. The matter has received some congressional attention, at my hands, as Mr. Reuther suggested. It now lies with Mr. Reuther to come forward and explain the basis of his grave charges against the distinguished Secretary of Commerce, Mr. Weeks. Certainly, Mr. Weeks was not dreaming up "scaremongers" who "at the moment are attempting in particular to frighten automobile workers with the bogeyman of automation" inasmuch as the pamphlet put out by UAW-CIO education department entitled "Automation" to which Mr. Reuther refers and quotes from in his longer letter, on page 8 quotes a person who might well be described as a scaremonger—without identifying him anymore than Mr. Weeks did except to refer to him as an "expert" instead of a "scaremonger."

The following is a direct quotation from the pamphlet:

The experts disagree on what the future holds. (One says automation is only "a new chapter in the continuing story of man's organization and mechanization of the forces of nature.")

Another says that automation "will produce an unemployment situation, in comparison with which * * * the depression of the thirties will seem a pleasant joke."

Now, I do not think one can quarrel too much with Mr. Weeks for referring to this person, whoever he may be, as a "scaremonger" even if he is also an "expert." Personally, I do not like to use words which might be passed off as epithets even when they seem to be properly descriptive. I would prefer to have people judge for themselves from the person's own words and actions. Nonetheless, to call the Secretary of Commerce "reckless and irresponsible and distorting the truth," and so forth, because of it, seems to be in itself reckless and irresponsible and distorting the truth.

Sick Leave in the Postal Service

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LESINSKI. Mr. Speaker, I have been deeply concerned, as I know many Members of the House of Representatives have been concerned about the press reports on the report of the Comptroller General regarding sick leave abuses in the postal service.

I have given this report very careful study and feel that in fairness to our 500,000 loyal and conscientious postal employees this unfortunate impression should be corrected.

It is apparent to me that many press accounts of the contents of this report contain slanted emphasis—unintentional, I am sure—which reflects on both the work productivity and the integrity of our postal employees. My remarks are directed at this slanted emphasis, which does not at all represent the tone of the Comptroller General's report.

In truth and in fact, this report heavily scores the management of the Post Office Department from top to bottom. The keynote appears in the line beginning on page 7 of the report:

The failure by officials at the top management level to effectively administer and control sick leave has resulted, principally from a departmental policy, which, in the past, condoned the liberal interpretation placed on existing regulations or perhaps ignored a practice which was common knowledge.

The report goes on and cites chapter and verse in support of its statement that departmental officials had been made aware of the unsatisfactory sick leave practices. Here are some other excerpts from the report:

The Department issued a directive in May 1953 * * * relative to abuses of sick leave, but corrective action has not been taken to strengthen sick-leave policies, procedures, and reporting.

This is on the first page of the report. A few lines later the reports goes on:

Inadequate supervision of this vast number [500,000] of employees could result in considerable monetary losses as a result of man-hours lost on the job.

Elsewhere it is said that—

Responsible approving supervisors and officials in post offices have disregarded policies concerning the control and administration of sick leave * * *; that improper approval of sick leave results from the policy of the Department in delegating to immediate supervisors * * * authority to grant sick leave without providing adequate review and control; and that although departmental officials have assigned the responsibility for approving sick leave to the lowest level of supervision, they have not established procedures for a systematic review.

It should be pointed out that the discussion of abuse in paragraph No. 9 on page 2 of the Comptroller General's report will be corrected by the pending postal pay legislation. This legislation, as agreed to in conference and in the House, contains a new "biweekly pay period system" for the postal field service which will prevent the practice complained of in this paragraph. This legislation I seriously doubt will be vetoed by the President, for he would be definitely acting contrary to all responsibilities of his office just to placate the Postmaster General.

It should further be pointed out that in the past the Department has been very reluctant to appoint supervisors when the postmasters of post offices have requested same. The Department itself is primarily to blame for the action of the employees as to sick leave.

The very first recommendation of the Comptroller General is "that the Department reappraise the authority granted to immediate supervisors and strengthen the procedures relating to documenting and reporting of sick leave to those responsible at higher levels."

With further reference to the part played by the postal employee, the Comptroller General's report points out that organizations of postal employees are aware of the situation and have taken action, so far as would be appropriate for them to act, to cooperate with the Department in preventing abuse of sick leave. For example, one of the exhibits with the report is an excerpt from the M. H. News, a publication of Branch 29 of the National Association of Post Office and Postal Transportation Service Mail Handlers in Cleveland, Ohio, dated December 5, 1954. The M. H. News quoted its national office as asking employees to cooperate with the Department in this matter, and said:

You are subject to removal and heavy penalties. * * * We are asking you to cooperate with the local office and the Department to cut down on this abuse of sick leave. * * * Sick leave is the best insurance you can have. * * * Try to keep your record clean.* * * Watch your sick leave.

I think this should help set the record straight, as it should be in justice to our postal employees. I am presenting this material with the belief that will be helpful to those who must have received a distorted picture of this situation, as I can well understand from the press accounts that I have read.

Change in Policy by the National Labor Relations Board—Continued

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer a statement by Mr. Claude Ballard, international vice president of the International Woodworkers of America, CIO, in support of his letter to me, which appeared in the Appendix of the RECORD of May 9, 1955:

EFFECT OF THE NATIONAL LABOR RELATIONS BOARD'S CHANGING POSITION ON THE COMMERCE SECTION OF THE ACT

On July 1, 1954, the National Labor Relations Board in Washington, D. C., released to the morning papers, and announced a change of the standards under which it would exercise jurisdiction under the commerce section of the National Labor Relations Act. It seemed that the Board, in establishing these new standards, expressed the opinion that although they had the power delegated by Congress to take jurisdiction under the old rules, they felt that by expeditious handling of the caseload which was presently before it, that the purposes of the act could better be effectuated in the revision of the standards.

Everyone was aware of the general change which changed the direct flow into commerce from $25,000 to $50,000 and in indirect flow from $50,000 to $100,000. There was no indication at that time that the Board would materially change their yardstick on accepting jurisdiction where it can be reasonably proved that the material flowed either directly or indirectly from the producer's operation into commerce.

We in the lumber industry are faced with the difficult situation of determining to what extent that operators are in commerce under the present administrative decisions of the Board. In the first place, our industry is one where there is much contracting and subcontracting, not only for major operations but for smaller producers, brokers, and corporations selling lumber, and otherwise, where it is difficult to follow the flow of goods into commerce. This situation was always a problem, even before the present trend of the Board which has made it almost impossible. In some instances the Board, in our opinion, does not make a thorough investigation where a petition has been filed against a company to determine where the material produced by the employer actually flows. We do not believe their investigations are complete in any respect in making a final determination whether the company should come under the commerce section of the act or not.

Since the release of the new jurisdiction standards made on July 1, 1954, the Board has moved into the position of throwing out petitions in the lumbering industry which will, in our opinion, materially damage collective bargaining in the lumber industry if it is not stopped. We are firmly convinced if the present trend of the Board on decisions which generally finds operations

not in commerce continues, that the lumber industry, as such, will experience more labor strife than has been known in the industry for years. There is no doubt in our minds that a major part of the industry, by simple maneuvering, can, under the present policy of the Board, be released completely from the Board's jurisdiction.

There have been three specific cases in change of policy by the Board in our industry which we will enumerate as examples. We are not saying, in enumerating these cases, that the Board, under its present policy, will not go further than they already have in narrowing their jurisdiction in the industry. If this policy is continued, it will be a catastrophe as far as collective bargaining is concerned in the lumber industry because it will force upon the organized workers, where the jurisdiction is removed, the policy of striking to establish their bargaining rights and we have no doubt that a great many employers will take advantage of the present trend of the Board and attempt to take themselves out from under the commerce section of the act.

We raise for consideration the three cases that will follow, because we feel that they substantiate our thinking at the time of the release of the changes and standards of July 1, 1954, that the policy for the future was not that which the Board expressed at that time. We feel that the Board is, as fast as possible, using every excuse to narrow its jurisdiction down to make the Board ineffective and to undermine the right of the working people to establish bargaining rights by Federal law.

The first case was a charge case, number 20–CA–944, involving the Mast Lumber Co., Inc., and the International Woodworkers of America, CIO. This case developed out of the election campaign in the operation where our representative had signed up a vast majority of the employees in this company. The discrimination against those active in the union, along with the release of the men actively engaged in union affairs, finally caused the union to file a charge case against the company for their antiunion activities.

The record shows that the company sales of the lumber sold from its operation was approximately $900,000. The company sold $39,622.64 of lumber to an Arizona company who trucked the lumber directly from the Mast Lumber Co. plant to their distributing centers in Arizona. There was $38,530.68 worth of lumber that was sold to companies which admittedly shipped those amounts out of State but was not considered directly in the flow of commerce. There was $11,724.63 worth of lumber which was shipped by the company to a company in Michigan which the Board determined was directly in the flow of commerce. Up until this time there would have been no question as to the $39,622.64, going from the company's plant directly to the Arizona distributing company, being in commerce, so along with the $11,724.63, it would have placed this company well within the rules as laid down by the July announcement of policy of 1954, but by a simple maneuver, the Board finds it convenient to say, because these companies purchased the lumber and hauled the lumber from the producer's plant after buying it, that this amount was indirectly in commerce. We believe that also the amount sold to the two companies who shipped into interstate commerce should have been designated as directly in commerce but the Board had far overstepped their former policy, which had been followed for many years, when they eliminated the direct shipment by the company to the Arizona buyer.

Now in addition to the approximate $100,000 worth of sales, there was $800,000 worth of material that left the employer's plant which was still not accounted for, as the Board ruled that this company would not fall under the commerce section of the act. Now the Board says that in their decision and order in the case, that all of the sales concededly were, for the Board's jurisdictional purposes, wholly intrastate in character, with the exception of the amount which we have mentioned above. We have no way in which to prove that an inadequate investigation of this amount of $800,000 worth of lumber, which was shipped from the employer's plant was made but we are firmly convinced, knowing the industry, that a substantial amount of this lumber finally found its way into the stream of commerce, and if a proper investigation had been made by the Board, that would have been the findings rather than their abrupt dismissal of the case.

The General Council of the Labor Relations Board filed a brief, taking exception to the decision of the Board in the above-numbered case and pointed out the errors in respect to the reasoning of the trial examiner in recommending that the company did not fall under the commerce section of the act. Some of the General Council's argument, which is contained within the brief, was very interesting and should have been taken into consideralton by the Board in making a final determination of the case. However, the General Council did not urge the Board to accept his reasoning with too much force and only asked that the Board make a definite commitment as to what its policies would be in the future. We have yet to see where the Board has established any policy on which anyone can depend as being the yardstick. Tomorrow we cannot reasonably expect in the lumber industry that a company is either under, or out from under the commerce section of the act as far as the NLRB is concerned. The situation changes from day to day and there seems to be no rhyme nor reason to the present policy of the Board in this respect.

The second case is one which involves the George Secor Logging Co., Case No. 12–RM–149 and Case 19–RC–1527. The Secor Logging Co. produced approximately $300,000 worth of logs which were logged at the direction of the Albian Logging Co., who bought the timber and directed its exploitation. The Albian Logging Co. not only told the Secor Logging Co. how and when the timber was to be logged, but also directed them to deliver the logs to various companies unquestionably in interstate commerce.

The Albian Logging Co. was set up simply for the purpose of buying and exploiting timber in the burn area of the Olympic Peninsula in behalf of two other companies. The Albian Logging Co. is owned by the Nettleton Timber Co. who owns 50 percent, and 50 percent is owned by an individual in Hoquiam, Wash., is a part owner of the Nettleton Lumber Co. The Nettleton Timber Co. is a totally owned subsidiary of the Nettleton Lumber Co. The Albian Logging Co. is just a creature of convenience set up by the Nettleton Timber Co. which is the same as the Nettleton Lumber Co. Now the Albian Logging Co. directed a great volume of the logs produced by the George Secor Logging Co. to be delivered to the parent company, the Nettleton Lumber Co. The peeler logs, which were to be used in the manufacture of plywood, was directed by them to be delivered to the National Plywood Co. and the cedar logs were directed to be delivered to a shingle mill in the area. It is clearly shown that the Nettleton Lumber Co., the Nettleton Timber Co. and the Albian Logging Co. are one and the same company as to operational direction. It is also clearly established that the George Secor Logging Co. is completely dependent upon their direction as to how he does his work, with the exception of him having a few employees whom he pays, he is in no position other than that of an employee who takes his direction for a job he is performing on an hourly rate.

In face of the facts in this case, the Board unreasonably ruled that the George Secor Logging Co. was not only twice removed from commerce but thrice removed, and dismissed the case. These cases clearly show that by the simple device of setting up a dummy corporation for sales purposes, or for any other purpose where the material can flow into someone else's hands within a State prior to the time of entering the flow of commerce, that they can now be eliminated from the commerce section of the act. It also indicates that the very nature of the industry will force the unions and their membership to strike more and more often for recognition in the future because of the lack of understanding on the part of the National Labor Relations Board.

The third and final case I wish to call to your attention is the Robert Tuttle Logging Co., case No. 19–RC–1584. The record in this case shows that the average sales of logs of this company was $125,000. The record also shows that these sales were made locally to the National Logging Co., a dummy corporation which sold the logs to companies engaged in interstate commerce. The record also showed that the National Logging Co. was owned by 3 logging operators, Robert Tuttle being 1 of them. They all operate on the same basis and all of their sales were made through the so-called National Logging Co.

The 3 small operators, including Tuttle, were the 3 officers of the National Logging Co. and directed their policies entirely. The Board in this case, ruled that because the National was an independent company, Tuttle is twice removed from commerce and is not covered by it under the act.

We must assume by the actions of the Board that if the case had involved the two other operators in the National Logging Co. and their operations, they also would be placed under the twice removed theory and would have been eliminated from the commerce section of the act. Inasmuch as it has been the long practice of the Board that when interlocking ownership was apparent, such as it is in this case, the twice removed theory would not have been applied and if they met the dollar requirements, the companies would necessarily have come under the commerce section of the act but the Board is now completely disregarding the interlocking ownership and is using the fact that the dummy company, such as the National was set up for sales purposes, as an excuse to place the operating companies in a position of being twice removed from commerce.

These three cases and their handling by the National Labor Relations Board, fully sets forth the intentions of the Board to eliminate a major portion of the lumber industry from protection, if any, under the NLRB. The Board, by its administrative prerogatives, is not only cutting down to the smaller caseload which it had indicated prior to its release of the standards under which it would exercise jurisdiction on July 1, 1954, but they have continued to enlarge on these prerogatives to the point that they have eliminated, by administrative manipulation, a major share of the companies in the industry from coverage under the act if those companies choose to use the loopholes which the Board has provided for them.

As we have said before, if the present procedure continues, and if the employers are allowed to extend it by the simple device of setting up dummy corporations within the State, many of the operations which are presently under contract to our union can lose the coverage under the act by simply questioning the bargaining rights at the time of expiration of the contract on the appropriate notice as required by the act, prior to the termination of the contract. It follows that if this matter comes to the attention of the Board in the form of an employer questioning a majority held by a union, the Board will immediately, in these cases, declare the operation not under the

commerce section because of being twice or thrice or even further removed from commerce. The end results will be that if the people still working in the operation still desire a union, and in most cases they do, there will be only one way to answer the problem and that will be to strike for the recognition desired by the employees.

The intent and the purpose of the Board at the present time in these cases is well set forth by the statement by Mr. Farmer when he says that aside from the legal limitations, it also has some practical considerations to weigh, and these are time and space, and money and personnel. Consideration of the heavy number of cases it was receiving, Farmer says, led to the Board's decision last July to cut down its exercise of jurisdiction by establishing new standards for assertion of authority. This statement by Farmer would indicate to us that the Board is not really interested in who is, or who isn't involved in interstate commerce as to the coverage of the act. It would seem by Farmer's statement that they were only interested in the major companies at the present time, and only to the degree that each case would affect the money and personnel that the Board has available. The Board, on its own motion, seems perfectly willing to have money and personnel cut to have an excuse to reduce the caseload, so it seems that the Board is placing themselves in a position of a court which has a large number of cases to hear and because of this caseload, they, on their own motion, threw out those cases that they feel are least important and try only those cases that, in their wisdom, they feel should be tried. Of course a court of law does not have the administrative latitude that Mr. Farmer's board has, so regardless of the caseload, they cannot, through administrative procedure such as the Board has, get rid of their work and actually change the law by administration.

It would seem to us that the administrative procedure of the Board has changed the existing National Labor Relations Act to their convenience to the point, in the lumber industry at least, that it will be difficult to establish bargaining rights without the weapon of the strike in the near future. This will be the case in the large part of the industry with the exception of very few major operations which represent and constitute only a fraction of the total industry.

Peanuts Are Basic

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the New York Times of May 7, 1955, entitled "Peanuts Are Basic":

The House of Representatives has voted, 206–201, for a restoration of fixed 90-percent price supports for the so-called basic commodities. But unless and until the Senate gives evidence that it is prepared to back the House up on this rejection of flexible supports without even a trial it is difficult to take the House action too seriously.

It seems doubtful that the Senate will go along in this irresponsible action, especially since the measure would invite an almost certain Presidential veto. On the other hand, it seems doubtful that Mr. RAYBURN, who helped push this week's farm prop measure through, would have done so in disregard of a possible second rebuff from his own party in the Senate. The most logical assumption, therefore, would seem to be that the proposal for high price supports will not even get to the floor of the Senate. This would mean that the House vote was intended merely for the record; and if that proves to be the case it isn't likely to contribute greatly to Democratic strength in the Farm Belt.

Meanwhile, we have seen an interesting demonstration in the last few days of why the term "basic" is applied to the commodities wheat, corn, cotton, rice, and peanuts. The average person is likely to assume that basic here means that these crops are, let us say, more fundamentally important to the economy than any other crops. Actually they are basic chiefly to one another, and for political purposes. That this is clearly realized by the leaders on both sides of the House was to be seen in the strategy they used. The Republicans sought to have peanuts dropped as a beneficiary of the legislation, knowing that representatives of all five commodities leaned on each other. It was by using his influence to defend the peanut amendment that Mr. RAYBURN saved the day for his colleagues. But the contest was so close that, just to make sure, the representatives of the basics coaxed the dairy farmers into a temporary alliance with them by the lure of an 80-percent floor under their products.

Some Plain Facts on Farm-Labor Deals

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. ANFUSO. Mr. Speaker, during the debate on the farm bill last week we heard much about a so-called deal between urban area Congressmen and their rural brethren to support farm legislation in return for the farm bloc's support of a minimum-wage bill.

What was an appeal to rural area Congressmen to consider the plight of low-income workers, was interpreted by some as a "shady" or "shabby" proposition. What was an attempt to arouse some interest in the welfare of consumers and to present their views on farm issues, was interpreted in certain quarters as "logrolling."

Both farmers and city workers are entitled to share in the prosperity of our Nation and they should not be deprived of the opportunity of a decent living. Somehow, this thought seems to have escaped those who are constantly on the lookout for sinister deals and shabby propositions.

Mr. Speaker, an excellent editorial on the subject was published in Labor's Daily on May 7, 1955. I am pleased to insert it into the RECORD in order to bring it to the attention of all my colleagues. It reads as follows:

THEIR HELP IS WELCOME
(By Willard Shelton)

Representative ARENDS, Republican, of Illinois, showed discontent during the farm bill debate, with the fact that union spokesmen had endorsed amendment of the Eisenhower-Benson flexible price-support program. The suggestion has been bandied about that unions and farm spokesmen have made a deal, whereby city Congressmen would support the farm bloc and rural Congressmen would support labor's desire for a better minimum wage.

This alleged deal probably exists more in somebody's imagination than in actuality, but it would be hard to think of a better deal for the country.

The plain fact is that rural Congressmen have depended on city support for practically all the major farm programs of the past two decades.

City Congressmen supported the Agriculture Adjustment Act, farm conservation plans, rural electrification, and commodity credit. The bills would never have been passed without help from city Congressmen elected with labor votes.

There isn't anything new in the fact that both AFL and CIO believe that the farmer has a right to share in prosperity, that the city worker can't prosper if the farmer is deprived of a decent living.

Chairman COOLEY, Democrat, of North Carolina, of the House Agriculture Committee, gave Walter P. Reuther and George Meany a chance to testify this year on the farm problem, and their views thus got wide circulation. But the views were honestly conceived and honestly uttered; they were not invented or doctored up as a result of any shabby little deal.

It is perfectly true, on the other hand, that some Congressmen from rural districts have shown an extraordinary lack of sympathy with the problems of organized labor.

It was rural votes that passed the Taft-Hartley law in 1947 and it was rural votes that held down the rate of pay and the spread of coverage under the latest amendment to the Fair Labor Standards Act.

There is nothing wrong in an invitation to Congressmen from farm districts to take another look at the problems of city workers, to think a bit more deeply about the rights of unions, to realize that reciprocity is often a virtue.

This observer found great pleasure in the fact that Chairman COOLEY stood in the House and defended his committee for asking Meany and Reuther to present the viewpoint of city consumers on the farm bill. Why shouldn't labor leaders be invited to discuss major issues affecting the economic well-being of millions of farmers?

There is a minimum-wage bill making its way through Congress, although Chairman BARDEN, Democrat, of North Carolina, hasn't yet scheduled House Labor Committee hearings on it. It is a bill about which labor feels deeply and in which labor's interests are vitally involved.

If a few farm Congressmen have been awakened to the facts of life by debate on COOLEY's farm bill; if they realize that the broadest interests of both city workers and farmers are identical, maybe they will help the city Congressmen this time. Their support would be very welcome.

Voting and Attendance Record

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 2d session of the 83d Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record. It follows:

Voting and attendance record, Representative GERALD R. FORD, JR., Fifth District, Michigan (83d Cong., 2d sess.)

Roll call No.	Date	Measure, question, and result	Vote
	1954		
1	Jan. 6	Call of the House	Present.
2	Jan. 20	Quorum call	Present.
		H. R. 5337, providing for the establishment of a United States Air Force Academy:	
3	Jan. 21	On passage. (Passed, 329 to 36)	Yea.
		H. J. 358, to discharge indebtedness of Commodity Credit Corporation:	
4	Jan. 27	On passage. (Passed, 323 to 27)	Yea.
5	Feb. 2	Quorum call	Present.
6	Feb. 3	do	Present.
7	do	do	Present.
8	Feb. 4	do	Present.
9	do	do	Present.
		H. R. 3300, authorizing the State of Illinois and the Sanitary District of Chicago, under direction of the Secretary of the Army, to divert water from Lake Michigan into Illinois Waterway:	
10	do	On amendment designed to prevent additional diversion of water until survey of lake levels had been completed by Corps of Engineers and submitted to Congress. (Rejected, 177 to 202.)	Yea.
11	do	On motion to recommit. (Rejected, 150 to 234.)	Yea.
12	Feb. 16	Quorum call	Absent.
13	do	do	Absent.
14	Feb. 17	do	Absent.
		H. R. 4646, providing for the exchange of certain public and private lands in order to prevent Federal lands acquisition from interfering with sustained-yield timber operations:	
15	do	On motion to recommit. (Adopted, 226 to 161.)	NV.
16	Feb. 18	Quorum call	Present.
		H. Res. 400, to provide funds for the operation of the Committee on Un-American Activities:	
17	Feb. 25	On passage. (Passed, 363 to 1.)	NV.
18	Mar. 1	Quorum call	Present.
19	do	do	Present.
20	Mar. 2	do	Present.
		H. J. Res. 355, relating to supplying of agricultural workers from Mexico:	
21	do	On motion to recommit. (Rejected, 156 to 250.)	Nay.
22	do	Quorum call	Present.
23	do	do	Present.
24	Mar. 4	do	Present.
		H. R. 8067, making appropriations for the Departments of State, Justice, and Commerce, and the United States Information Agency, for fiscal 1955:	
25	Mar. 5	On an amendment to increase funds for subsidies to air carriers from $23,000,000 to $40,000,000. (Adopted, 265 to 105.)	Yea.
26	Mar. 8	Quorum call	Present.
27	Mar. 10	do	Present.
		H. R. 8224, reducing and extending certain excise taxes:	
28	do	On motion to recommit, with instructions to remove taxes on admissions of 50 cents or less. (Rejected, 200 to 213.)	Nay.
29	do	On passage. (Passed, 411 to 3.)	Yea.
30	Mar. 11	Quorum call	Present.
31	Mar. 15	do	Present.
32	do	do	Present.
33	Mar. 17	Quorum call	Present.
		H. R. 8300, revising the internal revenue laws:	
34	Mar. 18	On motion to recommit with instructions to increase personal exemptions and eliminate section dealing with double taxation of dividends. (Rejected, 204 to 210.)	Nay.
35	do	On passage. (Passed, 339 to 80.)	Yea.
36	Mar. 22	Quorum call	Present.
37	do	do	Present.
38	Mar. 23	do	Present.
39	Mar. 24	do	Present.
40	Mar. 29	do	Present.
		H. R. 8224, reducing and extending certain excise taxes:	
41	Mar. 30	On adoption of conference report. (Adopted, 395 to 1.)	Yea.
42	Mar. 31	Quorum call	Present.
		H. R. 8583, appropriating funds for various independent offices for fiscal 1955:	
43	do	On motion to recommit with instructions to adopt language preventing FNMA from liquidating mortgages. (Rejected, 180 to 214.)	Nay.
44	Apr. 1	Quorum call	Present.
45	Apr. 2	do	Present.
	do	H. R. 7839, aiding in the provision and improvement of housing, the elimination and prevention of slums, and the conservation and development of urban communities:	
46	do	On motion to recommit with instructions to provide 35,000 public housing units each year for 4 years. (Rejected, 176 to 211.)	Nay.
47	do	On passage. (Passed, 352 to 46.)	Yea.
48	Apr. 5	Quorum call	Present.
49	Apr. 7	do	Present.
50	Apr. 8	do	Present.
		H. R. 8649, authorizing the admission into evidence in certain criminal proceedings of wiretap information secured in national security investigations:	
51	do	On amendment requiring a court order in order to make wiretap evidence admissible. (Passed, 221 to 166.)	Nay.
52	do	On passage. (Passed, 379 to 10.)	Yea.
53	Apr. 12	Quorum call	Present.
54	Apr. 14	do	Present.
55	Apr. 27	do	Present.
		H. R. 7397, amending the Public Health Grant-in-Aid Act by consolidating and simplifying the several public health grant-in-aid programs for assisting States and local communities in providing necessary public health services:	
56	Apr. 28	Quorum call	Present.
57	Apr. 29	do	Present.
		H. R. 8873, appropriating funds for the Defense Department for fiscal 1955:	
58	do	On passage. (Passed, 077 to 0)	Yea.
59	May 5	Quorum call	Present.
60	do	do	Present.
61	May 6	Quorum call	Present.
		S. 2150, providing for creation of the St. Lawrence Seaway Development Corporation to construct part of the St. Lawrence seaway in the United States territory:	
62	do	On motion to recommit. (Rejected, 157 to 242.)	Nay.
63	do	On passage. (Passed, 241 to 158.)	Yea.
64	May 10	Quorum call	Present.
65	do	do	Present.
		H. R. 2556, amending United States Code relative to extradition of certain fugutives from United States to countries occupied by United States jointly with 1 or more powers:	
66	do	On motion that enacting clause be stricken out (that the bill be killed). (Adopted, 228 to 68.)	Yea.

Voting and attendance record, Representative GERALD R. FORD, JR., Fifth District, Michigan (83d Cong., 2d sess.)—Continued

Roll call No.	Date	Measure, question, and result	Vote
	1954		
67	May 11	Quorum call	Present.
		H. Res. 533, citing Bernhard Deutch for contempt of House of Representatives by refusal to answer questions before the Committee on Un-American Activities:	
68	do	On adoption. (Adopted, 346 to 0)	Yea.
		H. R. 9040, authorizing cooperative research in education:	
69	May 12	On passage. (Passed, 296 to 55.)	Yea.
		H. Res. 532, providing for consideration of H. R. 7434, establishing a National Advisory Committee on Education:	
70	do	On resolution. (Adopted, 194 to 140)	Yea.
71	May 13	Quorum call	Present.
		H. R. 7434, establishing a National Advisory Committee on Education:	
72	do	On passage. (Passed, 179 to 157.)	Yea.
73	May 19	Quorum call	Present.
		H. R. 7001, providing for a White House Conference on Education:	
74	do	On passage. (Passed, 269 to 69.)	Yea.
75	May 26	Quorum call	Present.
		H. R. 9242, authorizing certain construction at military and naval installations and for the Alaska communications system:	
76	do	On passage. (Passed, 346 to 0.)	Yea.
		H. Res. 568, providing for the consideration of H. R. 9366, amending the Social Security Act and Internal Revenue Code:	
77	June 1	On adoption. (Adopted, 270 to 76)	Yea.
		H. R. 9366, amending the Social Security Act and the Internal Revenue Code so as to extend coverage under the old-age and survivors insurance program, increasing the benefits payable thereunder, preserving the insurance rights of disabled individuals, and increasing the amount of earnings permitted without loss of benefits:	
78	do	On passage. (Passed, 355 to 8.)	Yea.
79	June 9	Quorum call	Present.
		H. Res. 580, providing for the consideration of H. R. 7494, extending the Trade Agreements Act for 1 year:	
80	June 11	On adoption. (Adopted, 273 to 63.)	Yea.
		H. R. 7494, extending the authority of the President to enter into trade agreements under sec. 350 of the Tariff Act of 1930, as amended, for 1 year:	
81	do	On passage. (Passed, 281 to 53.)	Yea.
82	June 14	Quorum call	Present.
		H. R. 9517, appropriating funds for the government of the District of Columbia for fiscal 1955:	
83	June 15	On amendment fixing the Federal payment to the District of Columbia at $20 million instead of $16 million. (Passed, 186 to 168.)	Nay.
84	June 16	Quorum call	Present.
		H. R. 8729, extending for 2 years the present authority of the Federal Reserve banks to purchase securities directly from the Treasury in amounts not to exceed $5 billion outstanding at any one time.	
85	do	On motion to recommit with instructions to limit bond purchasing authority to periods when no cash is available. (Rejected, 80 to 250.)	Nay.
86	June 17	Quorum call	Present.
		H. Res. 583, providing for disagreement to a Senate amendment to the Housing bill providing for public housing and agreeing to conference requested by Senate:	
87	do	On passage. (Passed, 360 to 19.)	Yea.
88	June 28	Quorum call	Present.
		S. Con. Res. 91, expressing the sense of Congress that the United States support the Organization of American States in taking appropriate action to prevent interference in Western Hemisphere affairs by the international Communist movement:	
89	June 29	On passage. (Passed, 372 to 0.)	Yea.
90	June 30	Quorum call	Present.
		H. R. 9678, promoting the security and foreign policy of the United States by furnishing assistance to friendly nations (mutual security bill):	
91	do	On amendment stating it to be the sense of Congress that no funds should be used for governments which are committed by treaty to maintain Communist rule over any defined territory of Asia. (Passed, 389 to 0.).	Yea.
92	do	On passage. (Passed, 260 to 126.)	Yea.
93	do	Quorum call	Present.
94	July 1	do	Present.
95	July 2	do	Present.
		H. R. 9680, providing for continued price support for agricultural products, augmenting the marketing and disposal of such products, and providing for greater stability in the products of agriculture:	
96	do	On amendment to provide flexibility in price supports from 82½ to 90 percent of parity for the 1955 crops of basic commodities. (Passed, 288 to 170.).	Yea.
		H. R. 9640, amending the Vocational Rehabilitation Act so as to promote and assist in the extension and improvement of vocational rehabilitation services, provide for a more effective use of available Federal funds and otherwise improve the provisions of that act:	
97	July 8	On passage. (Passed, 347 to 0.)	Yea.
	do	H. R. 9709, a bill to extend and improve the unemployment compensation program:	
98	do	On motion to recommit with instructions to impose Federal standards upon State programs. (Rejected, 110 to 241.)	Nay.
99	do	On passage. (Passed, 309 to 36.)	Yea.
		H. R. 9580, revising and extending the laws relating to espionage and sabotage:	
100	do	On passage. (Passed, 324 to 0.)	Yea.
101	July 12	Quorum call	Present.
		H. Res. 623, providing for the consideration of H. R. 8356, the health service prepayment plan reinsurance bill:	
102	July 13	On passage. (Passed, 274 to 88.)	Yea.
		H. R. 8356, the health service prepayment plan reinsurance bill:	
103	do	On motion to recommit. (Adopted, 238 to 134.)	Nay.
104	July 15	Quorum call	Present.
		H. Res. 627, reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations:	
105	do	On passage. (Passed, 381 to 0.)	Yea.
106	July 20	Quorum call	Present.
		H. R. 7839, the Housing Act of 1954:	
107	do	On recommittal motion designed to provide 140,000 new units of public housing over a 4-year period in lieu of the 35,000 new units for fiscal year 1955. (Rejected, 156 to 234.)	Nay.
108	do	On adoption of conference report. (Adopted, 358 to 30.)	Yea.
		H. R. 9888, extending the time for initiating training under the Korean GI bill of rights to 3 years instead of the present 2 years after date of induction:	
109	July 21	On passage. (Passed, 399 to 0.)	Yea.
		H. R. 9020, granting increases in compensation and pension to veterans of all wars and their dependents:	
110	do	On passage. (Passed, 399 to 0.)	Yea.
		H. R. 9245, providing postal rate increases and postal pay increases:	
111	do	On motion to suspend rules and pass with an amendment. (Rejected, 228 to 171. A ⅔ majority is necessary for passage under suspension of the rules.)	Yea.
112	July 22	Quorum call	Present.
		H. Res. 604, citing Bolza Baxter for contempt of the House of Representatives by refusal to answer questions before the Committee on Un-American Activities:	
113	July 23	On passage. (Passed, 376 to 0.)	Yea.
114	do	Quorum call	Present.
		H. R. 9757, amending the Atomic Energy Act of 1946, as amended:	
115	July 24	On amendment relating to atomic patents. (Passed, 203 to 159.)	Yea.
116	July 26	Quorum call	Present.
		H. R. 9757, amending the Atomic Energy Act of 1946, as amended:	
117	do	On motion to recommit. (Rejected, 165 to 222)	Nay.
118	do	On passage. (Passed, 231 to 154.)	Yea.
119	July 27	Quorum call	Present.
		H. R. 10051, the mutual security appropriation bill for fiscal 1955:	
120	July 2	On passage. (Passed, 266 to 128.)	Yea.
		H. R. 8300, a bill to revise the internal revenue laws of the United States:	

Voting and attendance record, Representative GERALD R. FORD, JR., Fifth District, Michigan (83d Cong., 2d sess.)—Continued

Roll call No.	Date	Measure, question, and result	Vote
	1954		
121	July 2	On motion to recommit with instructions for House conferees to agree to Senate amendment which deleted section providing credit against the income tax of an individual of a percentage of the dividends received from certain domestic corporations. (Rejected, 169 to 227.)	Nay.
122	...do....	On adoption of conference report. (Adopted, 316 to 77.)	Yea.
123	...do....	Quorum call	Present.
		H. Res. 626, providing for the consideration H. R. 236, authorizing the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado:	
124	...do....	On passage. (Rejected, 188 to 195.)	Yea.
		H. R. 9756, increasing the borrowing power of the Commodity Credit Corporation:	
125	July 29	On passage. (Passed, 317 to 57.)	Yea.
		H. Con. Res. 265, providing for sine die adjournment of the 2d sess. of the 83d Cong. on July 31:	
126	...do....	On passage. (Rejected, 183 to 193.)	Yea.
127	...do....	Quorum call	Present.
128	July 30	....do....	Present.
		H. R. 7840, amending the Railroad Retirement Act, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act:	
129	...do....	On passage. (Passed, 360 to 0.)	Yea.
		H. R. 9666, amending sec. 1001, par. 412, of the Tariff Act of 1930 with respect to hardboard:	
130	...do....	On passage. (Passed, 235 to 109.)	Yea.
		H. Con. Res. 266, providing for sine die adjournment of the 2d sess. of the 83d Cong. on July 31:	
131	...do....	On passage. (Adopted, 179 to 167.)	Yea.
		H. R. 8384, authorizing the Secretary of the Interior to construct, operate, and maintain the Talent division of the Rogue River Basin reclamation project, Oregon:	
132	...do....	On passage. (Passed, 163 to 144.)	Yea.
133	...do....	Quorum call	Present.
134	Aug. 4	Quorum call	Present.
		S. 16, amending the immunity provision relating to testimony given by witnesses before either House of Congress or its committees:	
135	...do....	On passage. (Passed, 293 to 55.)	Yea.
136	Aug. 9	Quorum call	Present.
		H. R. 9245, establishing a joint committee of Congress to study postal field service reclassification and providing a 7-percent pay increase for postal employees:	
137	...do....	On motion to discharge the Committee on Rules from further consideration of H. Res. 590, the rule providing for consideration of H. R. 9245. (Passed, 348 to 29.)	Nay.
138	...do....	On passage. (Passed, 352 to 29.)	Nay.
		H. Res. 687, providing for consideration of S. 2033, relating to the labeling of foreign-produced trout sold in the United States:	
139	...do....	On passage. (Passed, 209 to 159.)	Yea.
		H. R. 9678, promoting the security and foreign policy of the United States by furnishing assistance to friendly nations:	
140	...do....	On motion to recommit. (Rejected, 97 to 266.)	Nay.
141	Aug. 16	Quorum call	Present.
		S. 3706, outlawing the Communist Party, prohibiting members of Communist organizations from serving in certain representative capacities, and for other purposes:	
142	...do....	On passage. (Passed, 305 to 2.)	Yea.
143	...do....	Quorum call	Present.
		S. 3706, outlawing the Communist Party, prohibiting members of Communist organizations from serving in certain representative capacities, and for other purposes:	
144	...do....	On motion to instruct conferees to accept Senate amendments. (Adopted, 208 to 100.)	Nay.
		H. R. 10051, making appropriations for Mutual Security for fiscal year 1955:	
145	Aug. 19	On adoption of conference report. (Adopted, 188 to 77.)	Yea.
146	...do....	On motion ordering previous question on amendment providing $55 million and providing 80 percent of the foreign currency generated shall be used to strengthen and improve the civilian economy of Spain. (Adopted, 186 to 76.)	Yea.
		S. 3706, outlawing the Communist Party, prohibiting members of Communist organizations from serving in certain representative capacities, and for other purposes:	
147	...do....	On adoption of conference report. (Adopted, 265 to 2.)	Yea.
		H. R. 2236, providing for regulation of certain public transportation in the Washington metropolitan area:	
148	Aug. 20	On recommittal of conference report with instructions to eliminate establishment of Washington Metropolitan Area Transit Regulatory Commission. (Rejected, 95 to 164.)	NV.

GOP Politics Warps Regulatory Agencies

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. MACK of Illinois. Mr. Speaker, no one questions the right of the Eisenhower administration to represent the interests of big business, but a serious question does arise when this administration endeavors to influence and carry out this policy in our regulatory bodies which were established to protect the public interests. I have just read the following very interesting article on this subject which appeared in the May issue of the Democratic Digest, and I wish to include it as part of my remarks:

UNCLE SAM'S UMPIRES SEEM TO BE TAKING SIDES

Mrs. Marie Natvig waved a metal water jug at the defense attorney.

"Mr. Brown," she shouted, "I'll kill you."

This threat was delivered during hearings at the Federal Communications Commission, the Government agency which hears applications for new TV and radio stations across the Nation, and then is supposed to grant a license to the most worthy applicant.

That was some months ago, but repercussions from Mrs. Natvig's outburst are far from over. Since then the Senate has appropriated $200,000 for an investigation which will delve, among other things, into the FCC's handling of telephone, telegraph, radio, and TV.

The case in which Mrs. Natvig appeared as a witness also called public attention to the deepening suspicions that the Eisenhower administration is making political use of traditionally nonpolitical Government agencies. Uneasiness on this score has led Congressman EVINS, of Tennessee, to favor an investigation of all the Federal regulatory commissions.

"These regulatory commissions," he says, "were originally conceived to be nonpartisan, or at least bipartisan, and they were intended to be of a judicial character. If it proves to be true, as we frequently hear, that these supposedly independent commissions have become political puppets on telephone wires leading from the White House, or from a political committee, then it is time we made the facts known."

It may be difficult for people who are unfamiliar with FCC hearings to understand why Mrs. Natvig's threat has had such an impact. Hearings at the Commission ordinarily consist of stodgy, fact-packed testimony on financial qualifications or equipment proposals.

But when Edward Lamb applied for an extension of his license to a TV station in Erie, Pa., the FCC brought forward a string of questionable witnesses to testify on his qualifications. There was a man being sought on a warrant for bigamy, another convicted of feeding liquor to underage girls in a cemetery, and still another who, after a career as a strongman and strikebreaker, was sentenced to life imprisonment for murder.

Mrs. Natvig was probably the most colorful of the lot. She was described by the press as a prim-looking 50-year-old grandmother, but this facade was belied by her confessions of sexual promiscuity and Communist affiliations. So far as the examiner was concerned, the importance of her testimony lay in her assertions that some 20 years ago, Mr. Lamb had associated with Communists and contributed to their causes.

Said the Associated Press:

"Mrs. Marie Natvig, who has testified she remembers in detail Communist conversations she had with publisher Edward Lamb in 1936, answered 'I don't remember' a score or more times yesterday when asked about other events and persons of the same period.

"Among the things Mrs. Natvig, a self-styled former Communist, said she did not remember were:

"Where she lived in Washington in 1943; where she was married to her second husband; where her second husband had a fur shop in Akron; the address in Chicago of an organization called Public Affairs Informa-

tion Service, which she said employed her; who her PAI boss was; or who any of her fellow PAI workers were."

Four months later, people who had followed the hearing were not surprised when Mrs. Natvig dismissed her testimony as a series of crazy statements.

"Only an idiot would have put any credence in anything I said," said the new Mrs. Natvig. She was subsequently indicted for perjury. Mr. Lamb countered these accusations by offering a reward of $10,000 to anyone who could prove he had misrepresented himself to the Commission in denying Communist sympathies. Though no one came forward to claim the reward, the FCC took the colorful testimony of 19 witnesses over a 5-month period.

After Mrs. Natvig reversed her testimony, this comment came from the Toledo (Ohio) Times, a long-time competitor of Mr. Lamb's Ohio interests:

"We've been sitting by, rather calmly and unconcernedly, we regret, as the Federal Communications Commission has conducted its hearings on Mr. Lamb's petition for a renewal of his radio station license in Erie, Pa. We regret it because it is now clear, beyond peradventure, that Mr. Lamb is being persecuted and the FCC's record in the matter is abominable, to say the least.

"The time is past for calmness and unconcern in his case, and every operator of a radio or television station in the country should realize that fact.

"The power to license, vested in the Government, is the power to destroy. Mr. Lamb is being given a conspicuous example of this power to destroy.

"We think it is time the sorry business was stopped."

What motive lies behind this hearing?

It is difficult to see from any evidence produced so far that any question of public interest is at stake. Mr. Lamb has suggested that he is the victim of a political vendetta touched off by Federal Communications Commissioner Doerfer. Indeed, Mr. Lamb has told a congressional committee that Mr. Doerfer frankly told him "it would be better if you were still a Republican."

Doerfer has denied this, but in the absence of any other explanation, more and more people around Washington are coming to believe that this is quite possibly the case. Moreover, the impression is growing that the Lamb hearing is only one byproduct of a general political bias which the Eisenhower administration is imposing on the "fourth branch" of our Government—the various regulatory commissions in Washington.

Thomas L. Stokes is one columnist who has expressed his concern over this matter:

"Something needs to be said," wrote Mr. Stokes, "about the way Federal regulatory commissions have come under the dominant influence of business and financial interests which the commissions are supposed to regulate, and how their function ordained by Congress to protect the public interest has been submerged."

Just what are these regulatory commissions?

Everyone is familiar with the names. There is the Interstate Commerce Commission, the Tariff Commission, the Federal Power Commission, the National Labor Relations Board, the Atomic Energy Commission, the Federal Communications Commission, the Federal Trade Commission, and perhaps half a dozen more.

But few people realize that these Commissions were created to regulate business in the public interest. They are the administrative police power, and they speak with the public voice on such matters as rates on interstate transportation, telephones, and power; licenses for radio and TV stations, airline routes, and fissionable atomic material; various safety standards, tariff adjustments, and labor disputes. On these Commissions, the public interest is ordinarily protected from political infiltration through staggering the terms of the commissioners (so that they are not all appointed by one President) and through limiting by law the number of commissioners who may be from any one political party. Apparently this is not always effective.

When President Eisenhower filled the chairmanship of the Federal Communications Commission with a highly successful public-utilities lawyer, George C. McConnaughey, the St. Louis Post-Dispatch said:

"No one would argue that it would be fair to take a ballplayer from one of the two competing teams in a world series and make him the chief umpire for the championship game.

"When then did President Eisenhower appoint a telephone-company lawyer as chief regulator of the interstate telephone business?

"The McConnaughey appointment is in the Eisenhower administration pattern for the regulatory agencies," the Post-Dispatch went on. "Edward F. Howrey, corporation lawyer, goes to the Federal Trade Commission, before which he has argued cases. Albert M. Cole, congressional foe of housing, becomes Public Housing Administrator. Robert E. Lee, friend of Senator MCCARTHY, is put on the Federal Communications Commission. Jerome K. Kuykendall, opponent of public power, is named to the Federal Power Commission. Albert C. Beeson, appointed to the NLRB, has a record so dubious that the Republican-controlled Senate cast 42 votes against him. Enemies of the President's trade program are slipped onto the Federal Tariff Commission. And so on and on."

Unfortunately, once politically minded Commissioners have taken over at the top, it is apparently not too difficult to whip the supposedly impartial Commissions into partisan shape. Columnist Thomas Stokes has shown how this was done at the Federal Power Commission.

"The FPC has emerged finally from a reorganization instituted by the Eisenhower administration," wrote Mr. Stokes. "The result is that the 'guts,' heart, and spirit once possessed by this agency have been nearly reorganized out of it. It's the old story. Things were made uncomfortable for key members of the expert staff whose conception of regulation does not coincide with that of the now prevailing business-minded element of the FPC. Some have been demoted and shunted aside to make way for more amenable personnel. Some have quit, including a number of lawyers on the staff as well as technical experts."

There results were achieved in part by letting "the top executives of natural gas and electric utilities" give advice on the reorganization.

Two First-Rate Judges

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. MULTER. Mr. Speaker, I am very pleased to direct the attention of our colleagues to the following editorial which appeared in the New York Herald Tribune of May 6, 1955.

It is my fervent hope that President Eisenhower will nominate these two able jurists to the two vacancies in the United States Court of Appeals, Second Judicial Circuit.

TWO FIRST-RATE JUDGES

There are two vacancies in the Federal court of appeals in this circuit. The importance of the Federal bench needs no elaboration; it goes without saying that partisan politics should have no place in filling these positions. It would be a fine demonstration that this truth is recognized if the places on the appeals court go to J. Edward Lumbard, Republican, and Irving Kaufman, Democrat.

Both men are young, vigorous, and have unblemished reputations, personally and professionally. Mr. Lumbard, at present the United States attorney for the southern district, has a long and excellent record in Federal and State prosecutions; he has occupied, with distinction, a seat on the State supreme court. Judge Kaufman, on the Federal district court since 1949, met his most severe test in the Rosenberg case, where his fairness and courage in the face of Communist vilification was typical of his consistently high standards of judicial conduct on the bench. His appointment would strengthen the principle of promotions within the Federal judiciary and thus aid morale among all the judges.

Both Mr. Lumbard and Judge Kaufman are favorably known to lawyers and laymen in this community and nationally. To see them on the court of appeals would enhance confidence in the Federal court system and in the way its members are selected. President Eisenhower has an opportunity to perform a public service, to rally nonpartisan sentiment, and to open new and wider fields for two able jurists by nominating Mr. Lumbard and Judge Kaufman to the vacant posts.

I Speak for Christian Citizenship Contest

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. VELDE. Mr. Speaker, I am extremely proud to learn that a young woman from Peoria, Ill., in the 18th Congressional District, was greatly honored by receiving first prize in a contest on the topic entitled: "I Speak for Christion Citizenship." It is with great pleasure, therefore, that I introduce into the RECORD her very well-prepared and excellently delivered speech on this subject.

I hope that Miss Brodbeck will continue with renewed vigor the work she has already begun in the interest of the Christian Endeavor Society.

A LETTER TO MY CONGRESSMAN
I SPEAK FOR CHRISTIAN CITIZENSHIP
(By Barbara Ann Brodbeck, Peoria, Ill.)

DEAR MR. CONGRESSMAN: All of us are alarmed by the rapid progress which communism is making all over the earth. We have seen it swallow up much of Asia in recent years. We have noted its growing influence over some of our most important European allies in the past few years. As we look at these oppressed nations we are forced to the conclusion that many of the evils which confront them, and us, are a direct result of man's failure to serve God.

The creation of godless ideals, the setting up of wealth, power, and personal success as the chief aims of life, has contributed more thany any other single factor to precipitate the moral and economic crisis with which these lands are faced today, and with which

we will be faced if Christians do not provide our country with leadership in its fight to preserve freedom. Yes—there is a chance we might lose our freedom. Democracy is freedom, but you cannot continue to build a free country on lack of initiative and independence, on selfishness, on cowardice, or on godlessness and immorality. Fortunately, democracy doesn't depend upon one wise leader, but upon thousands of men, women, and young people who will work together.

A fundamental belief in God is the essence of citizenship, democracy and freedom. Our country was founded by Pilgrims who were seeking freedom to worship God the way they pleased. Our Constitution is based on the fundamentals of Christianity. The home and constitutional government depend upon it. Christianity is more, however, than good moral character; it is more than the belief that all men were created equal and that the government should be of the people, by the people, and for the people; it is more than a sense of honesty and integrity. Christianity is humble repentance by sinners, followed by belief in the Lord Jesus Christ as their personal Saviour through His death on the cross and His resurrection.

"For all have sinned, and come short of the glory of God." "For by grace are ye saved through faith; and that not of yourselves: it is the gift of God: Not of works, lest any man should boast." "Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

A Christian is a changed being through faith and the result of this faith is good works. Christian citizenship, therefore, is a logical and necessary expression of one who loves God. Our free enterprise system is great because Christians do not rely solely upon the free part but upon their own enterprise. Personal achievement which lies in devotion to Christianity and freedom has made and will continue to make this a great Nation.

People do things because others do them. This places a great burden upon all of us to be always a proper example for others who might follow or imitate. Unconsciously, even more than consciously, young people are making this world a better or worse place. It's up to each young person what somebody will be. Nothing has ever been done as well as it can be done. And it's up to Christians to improve their communities, the Nation and the world.

Mr. Congressman, this is the need for Christian citizenship.

Daniel Webster once said, "Whatever makes a man a good man, makes him a good citizen." It is never hard to think of greatness in terms of heroic deeds, or of rising to dangerous opportunities. But too often men feel no responsibility for greatness in good citizenship. Everything we have came from God, our parents, and our community. Isn't it logical to put something back?

There are always enough projects to go around. Yes, projects for young people in the community. When there is an election, there is always work to be done to get out the vote. Churches vitally need Sunday-school teachers. Their city's recreational program offers many opportunities for young people to help by leading craft classes, supervising recreation for children, and doing general office work. Fund drives for the Community Chest, Red Cross, Heart, Boy Scouts, and so forth, require a lot of volunteer help. The many temptations for young people in drinking, gambling, narcotics, class distinctions, etc., can be overcome by group projects in the schools and churches.

The greatest thing we can do is to make every possible effort to be a good citizen. We are fortunate people within a fortunate land. God has given us His only Son as our Saviour and has blessed us much more abundantly than we deserve. Our forefathers have given us a philosophy of government that gives every man, woman, and child the right to life, liberty, and the pursuit of happiness.

As we take these blessings and give them back measure by measure, so we become beautiful in our citizenry, much as the Sea of Galilee is one of the most beautiful spots in the world because it allows its waters to flow out into the other parts of the land. If our citizenship is not Christian—if its goal is selfishness, personal success, wealth, honor, and power—it is no longer great and we become as miserable as the Dead Sea which harbors all of the water of the River Jordan to itself and gives back nothing.

That to me is the great challenge of Christian citizenship. A Christian is a mind through which Christ thinks, a heart through which Christ loves, a voice through which Christ speaks, a hand through which Christ helps, a life through which Christ lives.

That is why, Mr. Congressman, I speak for Christian citizenship.

Sincerely,

BARBARA BRODBECK.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. MADDEN. Mr. Speaker, today, May 10, is a day which the people of Rumania and also of Rumanian descent living in the United States highly revere and commemorate. May 10, 1866, May 10, 1877, and May 10, 1881, stand out as milestones in the centuries of struggles of Rumania for independence and self-government.

On May 10, 1866, Prince Carol was chosen for the throne of Rumania and a constitution of liberal principles was adopted. For the first time in almost two centuries began a breathing spell for Rumania's development.

On the eve of the war between Russia and Turkey on May 10, 1877, Rumania signed a convention with Russia which established further progress toward Rumania's freedom and self-rule.

On May 10, 1881, Rumania was recognized as a sovereign kingdom and proceeded to develop and expand its ancient culture without interference from her powerful neighbors to the north, east, and south. The history of Rumania's fight during the First World War on the side of France, England, and America brought about freedom and unity of all Rumanians. The recent history of the Soviet and Communist infiltration and aggression in Rumania is well known by all who are familiar with Communist aggression. The same communistic blueprint was used to place Rumania under Soviet tyranny as was inflicted upon other captive nations now under the heel of the Kremlin.

Last Sunday, May 8, I addressed a mass meeting at Detroit, Mich., of Rumanians and friends of Rumania which was held in commemoration of the day, May 10, which stands out as a day of celebration in Rumania's history.

Mr. Speaker, I wish to incorporate with my remarks a resolution which was unanimously adopted by the assemblage gathered in Detroit in joint commemoration of Rumania's Independence Day:

RESOLUTION OF THE RUMANIAN-AMERICAN NATIONAL COMMITTEE AND RUMANIAN-AMERICANS OF MICHIGAN—JOINT COMMEMORATION OF MAY 10, RUMANIAN INDEPENDENCE DAY, SUNDAY, MAY 8, 1955, DETROIT, MICH.

Whereas the declaration on liberated Europe of the Yalta agreement, to which the United States is one of the three signatory powers, provides that the peoples liberated from domination of Nazi Germany and the peoples of former Axis satellite states of Europe are to be assisted to solve by democratic means their pressing political and economic problems; and

Whereas the Yalta agreement further provides that the establishment of order in Europe and rebuilding of national economic life must be achieved by processes which will enable liberated peoples to destroy the last vestiges of nazism and fascism and to create democratic institutions of their own choice; that this provision is a principle of the Atlantic Charter, namely, the right of all peoples to choose the form of government under which they will live and the restoration of sovereign rights and self-government to those people who have been forcibly deprived of them by the aggressor nations; and

Whereas the three Governments, namely, the United States of America, the United Kingdom, and the Union of Soviet Socialist Republics, are pledged that they will jointly assist the people in any European liberated state or former Axis satellite state in Europe where, in their judgment, conditions require—

(a) To establish conditions of internal peace;

(b) To carry out emergency measures for the relief of distressed peoples;

(c) To form interim governmental authorities broadly representative of all democratic elements in the populations and pledged to the earliest possible establishment through free elections of governments responsible to the will of the people;

(d) To facilitate where necessary the holdings of such elections; and

Whereas the Yalta agreement, on the part of the Government of the United States was, in good faith, a determination to build, in cooperation with other peaceloving people, a world order under law, dedicated to peace, security, freedom, and general well being of all mankind; and

Whereas because of devious and underhanded methods employed by the Union of Soviet Socialist Republics to avoid the fulfillment of their stated obligations under the terms of the Yalta agreement, in effect has enabled the Union of Soviet Socialist Republics to foist upon the peoples liberated from Nazi Germany a government other than one of their own choice, and thereby have secured for the peoples concerned only a change of masters; and

Whereas this Nation has a sacred obligation to right the wrongs committed by the Union of Soviet Socialist Republics: Be it

Resolved, That we Americans of Rumanian origin first and foremost reaffirm our unswerving loyalty without reservation to the Government of the United States of America; that we are determined at any cost to maintain our American form of democracy; that we are opposed to all forms of subversive ideologies; that we desire to alleviate in every way legally possible the sufferings of our Rumanian brethren; that we desire to assist our Government in every peaceful way to attain the restoration of the freedom not only of our Rumanian brethren, but of all enslaved peoples everywhere, from a tyrannical and Godless Communistic regime; and be it further

Resolved, That we Americans of Rumanian origin urge our subjugated Rumanian brethren to remain steadfast in their devotion to democratic ideals, institutions, and processes and to await with faith and hope the day of their liberation; and be it further

Resolved, That copies of this resolution be sent to President Dwight D. Eisenhower, the Honorable John Foster Dulles, Secretary of State, the United States delegate to the United Nations, the members of the Senate Foreign Relations Committee, the members of the House Committee on Foreign Affairs, the two United States Senators from Michigan, and to all Representatives from Michigan whose districts include citizens of Rumanian origin.

The Changing Picture

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include a timely editorial from today's Springfield (Mass.) Union as follows:

THE CHANGING PICTURE

When Secretary Humphrey closed his books for the fiscal year ending last June 30 he found that his Treasury owed some $270.8 billion. Since the debt ceiling fixed by law is $275 billion, this meant that the Treasury's borrowing power amounted to $4.2 billion. Mr. Humphrey thought this was not enough, so he asked Congress to give him the authority to borrow an additional $15 billion, lifting the Federal Government's debt ceiling to $290 billion.

The prudent Mr. Humphrey had not suddenly turned profligate. There had been no unexpected expansion in the administration's spending plans. The argument was that the Treasury would need more than $4.2 billion in extra cash to tide it over until the spring tax flood. The protestations of Senator BYRD stopped Congress from raising the debt ceiling then, and there was talk of a "busted" Treasury and the need for a special session of Congress before Christmas. But nothing of a dire nature happened at all.

On Monday Secretary Humphrey told a group of business leaders he had high hopes for both tax cuts and a balanced Federal budget next fiscal year ending June 30, 1957. The surge of business activity, if continued, will increase income and corporate tax revenues. The most substantial reductions are expected to be made in individual income tax rates.

The economic committee of the Business Advisory Council of the Commerce Department predicts that high-level business activity will continue through 1955 and into 1956. Chairman Donald K. David, who is also dean of the Harvard Graduate School of Business Administration, cautioned, however, against too rapid expansion that could become an abortive boom, and against overexpansion of credit.

However, the boom is not built on an accumulation of business inventories. And Federal Government spending has dropped 17 percent from a year ago and 27 percent from the peak of 1953, which means that the gains in production have been wholly in the private sector of the economy, since State and local spending has also declined.

Secretary Humphrey will share the optimism of the business leaders and most economists over this highly promising business outlook—not to mention the taxpayers who will profit through the lowering of individual tax rates and the balancing of the Federal budget sooner than anybody had a right to expect when the Eisenhower administration came to office. It will be a truly magnificent accomplishment against tremendous accumulated odds.

News Reporters Urged To Be Fearless and Truthful

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDONOUGH. Mr. Speaker, the great responsibilty of reporting the news fearlessly and truthfully was expressed recently by Pope Pius in Vatican City and by Cardinal McIntire in Los Angeles. No institution serving the public has equal influence on the public mind than the press, the daily newspaper, and the thousands of news weeklies which keep the public informed on local, national, and international affairs. The American press has the reputation of fearless, honest reporting but in the hands of the wrong kind of people with little care or regard for truth or honesty it could become an agency of dishonest propaganda.

The Constitution of the United States guarantees a free press, but the honesty and fearlessness of the press is in the hands of newsworkers and management. Let us keep the American press honest and fearless as advocated by the following sound advice:

BE FEARLESS FOR TRUTH, PRESS TOLD

VATICAN CITY.—Pope Pius XII this week adjured a group of United States newsmen touring Europe and the Near East to be fearlessly faithful to the truth.

He said that while this task is not an easy one, it is "a precious service, as well as your bounden duty of the hundreds of thousands of people who are going to be influenced by your words."

The pope granted an extraordinary audience to the group, led by James L. Wick, of New York, president of the Wick Newspapers.

"Eternal truth and eternal justice must be your strength and your monitor," the pontiff said. "Hence, with fervent prayers for your success in your profession, we are happy to be able to call down upon you and those near and dear to you the blessing of Almighty God."

NEWSMEN REMINDED OF OBLIGATIONS

Catholics who are reporters and publicists may not often have the opportunity to be direct apologists for the church, but they always have the obligation to be morally sound in all of their work.

Father John V. Sheridan voiced this reminder last Sunday to 200 members of the Catholic Press Council of Southern California gathered in Our Lady Chapel downtown for their organization's annual mass and communion.

"It is unthinkable," he said, "that a Catholic reporter would deliberately excite the obviously morbid, the lascivious, the sensuous instinct in his readers.

RESPONSIBLE FOR FACTS

"He should be able to cover his subject, whatever it might be, as thoroughly, as completely, and as interestingly by developing an attractive style, a sensitivity for the strictly human—not animal—element and a memory for the facts. After all, it is the facts for which a reporter is responsible."

His Eminence James Francis Cardinal McIntyre, chaplain of the Press Council, celebrated the mass.

In the elections at the Statler breakfast, Michael Todd, public relations executive, was chosen president of the Press Council. Herald-Express artist John P. Maloney is vice president; Paramount publicist Doug Bridges, treasurer; Tidings, assistant managing editor; Bob Labonge, secretary; and Don Lee. Radio and TV executive Tony Lafrano was voted sergeant at arms. Elected to the executive board were Joseph Reddy, of Disney; James Shea, Southern Pacific public relations director; and Harold Walsh, Times financial editor.

Father Sheridan, director of the Catholic Information Center, told council members that a mere glance at the letters of St. Paul, the confessions of St. Augustine, and even Boswell's life of Johnson "will disclose how thoroughly clear a writer may be when dealing even with sin without creating in the reader or listened anything but a revolt against sin."

TEST OF GREATNESS

"The real test of a man's greatness," Father Sheridan told the newsmen, "is not in his ability to exploit environmental trends for his own advantage or to please others. It is rather his daily struggle to live his moral principles, regardless of trends, that demonstrates his greatness, brings him unmeasured happiness, and edifies and uplifts his weaker associates."

Lawrence Welk provided entertainment at the breakfast, as did the four Schmitt brothers' barbar shop quartet. David Bongard was breakfast chairman.

Admit Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial which appeared in the May 6, 1955, edition of the New York Herald Tribune:

ADMIT ALASKA AND HAWAII

In a time when defense and the avoidance of war are necessarily prime, if negative, objectives, the United States and its President might well be eager to take some step on which later times could look back as a noteworthy and positive advance. The opportunity for such an advance has been appearing in Washington for session after session of Congress and has been fumbled each time because petty political considerations and unthinking, fearful conservatism have not been overcome.

The opportunity lies in statehood for Hawaii and Alaska. Their admission would increase the area of the United States by one-fifth and add 600,000 persons to the population. It would establish conditions under which vast natural riches could be made more easily and equitably available for normal development, rather than being preserved for exploitation by groups which betray their motives by their opposition to statehood. It would end the long-standing injustice of taxation without representation for residents of the two Territories. Finally, it would say to the world that the United

States had ended second-class status for two areas which deserve better.

Under the joint statehood bill scheduled to come up for 2 days of House debate on Monday, 4 percent of northern Alaska can be set aside as a defense zone under exclusive Federal jurisdiction. This has softened the Pentagon's objections. The political considerations which have defeated statehood before are unworthy and discredited. There has been an argument that statehood would stretch the Nation's defense commitments, but this would appear to rest on the untenable supposition that Hawaii or Alaska could be sacrificed to an advancing foe more easily if they were Territories than if they were States.

There is no good reason for further holding back. Alaska and Hawaii cannot forever be held in the confinement of territoriality. Let us have strong leadership; let use make them States now.

Prize-Winning Essay

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. MILLER of California. Mr. Speaker, Roxanne Long, age 16, who resides in Alameda County, submitted the award-winning essay on the subject of One Nation Under God, which was judged the best over all others written by students of the high schools of Alameda County.

When you have read Roxanne's essay, copy of which I insert herewith, I am sure that you will join me in congratulating this fine, talented young lady:

ONE NATION UNDER GOD

(By Miss Roxanne Long, Alameda, Calif.)

"The world stands or falls with the laws of life which Heaven has written in the human conscience."

These laws of life could be called the four freedoms—freedom of speech, freedom of religion, freedom from want, and freedom from fear. One nation under God must be founded on these four freedoms.

One freedom stands out in my mind as the most important. That freedom is the freedom of religion. As mankind progresses on the path toward a goal of freedom of religion throughout the world, freedom from want and freedom from fear and freedom of speech will become a living reality.

If all peoples of the world would turn to religion, they would overcome any fear they have of evil forces, poverty, or discouragement. They would realize that all men are brothers and that God is their father. If we want peace we must treat other nations in the spirit of democratic Christianity. No nation can reach its fullest development alone.

It is accomplishment, not by declarations of leaders but upon acceptance by the peoples of the peoples of the world.

Whatever direction the future moves, right or left, we must move onward and learn to live and act in the knowledge that we as a leading nation are responsible to and for one another. We must have one common eternal destiny because we are dependent on the one Father who made brothers of us all.

The statement so often used, "A family that prays together stays together," can also be applied to a nation. "A nation that prays together, stays together."

If we as a nation can turn to God, other nations will follow in our footsteps.

Living proof of our progress is the addition to our pledge of allegiance:

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one nation under God indivisible, with liberty and justice for all."

A Free, Independent Poland

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, on the occasion of Polish Constitution Day, it is fitting that we commemorate the 164th anniversary of the Polish Constitution of 1791—a document which adopted many of the concepts of freedom which were put forward only a few years earlier by the new United States of America. It was, of course, natural that the Polish patriots of 1791 should derive a degree of inspiration from the United States in this regard, since freedom-loving Poles had played an important role in our own American fight for freedom and liberty.

In Westmoreland County of Pennsylvania, Mr. Speaker, we have today many fine citizens—outstanding citizens—of Polish descent who are completely steeped in the principles of freedom and who are bitterly unhappy over the continued denial of freedom to their friends and relatives behind the Iron Curtain. Our laws and red tape intended to make it so difficult if not impossible for escapees from Communist terror behind the Iron Curtain to get into the United States rankle with these Americans because of their implication that Polish people who want to come here are some kind of security risks. No such implication is justified. It is because the Poles love freedom so deeply that they try to escape from the Iron Curtain and come here. People so imbued with a love of freedom make outstanding citizens of a free country.

Despite the most intensive kind of "Russification" attempts in Poland by the Communist rulers trying so hard to turn Poland into a Russian colony, the natural leanings of the Polish people are to the West, to freedom and to independence. The "Russification" will fail, just as previous attempts to destroy the Polish national character have always failed.

We must never cease our efforts, Mr. Speaker, to work for the freedom of the Polish people and of all peoples now prisoner behind the barbed wire and machinegun emplacements of the Iron Curtain.

On Poland's great national holiday—free Poland's holiday, that is, since of course the Russians would not permit Poland today to celebrate its past traditions of freedom—we should reiterate the conviction of the free world that Communist tyranny must be ended over the minds of men, and over their lives as well.

We pray that there may be a new birth of freedom in Poland soon.

Federal Aid

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, I commend to your attention the philosophy expressed in the editorial which follows. Although this editorial from the Green Bay Press-Gazette of April 30, 1955, relates to the subject of Federal aid for education, it should serve as a guide in the consideration of other programs of Federal aid to the States and local units of government:

FEDERAL GOVERNMENT AND THE SCHOOLS

A great many people in this country are deeply concerned over the problem of financing public education for the millions of young children that are now growing up as a result of the baby boom that has been going on since the end of World War II. Various citizens and educators groups have studied this matter, and more and more the pressure is growing for the Federal Government to subsidize, to some extent, the school construction and operating costs with which the Nation is going to be faced.

Why is it that invariably when we are faced with a situation of this kind we turn to the Federal Government for help? There are several reasons for this, but the only one with any merit is that some States are poorer than others and a Federal subsidy can be justified as an equalizer. But every time we go into a Federal-subsidy program we end up sending dollars to Washington which are then funneled back to the States considerably shrunken. Another serious long-term effect has been to cause people to lose interest in their State governments since the taxes they pay to Washington are so much larger than those they pay to their State tax departments.

Schools are about as local an institution as we can think of. And they are certainly one in which the average citizen wants to have a direct voice, and over which he wants to exert fairly direct control. In the interests of uniformity, we have surrendered some of that control to our State government. But making Washington the focal point of school financing is something else again.

Recognizing the soundness of this objection to Federal subsidy plans, the people who are interested in channeling more money into the public school system are suggesting a Federal subsidy without the usual controls that go hand-in-hand with such grants-in-aid. This point of view was outlined at a recent meeting of the American Association of School Administrators by Beardsley Ruml, the economist who invented the pay-as-you-go income-tax system. Mr. Ruml pointed out that the national income is expected to increase rapidly during the years when school populations are going to be increasing, and that the problem is simply to channel a small portion of that increased national income into the school system.

Mr. Ruml gave his reasons as follows:

"The use of income or sales taxes for the support of public education is theoretically possible at either the State or National level. In fact, however, the State level is entirely impractical. Differential sales or income taxes among the States would be required which would injure the poorest State competitively and would shortly force national uniformity as indeed happened in the case of the community-property basis for personal income tax. It is therefore recommended that the revenues needed for basic support of the schools be raised at the Federal level."

Let us admit that there are some States which do not have the industries or other income-producing activities to support school programs at a level most of us believe is necessary.

If that calls for subsidy, why should it not be an honest subsidy? The "differential" of which Mr. Ruml speaks might be eliminated by grants to the States with less than average income at the expense of the richer States. This would not have the flavor of "free money" from Washington and it would not give Washington the authority to enforce its bureaucratic rules on all of the States for the privilege of spending their own money.

For a long time government in this country consisted of doing on the local government level what we could not do as private citizens; doing on the State level what we could not do through our local government; and doing on the national level that which was not feasible at the State level. But more and more we have been using the Government at Washington to do things that could very well be done through our State and local governments. It may be the easy way, but it is certainly not the best way.

The Bicycle Industry

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith Resolution No. 66 which was adopted on May 5, 1955, by the House of Representatives of the Illinois State Legislature. The resolution, which urges the President to confirm and approve the findings of the United States Tariff Commission suggesting relief for the bicycle industry from the pressure of excessive imports, follows:

House Resolution 66

Whereas the bicycle industry represents considerable business to several cities within the State; and

Whereas an overwhelming flood of foreign made bicycles are being imported from several foreign countries; and

Whereas the rates of pay in these countries for the fabrication of materials and the construction of these bicycles is greatly less than prevailing rates in the United States, therefore making it impossible for the manufacturers of this country to compete in this business under the present tariff treatment; and

Whereas the United States Tariff Commission, after exhaustive investigation and extended public hearings has voted in favor of relief for the bicycle industry from the pressure of excessive imports: Therefore be it

Resolved, That the Legislature of the State of Illinois hereby strongly urges the President to confirm and approve the findings of the Tariff Commission in the bicycle action, which action is now awaiting the President's final decision.

Resolved, That copies of this resolution be sent forthwith by the secretary of state to the Members of Congress from this State.

The Anniversary of Rumanian Independence and Union Is Celebrated in the Hearts of the Brave Rumanian People Now Living in Bondage

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. VAN ZANDT. Mr. Speaker, the 10th of May is the anniversary day of Rumanian independence and national unity. The Moscow-controlled regime in Bucharest has abolished this celebration according to the Soviet plan of denationalization of Rumania. But in this free country it is for us a moral obligation to remember those who fight and suffer for human liberty, because such heroic sacrifices lie at the very source of our own history as a free nation.

History reveals that the Rumanian people, descendants of the Roman colonists of Dacia—the ancient name of the land inhabited by the Rumanians—formed a strong Latin and Christian outpost at the eastern confines of Europe. The country, numbering now twenty-odd millions, has preserved its national integrity throughout centuries of vicissitudes. A deeply rooted nationalism and Christian faith are once more today the inspiration which welds the Rumanian people together in an unyielding resistance to communism.

After a period between the 17th and 19th centuries, when the Ottoman Empire had the suzerainty over the Rumanian lands and Russia brutally sought their annexation under the pretext of protecting them, the Rumanians succeeded in regaining their liberty following the Crimean War in 1856. They were given political autonomy under the guaranty of the European powers. It was to put a barrier to Russian expansion which 100 years ago represented a threat similar to the one plaguing Europe today, that the ancient position of Rumania as the guardian of the southeast gates of Europe, was restored as the most effective step against Moscow's imperialistic drive toward the heart of Europe. In 1878 the Berlin Congress recognized the full independence of Rumania which had been proclaimed by the Rumanians on May 10, 1877, and which they achieved in blood by defeating the Turks on the battlefield.

But today Rumania is no longer a free and independent country. In 1945, after an ultimatum delivered by Andrei Vishinski 2 weeks following the Yalta declaration, Rumania was subjugated by the Soviet Union, and a puppet government under Groza was imposed on the Rumanian nation. It is the ardent hope of every liberty-loving American that the time is not far away when the great injustice done to Rumania will be corrected, and from her status as an enslaved country she will soon be restored to the ranks of the free nations. This is the sincere wish of America on this day of national commemoration and mourning of the Rumanian nation.

America's Mother of the Year

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. DIXON. Mr. Speaker, on Friday of last week I had the privilege and pleasure of attending the reception and luncheon at the Waldorf Astoria in New York honoring the American mother of the year, Mrs. Lavina Christensen Fugal, of Pleasant Grove, Utah.

I also attended a special Mother's Day service in Scarsdale, N. Y., where Mrs. Fugal was the honored member of the congregation.

On both of these occasions I was deeply impressed with the spirituality and the fine dedication of the members of the American Mothers, Inc., which organization is responsible for the selection of the mother of the year. The objectives of the mothers' committee are to develop and strengthen the moral and spiritual fiber of the American home, and to give to the observance of Mother's Day a more spiritual significance outlining the important role of the mother in the home, the community, the Nation and the world. Annually each State selects a mother of the year for the State, and from among this total number, the American national mother is chosen.

Mothers attended the Friday function from every State in the Nation, from the District of Columbia, Alaska, and Puerto Rico. The assembled State mothers of the year entered the room, each carrying a lighted candle, to the softly played tune Lead Kindly Light.

It was a stirring and inspiring sight. One felt that mothers indeed epitomized the light in the encircling gloom and shadows of today's world. The mothers who spoke stressed without exception the power of prayer in the home, its deep-rooted significance, and important influence throughout the Nation, the need for a Bible in every home, the blessing of food, and family prayer.

This House, too, has a religious service every Thursday morning. We all feel more and more poignantly the need for prayer and for divine guidance in solving today's problems.

Congressmen can help to further this fine movement in their own States by endorsing and encouraging its work. Commendation should be given to the national body of the American Mothers,

Inc., who work tirelessly and without recompense of any kind in their effort to improve the homes of America and to bring about the solution to the problems of juvenile delinquency. It is hoped that Congressmen will realize the seriousness of juvenile delinquency and enact some kind of legislation that will help to fortify the homes of America.

This is a land of much industrial accomplishment and much time is spent on economics. There is a finer part to play, greater far than that of economics. It is the support, endorsement, and encouragement of spirituality in our homes, the foundation on which our Nation is built.

This great spiritual strengthening and developing of the moral fiber of our home, which is the work of the American Mothers, Inc., deserves the support and commendation of this body.

One Hundredth Anniversary of Louisiana State Board of Health

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LONG. Mr. Speaker, it has now been proved and generally accepted that the first State board of health was established in Louisiana in 1855. Public-health workers from 16 Southern States, the District of Columbia, and Latin America are gathering today in New Orleans to commemorate this centennial. They will be in session through the 13th.

Every so often it is good that we should pause in the press of our day-to-day activities and look to our past. This is such a time for Louisiana on the occasion of the 100th anniversary of its State department of health.

Forged out of trial and struggle, this department today is conceded to be one of the most important divisions of Louisiana State government. But in 1855 the idea of State responsibility for the health of its citizens was a new and challenging one. No other State in the Union had recognized this responsibility. Indeed, the board of health in its early years met with the opposition of many shortsighted and faint-hearted men in Louisiana. But they could not impede the wheels of progress once they were set in motion.

It was the scourage of yellow fever that prompted the enactment in 1855 of the act "to establish quarantine for the protection of the State," extending along the entire Gulf of Mexico shore of Louisiana. Combining with the city board of health of New Orleans, it fought the spread of yellow fever. Incidentally, this pattern of State-local cooperation in matters affecting the public health has become one of the keystones in our democratic form of government. This joint cooperative enterprise lasted until 1898 when the present organization of the State board was set up in the constitution of that date. Up until that time the function of the board was primarily, but not solely, the establishment and maintenance of quarantines. In the words of the first State health officer, Dr. A. Forster Axson:

> Quarantine forms only a part of what the law contemplated as a system of health measures.

The evolution of public health in Louisiana, from its beginning in 1855, has provided precedent and inspiration for every other State in the Union. The present machinery for health action-in-partnership was mirrored in the prophetic vision of those early trailblazers. Today, every State in the Union has a State health organization which, with the local and Federal organizations, constitutes the modern public health team.

We have not arrived at our present stage of development without some tragedy. It was many years, for example before the scourge of yellow fever was finally brought under control. It took another epidemic in 1897 at Franklin, La., to provide the groundwork for present Federal, State and local cooperation in promoting public health. At that time, the Federal Government sent 2 medical officers and 2 pharmacists to Franklin to work with the State and local officials to prevent the spread of the epidemic.

Thus, the past 10 years have been notable ones for Louisiana, as well as for the entire Nation in the field of public health. Let us all hope that the next century will be filled with even greater accomplishments, even more momentous triumphs. We have largely conquered the contagious diseases, such as yellow fever, but we have new problems threatening the health of our people. Longer lives, made possible by the conquest of communicable diseases, bring with them the chronic diseases of old age. It is in this area that we must look for future accomplishments. It is in this area that I feel certain the next 100 years will bring even greater triumphs. It is with pride that I salute the Louisiana Department of Health on its 100th birthday.

H. R. 4627 and S. 923

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I have been requested by Mrs. Earl Wagoner, who is legislative representative of the West Virginia Woman's Christian Temperance Union, to inform my colleagues of a petition I have received from the West Virginia Womans' Christian Temperance Union supporting H. R. 4627 and S. 923. The petitions in support of these bills have been signed by more than 330 citizens of West Virginia.

Red Government Protests Special Report No. 8 of Kersten Committee Dealing With Communist Takeover of Czechoslovakia — Also Subversive Balloons and Czechoslovakia Guard Units Attached to United States Army

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. BENTLEY. Mr. Speaker under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article entitled "Red Government Protests Special Report No. 8 of Kersten Committee Dealing With Communist Takeover of Czechoslovakia; Also Subversive Balloons and Czechoslovakia Guard Units Attached to United States Army":

RED GOVERNMENT PROTESTS SPECIAL REPORT NO. 8 OF KERSTEN COMMITTEE DEALING WITH COMMUNIST TAKEOVER OF CZECHOSLOVAKIA—ALSO SUBVERSIVE BALLOONS AND CZECHOSLOVAKIA GUARD UNITS ATTACHED TO UNITED STATES ARMY—CZECHOSLOVAKIA MINISTRY OF FOREIGN AFFAIRS DELIVERS NOTE TO UNITED STATES EMBASSY

On April 19, 1955, the following note was sent to the Embassy of the United States of America, Prague, by the Czechoslovak Ministry of Foreign Affairs:

Referring to a number of its previous protests, the Government of the Czechoslovak Republic deems it necessary to call the attention of the United States Government once again to the fact that in spite of the existence of normal diplomatic relations between Czechoslovakia and the United States of America, the United States Government and its agencies continue in their systematic hostile activities against the Czechoslovak Republic.

AGGRESSIVE UNITED STATES POLICY

The Government of the United States of America which, under the hypocritical slogan of "liberation" of the countries of the people's democracy has openly declared its interventionist and aggressive intents, spends millions of dollars on subversive activities against sovereign, peace-loving, and democratic countries, including the Czechoslovak Republic, and has not ceased its attempts to interfere in their internal affairs. Official American propaganda, aimed at creating war hysteria, publicly glorifies all provocations and subversive (acts) carried out in the interests of "containing communism" and thereby only underlines the aggressive nature of United States policy.

PROTESTS BALLOONS SPONSORED BY SENATOR DOUGLAS WITH SUPPORT OF EISENHOWER

Thus, in February and March 1954, both Houses of Congress discussed a resolution authorizing the Secretary of State of the United States of America to prepare as soon as possible a program of dispatching balloons carrying subversive leaflets into the people's democracies. The resolution submitted by Senator Douglas, with reference to the initiative of President Eisenhower, authorizes the Secretary of State to use the staff and means of the Department of State, or of any other governmental department or agency, for the carrying out of this "operation," and allocated the amount of $2 million from the budget of the United States for this purpose.

Shortly thereafter this subversive operation was started, and from the United States

Occupation Zone in Western Germany, balloons carrying leaflets aimed at inciting unrest and exhorting the Czechoslovak people against their lawful government were released for months into Czechoslovakia. The Czechoslovak people reacted to this provocation—as brazen as it was foolish—with proud contempt.

CRUSADE FOR FREEDOM HIT

The attempts of the Government of the United States of America to interfere in the internal affairs of Czechoslovakia failed dismally in spite of the fact that the so-called American Crusaders for Freedom, who had been entrusted with the actual carrying out of this operation, continued for almost a year to pollute Czechoslovak airspace and the territory of the Czechoslovak Republic with their subversive leaflets.

The responsibility of the Government of the United States of America for this subversive action constituting an attempt at interference in the domestic affairs of Czechoslovakia and a systematic violation of the territorial integrity is beyond doubt, and the indignation of the Czechoslovak people, as well as of democratic international public opinion, at the subversive methods which the Government of the United States of America has carried into international relations is fully justified.

Despite all these failures, the aggressive circles in the United States of America do not want to reconcile themselves to the fact that the Czechoslovak people, after their liberation from the Fascist yoke, started out on the road of the building up of socialism. The representatives of these aggressive circles continue to call for intervention and war against the peace-loving countries which ridded themselves of capitalism and refuse to submit to their dictate.

PROTESTS KERSTEN COMMITTEE REPORT ON CZECHOSLOVAKIA

At the beginning of this year an official document of the American Congress was published in the United States, which deals with an alleged usurpation of power by Communists in Czechoslovakia. The document, dated December 31, 1954, and published as Special Report No. 8 of the House Select Committee on Communist Aggression, headed by former Representative Kersten, has set itself the objective of presenting to the American public "the essentials of the history of Czechoslovakia and its people," of proving the impossibility of peaceful coexistence of various social systems, and of warning the world of the so-called Communist threat.

REPORT INVESTIGATES CRUSADE VERSUS COMMUNISM

This insolent pamphlet is up to the standard of the vilest products of Goebbels' Fascist propaganda machinery. It is nothing but a conglomeration of lies and slander which are to spread hate against Czechoslovakia, foment war hysteria, instigate a crusade against communism, and prepare a preventive war against peace-loving countries.

KERSTEN KNOWN FOR SUBVERSIVE WORK VERSUS COMMUNIST GOVERNMENTS

Former Representative KERSTEN, the chairman of this House select committee, is known to the Czechoslovak people as the author of the ill-famed amendment to the so-called Mutual Security Act of 1951, under which the sum of $100 million was allocated from the budget of the United States for subversive activities against Czechoslovakia and other peace-loving countries. The blood-stained record of this act includes also numerous murders of Czechoslovak citizens and other crimes of American agents committed on the territory of the Czechoslovak Republic.

INSULTING TO COMMUNISTS

The profascist beliefs of Mr. KERSTEN and his intimate friendship with Fascists and collaborators, who have escaped punishment after World War II and found haven in the United States, are generally known. The Czechoslovak Government cannot, however, ignore the fact that an official document of the Congress of the United States described Czechoslovak history in a Fascist spirit and in a grossly insulting manner, in particular as concerns the interpretation of the events of the World War II when the Czechoslovak people fought in a hard struggle against the Fascist intruder and their domestic quislings.

REPORT EXTOLS SLOVAK STATE

The report of the Kersten committee extols the so-called Slovak state, covers up the crimes of the occupants and their henchmen, and stresses their merits in their fight against the Soviet Union and communism. The anti-Fascist resistance of the Czechoslovak people is disparaged in the report, the Slovak national uprising is described as an improvised rebellion of subversive elements, and the liberation of Czechoslovakia by the heroic Soviet Army is described with bitter sorrow at the defeat of Hitlerite occupants.

The Kersten committee reports is a gross provocation not anly against all Czech and Slovak patriots, but also against all honest and democratic Americans who, together with the peoples of the Soviet Union, Czechoslovakia, and other democratic countries, sacrificed their lives in the fight against their common Fascist enemy.

KERSTEN REPORT "FABRICATES" ANTICOMMUNIST TESTIMONY

At the present time, reports, both in the American and the world press, daily give the reader a picture of how American justice and various congressional investigation committees fabricate anti-Communist testimony. As to the investigations of the so-called Kersten committee and its report on Czechoslovakia, however, it is worthy of note that the principal witnesses and experts named and quoted by the report are primarily notorious Fascists and collaborators from the time of World War II.

Thus, for instance, the section dealing with the anti-Fascist struggle of the Slovak people is based on the testimony of the former charge d'affaires of the so-called Slovak state in Madrid, Josef Mikus, to whom the report gives his full title, obviously in order to eliminate any doubts as to his qualifications or loyalty. The official circles of the United States of America base their hostile activities against Czechoslovakia on the most reactionary Fascist emigree groups.

The present Government of the United States of America quite openly gives support to and encourages those elements, who as early as the period before World War II, sided with Hitler in the breaking up of the unity and territorial integrity of the Czechoslovak Republic, who gave convincing proof of their political convictions by their servility to the Fascist occupants and who, speculating on a new world war and a new occupation of Czechoslovkia, have now placed themselves fully at the disposal of aggressive groups in the United States of America.

UNITED STATES COOPERATES WITH "TRAITORS" WHO ESCAPE

Similarly, the United States occupation authorities in Western Germany, in the organization of plots against Czechoslovakia, cooperate closely with the traitors of the people, with convicted war criminals. Thus, under the protection of the United States occupation authorities, the former minister of the so-called Slovak state in Berlin, Matus Cernak, together with a number of other traitors who escaped from Czechoslovakia and other eastern European states, continue in their treacherous activities under a new master but along the same Fascist line.

UNITED STATES SUPPORTS REVIVAL OF GERMAN MILITARISM

Thus, American policy in relation to Czechoslovakia already reflects the consequences of the war alliance between the American and the West German militarists and revanchists, the worst enemies of the peoples of Europe, who have also in the past brought so much suffering upon the Czechoslovak people. The policy of the revival of militarism in Western Germany and the building of a Fascist Wehrmacht under the leadership of Hitlerite generals, carried out by the United States Government, is aimed also against the freedom and independence of the Czechoslovak Republic.

For a number of years, Western Germany, and in particular the American zone of occupation, have been the breeding grounds for various provocations and subversive operations aimed against Czechoslovakia.

HITS RADIO FREE EUROPE

The constant campaign of incitement issuing from the broadcasting station, Free Europe, which is nothing but a branch of the Voice of America, the sending of subversive leaflets to the territory of the Czechoslovak Republic, the violations of Czechoslovak airspace by American military aircraft, the instigation of border incidents, the dispatching of spies, saboteurs, and subversive agents to Czechoslovak territory—all these are open acts of hostility of the United States of America against the Czechoslovak Republic, carried out primarily from the territory of Western Germany in flagrant contradiction to the international obligations of the United States as an occupying power.

CZECHOSLOVAK GUARD UNITS IN UNITED STATES ARMY

On January 18, 1955, the American radio broadcast a report that the first so-called Czechoslovak guard unit had been established with the units of the United States Army in Western Germany. The report further notes that this unit, whose members wear on their uniform an insignia bearing the inscription "Czechoslovakia," uses the Czechoslovak national flag, which, according to the report, was presented to the commander of this unit at a ceremony in the presence of officers of the United States Army. In connection with the organization of this unit, the designation of which is in itself a gross insult to Czechoslovakia and all of its people, the aggressive intentions of the United States Government have been revealed even more clearly than in a number of previous provocations and hostile acts aimed against Czechoslovakia.

USE OF CZECHOSLOVAK FLAG WITH UNITS INSULTING TO COMMUNIST "FREEDOM"

The Government of the Czechoslovak Republic raises emphatic protest against the fact that in times of peace and in disregard of the existence of normal diplomatic relations between the United States and Czechoslovakia, in opposition to the provisions of the Charter of the United Nations, and in abuse of its position as an occupying power, the Government of the United States organizes in its zone of occupation a military unit composed of criminal elements hostile to the Czechoslovak Republic, using the official designation, "Czechoslovakia," and the Czechoslovak national flag in an unlawful and insulting manner.

There is no doubt as to the character of this unit of mercenaries. In its hostile activities against Czechoslovakia the United States Government bases itself primarily on criminal elements from among the emigrees. This is demonstrated, among others, also by the case the criminals, Ctirad Masin, Josef Masin, and Milan Paumer, who committed a number of murders, robberies, and other crimes on Czechoslovak territory and succeeded in escaping to Western Germany where they were taken care of by the American authorities.

PEACEFUL COEXISTENCE

The Government of the Czechoslovak Republic notes that the aggressive policy of the United States of America and the hostile

acts of the United States Government against Czechoslovakia are in flagrant contradiction to the most fundamental provisions of international law which regulate peaceful coexistence among nations and peaceful international cooperation.

This policy meets with the determined opposition of all the Czechoslovak people. This policy of cold war and interference in the internal affairs of other states only compromise the United States in the eyes of world public opinion and injures the interests of the American people themselves, with whom, were it not for the hostile attiude of the United States Government, the Czechoslovak people could develop friendly economic and cultural relations.

CZECHSLOVAK RED GOVERNMENT DEMANDS STOP TO "INTERFERENCE" BY UNITED STATES

The aggressive policy of the United States of America is a source of international tension and the cause of the unsatisfactory state of the relations between the Czechoslovak Republic and the United States of America. The Government of the Czechoslovak Republic calls upon the Government of the United States of America to discontinue, in accordance with the provisions of international law and in the interest of lessening international tension and improving international cooperation, its hostile activities against Czechoslovakia, against its freedom and independence, and to conduct its relations with Czechoslovakia in accordance with the principles of peaceful coexistence.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution on the subject of Federal Aid for Schools adopted by the directors of the Taxpayers Association of Oshkosh, Wis., on May 5, 1955:

Whereas where children go to school and what they are taught have historically been the responsibility of local and State government, with the Federal Government taxing heavily to discharge other obligations it has assumed; and

Whereas current reports show our Federal debt is now equivalent to the full value of all land, buildings, mines, machinery, livestock, everything of tangible value in the United States; and

Whereas any new or enlarged program involving Federal aid, such as Federal aid to education, would necessarily require either increased Federal taxes, deeper Federal debt, or both; and

Whereas the school facilities survey being used as a basis for justifying Federal entry into local school financing has been shown to be erroneous, with Wisconsin, for example, not $70 millions short of meeting its school building requirements but actually having no deficit and a potential sum of over $200 millions which can be raised for school building when local decisions find it necessary; Now, therefore, be it

Resolved by the Taxpayers Association of Oshkosh at a directors meeting held this 5th day of May 1955, in Oshkosh, Wis., That Senators WILEY and MCCARTHY and Congressman VAN PELT are hereby urged to take whatever action is necessary to point congressional action in the direction of lower taxes, a reduced Federal debt, and lessened interference in local affairs such as would follow Federal aid to schools; and be it further

Resolved, That copies of this resolution be sent to Senators WILEY and MCCARTHY, Representative VAN PELT, Senator LISTER HILL, chairman of the Senate Committee on Labor and Public Welfare, and to Representative GRAHAM BARDEN, chairman of the House Committee on Education and Labor.

Adopted, Oshkosh, Wis., May 5, 1955.

DAN MANION,
President, Taxpayers Association of Oshkosh.

Resolution Opposing Duplication of Air Service on the Great Circle Course to the Orient

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Senate Resolution 49 adopted May 5, 1955, by the Senate of the 69th Illinois General Assembly. The resolution expresses opposition to any application for duplication of air service on the great circle course to the Orient, which is also operating on the central Pacific course:

Whereas the Civil Aeronautics Board, after thorough and exhaustive study, has again concluded there should be two separate and competing United States flag air routes across the Pacific, one through the California gateway to the Orient via the central Pacific, and the other through the Seattle gateway via Alaska and the short Great Circle course to the Orient; and

Whereas the Civil Aeronautics Board maintain that retention of these different flight courses under existing conditions is vital to keep the balanced competitive pattern required by public convenience and necessity and that modification of this policy would undoubtedly require substantial Government subsidy; and

Whereas a request by the airline now serving the Orient through the Central Pacific for authority to also fly over the Great Circle track is pending before the President of the United States; and

Whereas the Civil Aeronautics Board recommended denial of that request because the duplicating service would destroy the balanced competitive air pattern in the Pacific and result in additional Government subsidies; and

Whereas the airline now authorized to fly over the Great Circle course serves Chicago on direct flights to the Pacific Northwest and is the only direct air tie between the State of Illinois and Alaska, Japan, Korea, Okinawa, Formosa, and the Philippines; and

Whereas this direct international air service has assumed increased importance to business, industry and the traveling public in the State of Illinois and the Midwest generally and has helped broaden markets and expand trade territories for Midwest products; and

Whereas the Governor of the State of Illinois, realizing the importance of this service to the State and the necessity of a balanced air pattern across the Pacific urged the office of the President of the United States in effect to continue a policy of two separate and competing air routes to the Orient; and

Whereas the Chicago Association of Commerce and Industry and the City of Chicago Aviation Committee also conveyed similar communications to the President's office: Now, therefore, be it

Resolved by the Senate of the 69th General Assembly of the State of Illinois, That we respectfully request that the proper governmental authorities take heed of these circumstances; that we express our adherence to the policy set forth by the Civil Aeronautics Board, an authoritative governmental agency thoroughly familiar with all aspects of international air problems, and therefore oppose any application for duplication of service on the Great Circle course as contrary to the interests of the State, the Government and the public generally; and, be it further

Resolved, That the secretary of state be instructed to forward a suitable copy of this preamble and resolution to the Civil Aeronautics Board, the President of the United States and United States Senators and United States Representatives from the State of Illinois.

Adopted by the senate, May 5, 1955.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Polio Vaccine and Public Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MULTER. Mr. Speaker, the following article by Walter Lippmann, which appeared in the New York Herald Tribune of May 10, 1955, is deserving of our attention:

TODAY AND TOMORROW
(By Walter Lippmann)
POLIO VACCINE AND PUBLIC POLICY

There are those who have had great misgivings ever since April 12 about the dramatic build-up, the theatrical suspense and the spectacular publicity with which the effectiveness of the Salk vaccine was proclaimed. It was more like announcing the results of an election than the results of a scientific inquiry. The whole performance was contrary to the spirit and morale of good science, which is to be very scrupulous about not claiming, or appearing to claim, more than has been proved.

This rule was violated on April 12 not by what Dr. Thomas Francis Jr. actually said in his report but by the way the big show was staged. For while his actual report contained reservations in the fine print, the blazing publicity was bound to convey, as it did convey, the misleading impression that a full solution had been found of the problem of making an effective vaccine for the mass immunization of the children of this country. For the public the proof that polio had been conquered was not in what was actually said in the report. It was in the elaboration of the show, the eminence of the actors, the high-powered publicity itself. The public concluded fairly enough that such publicity could mean only that the scientific experimentation had in fact been completed and concluded.

We know now that the responsible authorities, both private and public, had not made sure that they could fulfill the promise which the people believed had been made. The authorities could not know how large would

be the available supply of the vaccine at the critical dates. For obviously they had not yet settled definitively, as the President made known in his press conference, the question of whether a shorter or a longer test of the manufactured vaccine was necessary. Not having settled that, they had not settled the critical problem of passing from the laboratory to mass production in factories. The trouble they have now run into, compelling them to recheck the factory production, proves that they allowed hopes to be raised before they had concluded the period of experimentation.

Yet it is commonplace in the field of applied science that new technical problems are posed when a process is carried from the laboratory into the factory. In his statement on Sunday the Surgeon General said that "a great deal of new information has been developed during the past 10 days as the result of continuing consultation between the Public Health Service and its consultants, and between these groups and the senior technicians of industry." Is there any good and plausible reason why these consultations did not take place before the American people were invited to believe that the problems of the vaccine had been solved?

The fact of the matter is that on April 12 the responsible authorities went off half-cocked. The problem of mass production had not been reliably solved, and there was, therefore, no justification for the publicity which created a mass expectation of mass immunization for this polio season.

The real situation called for at least one more season devoted to an enlarged and fully controlled experiment. It was a case where the way to make genuine progress—and to avoid lacerating the feelings of the parents of small children throughout the land—was to adhere to the strictest standards of scientific caution. The tests made last year did indeed show very promising results. But the only practical conclusion to be drawn from the tests made last year was that tests on a bigger scale were warranted for this year. This would have meant keeping to laboratory standards before passing to the looser standards of mass production.

It is established public policy that medical advertising shall not be misleading. It was the duty of the Federal Government, and specifically of Mrs. Hobby's department, to have frowned upon and to have prevented the theatrical exploitation of Dr. Salk's work. The National Foundation for Infantile Paralysis, which sponsored the experimentations and the development of the vaccine, sponsored also the publicity attending the announcement. The Foundation has done great and necessary things in its field. But it is dependent upon voluntary popular subscription. This requires promotion and publicity which should have been kept carefully distinct from the publication of medical news.

Quite apart from the question of whether the Federal Government should have asked specific legislation in regard to polio vaccine—and in view of the short supply it should have—the Federal Government had a general public duty to protect the people against being misled on a burning question of public health. The consultations it has been holding in the past 10 days should have been going on for months—ever since the decision was taken to manufacture the vaccine on a large scale.

I do not know why the Federal Government did not assume the direction of this great public health operation as soon as enough was known about last year's tests to start the pharmaceutical firms making the vaccine. But it would seem as if the inaction of the Federal Government was due in some considerable degree to theoretical misconceptions—to unexamined and false notions of the general principles of free enterprise, voluntary cooperation, and decentralization—and to the strange prejudice that the only way the Federal Government can assume direction and control of anything is to build up a vast bureaucracy.

The principles of free enterprise and voluntary cooperation are beneficent and widely applicable. They are the rule in our society and a departure from them should be regarded as an exception from the rule. But not all public principles in this workaday world can be applicable at all times and under all circumstances. They are beneficent and are workable only if we apply them with good sense, only if we apply them when conditions make them applicable, and do not apply them when conditions do not make them applicable. As politics is a crude art, and not a mathematical science, there are many borderline cases where it is a close question whether to rely upon free competition and voluntary cooperation or to assume central government direction and control.

But the case of the Salk vaccine was not a borderline question. The vaccine was bound to be in short supply at least for this season; its proper use touched the vital interests of the families of the Nation. There should, therefore, have been no more doubt here than there has been in Canada that the public authorities were in control.

Protest in Order

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Protest in Order," which appeared in the Boston Traveler of May 2, 1955:

Defense Secretary Wilson has taken another blasting from the press, this time from the top echelon. He asked for it when he decided to impose a Pentagon news gag.

Now Richard W. Slocumb, president of the American Newspaper Publishers Association, has warned his fellow publishers that the flow of legitimate news is being dammed by unnecessary censorship and restrictions.

As a point of illustration, Slocumb has cited the situation resulting from Wilson's order. It has cut sharply into the normal traffic of news, speeches, statements, and opinions.

Probably at heart Wilson doesn't agree with the principle of rigid censorship any more than we do. But when his Department recently came in for criticism it was natural for him to direct his subordinates to tie down their tongues. Then bureaucracy started to function, and suddenly the press found that everything had to be cleared.

The business of clearing a bit of information or a story can get complicated and ludicrous in a huge setup like our Defense Department, spread out all over the free world.

On the heels of a tightening-up such as that ordered by Wilson, the press finds that virtually nobody in the defense network—Army, Navy, Air Force, or whatnot—wants to take responsibility.

The results are ridiculous. A correspondent in Japan wants information about a new building going up on a defense installation. The Army won't even admit there is a building, although it's in plain sight for all to see. A correspondent in Washington wants an obituary on a dead naval officer. He faces a long delay while the information is cleared.

Every correspondent in Washington knows the frustrations of bureaucratic censorship. He knows, too, that the situation would get worse unless the American press put up an occasional loud squawk.

Protests are always in order when the press feels that the public is being denied the news to which it's entitled.

Bank Holding Companies: Views of Chicago Bankers on H. R. 2674

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. O'HARA of Illinois. Mr. Speaker, in the 3 Congresses during which I have served on the Banking and Currency Committee, I, as a Representative from Chicago, have made it a practice to mail to all the bankers in that great financial center copies of banking bills under consideration by our committee and to request expression of their judgment on the validity of the pending measures and their own thoughts as to the advisability of their enactment into law.

For the past several weeks the Banking and Currency Committee has held lengthy public hearings, followed by executive sessions, on H. R. 2674, the bill introduced by Chairman SPENCE for the regulation of bank holding companies and their divestment of nonbanking interests. It is, of course, in the area of legislation of major importance, being the measure of greatest banking interest and effect on future banking operations to come before the 84th Congress.

Following my practice of acquainting the House with the thinking of individual Chicago bankers as reflected in their correspondence with me, I am extending my remarks to include all the replies received to date on the matter of H. R. 2674, as follows:

AMERICAN NATIONAL BANK

DEAR MR. O'HARA: There is little question that one of the true assets of this country throughout its entire history has been the recognition of the rights of the individual. It has been the independence of the individual that has made our country great. In recent years we have all witnessed a great trend toward bigness in business. In the automobile industry, the steel industry, in the retail field, and more recently in the banking system of the country, we have seen the growth of the large firms and chains and the gradual squeezing out of the independent.

You are now considering holding company legislation through your bill H. R. 2674 which, if passed, will do much to guarantee the survival of the independent bank, which is the backbone of our banking structure. Let me urge you to support that bill and by so doing keep alive the rights of the individual and the independence of small banking.

Most sincerely,

WILLIAM O. KURTZ, JR.,
Vice President, American National Bank & Trust Co., of Chicago.

CHATHAM BANK

DEAR MR. O'HARA: The majority of the bankers in this State are opposed to holding companies for several logical reasons.

Mainly the capital is supplied from other than residents of our State and the money that is earned by the bank is siphoned off to other parts of the Nation. In addition, many times they are interested in profits above stability. The dividends paid are usually large and normally would be used in part as additions to capital if the bank were locally owned.

Secondly, the absentee ownership does not understand the needs of the community as well as the unit banker who resides in the area he serves.

Also, recently we had three Beutel banks in Chicago that caused the banking industry great concern. This would not have occurred had we had holding company legislation at that time.

Also permitting holding company groups to acquire banks is merely a vehicle to evade the law in those States that prohibit branch banks, which is the law of Illinois. The various banks owned are for all intents and purposes operated as branches of the parent bank.

Therefore, I personally feel that H. R. 2674 is just and equitable.

Very truly yours,

WALTER J. RILEY,
President, Chatham Bank of Chicago.

FIRST NATIONAL BANK

DEAR CONGRESSMAN O'HARA: Thank you for your letter of March 1 asking for my comments on H. R. 2674. I happen to be president of the American Bankers Association, whose committee on Federal legislation has made a full study of this bill. Mr. George R. Boyles (whom I think you know), is president of the Merchants National Bank of Chicago, and is chairman of the American Bankers Association committee on Federal legislation. Mr. Boyles is scheduled to appear before your committee next Monday and present the views of the association on this legislation.

May I commend you for soliciting the views of your constituents on this important piece of banking legislation.

With personal regards, I am

Sincerely yours,

H. J. LIVINGSTON,
President, First National Bank of Chicago.

DEAR CONGRESSMAN O'HARA: I have your letter of the 1st, enclosing a copy of H. R. 2674, the so-called Spence bill, on bank holding companies legislation.

I think the bill in its present form, or anything like it, is highly undesirable and would do much more harm than good. I have read, and am sure you have, the testimony of Chairman Martin of the Federal Reserve System, and I think his conclusions on what should be in a holding-company bill are, on the whole sound and that it would be advisable for Congress to adopt his recommendations.

Sincerely yours,

EDWARD E. BROWN,
Chairman of the Board, First National Bank of Chicago, Chicago, Ill.

DEAR BARRATT: On my return to Chicago I find your letter of March 1 regarding H. R. 2674—so-called bank holding company legislation.

I have studied this question quite intensively since 1947 and have twice testified in regard to it before the Senate Committee on Banking and Currency. My viewpoint is well known by the various groups involved in the discussions.

Briefly, I believe H. R. 2674 is unnecessarily restrictive in some respects to accomplish the best results in the light of the goal of the proposed legislation, to wit, (1) the maintenance of sound, adequate, and competitive banking, and (2) a progressive coordination of our country's banking structure as it now exists.

From the beginning, my thinking on this legislation has been along the lines outlined by the Federal Reserve Board and the Comptroller of the Currency at the recent hearings before your committee. I believe legislation of that type would be more desirable and that it would be quite sufficient for the attainment of needed regulation—without playing favorites to any particular banking group.

With warmest personal regards,

Sincerely yours,

HAROLD V. AMBERG,
Vice President, First National Bank.

LAKE SHORE NATIONAL BANK

DEAR MR. O'HARA: Thank you for sending me the copy of H. R. 2674, the bill to provide for the control and regulation of bank holding companies.

I served the Illinois Bankers Association as its president for the fiscal year 1950–51 and I am currently serving as the chairman of the Federal legislative committee. In that capacity I have had the opportunity to discuss holding company operations in Illinois with several Chicago and downstate bankers. The Illinois Bankers Association has taken action through its Council of Administration favoring H. R. 2674 as far as it pertains to the right of Illinois banks to continue to operate as individual units. We favor Federal legislation that would freeze bank holding company operations and divest them of their nonbanking interests. We are advised that State legislation can be adopted prohibiting bank holding company operations in Illinois corporations but that we would be very much in need of Federal legislation to control foreign corporations licensed to do business in Illinois from acquiring ownership of stock in our Illinois banks.

Kindest personal regards.

Yours very truly,

JOSEPH R. FREY,
President, Lake Shore National Bank, Chicago, Ill.

PULLMAN BANK

DEAR MR. O'HARA: Your letter enclosing a copy of H. R. 2674 (bank holding companies) arrived when I was out of town. Consequently, I ask that you excuse my delay in replying.

We are grateful to you for your kind remarks about the administration and operations of our bank, in the course of the hearings. We feel that we have done a real service to our community in making use of capital which we have secured outside of the community, to provide support for a banking structure which has been able to extend the widest variety of banking services of any bank in Chicago. The capital that one needs for such an operation must be well informed capital, under the control of people who understand the banking business, and who encourage the local managers of the bank to extend the bank's services in fields which are of great value to the people living in the community in which the bank operates.

The biggest objection I see in the proposed bill is that it goes a long way toward freezing certain independent banks into monopolistic positions in their communities. If they do not have to face any competition, particularly competition which has been developed in other sections of the country where some new thinking in banking may have been discovered, then the community in which such a monopolistic bank operates is definitely the loser, because it does not gain the services and the lower rates established by competition, that are found in other communities.

This is especially true in Illinois. I have done a good deal of traveling around banks in the State, particularly up in the Chicago area, and I have been shocked, from time to time, by situations in which the banker in a given community denies his community all kinds of bank services and competitive rates, simply because he is without the competition to force him into them. This picture is radically different in communities where branch banking is permitted, and the local offices of big city banks bring to the communities the wide variety of services and competitive rates which the big banks have been able to discover in the larger metropolitan centers. Certainly the public is the gainer under this latter condition, and is the looser under the condition wherein the independent banker, wholly without competition, metes and parcels out to the community just whatever kind of banking service he in his own undisputed judgment determines the community shall have.

Today we are witnessing the return to the American business scene of the independent grocer, backed up by such huge grocery co-ops as certified grocers, IGA, Royal Blue, etc. This new independent grocer is gaining the full advantage of the mass-buying capabilities of his co-ops, and of the research in marketing practices done by his co-ops, and is setting up his stores according to the very finest standards of store management. From our observation in our own area, he is earning, in many cases, twice as much as the best that any chain store has been able to produce in the same location.

Where did he learn these practices? From the big food chains. No one of us would like to go back to the old, musty, confused, and high-priced independent grocery. Yet the change from those bad methods of merchandising groceries was accomplished because the big food chains were able to operate throughout the length and breadth of the United States, and bring to all of our communities the benefits of mass buying, scientific merchandising, and vigorous competition. It really has not taken very long for the American independent business system to find how to copy the practices of the chains, and, through the co-ops, to enable individual grocers to merchandise more effectively than the chains themselves.

If we ham-string competitive banking, so that it will be impossible for the highly efficient and competitive banking organizations of the larger metropolitan centers to bring their services and competitive practices into local communities, then the banking business will never enjoy the enlightening effects of good and intelligent competition. I don't think that any legal or political measures which protect independent bankers by freezing them into monopolistic positions in their communities, is worth the cost to the American public of the lack of the beneficial effects of vigorous competition, which has always been good for any American business.

These are my general feelings toward the banking holding company bill. In looking through the copy of the bill which you sent me, I note the following:

Page 2, line 25: I am vigorously opposed to giving to any mutual savings bank any greater privilege to own the stock of a commercial bank than is given to any other type of corporation. There has been far too much granting of power to these mutual institutions, whose managements are frozen into office by the simple practice wherein new trustees or directors are elected by the existent board of directors. This really results in the creation of a private enterprise, and not a cooperative, consisting of the group of men who retain themselves in office at very attractive salaries.

Page 6, lines 23 to 25: As a Congressman from Illinois, you are probably aware of the fact that bank holding companies are not prohibited by law in Illinois, but neither

are they authorized. Under these provisions, banks have operated very successfully in Illinois, and bank holding companies also. I object to allowing the Federal Government any greater prerogative in regulating this sort of thing than the State has of itself. I feel most postively that these particular lines should be stricken from the bill.

Page 7, lines 6 to 9: This would apparently preclude a bank from engaging in any way in the insurance business. I am most positively opposed to this provision, which places banks at serious disadvantages in competition with savings and loan associations, mortgage brokers, and all other corporations which are permitted to engage, directly or indirectly, in the insurance business. There is no reason in the world why banks should not be able to do the same things here that other corporations are permitted to do.

I appreciate especially your interest in writing to us about these matters. I sincerely hope that these thoughts may be helpful to you.

Yours very truly,

DONALD O'TOOLE,
Executive Vice President of Pullman Trust & Savings Bank.

MERCHANTS NATIONAL BANK

George R. Boyles, president of the Merchants National Bank, is chairman of the national legislative committee of the American Bankers Association. He was one of the principal witnesses at the public hearings of the Banking and Currency Commitee. His testimony will be found on pages 405–429 of the public hearings.

Parental Responsibility

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial that appeared in the Newark (N. J.) Star-Ledger under date of May 10, 1955:

PARENTAL RESPONSIBILITY

Newark should watch with interest the program which New York City says it will put into action to stem juvenile delinquency.

Our problems are not identical, of course, but this much is certain: We have too much juvenile delinquency, too.

New York's answer is to spend money. It proposes to spend $3,410,000 over 3 years. This year's budget is $1,500,000. The money will go to hire recreation staffs, for testing the work of police agencies, for expanding facilities.

Perhaps it will work. We fervently hope so. At least the big city is trying.

All of the money and all of the reports and all of the studies won't change the fact, however, that parents are at the root of juvenile delinquency.

Too many parents are indifferent to what their kids do. And it's not just poverty that makes parents indifferent. Some of the worst delinquents come from the best homes.

Perhaps the answer is parental responsibility. It's been suggested before, but it's not practiced.

The community has a right to protect its interests. If a parent, through neglect, permits a child to endanger the community, should the parent not be held responsible? Lots of parents might suddenly develop a wholesome interest in where their kids hang out, and in what they do, if they know that they're liable to be fined for the mischief done by the kids.

Ike's Economic Report Is a Tribute to the New Deal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. MULTER. Mr. Speaker, the following condensation of Thomas L. Stokes article from the Toledo Blade which appeared in the April 1955 issue of the Democratic Digest is deserving of our attention:

IKE'S ECONOMIC REPORT IS A TRIBUTE TO THE NEW DEAL

(By Thomas L. Stokes)

It often takes time, sometimes adversity, to put past events in just and proper perspective. Take, for example, that era of reform known as the Roosevelt New Deal back in the middle and early 1930's which has been slammed and pilloried, even down to the last congressional election campaign.

It is worthy of note that it now is paid high tribute at long last—and significantly by the first Republican administration since then. You will find this scattered throughout President Eisenhower's Economic Report to Congress. That gives repeated credit to antidepression measures put on the statute books by the Roosevelt New Deal in helping to keep the recession of last year from snowballing into a real depression.

Naturally the Eisenhower report does not identify those as Roosevelt New Deal measures, which would be too much to ask of any political party, whether Republican or Democratic. It just tells how the administration utilized them, with effusive praise for that operation.

Nowhere in the comprehensive report of the President's Council of Economic Advisers submitted to Congress will you find the name of Franklin D. Roosevelt. Nor, for another, that of the late Senator Carter Glass, a Virginia Democrat, who put through the banking laws which gave the Federal Government more of a free hand to devise flexible policies to check downward swings in the economy. Nor the name of Marriner S. Eccles, Governor of the Federal Reserve System for many years, who directed recovery efforts possible through credit policies. Nor the late Senator Robert F. Wagner, New York Democrat, sponsor of unemployment insurance and old-age-pension laws. Nor any other in the galaxy of New Deal reform figures.

Yet, anonymous though they remain in the President's report, they are highly complimented by proxy in the detailed story in the economic report. It relates how the 1953–54 recession was checked and recovery set in motion by infusion of unemployment benefits into the stream of purchasing power to bolster the economy; by farm-price supports; by the use of monetary policy and tax reductions, as well as other instrumentalities and methods to be found in the solid body of social and economic measures and policies enacted and instituted 20 years ago, and often after long, frustrating, and bitter battles.

One sentence in the President's report might be regarded as a sort of memorial to those men and measures, if somewhat restrained and reserved:

"It is well to recall that we have developed in our country a fiscal system that tends to cushion or offset a decline in private income."

The economists who drafted the economic report offer the forgotten men, against without credit, the flattery of imitation by advocating more of what they did—further improvement and extension of the Social Security System, increase of the statutory minimum wage, more public housing, all originally started in the 1930's.

The President's report takes the year from July 1953 to July 1954 to spell out the story. While production income declined $4.4 billion during that period, this was more than offset, it explained, by the payment to the public of $2.2 billion for unemployment insurance and other social security benefits, and by tax reductions amounting to $3 billion, so that "the income available to the public for spending and saving actually increased by nearly $1 billion."

The report insisted throughout that Government must operate actively to check economic recession, saying in fact that, among lessons learned by the experience of this setback, the first was "that wise and early action by Government can stave off serious difficulties later."

For years it was the fashion, and still is in some quarters, to condemn the New Deal economic and social reforms as weakening the fiber of our people and encouraging them to lean on the Government. This myth is exploded by the economic report. As for this recent experience, it says that, while Government helped, the recovery itself was brought about by the American people who, it said, have developed a mood of confidence in their economy. Though the report does not say so, it is suggested that such confidence grows, itself, from confidence built up among the people during the New Deal era that the Government will lend a hand when there is trouble, and now has means to do this effectively.

Mrs. Hobby Charged With Culpability

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. CELLER. Mr. Speaker, Mrs. Hobby, Secretary of the Department of Health, Education, and Welfare, has stirred up a witches brew of uncertainty and confusion. Unfortunately Dr. Scheele, a good doctor, is cast in a bad role as her front. Mrs. Hobby has now suspended further distribution of the antipolio vaccine. She proclaims, however, that the vaccine is safe. Suppose the investigation reveals that the vaccine, as manufactured, is unsafe? Where does this leave the anxious parents of the 5 million children already inoculated? Why did not Mrs. Hobby insist upon proper inspection before and not after she gave the green light?

Why did the President recently assure the Nation that all was well? He is not without responsibility for the actions of his agent, Mrs. Oveta Culp Hobby. This lady is indeed very culpable.

Trinity Project in California

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. DAWSON of Utah. Mr. Speaker, among many specious arguments now being leveled against the upper Colorado River storage project is one to the effect that atomic energy will replace the hydroelectric energy this project would develop.

In answer to those arguments I am submitting herewith excerpts from testimony of the Pacific Gas & Electric Co. engineers dealing with hydro versus atomic power. The testimony was taken during House Interior Committee hearings on the Trinity project in California.

EXCERPT FROM THE TESTIMONY ON THE TRINITY PROJECT

Mr. ASPINALL. The Chair recognized the gentleman from Utah, Mr. DAWSON.

Mr. DAWSON. Mr. Gerdes, on page 2 of your statement we find the words that by 1956 postwar additions in new hydro and steam power capacity of the Pacific Gas & Electric Co. will amount to nearly 3 million kilowatts, increasing the total system to 4.4 million, and your 11-year postwar construction program will represent an investment of $1.6 billion.

In addition to that investment I understand that you have plans beyond 1956 for the construction of steam plants and also hydro developments, have you not?

Mr. GERDES. Yes; we have plans for construction of additional powerplants, both steam and hydro. In our area the powerload is increased rapidly each year, and we have to keep building ahead to take care of those demands.

Mr. DAWSON. And that involves a good many millions of dollars, as you estimated?

Mr. GERDES. I could state it this way: Last year my company spent, if I recall the figure correctly, approximately $170 million. That includes distribution lines and transmission lines as well as generating facilities. It also includes some gas facilities. It is a very large sum of money we are speaking of.

Mr. DAWSON. Now, in view of the fact that some of those who would oppose future reclamation projects involving hydro development are claiming that the atomic age is upon us and is about to blossom forth, do you figure you are taking any chance with that kind of investment in hydro and steam plants?

Mr. GERDES. We are planning to build hydro plants and we are planning to build steam plants. We do not feel we are taking any risk in building them because of the development of atomic energy. As a matter of fact, we are participating with four other companies in a study of the development of atomic energy. We have recently made an offer to the Atomic Energy Commission which would involve the construction of a sizeable plant. We do not regard the development of atomic energy as a threat to our existing development of the plants that we intend to build.

Mr. DAWSON. That would include both hydro and steam?

Mr. GERDES. That includes both hydro and steam. On anything that we know today, atomic energy, at least in our area, is not competitive with the conventional plants. I am speaking as of this day. It may be that within a few years—and I would not predict how many—it may become competitive.

Mr. DAWSON. As of this day you do figure you are safe in projecting your future plans far enough ahead that you are willing to go ahead now and construct steam and hydro plants?

Mr. GERDES. In the first place we have to go ahead with our plans in order to meet prospective loads; and in the next place we think we are safe. Atomic energy, so far as electric power is concerned, is only another source of fuel to generate steam. If and when it becomes competitive—that is, when atomic energy can produce electric energy at a cost equal to or less than the conventional plants—it will just be another source of fuel. As a matter of fact, every year that we build a plant, that plant is more efficient than the one we built previously due to progress of the art.

Mr. DAWSON. But it would not render your hydroplants obsolete?

Mr. GERDES. It would not; no. The older plants are relegated to a point where you use them less. You use your most efficient plants at the base of the load curve. In other words, the most efficient plant is run 24 hours a day, or as much time as you can run it, and the less efficient, older plants are run to met the load peaks.

Act on Vaccine Control Now

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of May 10, 1955:

ACT ON VACCINE CONTROL NOW

Dr. Scheele has issued a lengthy report on the results of the study made of the Salk vaccine program by a panel of distinguished scientists which contains much that is encouraging, much that is confusing. Nowhere does he spell out precisely what the rechecking of manufacturing processes and of existing supplies by Government laboratories is intended to discover.

He reaffirms his confidence in the Salk vaccine as such—which is good. He says that it is actually being made more effective—which is better. But the heart of his statement, the delay in going forward with vaccination, can only be understood by inference, by collateral information.

It is clear that in the product of the Cutter Laboratories an as yet unexplained phenomenon has appeared—a definite association "between the administration of the Cutter vaccine and the few cases of poliomyelitis that have occurred after its administration." This association was not foreshadowed in the massive experimental vaccination last year (in which the Cutter Laboratories did not participate). It certainly justifies the suspension of production by that firm until the cause is found and eradicated. It might well warrant a revision of recent Government testing practices—which apparently were based on the assumption that, after the success of last year's program, production methods for the vaccine had been stabilized and only spot checks and reviews of "protocols" were sufficient to insure safety.

Since such a recheck would involve going back over laboratory samples of lots already distributed, it is wise to halt inoculations until they have been cleared. But if this chain of reasoning is correct, why did Dr. Scheele not make it plain in his report? If there are detectable differences between the Cutter vaccine and that of other companies, why did he not say so? If not, what is expected from the new tests?

The lack of clarity in recent statements by the Surgeon General is a strong argument for a form of national control which would provide for full, objective, carefully evaluated information by the Government. The delay in the program, which will mean greater pressure on vaccine supplies as the period of a higher incidence of polio draws nearer, makes an even more powerful case for compulsory allocation according to need and protection against a black market. At the same time, the pause in mass vaccination allows time for legislation and setting up the administration of a national law. It must be done now, when the opportunity offers and the need is more urgent than ever.

Bootlegging: It's a Big Problem Again

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. CELLER. Mr. Speaker, when will the Nation learn. We certainly should have learned our lesson from prohibition. Now, we are having prohibition by taxation. The liquor taxes are so high that moonshiners and bootleggers are once again reaping a harvest. It is high time we took a new look at the liquor taxes with a view toward reducing them. Look magazine is to be complimented on its article entitled "Bootlegging: It's a Big Problem Again," by Jack Wilson, which appears in its current issue.

It reads as follows:

The hard facts of 1955 economics are reviving the lawlessness that was a byproduct of prohibition. Bootleggers are cashing in again.

The current rise of bootlegging doesn't involve any law against quaffing strong waters. It has come about simply because the price of legal liquor has been forced so high that many prospective customers can't pay and others won't. The inevitable result has been the opening up of a big market among consumers in the low-income brackets. The bootleggers are demonstrating that they're able and more than willing to fill the demand.

Large illicit distilleries, professional jobs producing 1,000 or 2,000 gallons a day, have been springing up in the eastern cities. Last fall, Federal agents raided a column still that occupied three full stories of a brick building in Philadelphia. The plant cost at least $75,000 and had a capacity of 1,000 gallons of alcohol per day. A similar still was seized near Hackettstown, N. J. In the past 2 years, 20 others, the same size or larger, have been uncovered in New York and its vicinity, including one giant in a Brooklyn warehouse leased from the city.

These big outfits, financed by big-time racketeers, turn out raw alcohol to supply the half-pint trade and the back-alley gin mills. And the little pot stills, built around a couple of barrels, a few feet of copper tubing and a good felt hat for a strainer, are still sprouting in the southern hills faster than the revenuers can smash them.

Licensed-liquor industry people estimate that 1 out of every 4 gallons of high-proof

liquor sold in this country today comes from unlicensed stills. The Federal Alcohol and Tobacco Tax Division feels this estimate—for certain areas, at least—is high. Nevertheless, the number of outlaw stills seized by Federal agents has definitely increased every year since the end of the war. This year it will be the highest since 1942 when sugar rationing cut off the flow of illegal liquor. And today's stills produce far greater volume than did the prohibition bathtubs.

The bootleg trade hurts you, the American citizen, in many ways—indirectly and directly. Illicit distilleries cheat the State and Federal Governments out of nearly three-quarters of a billion dollars in taxes every year. You have to pay the money instead. For the average four-person family, it amounts to an income-tax boost of about $19 a year, to make up for the revenue stamps bootleggers don't buy.

More important, in the last 4 years, 65 persons are known to have died from poisonous bootleg liquor—42 of them in a single week in Atlanta, Ga., where a peddler used wood alcohol to stretch his merchandise. Hundreds more were blinded and hospitalized.

The basic economics of bootlegging are about the same as they were during prohibition. A gallon of 180-proof alcohol from an unlicensed still costs a little over $1. When it has been cut to half strength, it makes 2 gallons of hootch that can be peddled at retail for around $3 a fifth. The corrosive product may loosen the drinker's fillings, but licensed dealers can't compete in price.

HERE'S WHERE YOUR MONEY GOES

The average price of a fifth of 86.8-proof blended whiskey in a legal liquor store is about $4.27. That includes $1.89 for producing, bottling, advertising, and distributing. The remaining $2.38 represents local, State, and Federal taxes. Put it another way: To buy $1.89 worth of whisky, you have to pay $4.27. A bootlegger can sell the same amount for $3 and still do very well.

All but 48 cents of that $2.38 tax goes to the Federal Government, most of it in the form of the $10.50 excise tax per proof gallon imposed in 1951 to help pay for the Korean war. Previously, liquor had been taxed $9 a gallon to help pay for World War II.

When the rate was increased to $10.50, the rise was billed as an emergency measure, and the law specified that it would revert to $9 on April 1, 1954. But before the expiration date, the $10.50 rate was extended a year, to April 1, 1955. It was done without debate on the floor of Congress. Congress doesn't like to talk about liquor taxes any more than necessary. Temperance organizations have sharp ears, long memories and a good many votes. A Congressman who rises up in favor of cutting liquor levies is running the risk of being tagged a seducer of American youth.

The legal-liquor industry regards this big excise tax as the principal cause of the bootlegging boom. Federal statistics show that between 1945 (when the tax went from $6 to $9) and the end of the last fiscal year, seizures of illicit stills increased 65 percent. And seizures of sour mash, an indication of the size of the stills, increased almost 170 percent.

"This multimillion-dollar racket can be curbed only by reducing the fabulous profit incentive given by the current record-breaking tax on liquor," said Thomas J. Donovan, vice president of Licensed Beverage Industries, Inc., a spokesman for the business.

Donovan believes that if the $10.50 tax were allowed to revert to $9, the loss to the Government in excise taxes would be nearly, or completely, offset by increased income and corporation taxes which would flow into the Treasury as a result of increased sales. He cites studies made by the Treasury Department and the University of Minnesota to back his claim that while the Federal Government would lose about $63,100,000 in excise taxes, it would gain at least $36,000,000 in increased corporation and personal income-tax payments. The States, in turn, would collect an additional $18,000,000. Also, he says, if the sales increased the full amount indicated by the studies, the Federal Treasury would show a net gain of $52,000,000 as a result of the tax cut, and the States a $35,000,000 profit.

The licensed industry, however, got a sad jolt this winter when President Eisenhower announced that he wanted all present levies extended. Some of the realists in the business admitted that they were not surprised. The only time Congress ever voted to lower the tax rate on liquor was shortly after the Civil War. It's been going up gradually ever since, with never a setback.

Federal officials believe that the answer to bootlegging lies in stricter enforcement of laws and sterner punishment. The Alcohol and Tobacco Tax Division last year revamped its inspection system in the licensed distilleries and shook more than 100 agents loose for outside work. Nearly half of them were sent into the New York-New Jersey-Pennsylvania section to hunt the new crop of liquor racketeers. The rest were assigned to the Southeastern States. These two areas are the hot spots. There is little bootlegging on the west coast, in the Southwest or Midwest. One ATTD man says, "Things are so dull in Chicago that we're beginning to wonder. * * *"

An estimated 85 percent of the illegal whisky is cooked in the area south of the Ohio River and east of the Mississippi. Moonshining is a southern tradition—there has always been a good supply of illegal corn back in the hills. Most of it is made in small backwoods pot stills. Lately, however, larger plants of modern design and considerable capacity have been found around some southern cities.

Seizure statistics indicate that at least one new moonshine pot starts bubbling for every one the revenuers knock out. Federal seizures in the 7 Southeastern States total between 700 and 800 a month. Similarly, seizures of moonshiners' automobiles and trucks in that area remain steady from month to month—between 80 and 115 automobiles, and from 30 to 40 trucks.

The operators seem to be little affected by the raids. Arrest records indicate that many moonshiners who are picked up stop off on their way home from the courthouse and collect apparatus for new stills. Many State courts are lenient with small-time moonshiners, punish them with a scolding and a suspended sentence.

The licensed-liquor interests, cooperating with other businessmen, have organized an Anti-Moonshine Association in Atlanta to combat the traditionally tolerant attitude toward manufacture of "white mule." This group is spreading the message that moonshining is a criminal matter, that it leads to such tragedies as the wood-alcohol plague in Atlanta, and that it adds to the taxpayers' woes.

Addressing a meeting of the association, Dwight E. Avis, director of the Alcohol and Tobacco Tax Division, said, "We are never going to be able to stamp out moonshining until we have an aroused public opinion which recognizes a criminal for what he is and makes its feelings felt by the courts and prosecutors."

Lately, there has been a trend toward stiffer penalties. Last November, an eight-man ring was convicted in a Federal district court in Virginia. Four of the defendants drew sentences of 2 and 3 years, 2 got 18 months, and the remaining 2 drew 1 year. Appeals are pending.

The operation of this gang was more or less typical of large-scale bootlegging in the South. Three of the leaders—Robert Orton, Hubert Hoffler, and Rubin Pierce—began by taking over an automobile business in Portsmouth, Va. They used this enterprise to acquire and service the trucks they needed for transporting moonshine. They built a 500-gallon still nearby, which was raided after running 3 weeks. Then they went into business in Ahoskie, N. C., and got by for 6 weeks before being caught. All told, they produced 6,976 gallons of country-style corn liquor, and they cheated the Federal Government out of $61,748 in taxes.

The new bootleggers are well heeled and ruthless; there are more of them getting into the racket every month. No one has found a solution to the problem. No one really doubts that as long as moonshine is cheaper than legal liquor, there'll be a demand for it. And there will always be bootleggers to fill the demand.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dill, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Appendix

Hawaii and Alaska Statehood Bill

SPEECH
OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. PILLION. Mr. Chairman, it is contended that the power of two seats each for Hawaii and Alaska is sought only for the protection of their interests. Unfortunately, the voting powers of these Senators cannot be limited to measures which affect these Territories alone. The senatorial power proposed in this bill would, of necessity, include the power to decide upon, and to vote against, the interests of each of the 48 States.

It is a recognized maxim that power without corresponding accountability and responsibility invites abuse and maladministration.

For example: Alaska, with 2 Senators, would possess one-fiftieth of the power to pass on appropriations of $60 billion per year. That share of power to spend is $1,200,000,000. Yet Alaska's responsibility for the collection of taxes, as represented by her 1954 Federal taxes, is only $48 million or 1,000 times less than the total budget. Alaska's Senators would be accountable to only 128,000 people—27,000 voters—although the $1,200,000,000—her share of the spending power—is collected from more than 3 million people.

It is contended that Hawaii is entitled to statehood by reason of the fact that her population is greater than that of either Nevada, Wyoming, Vermont, or Delaware.

It should be noted that each of these States was admitted before the ratification of the 17th amendment. This amendment fundamentally altered the basis for the allotment of two Senators to each State. The change in the mode of selection of Senators, to that of popular suffrage, totally destroyed the justification for equal representation, that of two Senators for each State.

This 17th amendment recognized the trend toward a national government and away from the Federal union of sovereign States. No State has been admitted to the Union since the adoption of the 17th amendment. Thus, other States furnish no valid precedent for the admission, today, of territories on the basis of representation by two Senators in the United States Senate.

Mr. Chairman, the correct and the equitable principle for the distribution of power in a national legislative body, elected by direct popular suffrage, is that of representation proportional to population. The apportionment of Senators on any other basis violates the basic concepts of constitutional representative government.

There is ample authority in the deliberations at the Constitutional Convention for the adoption of a constitutional amendment which would admit States, hereafter, upon the basis of representation in the United States Senate in accordance with population.

At the time of the adoption of our Constitution, the largest State, Virginia, had a population of 747,000; the smallest State, Delaware, had 59,000; a ratio of about 12 to 1. Today, the ratio between the largest and the smallest State is about 100 to 1. The gentlemen of that Convention had the foresight to make our Constitution amendable to provide for this type of contingency.

The convention specifically deleted, by a vote of 9 to 2, a proposal that new States be admitted on the same terms with the original States. In fact, article V of the Constitution is one of the clauses which cannot be amended. It provides in part, that no State can be deprived of its power to consent to accept less than equal suffrage in the Senate.

This bill should be laid aside, until such time as Congress shall, have had an opportunity, to give consideration to a constitutional amendment that would either limit the senatorial representation of States to be admitted or one that would admit States by the same procedure as is required for the adoption of a constitutional amendment.

COMMUNISM

The Hawaiian statehood bill was last considered by this House on March 10, 1953. Since then, there have been startling disclosures of communistic controls in Hawaii. Although the Communists began their activities in 1937, the full force of their power did not become apparent until recent events.

In attempting to assess the extent of the influence of communism in Hawaii, we should keep in mind that Hawaii can be fairly compared in population and area to an average congressional district. I am sure that every Member of this House would view with greatest alarm the prospect of having the same degree of communistic power in their districts, as now exists in Hawaii.

In Hawaii, communistic power is centered in and its influence emanates from two unions, the International Longshoremen's and Warehousemen's Union—the ILWU—and the United Public Workers Union—the UPW.

The ILWU has a membership of 25,000. About 2,000 of them are stevedores and dock workers. The balance work on plantations and in various type industries. This union dominates and is the leader in union activities in Hawaii. The international president of the ILWU is Harry Bridges. He has been cited time after time as a Communist. Next to William Z. Foster, who heads the Communist Party in the United States, Harry Bridges is the most powerful figure in the party.

Jack Hall is the regional director of the ILWU in Hawaii. He is one of seven defendants convicted by Federal prosecution on June 19, 1953, for conspiracy to overthrow the United States Government. His photo is the first one on the left in the newspaper account on the blackboard.

These convicted Communists are on bail awaiting their appeal. Although it is almost 2 years since their conviction, they continue in the same communistic activities today, unhampered. A newspaper account on the blackboard quotes Jack Hall as taking credit for the sweeping political victory in last fall's Hawaii elections. In fact, one territorial senator went to Jack Hall's aid as a character witness during his trial and another senator furnished bail for him.

The UPW is another cloak to cover communistic activity in Hawaii. It has a membership of 2,000 government public workers. They include government employees in the jails, fire department, and the public works. This union is headed by known and publicly identified Communists. It collaborates 100 percent with the ILWU in the fields of labor, politics, and communistic education.

It is common knowledge in Hawaii that both unions are completely communistic controlled.

The CIO expelled both the ILWU and the UPW in 1950 on the ground that they were Communist controlled.

We can fairly judge the control of the Communists over the ILWU and the adherence and the sympathy of the membership for the communistic cause by referring to the dock strike on June 19, 1953. Within an hour after the jury had convicted Jack Hall and his coconspirators, 24,000 members of the ILWU went on strike. These strikers even refused to load military cargo for Korea. The Navy-Army personnel had to take over the work of loading ships when the ILWU strike paralyzed the docks, sugar, and pineapple plantations.

This strike was not called because of any legitimate labor dispute. It was a strike to demonstrate the power and to attempt to intimidate our governmental processes.

This board contains newspaper accounts of this strike in the Honolulu Star-Bulletin and in the Honolulu Advertiser. They are the leading newspapers in Hawaii.

The Honolulu Advertiser refers to this strike of June 19, 1953, in its editorial as "one of the ugliest demonstrations of bad citizenship on record. Their defiance of due process of trial by jury constitutes a direct threat to the maintenance of law and order."

The Honolulu Star-Bulletin uses the following language in its editorial on June 22, 1953, in reference to the strike:

The other, of course, is the determination of the ILWU leaders to mold the thinking as well as the actions of its members. That determination has carried the ILWU to the extent of taking union workers off the job within hours after the jury of 12 good American citizens had given its honest verdict. But even the shock of anger does not justify this walk-off action, which is in effect a rebellion against the American jury system.

The outstanding local Hawaiian newspapers, the Star-Bulletin and the Advertiser, each of them indict and convict both the leadership and the 25,000 members of the ILWU of knowing, willful, communistic, and rebellious defiance of lawful authority.

This was not the first Communist sympathy strike by the ILWU. In August 1950, this same ILWU staged a strike to protest the jailing of Harry Bridges, its international president, in connection with his conviction for perjury arising out of communistic charges. A newspaper account of this strike is on the blackboard.

The Commission on Subversive Activities for the Territory of Hawaii is composed of 4 Republicans and 3 Democrats. It submitted its report of 2 years of investigation, containing 300 pages, to the Hawaiian Legislature on February 28, 1955. This is a copy of the report.

On page 218 of this report, this Commission had this to say about the UPW:

It is the considered opinion of this Commission that this control (referring to control of public workers by the Communist Party) UPW presents a potentially grave security problem in case of a national emergency, and that this problem has been intensified by the coalition of the Communist leadership of the UPW with the Communist leadership of the ILWU.

Now this Commission is composed of men who know conditions in Hawaii. They are the best informed authority on the subject of communism there. They are telling us, in plain language, that one of our most strategic outposts is honeycombed with traitors and saboteurs. They are serving notice that in event of war, these Communists could and would paralyze the island's public works and her economy, and pose a serious threat to our military operations.

Let us look into the propaganda and the educational apparatus of the Communist Party in Hawaii.

The Communists publish three different newspapers in Hawaii. One is an ILWU publication, another is the Honolulu Record, and the third is a Filipino language newspaper.

A copy of the Honolulu Record is on the board. Five of the convicted Communists are associated with this newspaper as owners, editors, or employees. Both the House Un-American Activities Committee and the Territorial Subversive Commission have branded this newspaper as part of the worldwide Communist propaganda apparatus.

All of its writers are Communists. The record of their communistic affiliations are contained on the board.

Since the conviction of the 5 persons associated with this newspaper, the anniversary edition has grown from 48 pages in 1952 to 72 pages in 1954. The advertisements in the paper increased from 2,137 ads in one issue in 1953, to 2,586 ads in the one comparable issue in 1954. Ninety-eight percent of these advertisers, these 2,500 people, must be regarded as part of the hard core of the communistic reserve forces in Hawaii.

The increasing public acceptance of this paper and the recognition of the political power of the Communist Party can be judged from these figures:

In the 1952 elections, 38 candidates for public office advertised in the Honolulu Record. In the 1954 elections, 62 candidates—in elections for 76 public offices—placed ads in this publicly known Communist newspaper.

As part of its communistic educational program, the ILWU in July 1954 established 16 book-lending libraries in Hawaii. Their books have been examined by the Commission on Subversive Activities and are found to be uniformly subversive. They teach the classic doctrine of class conflict and revolution. An example is a book which is entitled "Strike Strategy." It is a handbook on mass strike techniques which apply military theory to the conduct of labor disputes.

The paid educational director of the ILWU is an identified Communist. Within the last year this director engineered a very clever arrangement with the Library of Hawaii, a public governmental library. He has placed with the library a series of communistic films. They became available there for public use and propaganda. In return the library is storing and shipping them on schedules furnished by the ILWU, maintaining records, and repairing the films. Under this scheme the taxpayers pay for serving this communistic propaganda cutlet.

This same educational director systematically bombards the teachers of the public schools with communistic literature. He recommends books and propaganda courses to be taught to the children by the teachers.

Four radio stations are regularly scheduled every day to hammer the current Moscow propaganda line to the people of Hawaii. These radio broadcasts are made in the English, Filipino, and Japanese languages daily and systematically. The daily schedules are contained on the blackboard.

The Commission on Subversive Activities reports that the Communist Party spends $200,000 annually for propaganda purposes. It has succeeded in inculcating a whole generation of Hawaiian people with communistic doctrines.

Let us see how far the Communist Party has progressed in their political objectives. Jack Hall, the convicted Communist, coordinated and directed the union support for his candidates in the last election of November 1954. In 7 senate contests, the ILWU endorsed 6 candidates; 5 of the ILWU-endorsed candidates won. With the holdover senators, the ILWU-endorsed senators constitute a majority in the senate.

In the Territorial house of representatives, 22 ILWU candidates were elected out of a total membership of 30. In the county elections, 32 ILWU candidates won in 38 contests.

It is an accepted fact in Hawaii that the ILWU and the Communist Party not only influence but also dominate the Territorial legislature. Only 2 weeks ago, Newton Miyagi, an identified Communist ILWU leader, stated publicly that more than one-third of both houses of the legislature committed themselves to the ILWU and UPW communistic legislative programs.

On March 4, the New York Daily Mirror printed an article by one of its writers, Lee Mortimer, who was making a study of conditions there. He wrote, in reference to the Territorial legislature:

In its first few days, the Red dominated majority disclosed that its program would be:

1. To destroy the present police commission and turn the department over to the ILWU.
2. To exempt the ILWU property from taxes.
3. To invalidate leases and force the sale of properties to the tenants.
4. To repeal the 1950 dock seizure law.

Now, Mr. Chairman, the dock seizure law was enacted to prevent a prolonged Communist dock strike which could starve out the island.

A copy of this article is on the board.

A copy of the April 6, 1955, issue of the Peoples Daily Worker, a Communist newspaper published in California, is on the board. It prints the account of the present of a gavel from Charles Kauhane, Speaker of the Hawaiian House of Representatives, to Harry Bridges, the ILWU president.

In March 1955, the Territorial legislature passed a bill to exempt the ILWU Memorial Association from real estate taxes. This association is a real estate holding company for the ILWU. It houses the headquarters and offices of the ILWU. Seven out of 10 of its incorporators are identified Communists.

On April 24, 1955, the Communist ILWU publicly threatened the Hawaiian Legislature with a mass retaliation strike on the island if the elected legislators did not keep their political promises to the ILWU.

Here is what Senator Dillingham said on the floor of the Senate on Saturday, April 23, 1955:

It's time the people woke up and found out what we are dealing with. The people should know that the only thing that stands between ourselves and chaos is the position of the governor. If he were subject to the same pressures of the ILWU, we would be closer to a satellite of the Soviet Union than a territory of the United States and I'm not kidding.

On the same day Senator Tsukiyama said this on the senate floor:

The thing that I'm alarmed about is the fact, that there is a sense of fear. When legislators seem to be afraid of any particular group, we are going to run into a very

precarious situation. I feel that in order to make good legislation, we must free ourselves from this sense of fear.

The fear that this senator was referring to is the same fear that exists behind the Iron Curtain. The fear of an organized merciless, cold conspiracy that would resort to physical, economic and any other measure to retaliate against those who oppose it.

Gentlemen, the last session of the Hawaiian Legislature was a Communist holiday. They passed bill after bill on the orders of the Communist ILWU. Yet, not one anti-Communist or anti-subversion bill was reported out of any committee.

By reason of years of systematic undermining and propaganda, the Communists have made themselves and their doctrines acceptable to the people of Hawaii.

If this measure is enacted Hawaii will become entitled to 2 Members in this House and 2 Members in our Senate. Who will be electd by th citizens of Hawaii to represent them in Congress? The answer is obvious. The Members will, in all probability, come from the present Territorial Legislature. They have the political background and the support of the ILWU. This prospect is not a happy one. This bill will guarantee giving Harry Bridges 2 seats in this House and 2 seats in the United States Senate.

Statehood at this time would only serve to deliver the Hawaiian State government to the Communist Party on a silver platter. It would grant state sovereignty and free that Territory from Federal restraint. It would clothe the Communist power with the protection of the United States Constitution. It would completely turn over to the Communist Party the police force, the educational system and the public works of the island.

Our defeat of this bill will serve notice to the people of Hawaii that this Congress will not countenance a Communist police state anywhere within our boundaries. It will, also, serve to give encouragement to the very many good, loyal Americans in Hawaii who, up to now, have been fighting a courageous but losing fight against communism on the islands. Or defeat of this measure may electrify and arouse the citizenry there to make a supreme effort to free that Territory once and for all from the Communist octopus.

The Hawaiian Commission report of February 1955, states:

> The principal barrier to the Communists' efforts to create a revolutionary situation in the islands and seize power, is the presence here of large military forces.

Mr. MILLER of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. MILLER of Nebraska. The gentleman is giving a very fine, able, and earnest report. I know he has strong convictions on the Communist infiltration not only in Hawaii but in this country. I hold in my hand a FBI report of March 30, 1951, showing the total number of Communists in the United States—43,217 at that time. In New York State, there are 20,575—more than half the number of Communists in the United States. Then, in Hawaii, it shows that Hawaii had 36 at that time. Does the gentleman not feel the fact that Hawaii moved promptly to convict the seven known Communists might very well be very much in their favor?

Mr. PILLION. You cannot determine the power and the influence of Communists by numbers. For instance, in Russia, when Lenin took over from the Kerenski government, the Communists only had 80,000 adherents and only 23,000 party members and candidates, and probably only 2,000 top flight Communists, but they, too, over 140 million people.

Mr. MILLER of Nebraska. What is the gentleman's own State doing about the 22,575 known Communists in the State of New York? Have they convicted anyone?

Mr. PILLION. I regret that there is one Communist in New York. They have paseed legislation there and they are trying to do what they can to clean out the educational system. But it is difficult to fight whether it is in New York or Hawaii except that the difference is that they do not control the political machinery and the government in New York anywhere near to the extent that they control it in Hawaii where seizure is imminent.

Mr. MILLER of Nebraska. The gentleman complained about the foreign language broadcasts in Hawaii. Does the gentleman realize that in New York City there are 409 broadcasts, 39 of them in different foreign languages.

Mr. PILLION. I am not complaining about that.

Mr. MILLER of Nebraska. Are you doing anything about that?

Mr. PILLION. Doctor, we are not complaining here about foreign language broadcasts, but I am complaining about these foreign language broadcasts in Hawaii which are completely Communistic. I am not complaining about foreign language broadcasts. In fact, I think culturally, they are very fine.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. GROSS. Three of these New York Communists just the other day were ordered by the so-called International Court of Justice to be reinstated in the United Nations or be paid $43,000.

Mr. PILLION. That is a shameful situation.

Mr. GROSS. I do not know how the State of New York can get rid of these Communists as long as they are protected by the United Nations and subsidiary organizations.

Mr. O'NEILL. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. O'NEILL. I regret that I was unable to be present in the Chamber during the earlier part of the gentleman's remarks because I was in committee. I wonder if the gentleman has called attention to the evidence which was produced before our committee that the Territory of Hawaii is under a three-man police commissionership, and that the Communists have infiltrated to such an extent that one of these three commissioners was a known Communist.

Mr. PILLION. On top of that, they are trying now to take the police power out the commission's hands and place them in the islands where they have complete communistic control. They do not have quite enough control on the main island and they are attempting to split it up so that they will have complete control of these counties.

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. MORANO. Will the gentleman tell the Members what the editorial position of the two Hawaiian newspapers is on the question of statehood? I think the gentleman referred to the Honolulu Star Bulletin and the Record.

Mr. PILLION. I think they are both for statehood, as everyone else, because they recognize the increased political power that statehood would give those people—the sugar interests and all the other interests. Of course, the Federal Government is the biggest business in Hawaii.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. SISK. Will the gentleman state where are the headquarters of the ILWU?

Mr. PILLION. It is in California.

Mr. UDALL. As a Member who sat with the gentleman on the committee which heard these hearings, I have been particularly disturbed by this presentation, because I think it creates a feeling of alarm, perhaps designedly so. The main conclusion of the gentleman is that there is a growing influence of communism in Hawaii?

Mr. PILLION. That is a fact.

Mr. UDALL. Is it not a fact that the only facts before our committee, determined by the Department of Justice, the Committee on Un-American Activities, Mr. WALTER and Mr. VELDE, people who ought to know, is that the influence of communism is declining?

Mr. PILLION. The greatest specialists are right there. You do not find out about communism on Waikiki Beach or in the fine hotels. You find it out in the planting fields and in the shops. The greatest experts are the gentlemen appointed by the territorial legislature who are intimately acquainted with the problem and who have presented a 300-page report saying that communism is on the increase.

The CHAIRMAN. The time of the gentleman from New York [Mr. PILLION] has again expired.

Oil Industry's Contribution to Los Angeles Air Pollution

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I in-

clude the following press release of the Air Pollution Foundation, Los Angeles, Calif., of April 28, 1955:

HITCHCOCK PLACES AIR POLLUTION OF OIL INDUSTRY AT 18 PERCENT

Estimating the local oil industry's contribution to Los Angeles air pollution at 18 percent, Dr. Lauren B. Hitchcock, president of the Air Pollution Foundation, told a meeting of the American Petroleum Institute at the Statler Hotel Thursday night that the industry "still has a great deal to do before it can claim to have adequately discharged its responsibilities for air pollution."

The scientist addressed the 28th annual spring meeting of the Pacific coast district of the institute's division of production.

Hitchcock said the foundation calculations indicate that the oil industry currently is emitting 600 tons of significant pollutants into the air each day, or approximately 18 percent of a daily 3,300 tons total.

The balance of daily emissions is made up of about 45 percent by automobile, truck, and diesel operations; 20 percent by domestic use of natural gas and incinerator burning; 10 percent by miscellaneous industrial operations; and 7 percent by evaporation at service stations and gasoline losses in automobiles.

At the same time that Hitchcock announced the foundation's estimates of responsibility, he also gave the petroleum men a pat on the back.

"Your industry may have gotten off to a bad start a few years ago in connection with air pollution," he declared, "but today it is providing leadership in smog control which others in this community should match or shut up.

"In speaking thus forthrightly, I fully realize that I shall be condemned as an oil partisan by those few implacable of single-mindedness who do not give credit where credit is due. That is one of the hazards of my job, which I accept with a certain amount of equanimity, knowing I can do nothing about it.

"Fortunately I am strongly fortified by the knowledge that no strings whatever are attached to the Foundation's research efforts. Our findings have been, and in the future will be released without fear or favor or bias.

"The oil industry is an indispensable and major factor in the growth and existence of this country, in war and peace, and especially in the West. As far as its contribution to smog goes, it was originally indicted by an aroused public—with apparent reason, according to the county air pollution control district and Stanford Research Institute data—for contaminating Los Angeles air with over 1,300 tons per day of assorted hydrocarbons and stack gases. It has freely admitted its responsibilities in this connection, and reduced this total by more than half."

Not counting its eye-irritating smog, Los Angeles has as much actual dirt in the air as most American cities, and in addition the highest content of sulfates and nitrates among 30 cities in the Nation, Dr. Hitchcock told the oilmen.

"New measurements made during the past year by research workers of the Health, Education, and Welfare Department of the Federal Government indicate Chicago and Detroit have more air pollution than Los Angeles, and New York less," he said.

"Although clean air costs money, unclean air in Los Angeles well may cost more money. The extra costs of living and working in a polluted environment are still largely hidden. Noxious gases, dirt, and reduced visibility combine to form an unattractive environment in which man's welfare and productivity are undoubtedly reduced."

Picturing the Los Angeles smog problem from an engineering standpoint, Dr. Hitchcock said:

"Take a box 1,600 square miles in cross section, and 1 mile high. It holds 10 billion tons of air. Put 5 million people in it, with a couple of million chimneys, perhaps 10,000 assorted industrial stacks, 1½ million incinerators, and 2½ million motor vehicles.

"Burn in these combustion devices about 60,000 tons per day of fuel oil, gasoline, gas, and rubbish, and you've got an idea of the air-pollution situation in the Los Angeles Basin.

"In our high-school chemistry we were taught that these fuels consist largely of carbon and hydrogen, which burn to form harmless carbon dioxide and water. That this was an ideal far removed from practice, was not made clear. And it is exactly this difference between theory and fact that gives rise to man's modern urban air-pollution problem."

Dr. Hitchcock told the American Petroleum Institute delegates that it is up to the residents of the Los Angeles Basin how long it will take to eliminate smog.

"Every man, woman, and child in this Los Angeles Basin has on the average his box of air, one-fifth of an acre on the ground, and up to a mile high or less if the inversion is down. With a 1,000-foot inversion, our individual per capita share of air amounts to about 400 tons.

"Each factory, each homeowner, each business should look at his own box of air and resolve to reduce contamination in it to the best of its ability, taking full advantage of all existing knowledge and experience.

"So long as each of us waits for his neighbor, there can be no progress."

Calumet-Sag Channel Project

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. MADDEN. Mr. Speaker, I am hereby submitting a statement made by me in connection with the hearings asking for an appropriation to improve the Calumet-Sag Channel in the Chicago-northwest Indiana area.

The subcommittee, under the chairmanship of Hon. FRED MARSHALL, of Minnesota, of the Appropriations Committee, have been holding hearings on this important question for several days.

The statement follows:

STATEMENT TO THE PUBLIC WORKS SUBCOMMITTEE OF THE HOUSE COMMITTEE ON APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES, SUBMITTED BY HON. RAY J. MADDEN, MEMBER OF CONGRESS, FIRST DISTRICT, INDIANA

THE CALUMET-SAG NAVIGATION PROJECT, ILLINOIS AND INDIANA

Mr. Chairman, I wish to commend your subcommittee of the Appropriations Committee for holding hearings in behalf of the Calumet-Sag Channel project, which when completed will aid the industrial development of the Chicago area and the industrial region in northwest Indiana.

I also wish to commend the Chicago area congressional delegation who, through their chairman, Congressman THOMAS J. O'BRIEN, is unanimously supporting the Calumet-Sag development.

In the last session of Congress, legislation was passed which inaugurated the construction of the St. Lawrence seaway. This will be the beginning of the expansion of the Great Lakes waterway system from the Chicago area to the Mississippi River and on down to the Gulf of Mexico. United States Army engineers, through extended studies during recent years on the development of the Calumet-Sag waterway have estimated that inland shipping can be increased about 20 times the present capacity through deepening and widening this natural water transportation highway. The Chicago congressional delegation has amply outlined the benefits of this water transportation improvement to the Chicago area as well as advantages to Midwestern shipping in general.

The Calumet-Sag Channel project will also bring about tremendous industrial expansion to the Calumet region in northwestern Indiana, of which I have the honor to represent in Congress. This development would bring about the influx of industries in the Chicago-Calumet area. Industrial expansion can go in but one direction as far as the Chicago area is concerned. The residential section on the north side of Chicago, the lake on the east dictates that industry must go south along the Indiana shores of Lake Michigan, if water transportation expansion is made available. If the Chicago-Calumet area will take advantage of the increased water transportation which would be brought about by reason of the St. Lawrence Seaway, the next 25 years would give northwest Indiana an industrial metropolitan area extending from the Indiana-Illinois State line along the shores of Lake Michigan for a distance of 50 miles.

The development of water transportation inland through the Mississippi Valley, New Orleans and through the Gulf of Mexico will give the Calumet area immediate shipping facilities to Mexico, South America, and other world seaports.

If this development is carried out to its logical goal, it will be the main cause to bring about employment for thousands of families in the northwestern Indiana area. It would lower the cost of sugar from Louisiana and the West Indies, coffee from South and Central Americas, iron ore from Venezeula and Cuba, to the Chicago-Calumet region and also the numerous products we receive from our southern neighbors. It would reduce the cost of shipping grain and for transshipping to vessels from central States to the ports of the world. It would reduce the cost and expedite the shipment of steel and steel products from the mills and factories of our area into the great Middle West and South, and to the rest of the world through the Gulf of Mexico. Scrap iron could be brought more cheaper to the steel mills in the Calumet and Chicago areas and transported from our mills to world markets. Industries in the Calumet region would benefit from lower shipping costs. More new industries would be attracted by the availability of more industrial sites along the southern shores of Lake Michigan.

The development of the Calumet Sag Channel project would be merely a step forward in the modern 20th century campaign to provide employment for millions of young folks who will enter the labor market as time passes.

Another great reason for the necessity of this inland waterway development is the critical traffic situation which year by year becomes more critical in the Chicago-Calumet area. Water transportation out of this area to the South will eventually relieve our traffic problem to the extent of the construction of two large highway arteries in this congested area. An inland water highway from the Chicago-Calumet area would also prove to be a great asset and necessity in defense transportation in case of another world war. In addition to the facts that have already been presented by other witnesses before your committee, I submit that

this modest appropriation of $4 million to improve the Calumet Sag transportation arteries is but a necessary preliminary start for the great program which must be inaugurated by the people of the Midwest to take advantage of the tremendous influx of industry in the Chicago-Calumet area which is annually expanding far beyond our transportation facilities.

When the Congress, during the last session, approved the St. Lawrence Waterway, it inaugurated a new era in transportation which will affect every major industrial area located on the shores of our Great Lakes. The various metropolitan areas which would benefit by reason of the St. Lawrence project must immediately take steps to keep pace with this modern improved transportation trend. The ultimate effect will create a multiplication of our transportation problems and the time to lay the foundation to solve these future needs is now.

Agriculture Secretary Sees Halt in Farm Income Drop

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to insert the following article written by Clif Stratton:

AGRICULTURE SECRETARY SEES HALT IN FARM INCOME DROP

(By Clif Stratton)

Today this observer has taken on a guest writer. Sometimes this is done because the columnist is lazy. Sometimes because the guest writer not only knows more about his subject, but can express it better. Should add also that your guest writer today in the opinion of this observer—and he has been covering Washington affairs 27 years—not only knows his subject, but has intellectual and moral integrity, and courage, and principles which he follows.

In other words, if Diogenes and his lantern in their combined search for an honest man had run into Ezra T. Benson, of Utah, Secretary of Agriculture, Diogenes could have thrown away his lantern. Or at least, kept it only for ordinary uses.

Secretary Benson told the House Committee on Agriculture the other day that, true, the farmer needs and is entitled to price supports, especially on those commodities which the Government has encouraged him to overproduce to meet war emergencies. But it is not helping the farmer, nor the country, to continue the war high-incentive prices to encourage continued and continuous overproduction.

And Benson's picture of the farmer and his overall position in the scheme of things is not as bad as it has been pictured by—well suppose we say by the "professional friends" of the farmer in the political field.

From here on it is Secretary Benson doing the talking:

The overall financial condition of agriculture has continued sound. Total estimated assets of $162 billion at the beginning of 1955 were slightly higher than a year earlier. Almost all of the increase is accounted for by a rise in the value of farm real estate.

On the liability side, farm debts showed only a slight increase in 1954. While farm-mortgage debt has been increasing steadily since 1946, influenced largely by the transfer of farms to new ownership, the level of mortgage debt at the beginning of 1955 was still low relative to the value of assets.

Non-real-estate indebtedness has increased sharply since the end of World War II, influenced by the large expansion in machinery investment, the higher level of livestock values, and the large value of crops under loan. At the beginning of 1955, however, non-real-estate debt was still less than 25 percent of the combined value of farmers' holdings of livestock, machinery, and motor vehicles.

FARM DEBT LOW

Farm debt on January 1, 1955, was only 10.6 percent of total agricultural assets. In 1940 farm debt was 18.6 percent of total assets, in 1930 it was 21.2 percent of assets. In terms of current assets the comparison is even more striking. Farm debt as a percent of current assets was 23.9 percent as of January 1, 1955, compared with 49.3 percent in 1940, and 70.4 percent in 1930.

We recognize, of course, and are deeply concerned, about the difficulties and debt problems being experienced by some groups of farmers, especially those who have begun farming recently with a heavy load of debt.

As indicated by the statistics, however, the overall farm-debt situation is good, and most farmers are in a favorable investment situation.

The slight changes that have occurred in the value of farm assets in recent years contrast strikingly with developments following World War I. Farmland values from their peak in 1920, decreased $12.3 billion, or nearly 20 percent in 2 years. Following World War II, farmland values declined only $3.4, billion or less than 4 percent, from their peak in January 1952 to January 1, 1955. With the sharp drop in farm income and in the values of both non-real-estate and real-estate assets following 1920, the burden of debt repayment for farmers was a difficult one. Country banks, particularly, felt this strain in the early twenties and later.

Today, the percentage of farms mortgaged is substantially lower than after World War I. With only a moderate drop in farm income, farmers are now making a good record in the repayment of their debts, both real estate and non-real estate.

A correct evaluation of the farm income situation obviously must take into consideration the total number of farm people sharing that income. While our net farm income was declining from 1947 to 1954 by some 25 percent, our farm population was falling off about 20 percent. And if account is taken of the income that farm people realize from all sources, the realized per capita income of farm people from all sources actually increased 6 percent during this 7-year period. It is also worth noting that realized per capita income from agriculture in 1954 was 17 percent higher than in 1950.

The inappropriateness of parity prices as a sole objective of farm programs is evidenced by this fact: Since 1910–14 farm prices have fallen 11 percent relative to nonfarm prices, but per capita net farm income has increased relative to per capita incomes of nonfarmers. Thus, since 1910–14 farmers have improved their net income position relative to nonfarmers. They did this by turning out greater volume, and by increasing their efficiency, and in spite of a relative decline in farm prices.

It is essential that we retain fluidity in our agricultural population. As we increase efficiency of our production of food and fiber, it is possible to do our production job with fewer workers on farms. This results in a higher standard of living for our farmers as well as for our urban people.

The present high state of efficiency on American farms is not because of price supports but largely because, historically, farmers have had a substantial degree of freedom in the management of their farms, and because the fruits of research and education have been made available to them.

On the basis of what we can now see ahead, net farm income for 1955 should approach that of 1954. In other words, the United States farm income has about stopped its postwar decline. Between 1947 and 1950 realized net farm income dropped by about one-fourth. The outbreak of hostilities in Korea and the resultant inflated demand brought about a rise in farm income in 1951, after that it declined again from 1952 through 1954.

Deepening of the Mystic River

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. MACDONALD. Mr. Speaker, the deepening of the Mystic River to accommodate the growing commerce that utilizes that river and to provide resources for our national defense requires an immediate appropriation of $4,500,000.

I include as a part of my remarks the statement made by me before the House Appropriations Committee at the hearing held yesterday in connection with the matter.

It reads as follows:

Mr. Chairman and gentlemen of the subcommittee, I am TORBERT H. MACDONALD, Representative from the Eighth Congressional District of Massachusetts. I want to thank you, Mr. Chairman, and the members of the subcommittee for permitting me this privilege of making a brief statement relative to the Mystic River project.

I want to first state that I am vitally interested in this project because of its great value to my district, to the Port of Boston, to the Commonwealth of Massachusetts, and to our national defense.

The existing project, adopted in 1892 and supplemented by enactments in 1910, 1935, 1938, and 1950, provides for a channel 35 feet deep extending from the 35-foot channel of Boston Inner Harbor to the city playground at Charlestown, a channel 20 feet deep from the head of the 35-foot channel to a point 800 feet above the Malden Bridge with a turning basin above the bridge, a channel 6 feet deep from the Boston and Maine Railroad (western division) bridge to a point about 2,500 feet above Wellington Bridge, and thence 4 feet deep to Craddock Bridge.

All work on the existing project, with the exception of the 35-foot channel from Boston Harbor to the playgrounds at Charlestown, has been completed. The last work was done in 1938 when the section of the river between Island End River and the playground was dredged to 30 feet.

The dredging of the 35-foot channel, estimated to cost $4,500,000 is dependent upon the appropriation of funds as on May 17, 1950, Federal Law 516 authorized dredging the Mystic River from 30 feet to 35 feet at mean low water to within 100 feet of established United States bulkhead lines, generally from upper limit of 35 feet channel of Boston Harbor at Chelsea Bridge to the Charlestown playground and then narrowing to the downstream side of the Malden River. It was anticipated that this project

would be completed simultaneously with the construction of the new Mystic River bridge, which was built at a high level with added expense to our taxpayers so that vessels could come and go freely. However, deepening of the channel has not been done and shipping has not been able to capitalize on the benefit of the new high level bridge. Presently the inadequate depth of the river limits the passage of tankers and many seagoing vessels to a few hours each day at high tide.

I am sure you gentlemen will agree with me that this project is of vital importance to the waterborne commerce of the Port of Boston and the economic welfare of the Commonwealth of Massachusetts. At the present time this portion of Boston Harbor has the greatest potential for development, depending, of course, on a deeper approach waterway. Most of the deep-draft vessels which ply within the area of the project cannot now safely navigate at all stages of the tide, and must wait the higher stages This results in costly delays to all concerned.

Since 1950 every effort has been made to have Congress appropriate the necessary funds for the accomplishment of this project, but to date these efforts have been unsuccessful. President Eisenhower's budget for fiscal year 1956 calls for an estimate of $500,000 to start the project. As I stated before the dredging of the 35-foot channel is estimated to cost $4,500,000. I appreciate very much that the President is interested in getting this project started but I sincerely feel that the President's estimate of $500,000 is inadequate. I think a larger appropriation should be granted because this is a major channel of one of our country's primary ports, and it is my understanding that almost without exception, all such channels in other harbors have been dredged to 35 feet, and many have 40-foot channels. The present channel limits the passage of tankers and many seagoing ships to a few hours each day during high tides. Deepening of the channel would allow the passage of seagoing ships under the new bridge on a 24-hour basis. And reduction in the cost of "terminalling" must eventually be reflected in New England economics. As you know, long-range ship construction contemplates ever-larger ships of greater drafts. At present tankers are built which cannot be accommodated at the docks of a major oil company which has its piers on the Mystic River. This refinery and terminal is an important factor in providing aviation gasoline, motor fuels, heating oils, and residual fuels to Everett, other cities surrounding Boston, and a major part of Massachusetts. In wartime, as the only large refinery in New England, its supplies are even more important.

Some of the industries located in Everett which are very essential to the national economy and national defense and which would benefit by completion of this project are: Eastern Gas & Fuel Associates, Mystic Iron Co., Boston Edison Co., Esso Standard Oil Co., Monsanto Chemical Co., and General Electric Co.

In addition to Everett's industries, there are a large number of companies located on the Boston side of the Mystic River which would also benefit by the completion of this project. These include: Boston & Maine Railroad, Wiggins Terminal Co., United States Gypsum Co., Pocohontas Coal Co., and Revere Sugar (United Fruit Co.).

Mr. Chairman, let me say in conclusion that by providing a channel of sufficient depth we will have greater opportunity for industry to employ our people, and this means more Federal tax revenue. If the funds are not appropriated for this project serious damage to the industry of the district will result. I respectfully urge the committee to report favorably legislation for an adequate amount that will enable this great improvement to be started at the earliest possible date.

Employment and Unemployment Statistics

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. BOLLING. Mr. Speaker, the Congress is vitally interested in the nature and volume of employment and unemployment. The Joint Committee on the Economic Report has a Subcommittee on Economic Statistics, of which I am chairman, which has been urging the agencies in the executive branch of the Government to improve their concepts, their measures, and their information on employment and unemployment. Substantial progress has been made toward carrying out our recommendations in this respect. Much work is still in progress.

Mr. Speaker, I include a letter dated May 3, 1955, addressed to the Staff Director of the Joint Economic Committee from Raymond T. Bowman, Assistant Director of the Bureau of the Budget for Statistical Standards. This letter outlines the steps that are currently being taken to improve employment and unemployment statistics:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., May 3, 1955.

Mr. GROVER ENSLEY,
Staff Director of the Joint Committee on the Economic Report,
United States Senate Post Office,
Washington, D. C.

DEAR MR. ENSLEY: You may find the following brief statement useful, following up the discussion in your office last Monday in which Miss Martin participated.

During the past year the Office of Statistical Standards has taken the following steps to improve employment and unemployment statistics:

1. Appointed and participated in the work of the Review of Concepts Committee.

(a) The committee is now drafting its recommendations covering changes in concepts, improvements in method, desirable tests, expansions of data or additional research which would make employment and unemployment statistics more useful in economic analysis.

(b) The recommendations are being reached after a survey of opinion of nongovernmental users of the data on needed improvements. The recommendations will require interagency discussion and approval before adoption.

(c) The Review of Concepts Committee reviewed proposals submitted by the Census Bureau for:

(1) Monthly information on voluntary and involuntary part-time workers (series will be started in may 1955).

(2) Employment status by marital status (as an approximation to employment status on heads of families).

2. Initiated the Combined Employment and Unemployment Release, and acted as chairman of the editorial committee which writes the Release each month.

3. Reopened discussion of seasonal adjustments of labor-force data in a subcommittee of the Labor Supply, Employment, and Unemployment Statistics Committee; encouraged developmental work on the part of several agencies. The Seasonal Adjustment Subcommittee approved the seasonally adjusted index of unemployment first published by the Census Bureau in January 1955.

4. Requested the Census Bureau to shift the Current Population Survey to the midmonth, for comparability with BLS and other establishment reports. This will be accomplished in July 1955.

5. Coordinated interagency review, on an ad hoc basis, of revisions in Current Population Survey estimates for 1953, during period of sample changeover.

These activities have been supplemented, of course, by our usual review of report forms, procedural improvements (Census reinterview techniques; BLS analysis of payroll periods, etc.), and our participation in program planning through the budget process.

Sincerely yours,

RAYMOND T. BOWMAN,
Assistant Director for Statistical Standards.

Mr. Speaker, soon after completion of these current studies, which are expected to be ready by late summer, the Subcommittee on Economic Statistics plans to hold hearings on the subject of employment and unemployment statistics.

Tribute to Andrew T. Walker

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article written by Joseph Silvestri in the Postal News which pays tribute to Andrew T. Walker, a fine old gent who has done more for the postal workers than anyone I know.

The occasion is the 75th birthday of Mr. Walker who was recently reelected as president of branch I of the United National Association of Post Office Clerks:

ANDREW T. WALKER

(By Joseph V. Silvestri, treasurer, branch 1)

No history of our time could be written relative to postal-employee legislation and of its congressional enactment into law without devoting a generous page to the half century of dedicated service by Andrew T. Walker. Andy, as a member and officer of branch I and then right up to the presidency of the association, has become through the years an outstanding symbol of what Unapocism stands for in the betterment of conditions for postal men and women.

However my purpose today in writing this tribute to Andy is that he is 75 years young on April 18, 1955, and that he is still contributing to the growth and well-being of our organization which is the oldest postal clerk association in the Nation. For other 35 years I have had the pleasure of knowing Andy intimately. I know him as a room companion on our many organization trips to various parts of the country; it was, and still is, and I know will be for some time, a pleasure to work with him as a team at these conventions. It is an experience to plan jointly and endeavor in behalf of a desirable resolution or against a motion on the floor of State and National conventions with Andy. I have often witnessed him in the midst of a very serious argumentative exchange but whatever the subject, or difference of opinion it was refreshing to note

that he was always the gentleman. If I were asked what his two most outstanding characteristics are I believe I would have to say they are his generous impulses and the friendship that he held for those with whom he labored in the association and those that he knows. We are at this very moment in the midst of the toughest legislative campaigns we have ever experienced. The pace getting rougher with each passing legislative maneuver. During our appearances in Washington we always find Andy out in front in the thickest of the fight. That is how it is in the 1st session and will be again in the 2d session of the 84th Congress on other bills.

With all of his energies committed to the problems at hand, he manages from time to time to devote some time to his two helpmates, his charming wife, Belle, and daughter, Edna. Sometime ago Mrs. Walker suffered a stroke which confined her to bed for some time but her courage and constant smiling personality has contributed to her improvement. It has been a sacrifice on the part of thes two ladies to give up for many evenings the companionship of husband and father.

Throughout his entire life, Andy has and still is dedicating himself to serving Unapovism and his fellow men. Through his untiring efforts I believe it can be truly said by all who have been in contact with him that their lives have been enriched by his personality, ideals, and friendliness. His constant willing hand to aid another, regardless of race, color, or creed well earns for him the title he has borne so well for many years, Mr. Unapoc.

May you celebrate this 75th birthday Andy with the good wishes of thousands of your friends from coast to coast and may you be with us to accept felicitations on your 100th birthday.

Foreign Service of the United States

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. CHIPERFIELD. Mr. Speaker, I want to make a few remarks about the Foreign Service and its role in our foreign affairs, in view of the amendment recently passed to the Foreign Service Act of 1946.

Although there are about 100,000 American civilians employed by our Government overseas, the Foreign Service is the only career service operating abroad. All the other Americans overseas are engaged in some kind of program activities, such as building bases, operating technical-assistance programs, and other relatively short-time activities. This fact, in itself, places the Foreign Service in a unique category. It is a profession of lifetime service abroad. As such, it requires people with training, integrity, and a sensitivity to human values and problems. Wherever they serve, the Foreign Service represents our people and our Government. They must possess those qualities that we as a people hold in the highest esteem and be able to impart them to peoples of different backgrounds. It was for that reason that the Committee on Foreign Affairs, in 1946, laid emphasis upon a career concept. We expected that young men and women would enter the Service only after a rigorous examination and make it a lifetime pursuit.

I have been increasingly disturbed by the misrepresentations of life and work in the Foreign Service. Much of this misrepresentation has come from individuals who should know better or, at least, could have determined the facts rather easily. I am not defending those Foreign Service officers who may have departed from the high standards expected of them. The fact that there were some who did not measure up to expectations is no reason to condemn a whole group who are engaged in a vital activity for our Government. Contrary to popular belief, few of our Foreign Service officers find life glamorous. More frequently it is marked by hardships, personal sacrifice, and even dangers to their health and that of their families.

One requirement of a Foreign Service officer and, equally important, his family's adaptability to changed and changing environments. His "home" is never fixed. It changes every 2 or 3 years. He may move from Hungary to Indonesia to Brazil. Perhaps there is "romance" in this type of life. But there are more apt to be some hard problems. Take the simple matter of making daily food purchases. In a number of our posts abroad this constitutes almost a full-time operation. What about the education of the children? If they go to local schools, they must know the local language. If they are to receive an education in the English language, they must frequently be sent away to school. Certainly the content of education must be carefully considered. We do not want our children living behind the Iron Curtain to study Communist doctrine. I cite these two examples simply to show that a normal family life in the Foreign Service is difficult, if not impossible. The fact that individuals voluntarily enter the Foreign Service and stay in it is an indication that our Government does have devoted and loyal public servants abroad.

Many of the problems that beset the Foreign Service are inherent in the nature of work overseas. Legislation cannot correct that. But the Congress does have a responsibility to assure, in the words of Mr. Loy Henderson, Deputy Under Secretary for Administration, of the Department of State, that the satisfaction of public service is not dimmed by undue personal financial worries.

This is particularly true when it is remembered that we not only want to recruit the best of American youth but, more important, keep him in the Service. Mr. Henderson put it this way:

> If it (the Foreign Service) is successfully to compete with private enterprise or with other governmental agencies for the highest types of American youth it must be in a position to assure those who enter it unparalleled opportunities for public service. A career in the Foreign Service by its very character entails certain sacrifices. There is no place in it for those who are looking for a soft life. Much can be done, nevertheless, to alleviate the hardships inherent in it.

At this point I want to pay tribute to Mr. Henderson. If there is one thing that the Foreign Service needs, it is an understanding and experienced administrator of its personnel. Mr. Henderson has more than 30 years of service over the world. Most recently he was our ambassador in India and then in Iran—both critical posts. He has filled every assignment with distinction. I know his colleagues in the Foreign Service and in the Department have the utmost confidence in his integrity and ability. Members of both parties in this body have expressed a similar confidence in him. The Committee on Foreign Affairs reported to this House that it "is confident that he will administer wisely and effectively the provisions contained in the Foreign Service Act." That is my personal view too.

When this bill was before our committee, I was interested to learn that private American firms operating overseas branches gave more attention to inducements to retain employees overseas than in recruiting them for such service. I believe that the amendments that we recently passed to the Foreign Service Act will serve the same purpose. Those amendments do not increase the pay of the Foreign Service officers. But they do take account of the heavy extra costs that have to be met in serving abroad. They compensate in part for some of these expenses.

This new law is not, of course, the answer to all the problems of the Foreign Service. But it is a step in the right direction. I hope that the Committee on Foreign Affairs will keep under review the operations of the Foreign Service with a view to its continued improvement.

Aaron Frank: Distinguished Citizen and Public Servant

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. DAVIDSON. Mr. Speaker, it was with great sorrow that I this morning learned of the passing of a great public servant, a teacher, a brilliant lawyer, and a distinguished citizen of the State of New York. Prof. Aaron Frank died in his sleep on May 10, 1955. His passing will be noted with sorrow by the political and the legal fraternities as well as the philanthropic community in the city of New York.

Aaron Frank served with distinction as deputy police commissioner for many years. He was respected and honored for his brilliance, his integrity, and his kindly understanding by everyone of the thousands of policemen who were members of the Department. His legal attainments were widely recognized and respected, both in the field of teaching and the practice of law. He was professor of law at the New York Law School, who endeared himself to all of his pupils through the years. His ability as a lawyer's lawyer was recognized by the bar as well as the bench. He was active in

the field of philanthropy and served as chairman of the metropolitan New York advisory board of the antidefamation league of B'nai B'rith.

Above all, he was indeed as reported in the New York Times this morning, both "soft spoken and kindly," with a "reputation for fairness and compassion."

I know that I speak for literally thousands of grieving citizens in the city of New York when I extend heartfelt condolences to his wife, Mrs. Estelle Frank, his son, Julian, his daughter, Barbara, and his father, Philip.

The Salk Vaccine

EXTENSION OF REMARKS
OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. VANIK. Mr. Speaker, as a member of the House Banking and Currency Committee, I wish to protest the apparent efforts of Director Oveta Culp Hobby and Dr. Leonard A. Scheele to delay and perhaps avoid committee questioning on the safety factor and the Public Health Department control of the Salk vaccine.

Except for the review of the so-called protocol on the drugs and tests on partial supplies of the vaccine, the Department of Health obviously did not extensively analyze the vaccine prior to approval and release for public use. The Department relied almost completely on the tests of the private producers. In failing to conduct tests on all vaccines prior to public approval and dissemination, the Department failed to do what it had the authority and the duty to do, particularly in view of the mass innoculations which were planned. In seeking to test all vaccines at this late hour, the Department is hopeful to repair the dike and control the damage already done.

There can be no voluntary control by the individual States. The American public in all of its promotional hysteria still relies on the stamp of approval of the Public Health Service of the Department of Health. The State and local authorities rely upon the advice and the counsel of the Federal authorities—and if the Federal authorities have failed to act or if they have acted irresponsibly, this confidence in the Department of Public Health may have been misplaced. If the Secretary of Health was hasty in licensing, she should be held to account. If the Department has taken this matter too lightly, its attitude should be explained.

It is a congressional function and duty to determine the extent and effectiveness of the Federal testing of biologicals before they are distributed on public markets. Certainly prior to a mass innoculation, it is the duty of the Department of Health to conduct its independent tests to determine the safety of the vaccine rather than rely solely upon the tests of the independent producers. In the production of defense material, the Government never relied fully upon the producer's warranty but always conducted its own testing process. This same principle must apply to the fight against disease.

The American public had a right to assume that the vaccine administered to their children in a mass innoculation was 100 percent safe. If the degree of safety in the use of the vaccine was any less, they should have been so advised. They took the Department of Health's approval to mean the vaccine was safe. If the American public has a misconception of the Public Health Department's functions on these points, it should be so advised. If the laws relating to biological control should be redefined, a congressional committee hearing is the place to begin. If the Department of Health is commencing at this late hour to check into the safety factor of a vaccine which it has already approved, the public has a right to know that.

Statements after statements are pouring out to the public from the Department of Health. No satisfactory explanation is given for reversals. The officials seem to prefer the security of making news releases rather than expose their statements to committee scrutiny and cross-examination. It looks like a coverup for possible public dereliction.

If the Secretary of Health can take the time to tell political gatherings of the developments in this matter and if the Surgeon General can take the time to participate on Ed Murrow's TV program, they should both be available for immediate congressional interrogation. Congress should not be compelled to get its answers second-hand.

Hawaii and Alaska Statehood Bill

SPEECH
OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. PILLION. Mr. Chairman, there are two prime consequences of this bill which deserve our serious attention.

The first result of the enactment of this bill would be the transfer to Hawaii and Alaska of an excessive and disproportionate power in the United States Senate at the expense of the people of the 48 States.

The second effect of this bill is that we will be giving aid and encouragement to the strongest, most militant, and best disciplined single organization in Hawaii, the Communist Party.

Reduced to its fundamentals, statehood would grant to Hawaii and Alaska 4 Senate seats out of a prospective 100 seats in the United States Senate. The 1950 census states the population of Hawaii to be 499,000 and that of Alaska 128,000. The combined population is 628,000. The average representation will be 1 Senator for each 157,000 inhabitants. The people of the 48 States, on the other hand, only possess the average representation of 1 Senator for each 1,589,000 persons.

Statehood will entitle Hawaii and Alaska one twenty-fifth of the total membership in our United States Senate. Yet their combined population is only one two-hundred-and-forty-second of the United States. Thus, the inhabitants of Hawaii and Alaska will enjoy representation in the United States Senate more than 10 times greater than the average representation of the people of the 48 States.

To equal the voting power of 1 voter of these Territories in the election of a United States Senator will require the votes of 33 voters in California, 6 voters in Connecticut, 27 voters in Illinois, 15 voters in New Jersey, and 11 voters in Missouri.

This excessive representation is acquired by these Territories only by the corresponding reduction of the powers of the people of the 48 States.

The disproportionate advantage of Hawaii and Alaska would also apply in the presidential elections. Upon admission these States would have a total of 7 electoral votes, an average of 1 vote for each 89,000 residents. This compares with 1 electoral vote in the 48 States for each 287,000 citizens. The average voting power will be 3.2 times greater for every voter in Hawaii and Alaska than in the 48 States.

To equal the voting power of 1 voter in these Territories, in the election of a President, will require the votes of 3 voters in Alabama, 3½ voters in Indiana, 3½ voters in Michigan, 3 voters in Wisconsin, and 3 voters in Oklahoma.

Again, this power can be transferred, only by the reduction of the voting rights of the citizens of the 48 States.

If Consumers' Purchasing Power Does Not Keep Pace With Production, Boom Will Come to Quick and Disastrous End

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. PRICE. Mr. Speaker, under permission to revise and extend my remarks I call attention to a remarkable final paragraph in a column by Carroll Kilpatrick in the Washington Post and Times Herald. This paragraph, after the column reviews the economic progress of America, says that the one "great problem now is to make sure that consumers have the income to purchase goods the factories can produce. If pur-

chasing power does not keep pace the boom will come to a quick and disastrous end."

Mr. Speaker, we heard a good deal about fiscal irresponsibility when the Democrats in this House passed a tax measure that would have bolstered purchasing power among the great bulk of families in the low-income and middle-income brackets.

Now we hear soft and tinkling suggestions from spokesmen of the administration that next year maybe—an election year—it might be just possible for us to have some tax cuts.

The businessmen with whom the administration spokesmen foregather seem to have little interest, however, in tax cuts to bolster purchasing power among the bulk of families. They want tax cuts for themselves—tax cuts giving the cream of the relief to those who already have most of the luxuries as well as the necessaries of life.

We are going to have a fight about tax cutting next year, obviously, and some of us are going to feel that the cuts should be applied one way, others will feel they should be applied another.

To me it is the height of fiscal responsibility to say that continued prosperity depends on spreading purchasing power, that relief should go to those to whom $100 saved in taxes means $100 more to be spent from a modest sum on food, shelter, clothing, education, and health.

Our factories are marvels of productive efficiency, but they will grind to a limping pace unless the consuming power of ordinary millions of Americans is steadily broadened.

I offer for the RECORD the entire column which I mentioned, and call particular attention again to its final paragraph:

UNITED STATES AT NEW STAGE IN WEALTH PRODUCTION

(By Carroll Kilpatrick)

A big book of more than 1,100 pages weighing as much as the Federal budget came out last week with the conclusion that this great bastion of capitalism has drawn nearer the socialist goal of abundance for all in a classless society than any other country. In the last quarter century we have experienced a fantastic increase in the capacity to produce and a significant trend toward equalization of living standards.

Millions of Americans now in middle life have seen a greater change in the patterns of life and material standards of living than all the previous centuries of Western civilization, according to the book, America's Needs and Resources, published by the Twentieth Century Fund under the direction of J. Frederic Dewhurst.

The volume is full of tables on industrial production and capacity and on the problems of an expanding population and rapidly developing technology. It says that technology is our primary resource. For example, the same labor force in 1939 could mine 47 percent more coal than it could in 1929. And every ton of coal we burn for power today yields about six times as much energy as it would have in 1900.

More astounding is the fact that in 1939 the same number of persons employed with the same degree of utilization of equipment could have produced 22 percent more goods than in 1929. In 1900, an average farm worker produced enough for himself and 7 others whereas now he produces enough for himself and 14 others.

Yet in all these years of high production except the war years nearly every industry has operated below capacity. Even in 1929 only the steel and machine tool industries were producing at near capacity; the transportation industry in that boom year could have doubled the tonnage it carried. Without much effort the automobile industry today could double or even triple its output of cars and trucks.

These figures help us to understand the significance of the big news from the steel industry. Eugene G. Grace, chairman of Bethlehem Steel, announced that his company would have to add 8 million tons of capacity in the next decade merely to hold its position in the industry.

Benjamin F. Fairless, retiring chairman of United States Steel, announced that "if our corporation is to continue to hold its present position of leadership in the industry, at the peak of the prospective demand, we shall have to create the equivalent of 1 new Fairless Works about every 2 years throughout the next 2 decades." That would mean adding 1.1 million tons of ingot capacity every 2 years.

Contrast those optimistic statements with the gloomy report of a United States Steel official in 1946, who then predicted that in the long run the industry would operate at about two-thirds of capacity. The next year the president of another large steel company told a Senate committee that the demand for steel in 1955 would be about 78 million tons.

Actually, the demand this year will be about 40 million tons more than he predicted. If his prediction had come true we would have at least three times as many unemployed as we have today. Steel is a basic commodity that provides in its production index an excellent barometer of business conditions.

If the industry should fall much behind in meeting its orders it would itself generate stoppages in other industries and cause serious unemployment. Mr. Fairless reported that in recent months the demand for steel had exceeded capacity by a "considerable percentage." This is not a healthy situation although the backlog of orders is not yet seriously retarding any other industry. But if the steel industry failed to expand it soon would drag American business down into a new depression.

The greatest increase in basic producing capacity has taken place in the last decade. Hence, the social and economic problems that the new technology produces are now on our doorstep to a larger extent than ever before. Capacity in basic manufacturing industries increased at an average rate of 3.9 percent in the prosperous twenties, 1.8 percent in the depressed thirties, and 9 percent in the spectacular forties. Except in steel and 1 or 2 other industries there is no longer any impressive shortage of producing capacity; there is adequate capacity or the means for building it.

The great problem now is to make sure that consumers have the income to purchase goods the factories can produce in ever-expanding amounts. If purchasing power does not keep pace the boom will come to a quick and disastrous end.

Minimum Wage Legislation

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of the membership of this body a resolution adopted just recently by the City Council of the City of Milwaukee, Wis., memorializing the Congress of the United States to enact legislation which would increase the minimum wage standards in industries now covered to $1.25 per hour.

As a cosponsor of this legislation, I am particularly interested in seeing that early action may be taken thereon. As in the past, I shall continue to urge that hearings be held on this proposal as promptly as possible, in order that this House may be in a position to act on this vital legislation before the end of the current session.

It is my sincere hope that the following resolution will merit thorough consideration from the membership of this body:

Resolution on higher legal minimum wage

Whereas the national minimum wage is meant to provide a minimum standard of living necessary for health, efficiency, and general well-being of workers; and

Whereas the national minimum wage should protect the employer who pays a living wage against substandard wage competition; and

Whereas the national minimum wage should discourage employers from leaving decent wage areas to seek cheap labor in substandard wage areas; and

Whereas an adequate national minimum wage is essential to local merchants to maintain their local market and to farmers to maintain and bolster a strong market for agricultural commodities; and

Whereas an adequate national minimum wage is essential to local governments to prevent "run-away" industries, localized unemployment and mounting relief rolls: Now, therefore, be it

Resolved, That the City Council of the City of Milwaukee in the State of Wisconsin memorialize the Congress of the United States to increase the national minimum wage in industries now covered to $1.25 per hour; and be it further

Resolved, That copies of this resolution be sent to Senators ALEXANDER WILEY and JOSEPH MCCARTHY and to Congressmen CLEMENT ZABLOCKI and HENRY REUSS.

Barron County REA Opposes Hoover Task Force Plan

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I wish to insert a resolution sent to me by the Barron County Electric Cooperative. The resolution states clearly the cooperative's opposition to certain proposals made by a Hoover Commission task force with respect to REA.

I am in full agreement with the sentiments expressed in the resolution, the full text of which follows:

Whereas the study of the task force report to the Hoover Commission on lending agencies and particularly the part that concerns the Rural Electrification Administration and the rural electric cooperatives has been carefully studied. This study indicates that there is an antagonistic feeling in this report

toward the REA program and the recommendations made appear to be designed to retard growth of the rural electric cooperatives which could result in them being crippled to the extent that they could not operate efficiently and might eventually result in their failure; and

Whereas when one looks over the history of the program tremendous good has resulted from it, and the benefits which have been brought to the rural people and to the Nation are far beyond any dollar value that could be put on it. Private utilities had the opportunity to serve as large an area and as many people as they desired, but were interested only in urban service and a few residential areas that could be easily served with the greatest possible return from their investment. The REA cooperatives have only brought service to areas which did not have central station service and up to the date of their origin could not get electric service without paying exorbitant construction costs. Many of the cooperatives have in their system marginal areas which can only be served through long term loans and low interest rates; and

Whereas the use of electric service in the rural area has gone far beyond the most optimistic estimates, and that the investment in additional facilities to maintain service are going to need additional loans to increase capacities and that having the funds available at moderate interest costs is going to be very necessary to the success of the REA cooperatives; and

Whereas we understand that to date the cost of money to the Government has been less than the 2 percent being paid by the cooperatives, and these earnings have very nearly taken care of the cost of the administration: Therefore, be it

Resolved by the Board of Directors of the Barron County Electric Cooperative, That we respectfully petition our two United States Senators and our Congressman to do everything in their power to prevent any action taken by Congress which might be detrimental to the present rural electrification program; be it further

Resolved, That copies of this resolution be made part of the minutes of the board of directors meeting of April 13, 1955.

BARRON COUNTY ELECTRIC COOPERATIVE,
WILLIS JEROME, *President.*

Research Can Open Doors to Wider Farm Markets

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent article entitled "Incentives and Surpluses—A New Approach," by Dr. K. Starr Chester, vice president and chairman, research committee, National Farm Chemurgic Council. This article suggests a new approach in the way of encouraging increased use of agricultural commodities for industrial purposes. It seems to me that the incentive approach as suggested by Dr. Chester should be given consideration at this time when we are confronted with serious surplus problems in agriculture.

I include also an editorial from the May issue of Better Farming entitled "Research Can Open Doors to Wider Farm Markets." This article comments upon and endorses Dr. Chester's program.

INCENTIVES AND SURPLUSES—A NEW APPROACH

(By K. Starr Chester, vice president, and chairman, research committee, National Farm Chemurgic Council)

There is a growing trend for industry to use substitute raw materials for the agricultural raw materials formerly used. As a few examples of this:

Butanol and acetone, basic industrial chemicals, were formerly made from corn. Today the plants that made these chemicals from corn are idle, and the chemicals are being manufactured from petroleum or natural gas.

Glycerol, another basic industrial chemical, was formerly made from tallow, and to some extent from cottonseed oil and soybean oil. Now synthetic glycerol is dominating the market.

There is an extensive market for proteins in paper coatings. Either soybean protein or casein from milk can be used for this. This market is supplied with casein purchased from Argentina, which is cheaper than either domestic casein or soy protein.

Furfural, which could have a major outlet in nylon manufacture, is made from grain residues, the use of which aids the economics of grain marketing. Yet cyclohexane from petroleum is used to great extent, rather than furfural in nylon manufacture.

Synthetic raw materials are replacing linseed oil in the drying-oil field, in numerous applications.

Synthetic textiles are supplanting cotton for a number of uses including tire cords, carpeting, window curtains, and shower curtains as well as clothing.

Alpha cellulose is now being made of wood pulp instead of cotton linters, as formerly.

Synthetic detergents are replacing soaps which are made from natural oils and fats.

Carboxymethylcellulose, which in part has its origin in petroleum, is replacing starch as a thickening agent.

The reasons for this shift away from agricultural raw materials are chiefly economic ones, which might be overcome if industry had incentives to use the agricultural raw materials. Synthetic raw materials are used because they are cheaper to buy and use, and are in constant supply at relatively constant cost from year to year. In some cases, they are more uniform and of higher quality, but these advantages generally have less significance than cost and supply.

A great many agricultural raw materials are at a disadvantage because their cost is abnormally high; they have priced themselves out of the industrial market. Industry has no prejudice against agricultural raw materials; it simply cannot afford to use them. There is no lack of technology for producing industrial products based on such agricultural raw materials. In the files of the Department of Agriculture, of industry, and of the Patent Office are many hundreds of processes for converting the surplus farm commodities into industrial products. These processes are scientifically sound, practical, and workable, but they lie gathering dust because their economics are not favorable. There is no economic incentive to use them.

A leading industrial user of grain has put it this way: "There is no surplus. There is only lack of incentives for industry to use the farm products that have piled up."

There is well-established precedent for providing industry with incentives in situations comparable to this. This principle is not new. There are many precedents for Government to provide industry with incentives; (1) in emergencies, (2) when it is to the national interest, or (3) when the needed industrial activity involves risk.

1. In wartime, the need for military materiel is an emergency. At such times, Government provides industry with incentives to convert to military manufacture, in the form of cost-plus contracts and quick depreciation of capital investment. The agricultural surplus problem is an emergency. It contains the seeds of civil unrest, or antagonism against the farmer on the part of the nonagricultural population, and antagonism by the farmer against controls.

2. When it is in the national interest, Government provides incentives for industry to expand or divert production. An example, at present, is the incentive being offered to industry to increase the production of ammonia, which is vital to the national economy, the incentives taking the form of fast depreciation of capital investment and Government loans. It is certainly in the national interest to work down the surpluses, considering their drain both on public funds and on the temper of the public.

3. There is also precedent for Government to provide incentives to industry when the desired undertaking involves risk. Drilling for oil necessitates a high factor of risk taking and was made sufficiently attractive to private investment by Government's granting concession to the petroleum industry through liberal depletion deductions for tax purposes. Similar depletion deductions of varying percentages are applicable to production of most minerals, and the recently revised revenue bill has given healthy boosts to many of these depletion-deduction incentives. Industries based on surplus commodities also involve risk. The excessive supply of farm products will not last indefinitely, nor will their price remain constant. Industry is loath to erect plants for processing farm commodities with the knowledge that they may become unprofitable if the supply of raw material decreases or if its price becomes too high.

To ask industry to make greater use of the surpluses, which it is able to do technologically but not economically, is to ask industry to undertake operations that are economically hazardous, yet are in the national interest, and, indeed, are in the nature of an emergency. The precedents for providing industry with economic incentives, in such cases, are well established.

Incentives for industry to make greater use of the surplus commodities might take several forms. These include tax relief for operations based on the surplus products, rapid amortization of capital investment in cases where new plant or unamortized plant is required, or purchase of the surplus raw materials at less than the supported market price. All three, and possibly others, should be considered. All three forms of incentives involve complex and controversial factors that must be carefully analyzed and appraised.

Certain problems in applying incentives are recognized and would have to be worked out. It would have to be shown that this procedure would, indeed, substantially reduce the surpluses, and that the cost of doing this would be justified in light of present costs relative to the surpluses. If the incentives include any tax abatement, this might have to clear through Congress. It must be assured that if incentives are given to the chemurgic industries, this will not have a vital unfavorable effect on other industries that are significant to the national economy. Charges of partiality to certain industries must be avoided. Decisions would have to be made respecting the duration of this aid to the chemurgic industries. Questions on which further information must be secured before decision can be reached in this matter, are mentioned in the following section.

It is desirable that a thorough economic and technological study be made of the feasibility of relieving the surplus problem through providing such incentives to industry. This study should point out the industrial processes in which surplus agricultural commodities could be used to greater extent than at present, provided the economics were more favorable, and the extent to which this would relieve the surplus problem. The nature and amount of incentives that could stimulate such utilization must be determined. The cost of these must be calculated, and compared with existing costs related to the surplus problem. The study should consider the impact which such a shift in raw materials would have on other industries, and its economic and social consequences. It should include analysis of existing legislation and point out such amendments of legislation as would be necessary to permit the exercise of this principle. The best possible analysis would have to be made respecting the probable duration of this aid to industry, action to be taken if and when there no longer are huge surpluses, and, in the latter case, the question whether the stimulated industries would then convert to use of other raw materials or work out methods for maintaining their supply of farm raw materials, perhaps by contracting in advance for the production from given acreages, as is now done by canners.

The study would involve frank consultation with numerous industrial concerns to obtain a realistic picture of what they may be able to do in increasing the use of farm raw materials in a more favorable economic environment. It would also require a review of accomplished research, including that done by the Division of Utilization Research of the USDA, to bring to light processes based on farm raw materials that are not being exploited because of unfavorable economics. Such an undertaking as the suggested analysis would be new and would not be encompassed within past or present economic research programs.

The research committee of the National Farm Chemurgic Council urges that those branches of government that are most vitally concerned with the surplus problem give serious consideration to thoroughly investigating this suggested new approach for dealing with the problem.

RESEARCH CAN OPEN DOORS TO WIDER FARM MARKETS

The greatest need of farming is for more markets. This is the substance of numerous thoughtful letters from farmers received by Better Farming. The point was well summed up by a Mart, Tex., farm woman, who wrote:

"We on the farms in these United States can produce efficiently and abundantly—we have proved that. From the standpoint of supply there is little to complain about. But supply alone will solve nothing. The door must be opened to wider markets if we are to have a stable and solvent agriculture and a steady consumer demand."

Where are the wider markets to be found? Farmers, who have seen the tremendous gains in production caused by research, ask why a comparable emphasis has not been put on research to develop new uses and markets for farm products. This kind of research hasn't got much attention and, judging by USDA appropriations, it isn't going to soon.

But that isn't the only place to look for it. A different approach has been suggested by Dr. K. Starr Chester, of the Battelle Memorial Institute, of Columbus, Ohio, one of the leading private research institutions. It is by providing industry with the necessary incentives to undertake the job of developing new uses and wider markets for farm products, particularly those in surplus. Dr. Chester feels that such incentives would be justified on the basis that the farm-surplus problem is an emergency, that it is in the national interest that these surpluses be used and that industry can be induced in this way to assume the economic risks that are involved.

A number of such incentives, in familiar use, could be offered. Among them are Government loans, tax concessions, rapid amortization of capital investment and a liberal depletion allowance such as the oil industry enjoys.

Certainly there seems as much warrant for using these incentives in behalf of agriculture as in the other cases. The packing industry, with 140 different byproducts from the livestock it buys, has demonstrated what can be done by research. Better Farming believes that a positive research program along these lines is well worth consideration in Washington.

Resolution Memorializing the President and Congress To Issue Commemorative Postage Stamps in Honor of the Golden Anniversary of the State of Oklahoma's Admission to the Union

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following Resolution No. 531, as passed by the Oklahoma State Legislature on April 7, 1955, with which I thoroughly concur:

House Concurrent Resolution 531

House concurrent resolution memoralizing the President and Congress of the United States to issue special commemorative postage stamps in honor of the golden anniversary of the State of Oklahoma's admission into the Union

Whereas the great State of Oklahoma will celebrate the Golden Anniversary of her admission to the Union in 1957; and

Whereas the United States Post Office has in the past recognized such an event by issuing special commemorative postage stamps in honor of such statehood anniversaries; and

Whereas such recognition will be greatly appreciated and highly regarded by the people of the State of Oklahoma: Now, therefore, be it

Resolved by the House of Representatives of the 25th Oklahoma legislature (the Honorable Senate concurring herein, That the President and Congress of the United States is hereby memorialized to take the necessary steps to authorize the United States Post Office Department to issue commemorative postage stamps during the year 1957, celebrating the 50th anniversary of the admission of the State of Oklahoma into the Union; be it further

Resolved, That authenticated copies of this resolution be forwarded to the Oklahoma congressional delegation in Washington, D. C.

Adopted by the house of representatives the 7th day of April, 1955.

B. E. HARKEY,
Speaker of the House of Representatives.

Adopted by the senate the 12th day of April, 1955.

PINK WILLIAMS,
President of the Senate.

Hawaii and Alaska Statehood Bill

SPEECH
OF
HON. ELIZABETH P. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

The CHAIRMAN. The Delegate from Hawaii [Mrs. FARRINGTON] is recognized.

Mrs. FARRINGTON. Mr. Chairman, for 57 years the issue of statehood for Hawaii has been before the Congress of the United States in some form or other. For 35 years, during my entire adult life, I have been closely associated with the fight for statehood. Today I find myself, as the duly elected spokesman for the people of Hawaii, facing my colleagues in a debate upon this issue. I make no apology for the fact that I am a freshman Member of the House of Representatives, that this is my first experience in debate on the floor of this distinguished body. I hope that my mind, rather than my heart that is deeply involved, will control what I have to say today.

A bill for Hawaiian statehood has passed the House of Representatives three times; in the 80th, the 81st, and the 83d Congresses. Today there would be no necessity for me to repeat the many arguments supporting it except for the benefit of the new Members of the 84th Congress; and that is important. The overwhelming majority of the House of Representatives today, I believe, are in favor of Hawaiian statehood. But the problem confronting both Alaska and Hawaii is a joint bill that was reported out of the Interior and Insular Affairs Committee. Hawaii owes that committee a great debt of gratitude.

Then the bill went to the Rules Committee. At this point I would like to thank the members of the Rules Committee and particularly the chairman for the consideration of the measure. In spite of the opposition of a majority of the members they listened patiently over a period of three weeks to the arguments presented by the friends and foes of statehood. At the conclusion of these hearings, in spite of the objections of every Member who appeared before the committee, whether he was for or against the issue of statehood, the Rules Committee voted a closed rule. The friends of statehood asked for an open rule or no rule at all. The foes of statehood asked for no rule.

Despite these protestations, the Rules Committee voted a closed rule, which the House has now adopted, so we are faced with a very unusual parliamentary procedure established for consideration of H. R. 2535.

Time and again in the hearings before the Rules Committee we were reminded

that one of the most solemn, irrevocable, and nonrecallable actions which our parliamentary body could perform is that which enables a United States Territory to achieve its full maturity by becoming a State. I agree that this is so, as do all my colleagues.

But now that the closed rule has been adopted, and I am glad that it has been under the circumstances, this body is called upon to perform its duties under the most restrictive and narrowest procedure it is possible for the Rules Committee to establish.

Never in the history of this Government has a new State been taken into the Union without the full membership of the House of Representatives being allowed to contribute their thinking to perfect an enabling act.

On the basis of the best advice I have been able to obtain, not one of the enabling acts came into being without the full advice of both the House and the Senate. Not one of those acts went into the statute books without every Member's having an opportunity to express his views and to propose amendments if desirable.

But today the full membership of the House of Representatives has been denied that right. But in spite of that fact, I am here today to plead with you to vote for the measure, Hawaiian and Alaskan statehood. My sole concern is that this bill reach the President's desk in a form acceptable to him.

A few weeks ago when this bill was being considered by the House Interior and Insular Affairs Committee, as we proceeded to consider the language and the thought of the 39 sections contained in H. R. 2535 the members of the committee had honest and reasoned differences of opinion as to the form and substance of the bill.

The committee in the 84th Congress has a membership of 29 voting members plus the Resident Commissioner of Puerto Rico and the Delegates from Alaska and Hawaii, a total of 32 people, less than 10 percent of the whole House membership. While many of these 32 people have participated in committee consideration of the several bills acted upon in the past 8 years, for reasons not entirely clear the House Rules Committee, which in a real sense lays out the road this body must follow if the legislative destinies are to be reached, did not reflect in the resolution reported the sentiments expressed by the members of the Rules Committee on the nature of this legislation.

If Alaska and Hawaii are admitted, the acts are irrevocable—no return, no reconsideration, no subsequent act of Congress. On that, the members of the Rules Committee and I are in complete agreement. But the road laid out by this resolution which you have adopted, and I agree that it should have been adopted, as there was no alternative, is a narrow one. The 406 Members who did not participate in the committee consideration of H. R. 2535 are by this resolution denied the right to consider any procedure other than that contained in the bill as introduced or as that procedure is proposed to be modified by the committee by recommended amendment. As to the other obvious alternative procedure, 29 Members are required to speak for 435, if judgment is to be rendered. Twenty-nine, if a voice is to be heard at all, must speak for 435. Therefore, the House of Representatives today is faced with this situation. A voice, which we have listened to from the Rules Committee, has said to the House Committee on Interior and Insular Affairs, "Here is your bicycle. We have removed the pedals—now ride it to your destination."

Mr. Chairman, the resolution which this House has adopted is the narrowest possible parliamentary procedure which could be established by the Rules Committee. It should have been broadened to its maximum, but that was not possible for this House to do without killing the bill yesterday. Therefore, I plead with you so that Alaska and Hawaii might enjoy the full counsel of this body and that the Members put the pedals back on the bicycle by voting for this joint bill. Then, it can go to the Senate where the debate will not be restricted and returned to this body for further consideration. I will now proceed to summarize for you, as briefly as I can, a few of the arguments raised in the matter of Hawaiian and Alaskan statehood. I will not take your time to have you listen to a long recitation of the history of this legislation or the history of Hawaii. Many other speakers can present the subject to you and the many specific issues involved more eloquently than I. But, I would like to point out that in general there are three arguments applicable to both Territories, which are always offered by the proponents and opponents of Hawaiian and Alaskan statehood. First, there is the argument over noncontiguity which, in my opinion, is an exceedingly fallacious one. When I can leave my home here in Washington, D. C., at 2:30 p. m. and have breakfast in my other home in Honolulu at 6 a. m. the next morning, which is actually 11 a. m. in Washington, D. C., I believe those who argue against statehood on that basis are as antiquated as a surrey with a fringe on top. Hawaii and Alaska are more contiguous to the continental United States than to any other land area. In this atomic age of ours, there is nothing more contiguous than the air in which we live and travel. The second argument regarding Hawaiian and Alaskan statehood is usually that of disproportionate representation in the United States Senate. To those who argue in that fashion, I suggest that legislation be introduced in the Congress of the United States, and be passed by two-thirds of the Members, and ratified by the three-fourths of the States. That is the only way to resolve the issue. That is the only way it can be resolved. To penalize the Territories of Hawaii and Alaska in this manner is really an admission that the gentlemen who favor proportionate representation in the Senate know full well that their issue is not a popular one nationally, but their arguments go home for consumption to the districts from which they come. The third argument relative to Hawaiian-Alaskan statehood is the issue of national defense.

In this instance the argument for the two Territories is somewhat inconsistent, because when it comes to Hawaii it is normally argued that the defense of Hawaii would be better served by statehood, whereas with regard to Alaska the same gentleman argued that the national defense would be better served by Territorial status. The fact of the matter is that Territory or State status has nothing whatsoever to do with defense. Anyone who has experienced a war on American soil knows that. The difficulty in this situation is that some of our distinguished and able military leaders have never experienced an attack or a war on American soil. Their experience has been in dealing with foreign allies on foreign soil, and their thinking has not been directed to leading a war on American soil where loyal American citizens would be their bulwark in carrying their campaign forward to victory. Their conception, because of their kind of experience is one with foreign allies, purportedly loyal to us, who naturally have caused our military leaders when on foreign soil, concern from time to time.

We all agree that Alaska is our front line of defense today, but let us suppose that tomorrow, by a turn of circumstances, our front line of defense should suddenly change to the great State of New York. What then would our military leaders do? It goes without saying that the President of the United States, as Commander in Chief, would delineate military zones of national defense in that State. In Alaska today I do know that our military advisers are deeply concerned with the defense problem, but that is no reason why they should be asked at this particular and delicate time to make withdrawals and reveal our defense plan to enemies. But there is every reason to support them if they wish to have Congress spell out in legislation a certain area for withdrawals, if and when they choose to make them. Although the President, as Commander in Chief, has the power to do so at any time, whether Alaska is a State or a Territory, it stands to reason that the President may like to have this particular point defined in the bill, in order that, if it is necessary to make such withdrawals, he will have the complete support of the Congress of the United States, and therefore the people of this country, including the citizens of Alaska.

It was not necessary for the President to go to the Congress to ask support in the matter of the Formosan issue, but there was every reason for the Congress to give our President this reassurance. So it is in the case of Alaskan statehood. The bill, as it is written today, includes a committee amendment in defining a line for future defense withdrawals that, in my opinion, would not be satisfactory to the President of the United States. But that is no reason for defeating the bill. On the contrary, there is every reason, in my opinion, to support the bill and send it to the Senate where this particular amendment can be resolved.

As other spokesmen for the bill have pointed out, we do have the language of the amendment, and a line that we have every reason to believe would be

acceptable to the President. But, by the rule which has been adopted, we are denied the privilege of offering this amendment on the floor. Since this is so, I urge you again to vote for this bill so that we can send it to the Senate and achieve this purpose.

With reference to the specific arguments brought into any debate on statehood, there are two of them. One is the issue of communism. We have just listened to my distinguished colleague from New York [Mr. PILLION] plead his case. I was delighted to hear him speak today. Mr. PILLION, who has never stepped foot in the Territory of Hawaii, by his own admission before the Committee on Rules, stated at that time that he would not go to Hawaii for fear he might change his mind. I admire him for that honest statement, for I do believe he was sincere and correct in what he said. If I had never stepped foot into the congressional district of New York, from which my distinguished colleague comes, if I did not know the local personalities and the local issues involved, I would not try to evaluate an election in that district on the basis of cold statistics on paper.

Today when he brought here that horrendous exhibit of newspapers and pamphlets, and spoke as he did I hardly recognized myself, because there I learned about the editorial policy of my own two newspapers; I learned why we were supporting statehood; for the first time I learned about dives down in the part of town where communism breeds.

Now, seriously, let us get down to the points my colleague made. On May 6, the gentleman from New York [Mr. PILLION], by letter addressed himself to Members of the House on charges of communism in Hawaii. Those charges were made from this floor today, but again none of his allegations were supported by documentary evidence of Communist infiltration into the territorial government of Hawaii, its educational system, the political parties, the newspapers, or radio. On the contrary, the documentary evidence that he produced showed that the newspapers of Hawaii are fighting communism, that the people of Hawaii have convicted our leading Communists, and the exhibit in person is the delegate from Hawaii, and if there was any fight by the ILWU it was for this office.

On Tuesday, April 19, 1955, just this last month, I appeared before the Rules Committee to reply to these very extravagant and unsupported charges. Evidently the committee, after exhaustive hearings, agreed with me; they granted a rule which sent the statehood legislation to the floor of the House.

The gentleman from New York [Mr. PILLION], says Communist power is centered in and emanates from the International Longshoremen's and Warehousemen's Union with a membership of 25,000, and the United Public Workers' Union, with a membership of 2,000. We admit that the issue of communism in Hawaii centers about the leadership of the ILWU, but the fact is that the people of Hawaii through their elected representatives were the first to call attention to the fact that the ILWU in Hawaii, an extension of Harry Bridges' west coast longshoremen's union, might be Communist-dominated.

At the petition of the Territorial Legislature a subcommittee of the House Committee on Un-American Activities went to Hawaii in 1950 to conduct an investigation of Communist activity. The chairman of the subcommittee was the Honorable FRANCIS E. WALTER, of Pennsylvania, and the ranking minority member was the gentleman from Illinois [Mr. VELDE]. They reported that they found no cause whatever for withholding statehood from the Territory.

Mr. VELDE. Mr. Chairman, will the gentlewoman yield?

Mrs. FARRINGTON. I shall be delighted to yield to the gentleman from Illinois.

Mr. VELDE. First of all I want to compliment the gentlewoman on the very fine statement she is making on behalf of statehood for Hawaii. I may say further that she is a very worthy successor to our very dear friend, the late Honorable Joe Farrington.

I believe some of the Members to whom I have listened in debate here are deliberately attempting to exaggerate the influence of communism in Hawaii in order to defeat statehood for Hawaii.

I cannot disagree with my good friend from New York [Mr. PILLION], in some of the statements, practically all of the statements that he made about the influence of communism in Hawaii, but let me remind the gentleman from New York that the influence that the Communist Party in Hawaii has at the present time stems from the mainland. Further than that, it stems from the great State of California where the headquarters for the 13th district of the Communist Party is and has been located for a good many years. The 13th district of the Communist Party is comprised of California, Nevada, and the Territory of Hawaii.

During my experience as an FBI agent stationed at San Francisco during the war years and since I have been a member of the Committee on Un-American Activities I have watched with increasing concern Communists being sent from the mainland by such men as Harry Bridges and Bill Schneidermann to Hawaii deliberately to cause strikes, foment trouble, and to organize the Communist Party in Hawaii. I say we cannot cut off the influence of the Communist Party in Hawaii without first destroying the Communist Party in the United States, on the mainland, and the influence that it has, not only upon our territories but upon our own internal security. We have tried three times to get rid of the influence of Harry Bridges by court action to deport him but each time we have been unsuccessful.

I believe that we should consider cleaning up the influence that emanates from the mainland before we start worrying about the influence on the Territory of Hawaii. Furthermore, I am of the opinion, and I was of this opinion 5 years ago and 3 years ago when I voted for admission of Hawaii into the Union, that the State of Hawaii would be better able and more inclined to fight the influence of communism as a State than as a Territory for the reason that I believe the good people, the great majority of the patriotic citizens in the Territory of Hawaii would upon their admission to the Union gain a new sense of loyalty and would carry on a cause that would completely eliminate the influence of Communist traitors who have been sent from the mainland. In that way it would destroy communism more effectively in the Territory of Hawaii.

Mr. MILLER of Nebraska. Mr. Chairman, will the gentlewoman yield?

Mrs. FARRINGTON. I yield to the gentleman from Nebraska.

Mr. MILLER of Nebraska. I was hoping that the gentleman from Pennsylvania [Mr. WALTER] would be on the floor. When he returned in 1953 from Hawaii as a member of the Committee on Un-American Activities he made a report, from which I quote the following:

> At no time were there more than 160 Communists in Hawaii. My guess as of today, February 15, 1953, it does not exceed over 60. The people of Hawaii understand that communism is a worldwide conspiracy and given the opportunity they would put their own houses in order.

I think that answers the questions of the communistic influence. There are Communists in Hawaii, there are Communists in Nebraska. The gentleman from New York [Mr. PILLION] understands that New York State has more than half of the Communists in the United States within its own borders.

Mr. ENGLE. Mr. Chairman, will the gentlewoman yield?

Mrs. FARRINGTON. I yield to the gentleman from California.

Mr. ENGLE. Is it not true that Senator Cordon and Senator Butler made intensive investigations of this charge of communism in Hawaii?

Mrs. FARRINGTON. That is true. There have been several on-the-spot investigations into Hawaii's readiness for statehood.

Mr. ENGLE. Is it not also true that both of those distinguished gentlemen came back and said they did not find communism to be a serious menace? I would like to read what Senator Cordon's subcommittee reported. This is a statement from their official report:

"No evidence was presented to the subcommittee of communism in the Territorial legislature or other elective bodies or offices. Hawaii's political life has been traditionally sound and free from radical leadership in the government."

Mrs. FARRINGTON. I thank the gentleman from California. His statement is exactly correct. There has never been any evidence found of communism in the Territorial legislature.

Now, Mr. PILLION offers the fact that Harry Bridges is president of the ILWU; that Jack Hall is the Hawaiian regional director of the ILWU; that in 1950 the CIO expelled both the ILWU and the UPW as Communist dominated, and that on June 19 Jack Hall and six others were convicted by a Federal jury in Hawaii of violation of the Smith Act as indi-

cations of growing influence of communism in Hawaii. The contrary is true. These facts are an indication of the decrease of Communist influence in Hawaii. It was an all-Hawaiian jury that convicted Jack Hall and six others. It was after a lengthy Federal trial which was presided over by a Federal judge long a resident of Hawaii who was appointed by the President of the United States that these defendants were convicted. They are now on bail, the case having been appealed to the 9th Circuit Court of San Francisco. Hawaii has nothing to do with the case now. The people of Hawaii generally are chafing at the delay.

Mr. PILLION states that on June 19, 1953, 24,000 ILWU members went on strike to protest the conviction of the seven and refused to load military cargo for Korea. The fact is that the ILWU membership was ordered by its leadership to walk out, which is totally different procedure from voting to strike, and the fact also is that within 24 hours, when the membership learned the true cause of the walkout, they went back to work. They learned the truth through the Honolulu newspapers, which, instead of supporting the Communist cause, as Mr. PILLION would have you believe, used every means at their command by news stories, editorials, and radio broadcasts to inform the rank and file of the membership of the ILWU in order that they, loyal Americans, might evaluate the situation.

Mr. PILLION says the Honolulu Record is a newspaper front for the Communist Party and that individual and business ads increased from 2,137 in 1953 to 2,586 in 1954. The Honolulu Record may be a front for the Communist Party. The fact is that it also is a labor organ, and during the campaign the candidates who advertised in this paper may have done so in the belief that they were reaching the organized labor vote. If these candidates failed to evaluate the significance of advertising in a paper that may be Communist dominated, they likewise failed to evaluate the fact that their ads were wasted because the Record only has a circulation of approximately 3,000, which Mr. PILLION neglected to tell you, in contrast to the other dailies with a total circulation of 175,000.

Also I would like to ask you, if the Communists are so powerful in Hawaii through this particular medium, the Honolulu Record, why is it that they cannot even force their own membership of 25,000 to subscribe to the paper? The truth of the matter is that those ads you saw up here on the board are put in at 50 cents a throw from the boys when they go out and collect from the labor unions.

Now, Mr. PILLION says that the ILWU elected 58 candidates out of 71 endorsed in the November 1954 elections. There is one thing I have in common with my distinguished colleague from New York. We are both Republicans. But we disagree on this point. I am generous enough to give the credit of that election to the Democrats in Hawaii. The fact is that the people of Hawaii elected the candidates. The ILWU can claim anything it wants to. The Democrats for the first time in the history of the territory won control of the territorial legislature. The Republicans won the delegateship and the two largest mayoralties in the territory. Now, the largest of these mayoralties is particularly significant because the ILWU sustained a resounding defeat. John H. Wilson, a veteran Democrat and seven times mayor of Honolulu, whom the ILWU was out to reelect in 1954, could not even be nominated. After 50 years in public life in Honolulu he lost the nomination to a young Democrat, Frank Fasi, who has been a resident of Hawaii only since 1946. Furthermore, if more truth is needed for the refutation of Mr. PILLION's allegation, the ILWU threw the weight of its leadership's support to the candidacy of John A. Burns for the delegateship, and he was defeated by the incumbent.

Mr. PILLION also has neglected to tell you that of the membership of the ILWU of 25,000, possibly only one-third of those are citizens. Most of them are alien contract laborers and are not eligible to vote.

Mr. PILLION says that on April 6, 1955, the Communist Daily Worker printed an article concerning the gift of a gavel by Speaker of the House of Representatives Charles Kauhane to Harry Bridges, president of ILWU.

The "People's Daily Worker" can print anything it chooses. Charles Kauhane, speaker of the Territorial house of representatives, had denied publicly that he made a gift of a gavel to Harry Bridges.

Mr. PILLION states that the Hawaiian House of Representatives passed a bill last March to exempt the ILWU Memorial Association from taxes by a vote of 27 to 1 and 7 of the 10 incorporators of this association are publicly identified Communists.

What Mr. PILLION neglected to tell you also was that a month later, after it was revealed that 7 of the 10 incorporators of this association are publicly identified Communists, the measure was vetoed by Hawaii's governor, Samuel Wilder King, partly on charges that Communist activity in Hawaii appears centered around the ILWU. This we have never denied or minimized.

Mr. PILLION wrote that on April 24, 1955, the ILWU publicly threatened the Hawaiian Legislature with a mass retaliation strike if their endorsed elected representatives and senators did not keep their political promises to the ILWU.

Mr. PILLION neglected to tell you that an ILWU spokesman has publicly denounced the legislature for its refusal to adopt tax legislation favorable to the union. Furthermore, no mass retaliation ever came about.

Mr. PILLION writes that the ILWU uses four radio stations to daily preach the Communist line in the English, Filipino, and Japanese languages.

There are 407 of the nation's 2,800 radio stations which broadcast a daily fare of 36 languages and dialects, ranging from Arabic to Zuni and including the Russian languages.

I do not intend to defend the activities of the ILWU leadership or its radio commentators in Hawaii. However, I can assure you that these programs contain no more Kremlin propaganda than do those coming from some of our mainland labor reporters. This 15-minute-a-day fare from the ILWU commentators is offset by some 250 hours of typically American radio and television programs over 14 stations throughout Hawaii, all of them certificated by the Federal Communications Commission.

The gentleman from New York [Mr. PILLION] is absolutely incorrect when he tells you that since the Hawaiian statehood bill was last voted on, March 10, 1953, "there have been startling disclosures of Communist controls in Hawaii."

Do you think for a minute that the President of the United States, the Secretary of the Interior, the Secretary of Defense, and the Attorney General would recommend statehood for Hawaii if a situation existed there such as the gentleman from New York [Mr. PILLION] claims?

None other than the Attorney General of the United States, in a letter dated January 13, 1954, stated emphatically that communism was on the decline in Hawaii. He said:

> The facts known to me concerning communism in Hawaii do not indicate any reason to believe that communism is a greater menace in Hawaii at the present time than it was in 1950. As a matter of fact, the known members of the Communist Party in Hawaii appear to be fewer in number at present than they were in 1950. Undoubtedly the recent conviction of the leaders of the Communist conspiracy in Hawaii has contributed to this decline in Communist Party membership. I believe it inevitable that this conviction will have a weakening effect on the strength of communism in Hawaii.
>
> The fact that it has been necessary to prosecute the leaders of the Communist conspiracy in Hawaii is, in my opinion, no more of an indication of the strength of the party in that area than the convictions of the Communist leaders in New York, Pittsburgh, Seattle, and Los Angeles are indications of party control and dominance in those areas.

Now I should like to tell you a little bit about the second argument regarding Hawaii, and it is made on the basis of race. It is argued that we are a group of many racial extractions and therefore not qualified to be a State. I am proud to say that we are of many racial extractions and that in most of us the blood of several races flows. We are proud of that.

There is no race prejudice in Hawaii, but there is much race consciousness. We take pride in the American descendents of the many peoples who came from many foreign lands. They have contributed greatly to our American civilization and culture in Hawaii.

The first to go to the shores of Hawaii from foreign lands were the people from New England who went out to Hawaii in 1820 and there founded an American community. In 1820, when Honolulu was a typically going American community, there was not a single settlement west of the Mississippi. To be sure there were a few friars breaking their way through the mustard cane in California. By 1840 the people of Hawaii had a constitution based upon the theocracy of the great State of Massachusetts, and a compulsory free public

school system patterned after the State of New York. As a result, Hawaii has no illiteracy. Today every registered voter has to fill in a long printed questionnaire to determine that he is acquainted not only with reading and writing but also with the principles of government, and to this day no voter has ever questioned that requirement. As a result, 87 percent of our registered voters vote, and 65 percent of our eligible voters vote, which I think challenges the record of any State in the Union.

These same foreigners that went to our shores gave the people of Hawaii a written language—the English language. They gave them Christianity, a stable economy, and racial tolerance, and as the result of those American principles, Hawaii for many years has enjoyed four of the basic five principles of American freedom. Those principles are Christianity and religious freedom, racial tolerance, free education for all, and economic stability. The fifth principle of American freedom, complete self-government, is the one we seek today.

The privilege and responsibility not only for voting presence in the Senate and House of Representatives, for voting for the President and Vice President of the United States, and our own Governor and other officials, but the privilege and responsibility of contributing our thinking to the framing of legislation for these United States, is what we seek. Not only do we think that we would benefit by voting representation in the Congress, but we believe that we have a great contribution to make. Particularly do we feel that contribution could be given in the field of foreign affairs, because we live in the Pacific area and are more closely associated with the thought of the people of the Pacific than are any of those in this body elected from the continental United States. We would be the first to vote for legislation to support the freedom-loving peoples of the world in their struggle against communism, because we in Hawaii as a Territory have done as much if not more than any State in the Union about communism.

Mr. ENGLE. Mr. Chairman, will the gentlewoman yield?

Mrs. FARRINGTON. I yield to the gentleman from California.

Mr. ENGLE. May I ask the gentlewoman whether or not she referred in her remarks to the letter of January 13, 1954, by Mr. Brownell, the Attorney General, in which he discussed the charges of communism in Hawaii?

Mrs. FARRINGTON. I have the date right here.

Mr. ENGLE. If not, at the appropriate time, Mr. Chairman, I propose to ask to include this letter following the remarks of the gentlewoman. I again call the attention of the committee to the fact that not only has the President of the Uinted States endorsed statehood for Hawaii, which he would not think of doing in the face of any significant threat from communism, but in addition he has been backed up in that statement by his own Attorney General.

Mrs. FARRINGTON. That is the January 13 letter.

I have heard it said time and again during the debate on this bill that it matters not what the Communists think because they will twist the argument to their own purposes. I am concerned not about what the Communists think, but what the freedom-loving peoples think. We could also contribute much to the concept of freedom in the Congress, by helping to frame legislation from our great experience for more than 100 years where we have lived in a test of democracy, where all creeds and all colors are accepted exactly as our Founding Fathers intended that the phrase should be interpreted, where we have a living example of what the world is striving to find today.

Several in this debate have mentioned the issue of taxation without representation and pointed out that this issue is similar to that in colonial days. I would like to mention one difference—in the days of the colonies there was a difference of opinion among the American settlers. Some and many preferred to stay with the Crown without a vote in the Parliament, without breaking their bonds with the British Empire. The majority preferred independence and so we had a revolution, thus founding the United States of America.

But in Hawaii, although we have taxation without representation there is not a soul that would choose independence rather than staying with the United States even without a vote in the Congress. We are first and last irrevocably Americans, and whatever your decision may be in the matter of statehood for Hawaii and Alaska, you may be sure that the decision will be accepted in the spirit of true Americanism. You may also be sure that if that decision should be unfavorable, we will continue to fight on until we have achieved our rightful destiny.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject of American foreign policy, delivered by me at Peoria, Ill., last night before the Peoria Association of Commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. WILLIAM F. KNOWLAND BEFORE THE PEORIA ASSOCIATION OF COMMERCE ANNUAL DINNER MEETING, PEORIA, ILL., MAY 10, 1955

Mr. Chairman and fellow Americans, I am pleased to be here with my friend and colleague, EVERETT DIRKSEN, who so ably represents Illinois in the Senate of the United States.

American foreign policy is the people's business. There is no American man, woman, or child who will not be affected directly or indirectly by the present and future aspects of our foreign policy.

Our basic foreign policy is and should be peace with honor. This is far different from a policy of peace at any price.

As an example of our ultimate objective, I would point to our great neighbor of Canada to the north where for a long period of our history neither that country nor ours has found it necessary to have a single fort or military establishment for the purpose of defending one country against the other along the entire international frontier of 3,000 miles stretching from the Atlantic to the Pacific.

We certainly hope that in our lifetime or the lifetime of our children other nations not only in the Western Hemisphere, but also in Europe, Asia, and the Middle East, might live together as good neighbors as we do with Canada.

If we are half as prudent as the men who gave us this Republic and who helped to win and develop the great West, we will continue to hope and pray for peace but we will keep our powder dry.

Today the White House announced that Secretary of State Dulles was authorized to make arrangements for a meeting of the heads of government of the United States, Great Britain, France, and the Soviet Union.

All Americans will join in a prayer and a hope that this proposed meeting will rise above the gatherings of Tehran, Yalta, Potsdam, and Geneva which gave substantial victories to the Communist world. Those meetings all had a friendly press and a massive propaganda buildup. It was not until months and sometimes years later that the full price paid became known.

History teaches us that prior experience of great powers negotiating in the absence of small allies has not reflected great credit upon the large nations, and has been disastrous to the small ones. For reference, I refer to Munich and its impact upon Czechoslovakia, to Yalta and its impact upon Poland and the Republic of China, and to Geneva and its impact upon Vietnam.

The heads of the free governments will be accountable and responsible to their people and to their parliaments or congress.

To whom will Bulganin be accountable? To the presidium or to Khrushchev? If Bulganin is indeed himself "at the summit" today will he be there when the big four meet in June or July?

Are our Western allies prepared to stand against a condemnation to perpetual slavery behind the Iron Curtain of the people of Poland, Czechoslovakia, Latvia, Lithuania, Estonia, Rumania, Bulgaria, and Hungary? Or will we be outvoted 3 to 1?

Are we to insist on previous agreements being honored before we take the Soviet's word on a new scrap of paper?

Will plans for the Republic of Germany's part in a Western defense be scrapped to placate the Russian bear?

We might recall Kipling's the Truce of the Bear. While this was written concerning the imperial Russia of the Czar it is even more applicable to Soviet Russia today.

"When he stands up like a tired man, tottering near and near;
When he stands up as pleading, in wavering, man-brute guise,
When he veils the hate and cunning of his little, swinish eyes;
When he shows as seeking quarter, with paws like hands in prayer,
That is the time of peril—the time of the truce of the bear."

Will we insist on the Soviet Union withdrawing, as pledged, their troops from Rumania and Hungary when the Austrian

treaty is signed? Their only excuse for being in those two countries was to keep open lines of communication to their troops in Austria. Or will this promise also be overlooked in order not to offend the Muscovites.

There is no reliable evidence to date that would warrant a prudent person in believing that the Soviet Union or international communism have changed their basic long term strategy for the destruction of human freedom. In discussing American foreign policy before the American Society of Newspaper Editors in Washington, D. C. on April 22, Mr. George Meany, president of the American Federation of Labor said:

"The Communist enemy, regardless of any momentary change of tactics, regardless of any treaty the Kremlin may sign, is bent on conquering the entire world—the United States not excluded—and remolding it in the form of the totalitarian dictatorship and slave economy imposed on the people behind the Iron Curtain, in Russia, Rumania, outer Mongolia, and on the Chinese mainland. American labor never can be and never will be submissive or neutral towards such a total menace."

Certainly American businessmen and the public generally should be no less alert to the dangers of communism than is the American Federation of Labor as so ably and courageously expressed by the president of that great organization.

Our foreign policy should be based on human freedom. What advances it we should support and what retards it we should oppose.

The age of colonialism in Asia is dead. The people in that part of the world want no part of it. Any American policy in that part of the world will suffer a handicap if it is tied directly or indirectly to European colonialism.

Nowhere in the long history of Russia under the Czars or under the commissars is there anything equal to the United States establishing the free and independent Philippine Republic nor for that matter is there anything equal to Great Britain setting up a free and independent India, Pakistan, and Burma.

To the contrary, during the same period the Soviet Union was destroying the independence of Latvia, Lithuania, and Estonia though they had signed treaties of friendship and nonaggression with all 3 of those Baltic Republics.

We have many friends in Asia and we should call upon those nations with whom we have mutual defense pacts and agreements for their advice and continued assistance in dealing with problems arising in that area of the world. I refer particularly to the Republic of Korea, the Republic of China, the Republic of the Philippines, Thailand, Pakistan, and Japan, all of which are independent Asian nations, and together with Australia and New Zealand, have demonstrated on numerous occasions their friendship and willingness to stand up and be counted when the going gets tough.

Laos, Cambodia, and Vietnam are 3 new countries that have gained their independence from colonial rule but now find themselves threatened by the nearness of a more dangerous type of colonialism which is communism.

In Vietnam, Premier Diem is faced with tremendous problems. He has had the support of this country in meeting the difficult problems confronting him.

It is up to the people of free Vietnam to make their own decision as to the type of government structure that will best suit them. If their choice is a republic and the cutting of ties with an absent ruler their decision should have the support of their Asian neighbors as well as the United States and our western allies. If their choice should be for a constitutional monarchy without the present ruler they should likewise be supported. There must be no pressure of any kind to retain Emperor Bao Dai if the Vietnamese prefer some more acceptable alternative.

Americans must never lose sight of the fact that ours at the time and today is the authentic revolution. It not only freed us from colonial rule, but it developed a charter of liberty which established a constitutional form of government to serve us for all time to come.

Other nations have had their revolutions, but either immediately or in the not-distant future the people found they had supplanted one ruler for an even more despotic one.

We should be proud of our revolutionary past and help to encourage in the oppressed people behind the Iron Curtain the revolutionary zeal for freedom which won us a nation.

At the time of Yalta, just 10 years ago, less than 200 million people were behind the Communist Iron Curtain. Today, over 800 million people are enslaved by the most godless tyranny the world has ever known.

Despite the fact that the Soviet Union has violated its treaties of friendship and nonaggression with Finland, Poland, Latvia, Lithuania, Estonia, Hungary, Rumania, Bulgaria, Czechoslovakia, and the Republic of China, there are still some who believe that the way to deal with an international bully is by more appeasement.

At Munich the world should have learned that the road to appeasement is not the road to peace, it is surrender on the installment plan.

The Soviet Union is an admitted violator of the United Nations Charter and the resolutions in support of the Republic of Korea, a victim of communistic aggression on June 25, 1950. Yet now the Soviet Union is supporting the admission of the aggressor, Communist China, into that organization.

Such action would violate the moral foundation upon which the United Nations is supposed to rest. It would be putting a premium on aggression. It would serve notice that the quickest way to membership is by shooting your way in. It would be a betrayal of the 140,000 American casualties including 35,000 of our dead.

The Chinese Communists, in violation of the armistice, admit they hold 15 American airmen; 11 of these have been sentenced to Communist prisons. There is strong reason to believe they hold several hundred other United States and United Nations military prisoners. We know they hold over 30 American civilians who have been in jail for several years.

As long as one American in the armed services or in civilian life is unjustly held I shall not remain silent.

How can our associates even consider compromising principle and honor to that extent? What does the United Nations intend to do about it? What are the American people going to do about it?

How long is the United Nations going to pussyfoot on this question of American prisoners of war being held in violation of the terms of the Korean armistice? Of the 15 the Chinese Communists admit holding, 11 have been sentenced to terms of from 4 to 10 years.

These men were shot down in January of 1953. Last fall it was suggested in Government quarters that public discussion be held down until Mr. Hammarskjold had completed his mission to Peiping.

He came back in January and held a press conference in New York on January 14 in which he admitted that the prisoners had not been released nor did he have any firm commitment as to when they would be released.

It was suggested again in Government quarters that the American Congress and the American people be patient and that perhaps Chou En-Lai would release them prior to the Bandung conference.

The Bandung Conference has now come and gone and the prisoners have not been released.

Are we to wait until these prisoners have been completely brain washed and then released to serve the Communist propaganda purposes as has been the case of some of the civilians?

It is time for Mr. Hammarskjold to make his report to the United Nations and to the people of America.

What is intended to be done about Communist failure to comply with the terms of the Korean armistice?

If the United Nations as an organization is paralyzed from taking action, then the Government of the United States has an obligation to men wearing the uniform of this country to take some effective steps in getting our men released.

Yet voices of appeasement, abroad and at home continue to urge the admission of Communist China into the United Nations.

This despite the fact that Communist China was the aggressor in Korea where we suffered 140,000 casualties including 35,000 dead.

This despite the fact that Communist China has been and is now in violation of the terms of the Korean armistice agreement.

Have we forgotten the Biblical injunction in Second Corinthians:

"Be ye not unequally yoked together with unbelievers; for what fellowship has righteousness with unrighteousness? and what communion has light with darkness?"

As for me, as long as I have a voice and a vote in the Senate of the United States I shall oppose the admission of Communist China.

We must always distinguish between the people of Russia and their Communist Kremlin masters. The Russian people were the first victims of the godless marxian tyranny of Lenin and Stalin.

The struggle for power goes on in the Kremlin. The tactics may change with the faction temporarily in power. The long-term strategy for the destruction of human freedom continues throughout the world by Communist aggression from without or by subversion from within.

There will never be peace in our time in any real sense until the people of Russia and China have thrown out their Communist masters and established justice in their political system, freed their economy from the dead hand of statism concentrated on armament production and, more important than all, reopened their churches so that the guidance of the Father of us all may replace the godless teachings of Marx, Lenin, and Stalin.

The crucifix is a more potent force than the clenched fist of communism.

When the people of Russia and China gain their freedom from the tyranny which temporarily rules them we should make it known that our friendship and our assistance will be available for the establishment of peace with honor in a truly free world of free men.

We seek not one foot of their territory nor control over a solitary one of their people.

We only want for them the cherished freedom to worship God according to the dictates of their conscience; to have in the hands of a truly free people the right of self-determination on who shall constitute their government and the right to change it by the decision of 200 million people rather than a cabal of less than a dozen power-mad men in the Kremlin who threaten the peace of the world; and to be able to enjoy the

fruits of their labor and a rising standard of living.

We should look upon the people within the Iron Curtain as our friends and allies. Indeed, should their totalitarian masters embark upon further aggression the temporarily enslaved people may turn out to be among our stoutest allies.

Such a policy does not contemplate aggression on the part of the free world. But it does require that we never by word or deed give our moral or legal blessing to the enslavement of the 800 million people behind the Communist Iron Curtain.

Such a policy does contemplate the application of moral, economic, and diplomatic sanctions against the international Communist conspiracy against the free way of life. Human freedom is a God-given right beyond the power of dictatorships to permanently destroy.

There are many persons at home and abroad who believe the Chinese Communists are now merely following a long established technique to use negotiations (as at Panmunjom) for the purpose of building up their striking power.

Their minimum price will be a downpayment of the offshore island groups of Quemoy and Matsu. Their ultimate price, which they will hope to get by negotiation or through the United Nations, or by armed conflict, will be Formosa Straits.

In the long history of the Soviet Union or the shorter history of Communist China, there is nothing to demonstrate that the Communist pledged word is worth the paper on which it is written.

The bones of the repudiated Soviet treaties and agreements with Latvia, Lithuania, Estonia, Poland, Hungary, Rumania, Bulgaria, Czechoslovakia, Finland, and the Republic of China, together with the 1933 Litvinov compact with the United States are there for all to see.

More recently the violations of the Korean and Geneva armistice agreements by Communist China are an additional warning signal against placing either our faith or the survival of our friends and allies on the cynical smiling facade of a brutal Chou En-lai.

I cannot help but believe that we have a better chance of maintaining the peace of the world by showing strength and firmness now than by vacillation or weakness.

Just recently, I had a letter from an Air Force pilot in Formosa. In his letter to me of February 12, this pilot wrote:

"As an Air Force jet pilot assigned to this island for the next 2 years, I am sure my interest in lasting world peace is as acute as is any American.

"The presence here of my wife and children tends to intensify my natural desire that no one toss any atom or hydrogen bombs this way.

"I am quite convinced that my best chances as well as those of my country and the entire free world rest with the firm 'stop the Communist nation' movement which you so forcibly represent. I have flown 400 combat missions and would rather fly 400 more than to see my kind of a world go down the drain 1 island or 1 small country at a time.

"America must wake up to the real intentions of communism and take real and purposeful steps to frustrate those intentions."

This I believe: Under the divine guidance that made us and kept us a free nation this generation of Americans will not sacrifice principle for expedience; nor cringe in the face of brutal naked aggression and we will not barter friends and allies in the Western Hemisphere, in Europe, Africa or Asia, in a dishonorable appeasement at a Far Eastern Munich or a second Yalta.

Coexistence, Containment, and Liberation

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. ANFUSO. Mr. Speaker, I consider it a privilege to insert into the CONGRESSIONAL RECORD a very illuminating address by Louis Waldman made recently at Temple Beth Zion in Buffalo, N. Y. This address will surely serve as a source of valuable information to all Members of Congress and to all those who have occasion to read the RECORD. The subject matter discussed is of paramount importance in the world today.

Mr. Waldman is a well-known attorney in New York. He is the president of the Brooklyn Bar Association, chairman of the New York State Bar Association's committee on civil rights, a former vice president of the Association of the Bar of the City of New York, and former chairman of the committee on American citizenship of the American Bar Association.

His address is as follows:

The World Today is a very broad subject. It would be hard indeed to cover so wide a field in a single address and be intelligible. But when my friend Leonard Finkelstein, the distinguished assistant district attorney of your county wrote to me many months ago, asking me to speak here tonight he also asked me to name a subject. I knew that I could not go wrong in naming it "The World Today," because, whatever the day or whatever the year when I would speak, that subject would be timely and appropriate. Actually, my subject for tonight is a good deal more modest. I will speak to you on three matters embraced in the topic of "The World Today." I shall talk to you on Peaceful Coexistence, Containment, and Liberation.

Now, it is a poor speech that begins with an apology, but I am going to make an explanation for selecting this subject. First of all I recognize that the subject is controversial, that men and women may differ on both the analysis of the facts and on the conclusions to be drawn from the facts. But I think it is foolhardy for mature men and women, in times of world crisis, to run away from a subject dealing with the heart of that crisis simply because it is controversial. We should not constantly take refuge in escapist topics.

There is still another reason for having selected the subject that I did select. I have a profound conviction that unless people who are sincerely devoted to the cause of human freedom, to the cause of—to use a very much abused term—liberalism, unless people candidly face controversial questions, such as I have selected for tonight, questions which are sometimes unpleasant to face, then a vacuum will be created, and indeed has already been created, into which other people will step, and these other people are not always the most suitable by temperament or conviction to deal with those issues.

I don't have to tell you that the question of peaceful coexistence is now squarely before us. The State Department and the President are face to face with it. The Republican leader in the Senate has frequently been heard on it. But I am sure these leaders of Government will readily agree that this subject is not the special property of any particular Senator, or of the State Department or even of the President himself. I think the subject is one in which all Americans are interested and with which they should be concerned.

What is the meaning of each of these doctrines, peaceful coexistence, containment and liberation, and why are they important today?

The concept of containment is not new. It has existed in our diplomacy ever since the cold war came to be recognized by the American people as a fact of our daily life. All the billons of dollars that we have poured into Europe under the Marshall or Truman plans, or under the other foreign-aid plans we have had and all of the efforts that we have exerted from the time when Americans first became aware of the cold war in the late forties until the present administration took office, is to be described both historically and analytically as the policy of containment. It was so proclaimed to the world, and honestly so proclaimed. Its avowed purpose, aside from the humanitarian motives that America had in alleviating suffering among the people of our allied countries was to help rebuild their economies, their lives and their institutions so that they could rely on their own resources in the fight to prevent their countries from falling into the Communist orbit and becoming a part of the Communist empire. That was and is the philosophy of containment.

With the advent of this administration however, there was supposed to have been a change. There had been a great deal of discontent with and much criticism of the policy of containment. The 1952 Republican platform denounced this policy in most emphatic terms and pledged that the party, if given power, would go far beyond that policy. The Republicans proclaimed, instead, the policy of liberation.

Now, what does that policy mean?

That policy includes containment, but it goes further: It calls for policies, and for conduct implementing those policies, which would help liberate those countries which were seized and incorporated by the Soviet Union into its orbit in the postwar period. Such countries as Poland, Hungary, Rumania, Bulgaria, Lithuania, Latvia, Estonia, and Czechoslovakia were to be so liberated.

Under the theory of liberation the United States must make clear to Russia and the world that we do not recognize the annexation of those countries with their 80 to 90 million people as part of the Soviet empire. This problem of making clear that we shall not recognize Soviet annexation or forcible affiliation of other countries applies also to Austria, China, Korea and other parts of the world. It is partly because of this policy that it is necessary to maintain the fiction that Nationalist China is still the legitimate government over all of China, although the Nationalist Government exercises effective control only in Formosa.

In his first message to Congress, President Eisenhower sought to state and spell out the philosophy of liberation. At the same time, matters were going from bad to worse for us both in Europe and in Asia. It was in this context that the Soviet Union sprang on the world, as part of its propaganda, the proposal for a program of peaceful coexistence, as an alternative both to the policy of containment and to the policy of liberation.

Now all students of history know that we in the United States for more than a century have lived peacefully with countries with whose governments we did not always agree and with the policies of whose governments we could not possibly be reconciled. We coexisted with Czarist Russia. We coexisted with the Kaiser's Germany. We coexisted

with the militaristic Japanese Government. And we coexisted with many other governments whose policies were in fact abhorrent to us. No one even raised a question as to such coexistence. It was simply taken for granted because it was most politic.

What then is the difference between our historic position and the problem posed today by Russia's proposal?

The difference is this: When we coexicted, and still coexist, with governments the world over, with whose principles or policies we did not or do not agree, those governments were not working overtime to conquer the United States. And we, of course, had not sought to conquer them. With the Soviet Union, however, this is entirely different. Some countries may have had imperialistic ambitions along traditional imperialistic lines, but they did not establish their own vest-pocket political parties in our midst to infiltrate our Government, to corrupt our institutions, to capture our unions, our churches, our schools, all with the view ultimately to take over the United States, as has been done by the Soviet Union in the United States. Nor did those countries adopt such policy of infiltration toward the other countries of the world.

For more than a century Western civilization has been marching slowly but surely in the direction of the libertarian way of life. Our own philosophy of liberty is embodied in 3 historic documents: The Declaration of Independence, the Constitution, and the Bill of Rights. And in the life of our Nation for over 150 years we have tried at every step to improve and bring to fruition that philosophy of life. We have never been perfect. No democracy ever is. No human institution ever is. But basically we are striving for a free life. During all of this time no Czar, no Kaiser, no potentate, no dictator attempted to conquer us by fraud, by deception, by sabotage and at the appropriate time perhaps by military power. That became a 20th century disease, commencing with the Bolshevik Revolution in 1917. It was also tried by Hitler with disastrous results to him and the German people, but not without great tragedy and loss to us and the rest of the world.

I would like everybody to understand this proposition. I draw a distinction between the historic role of our Government and people in coexisting with governments with whose policies we do not agree, and sometimes even detest, and our difficulty in acquiescing readily to what appears to be the inocuous proposal of peaceful co-existence with the Soviet Union and its satellites.

Now, coming to peaceful coalition with the Soviet Union. We are, as all of you know, except those who have blinded themselves and will not see the facts, in the midst of a world-wide, bitter cold war. I do not mean that we alone are in it. We are in it together with the democratic countries who are broadly described as part of our Western civilization. We are in it with the countries who share with us a common philosophy of life, such countries as England, France, the Scandinavian countries, all the countries in the world who have a freedom-loving tradition. We are all together in the same boat. And opposing us in that cold war is the Soviet Union and its satellites. It therefore is of the utmost importance that each proposal by or concerning the Soviet Union, whether it be the admission of Communist China to the United Nations or a program a peaceful coexistence, be judged not only in terms of what the words mean to us, but above all in terms of (a) history; (b) the meaning of those words to our enemies; and (c) the context of that cold war. We must always ask ourselves what do the Communist leaders have in mind when they propose this kind of agreement. I think it was Holmes who made the oft-quoted statement that one page of history is worth a volume of logic. Nowhere, it seems to me, is this as true as in trying to evaluate and understand the proposals made to us and to the Western World, by the leaders in the Kremlin.

What is the page of history which is significant in this discussion? In answering that question please forgive me for the injection of a personal note. Usually it is not a good thing to be too personal when discussing ideas, politics, government, or law. In this case, however, there is justification for speaking of my own experience—if for no other reason—to qualify my opinions as having validity.

In dealing with Soviet leaders and actions, conventional training of the diplomat is not enough. Much more necessary is a thoroughly grounded, first-hand knowledge of Communist history, Communist philosophy, Commnist theory, Communist practice and even Communist personalities and their mental bag of tricks. Only with such a background can one intelligently evaluate the concepts of the leaders of the Kremlin, understand the slogans, the programs, and the propaganda these leaders let loose on the world.

Now, for over 30 years I have had something to do with the business of knowing Communists, and consequently with the understanding of Communist theory, history, and programs. At the very threshhold of their power in 1917 I knew some of their leaders who were then in the United States, either as exiles, as visitors, or as emigres. Such men as Leon Trotsky, Nicholai Bucharin and many lesser lights were well-known to me. I became fairly familiar with their temperaments and outlook. Not one of them, of course, is alive today because old age in old Bolsheviks is not acceptable doctrine in the Kremlin. Old Bolsheviks are not what life insurance people call insurable risks.

Also known to me were a large number of old-time Americans who belonged to the Socialist Labor Party, disciples of Daniel De Leon, many of whom left the United States, the country of their birth or adoption, and proceeded in haste to the Communist heaven immediately after the revolution in 1917. Boris Reinstein of your own city, Buffalo, was one of those men. This may be news to you, for few Americans know that among the architects of the Communist Frankenstein were those theoreticians of the De Leon School who exported their doctrine from America to Russia. These people were well known to me. I knew their literature, their philosophy, their intellectual approach to social problems, their revolutionary concepts that antedate 1917, and all showing the clear indication of what was to come, long before the Russian Revolution. With such knowledge and the knowledge that modern communism in the Russian sense did not begin with the Revolution in 1917 but had its intellectual roots generations before that date, we can begin to understand in the fullest sense of that word what makes the Russian communism what it is today.

Only by knowing that the apostles of terrorism, of violence, and of force, as an instrument of life, who so tragically plague the world today, have plagued the labor movement for almost a century before the Russian Revolution; only by knowing George Sorel's Reflections on Violence, or Robert Hunter's Violence and the Labor Movement, or the literature mirroring the struggle for almost half a century within the Socialist movement between those who believed in evolutionary change brought about by education, law, and order, and those who believed in shortcuts, in sabotage, in direct action, in the political strike, in syndicalism; only by absorbing and understanding the emotional drives, the intellectual twists and turns of mind of the fathers of modern communism—only with such knowledge can the diplomat of today get some idea of the concepts, the statements, the slogans and propaganda delivered by men like Molotov, the late Vishinski, the late Stalin, Malenkov, and other Red leaders.

Another basic proposition I should like to drive home to you tonight is this: communism in spirit and in philosophy is not a pacifist movement. It must not be confused with the pacifism and idealism of radical and liberal movements of our time. The great tragedy in many people's failure to understand the evil and the menace of communism is that they confuse the Communist with the radicals or liberals about whom they read or know.

I underscore for all of you to remember that Communists are not against war and violence.

On the contrary, they are in every sense advocates, and have been such for generations, of what the Germans called the "taat," the deed. They believe in direct action within the labor movement, of a given country, and in worldwide war between countries. They have elevated violence and propaganda of the deed to an instrument of policy, to a way of life on a world scale. I need not tell you that there is a great literature on this subject which we Americans can ignore at our peril. If we are too lazy to learn, we will pay dearly for that ignorance. Already, failure to understand this fact has been responsible for many of the tragic mistakes made by our statesmen and politicians.

No, Communists are not pacifists. They no more believe in peace than did Hitler. When Communists oppose a war between their nation and another they do not do so because they are pacifists; they do so as a tactic. Their sole desire in such opposition is to convert the natural hostility and unhappiness of a people at war into a civil war against their own government to seize power in that nation. It is old Lenin doctrine that every international war must be turned into a civil war because, according to him, every national crisis must be turned into a revolutionary crisis; and in the revolutionary crisis a tightly organized minority of Communists can seize power whether or not a majority of the people of the nation support their action.

If you read the history of the Bolshevik Revolution in Russia, if you study the pattern by which they seized power there and if you study the pattern by which they seized power in any other country, including China and the freedom-loving land of Czechoslovakia, you will find that the story is the same. It is a story of a compact minority exploiting the anxiety of a national crisis and seizing power by the processes of deceit, infiltration and violence.

To understand the problems raised by the seemingly innocuous slogan of peaceful coexistence I will ask you to read the story of the past 36 years on how a small, compact Communist group seized and broke up political parties, powerful trade unions, vital social institutions, not only in our country, but in every civilized country in the world.

Peaceful coexistence is not a new formula or slogan launched by the Kremlin. It is another way of describing what these leaders of communism used to call the united front and the popular front, two well-known and well-defined Communist concepts.

What is the united front or popular front?

The united front is a slogan and a program wrapped into one, enunciated as a tactical maneuver by the Communists from time to time over the past 35 years, and designed and used by them to beat down their political, social, and cultural enemies. Simply stated, the united front is the technique and the method of Communist minority control. The united front or the popular front is not what you think it is when you judge it from a purely semantic standpoint.

It is not a partnership of equal parties. Now, if you understand this page of history of the united front or popular front, you will understand that the Communists mean their current slogan "Peaceful coexistence," to be a synonym to the earlier slogans.

But most people are lazy, I mean mentally lazy, in the face of a reality which they find too unpleasant or intellectually inconvenient. I say to you that in my opinion had the people of the world paid attention to Hitler's Mein Kampf and to the speeches made by him they would have seen what he was driving at, what he aimed to do. And taking at face value what Hitler said they could have saved millions of lives and incalculable losses to our civilization and the world, sustained in the bloody holocaust of World War II. But they refused to take Hitler at his face value.

I now implore you and all Americans to read what the Communists have written and said and done. I ask you to read it and study it in order to save the Western World from the holocaust of a third world war. Let us benefit by our experience in the recent past, within our own lifetime.

Returning to the question of the united front, let me say that the example of the events in the Socialist Party as well as in many labor unions—internationals, locals, joint boards and other subdivisions—show us with true clarity the true meaning and purposes of the united front as far as the Communists are concerned. Some unions, for example, which regarded themselves as impregnable, and indeed they were impregnable and strong, just as the United States regards itself as impregnable and strong—some of these unions were suddenly confronted with the problem of the united front, apparently an innocuous doctrine, but one which the Communists exploited to the nth degree. The leadership of those unions who had the intelligence to reject it were branded by the Communist propaganda apparatus as the enemy of the working class in general and the betrayers of their members in particular. Frequently, the united front was offered for the sole purpose of having it rejected so that a fire could be built by the Communist propagandists under the leaders of the union, thus seeking to undermine the faith the members had in those leaders. On the other hand, where the leadership, though not themselves Communists, was either weak or downright simple, and permitted the establishment of a united front by consent, then their organizations were soon either split, captured, or destroyed. The history of our time is strewn with the wreckage of labor unions, political parties, and other social institutions brought about through the slogans and programs of the united front.

And what applies to political parties, trade unions, and other social institutions within a community or nation, applies with equal force as far as Communist strategy and outlook is concerned to the relationships of nations. Calling it united front in one situation and peaceful coexistence in another does not change the character of the doctrine.

Another fundamental proposition I wish to lay before you in connection with a discussion of this subject is that the Communists and their leaders, unlike people in the underworld who deny law and order and truth, do not regard themselves as evil men. That proposition must be understood, too, by those who would deal with Communists. In their own eyes Communists do not believe themselves evil. The reason for this is that they believe that communism, as interpreted from time to time by their recognized fuehrers—Lenin, Stalin, Malenkov, Mao Tse-tung—contains, first of all, the conclusive answers to all the social, economic, spiritual, and cultural problems of our time. They believe, secondly, that communism possesses the key to the mystery of life itself. They hold to the view, thirdly, that other people who do not accept their beliefs are either scoundrels or fools unworthy of survival. These things they believe with the ardor and fervor of a secular religion.

It is a further part of the Communist creed that to withhold from the world their so-called correct answer to mankind's problems would be a great disservice to the human race. And they hold on the basis of their mumbo-jumbo of so-called scientific socialism and Marxism that history has decreed that communism must ultimately succeed. They are, therefore, in their own eyes, not without moral justification to do what they can to accelerate the process of history. They are ready to remove the obstacles to the inevitable, to destroy their opponents, to obliterate all those who do not accept the Communists' conclusive and final answer. And it is part of their secular religion that the enemies of the human race are those who do not accept communism, and such enemies are not entitled to be treated on equal terms with themselves. You do not have to tell enemies the truth. You can lie to them, deceive them, sell them out, doublecross them.

This evil pholosophy, which I have tried to summarize for you so briefly and which is tantamount to a deep religion, has been the justification used by many people in our land and in other lands for doing acts which otherwise are inexplicable. How else explain an Alger Hiss? How explain a Judith Coplon? How else explain many people with long backgrounds of American tradition who are ready to sell out the land of their birth—not only here but in each of the countries of the world?

My friends, there is a great deal to this Communist religion that cannot be met by jails or the atomic bomb. We must reach the hearts and minds of people to prevent them from becoming infected by this evil, and we must try to cure those who have already been subjected to the disease. I do not mean to suggest that Communist lawbreakers should not be sent to jail or that the Soviet military threat should not be met promptly with military power. I do mean to suggest that to win the cold war more is involved than mere force. It must be met with an appeal to the heart and mind, to the intellect and spirit, based on a positive faith, the faith in democracy.

Now let me come back to the point I wish to make. On the basis of our experience and knowledge of what the united front and the popular front are, and the periods of history when communism sprang from these slogans upon their opponents, we must weigh and judge the reasons why its present synonym, peaceful coexistence, is being sprung on the world today. How explain the timing of it? What is going through the minds of the men in the Kremlin at the present time?

The first answer, it seems to me, is that if the men in the Kremlin believed that we, the United States and our allies, were weak they would not propose a united front or peaceful coexistence. By launching this proposal now the men in the Kremlin must regard our position as stronger than they would like it to be.

This view is supported by the known facts. At the present time the Western World seems to be gaining the ascendency, in propaganda, in organization, and in military strength. The proposal of a united front or peaceful coexistence by the Soviet regime is obviously one further step in the drive, sometimes by threat and sometimes by propaganda, to stop NATO or its substitute, the London agreement. They are seeking to prevent at all costs the buildup of the strength of our country by the alliance with our allies. So they now propose a united front, peaceful coexistence.

Now, as I see it, there are two ways of having a united front. One is by infiltration against your will. The other is penetration by consent. Communists have been penetrating against our will the governments and the institutions of every country of the western part of the world. Whenever they want to accelerate the process, they come out with the united front. If you accept the united front, you consent to having the Communists sit down with you, having them run your political party, run your temple, your university, your faculty organization, your Nation, or the world. In such manner you engage in a united front; you coexist by consent; you abdicate in favor of Communist control.

As a matter of experience what has come with the acceptance of the united front? This question is important because at long last the American people have been aroused to the danger of treating the Communist Party as if it were a political party in the accepted sense of the term, when in fact it is nothing less than a criminal conspiracy.

For more than a quarter of a century following the Communist revolution in Russia, the American people were thoroughly asleep and totally indifferent to the Communist menace. During that quarter of a century we, within a segment of the labor movement, fought incessantly against Communist infiltration. But nobody outside in public or private life cared a hoot about that fight. They regarded it as a private fight. This indifference proved tragic to our country and for that matter to the world. What we were engaged in was a private fight all right, but it was private only in the sense that we had no support where support should have been given.

And yet the fight we have waged during those 25 years was a prelude to the wider battle that is now being waged on a national and international scale. On this much broader scale, what does the so-called peaceful-coexistence concept mean when applied on this broad level? Great confusion on this question can be seen on all sides. Some of it is studied confusion, spread by those whose political task it is to breed it among us. But in the widest area it is confusion based on ignorance and false illusion.

Typical of the innocent confusion and perhaps summarizing it was a recent letter, more than a column long, published in the New York Times of December 27, 1954, from Ralph Barton Perry, professor emeritus of philosophy at Harvard University. If you have access to it, please reread that letter in the light of our discussion tonight. Although Professor Perry sounds quite plausible in that letter, his position could not be more wrong, his reasoning more faulty, and his conclusions more unsound. And, of course, Professor Perry is a perfectly honest and high-minded man, as are undoubtedly many of those who think with him. Here is the heart of what Professor Perry says:

"Two contradictory ideologies such as communism and western democracy are not capable of being simultaneously realized: this is what is meant by their being contradictory. But two contradictory ideologies are quite capable of being simultaneously pursued; which is precisely what is now going on under the name of the cold war. All that is necessary to transform this into a condition of peaceful coexistence is to postpone the date of their realization by an explicit agreement which will diminish apprehension and substitute a peace psychology and a peace economy for the expectation of war.

"In such a condition the realization of the aspirations of the free world and those of a communistic imperialism would be incompatible as ever. But the occasion of their incompatibility would be postponed, and the triumph of one over the other would be left to persuasion and social experiment rather than to settlement by force."

How can anything be more plausible than a call to Americans to coexist with Russia so that the two ideologies—communism and Western democracy—may compete and in the long run let whichever ideology proves to be superior and more acceptable to the world survive and win out? If that were all to the issue, as Professor Perry and his kind seem to think, then western democracy, indeed, should hang its head in shame for not wishing to enter into this noble contest and test the soundness of its ideology in the marketplace of ideas. But, what are the facts?

The Soviet Union, as of this date, exercises suzerainty, sovereignty, or power over close to 800 million people in the world. It exercises complete domination over some 200 million unhappy Russians in the Soviet Union itself. It exercises dictatorial power over its satellite countries in Europe and in Asia. The concept of free competition of ideas for these nations is an idle dream, a horrible delusion. The ideology of the western democracies cannot compete with communism in this vast Communist empire. This captive part of the world is not available for such competition, which would require, as a minimum, that those people possess freedom of assembly, freedom of speech, freedom of the press, freedom of political organization, freedom of education, and freedom of trade unions. But such freedoms are completely blacked out in the Soviet empire. And any person or group who would attempt to advance the ideologies, the principles of government and the way of life of the western democracies would find himself before a firing squad or in the less merciful slave-labor camp.

Where then is this competition of ideas envisaged by Professor Perry to take place? Only in the western democracies and, of course, in our own country will that competition take place. In other words, from the very nature of our two respective civilizations, the Russian empire is protected, shielded from competition by the police state. The western democracies thus become the battlegrounds.

But even that is only half the story. The other half of the story must be gleaned from the nature of the Communist totalitarian method of competition as based on its entire 36 years of history. Our Western democracies are pretty well divided among themselves, each with its own tradition, background, and culture. And within each of those democracies are vast divisions of opinion, such as the philosophies of the Labor Party and the Conservative Party in England. In France and Italy there is even more of a division. The same is true in other countries such as Holland, Belgium, Sweden, Norway, etc. In our own country the two major parties, though presenting a common front to an enemy in time of danger, fight over domestic and even foreign policy like cats and dogs. And that does not take into account splinter political groups and parties and the vast divergence of opinion within the Democratic and Republican Parties themselves on virtually all issues.

In each of the western countries of the world the competition for ideological supremacy of communism is directed by a central authority, a general staff of the revolution, so to speak, acting with a single will, for a single purpose, which is acquisition of power. It carries on its battle for mastery not merely on the level of argument and persuasion in the sense in which we of the Western democracies understand those terms, but, as I have already pointed out, on the basis of deceit, penetration, and the big lie, resorting even to the use of sabotage and disorganization of the economic and social stability of the country. The battle is carried on at all levels but particularly by setting up a fifth column operating under the guise of a political party. By means of this manner of competing for ideological supremacy, Russia, a foreign power, may enter the political and intellectual arenas of the western democracies in the same way as if they landed an army in civilian uniform to interfere in our domestic affairs in the interest of that foreign power. For bear in mind that whether dealing with political or educational action, communism in America, France, Italy, England, or any other country, respond the same way. Their unswerving loyalty is not to the country of which they are citizens but to the Kremlin.

Thus it is a pure delusion to talk of the concept of peaceful coexistence as does Professor Perry and his kind, as if it were a proposal for a contest in the market place of ideas of two contradictory ideologies striving for supremacy under accepted rules of civilized competition whereby, as Professor Perry so naively believes, "the triumph of one over the other would be left to persuasion and social experiment rather than to settlement by force."

Under this doctrine of the meaning of peaceful coexistence there is also this great moral problem: Can the free United States of America, the last hope of the hundreds of thousands, if not millions, of people behind the Iron Curtain, agree with their oppressor the Soviet Union and supinely accept what it has done to the part of the world now dominated by it. This is the clear implication of an agreement with Communists on peaceful coexistence. Such a pact between us and the Kremlin would be the death of the hopes of these millions of oppressed peoples. Such a pact would mean suicide for us on the moral level.

What then is the alternative to an agreement with the Kremlin for peaceful coexistence? Here I again appeal to the valuable lessons of history. It would be well for our people and our statesmen to restudy the history of the 20-year period preceding our own Civil War. Three choices were then presented to the American people. One was a policy of containment—the Missouri Compromise. Another was a policy of liberation—the doctrine of the Abolitionists. The third was the policy of peaceful coexistence—the program of the party of which Stephen Douglas was the spokesman. So that you can better see the conflict between these policies, let me read to you two paragraphs from the great Lincoln-Douglas debates. Those three principles were presented with great ardor and conviction before the American people. Stephen Douglas, in one of his great speeches, presented the doctrine of peaceful coexistence, although not by that name:

"Let each state mind its own business and let its neighbors alone. * * * If we stand by that principle, then Mr. Lincoln will find that this Republic can exist forever divided into free and slave States. * * * Stand by that great principle and we can go on as we have done, increasing in wealth, in population, in power, and in all the elements of greatness, until we shall be the admiration and terror of the world. * * * until we make this continent one ocean-bound Republic."

As you can clearly see, that was the philosophy of coexistence. The Abolitionists demanding liberation, obviously did not agree. Lincoln, who stood somewhere between the ardent Abolitionists and the apostles of peaceful coexistence, answered Douglas thusly:

"You say it [slavery] is wrong; but don't you constantly * * * argue that this is not the right place to oppose it? You say it must not be opposed in the free States, because slavery is not here; it must not be opposed in the slave States, because it is there; it must not be opposed in the pulpit, because it is not religion. Then where is the place to oppose it? There is no suitable place to oppose it."

As you know, throughout his term of office, the Great Emancipator did not wish to fight the Civil War. But neither did he favor the philosophy of peaceful coexistence with slavery. He did favor containment as a policy dictated by necessity and liberation as an ideal toward which the Nation would aspire. Lincoln wanted the slaves freed, but he was willing to accept containment for the time being. However, the slave States began the Civil War by firing on Fort Sumter, forcing armed conflict upon the Nation, and frustrating the middleground policy of Lincoln. I believe we can learn a great deal from this lesson in our own history.

I know that there are some differences between the situation that existed in our country in 1861 and the situation that exists in the world today. We were one nation under a single constitution, whereas the world consists of independent, sovereign nations. Actually, however, separate countries are far more interdependent at the present time than were the States in the 1858–61 period. Supersonic airplanes, speedy ships, radio, and television have all shrunk the world into a unit more compact than the pre-Civil War United States.

Lincoln, the great statesman and dreamer, was also the practical politician par excellence. He saw the difference between a vital interest of a nation and the ideal of a nation. The same, of course, is true of individual citizens. On their level they distinguish between their vital interests and their ideals. Abraham Lincoln felt that containment was a vital interest of the United States. Extension of slavery would have meant ultimately a slave United States. Therefore, he followed the policy of containment by directing a boundary line above which slavery would not be permitted to be extended as the absolute minimum which the United States could afford as a price for union. But although he set up containment as the absolute minimum, he nevertheless held aloft for the Nation and its people the ideal of liberation, never giving moral sanction to slavery in the slave States and never giving moral sanction to slavery in the free States. He saw that issue as one to be fought on moral and educational grounds which would be the foundation of political discussions within the slave States, within the churches, within the schools, within the free States, and wherever people could directly or indirectly exercise peaceful influence and power to instill the ideal of antislavery in the entire country. And yet he would not resort to war to fight for the ideal. He was willing to allow other forces, those of education and evolution, to work out the problem. He felt that if we could only keep the peace, time would solve the slavery problem.

These precepts of Abraham Lincoln could well be applied by the statesmen of our time. There is no real division, and there ought to be none, between the Democratic policy of containment and the Republican policy of liberation. From the standpoint of the welfare and future of our country, there cannot and ought not to be that division. It is unfortunate that we do not seem to be able to work out a synthesis of the two.

In my opinion containment is the minimum policy on which our country can rely. To abandon containment is to abandon a vital interest. Our security depends upon a policy of containment. Much as we hate war, we have got to serve notice that when it comes to the extension of the slave police state of communism to the free western world, we will have to take a stand against it as affecting our own safety and security. Liberation of those peoples who are now in the Communist empire should be maintained as an ideal. We cannot afford to say to 800 million people that we have accepted and agreed to a moral philosophy under which we close our eyes to slave labor camps, to oppression, to tyranny, to the blackout of a free

life. That ideal we must always keep. Hope in the hearts of millions of people must be kept burning and fresh. Yet it must be made clear even to them that we are not ready to throw the world into a bloody horror to accomplish liberation by war.

For that reason I believe it is a mistake for some of our citizens, whether they be military men or civilians, to talk and to write about a preventive war. Even if war, as it would be waged today, did not involve the possibility of ending all life on the earth, history has taught us amply that wars do not solve anything. They certainly do not accomplish their ostensible purpose. I make that broad and comprehensive statement because within our own lifetime we have waged two tragic wars, neither of which left us much better off than before. The best you get from a war is survival. But the problems created by war are always far worse and far more complicated than the problems settled by it. For that reason and for the great moral reason that war is wrong, whether it be described as preventive war or by some other alluring adjective, war should never be made an instrument of policy of our United States.

The most eloquent and best-reasoned voice in our country against the folly of a preventive war is that of my good friend and very able editor, William R. Matthews, editor and publisher of the Arizona Daily Star. Mr. Matthews is one of the best-informed editors in our country, a hard-headed realist and a great patriot. He has lifted his pen, not only in his own paper, but in a brilliant article in the Atlantic Monthly magazine of November 1954, exposing the folly of those who directly or by implication consider the possibility of a preventive war.

The American people must understand the underlying issues of our foreign policy and the Government must at all times be responsive to the will of the people. I know the argument for preventive war and I know that some citizens, whose devotion to our country cannot be questioned, have reluctantly come to the conclusion that a preventive war may be necessary for our survival. But I think it is morally wrong and as a practical matter most dangerous to our deepest interests. We should not give the impression abroad that we are seriously contemplating preventive war as an alternative to coexistence. It is not an alternative.

In the actualities of life we do coexist with Russia and with its satellites and we will continue to coexist with them. Let the Communists show that they are capable of peaceful coexistence by observing, on the theory of peaceful coexistence, the commitments that they have already made with us. The United Nations was certainly organized and established on the theory of peaceful coexistence and yet the Soviet Union has turned the U. N. into nothing better than a sounding board from which they can carry on propaganda against the United States and its associated powers. The Kremlin has the power to demonstrate to the world that it wishes peacefully to coexist by abandoning its acts of aggression which fill the air with uneasiness and tension, as it carries on the cold war against us. And let it sheath its fangs for a sufficiently long time as to really evidence a change of heart.

Yet we cannot, even as a propaganda measure, turn down requests for conferences. We cannot turn down proposed meetings even if they are called with ulterior motives. We can, of course, prevent those meetings from being ill-timed from the standpoint of deterring a buildup of our strength or our alliances.

But when we do go to such meetings or conferences, we must make two things abundantly clear, not only to the governments but to the peoples of the world: first, that we do not have too much hope that conferences with the Kremlin will bear fruit so that we do not establish illusions of hope that agreements with the Kremlin are of any real or lasting value; secondly that we shall never deviate from our minimum program of preservation of the fundamental values of Western civilization and the Anglo-Saxon heritage of freedom. We must make it equally clear that we shall not seek to extend our civilization or our freedom by force and at the same time that we shall never agree to the moral validity of the Communist philosophy of government based on terror, lawlessness, and tyranny. We must hold aloft before the peoples of the world the assurance that our own great tradition will be adhered to and defended and will not be sacrificed by either secret or public agreements. We must assure oppressed mankind everywhere that whenever it knocks at our door seeking asylum, whenever the victims of tyranny hope to find a new home and live in peace and freedom, our door, as in the past, will remain open to them. Many of us came here through that door, as did many of our ancestors and the pioneers and founders of our Nation. And that is the way it will have to continue if we are to be true to ourselves and remain the inspiration of the world, whether the rulers of Russia like it or not. We are going to stay loyal and steadfast and live by our Constitution and Bill of Rights. Any proposal for peaceful coexistence, united front, or whatever the name, with the apostles of dictatorship, will not be allowed to undermine and destroy those foundations of freedom which make life worth living. We are not going to meet tyranny halfway.

That is the best way I can put it to you. That is the way I feel our statesmen ought to speak to Communist representatives and to the people of the world, in the name of our free society.

Human liberty has been our greatest asset ever since the Soviet power came into existence and as long as it continues to exist. We cannot afford to fritter away that asset. Once lost, it cannot be recaptured. Once we give it up, we are morally, intellectually, and socially bankrupt and we have lost weapons in the fight against communism.

You cannot accept tyranny in Czechoslovakia as morally valid and fight it in Buffalo, in Chicago, in New York, or in Los Angeles. Dictatorship is wrong, but we do not have to go to war to free the victims of dictatorship. However, we must always realize the evil of dictatorship and we must have the courage to denounce it at all times and in all places.

Here again I turn for inspiration to Abraham Lincoln's fight against slavery. To him it was wrong in the States where it existed. It was wrong in the States where it did not exist. It was wrong in the church. It was wrong in the temples. It was wrong everywhere. We can only remain true to the conception of America if we keep alive the great fire which kindled the hearts of our people for freedom. We must always keep bright the light of liberty, which has cast so much glory on our Nation.

The Rights of the Individual, and the United States Security Program

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. WATKINS. Mr. President, on April 30 I delivered an address before the Anti-Defamation League of the B'nai B'rith, at the organization's freedom forums, in New York City, on the subject the Rights of the Individual, and the United States Security Program. I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RIGHTS OF THE INDIVIDUAL AND THE UNITED STATES SECURITY PROGRAM

(Address of Hon. ARTHUR V. WATKINS before the Anti-Defamation League of the B'nai B'rith at the organization's freedom forum at the Waldorf-Astoria Hotel, New York, April 30)

Mr. Chairman, distinguished guests, ladies and gentlemen, 300 years ago 23 Jewish refugees from persecution landed from the bark *St. Charles* at New Amsterdam to seek freedom and opportunity. The 300th anniversary of that event is now being celebrated by the Jewish people of this country. In these 300 years many who shared the faith of these 23 refugees have since come to these shores.

Their gratitude for the freedom they found here has been demonstrated in the great contributions they have made to every phase of unparalleled American progress. In my opinion, however, the greatest contribution has been the Hebraic Bible and the Judeo-Christian heritage which grew out of it.

We should never forget that in the last analysis our American form of government is rooted in that same Judaic-Christian ideology.

Our Founding Fathers were strongly influenced by the noblest teachings in the Bible expressed in the great truth that man is a child of God and only in an atmosphere of liberty and freedom can he achieve the destiny a Divine Father has made possible.

In the address delivered at the American-Jewish tercentenary dinner last October, President Eisenhower said:

"Of all religious concepts, this belief in the infinite worth of the individual is beyond doubt among the most important. On this faith our forefathers constructed the framework of our Republic.

"In this faith in human dignity is the major difference between our own concept of life and that of enemies of freedom. The chief among these enemies a decade or more ago were Nazi and Fascist forces, which destroyed so many of our fellow men.

"Today the Communist conspiracy is the principal influence which derides the truth of human worth and atheistic ruthlessness seeks to destroy the free institutions established on the foundation of that truth."

The order of the B'nai B'rith has stood in the forefront of our efforts to maintain this liberty. For more than 112 years this association has provided effective leadership in this continuous battle for democracy and the enlightened concept of Americanism.

We agree with you that "it has been an around-the-clock job to be carried on 365 days a year."

It is a job you have performed so well in so many fields of human activities. I am sure all enlightened Americans are aware of your great contributions.

In these times when our basic concepts of our way of life are being threatened by an international conspiracy that seeks world domination, your efforts and your cooperation are more sorely needed than at any time since the establishment of your order.

THREAT TO OUR SECURITY

The security of this country is being threatened by the most powerful enemy ever to confront us. This threat is posed primarily by the advocates of a political and economic system that is a direct opposite of our basic beliefs. It operates through a worldwide conspiracy which has already

demonstrated strength in other countries and which reveals an ominous capacity to spread its poison through the system of democratic governments, leading to their downfall and the eventual enslavement of their people.

ATTORNEY GENERAL QUOTED

As the Attorney General has said, "The Communist conspiracy is a worldwide plot directed by scheming ruthless men who would bend the whole world to their selfish will. They cannot rest * * * until they have enslaved all the world. When repulsed in one area they try another. When one plot is exposed they hatch another. * * * They are willing to devote their lives to destroy in this country the very freedoms which allow them to speak and write and act."

I fully realize that loyal Americans cannot effectively support the Government's program to combat the effort to Communist infiltration unless they have an understanding of both the problem and the means by which we see to meet it.

ATTACK ON SECURITY PROGRAM

Today we are in the midst of a widespread attack on our security program, which could be dismissed lightly if it were confined to those sympathetic to the Communist cause. We can expect attacks on any effective program we might devise.

But when this attack is made by well-intentioned people who abhor the principles of communism as earnestly as this administration does, then it becomes necessary to set the record straight.

I do not believe there is one among you who would not agree that a security program is a vital necessity if our Government is to survive.

No one denies the need for removing from the Government or refusing a Government position to members or potential members of a fifth column.

I believe all of us would agree that it is the duty of the Government to remove from its ranks those whose personal habits or activities make them sources of vital information to our enemies.

It would appear, therefore, that the criticism which has been leveled recently at the Government's security program is not directed toward the objectives of the program but toward the methods used to put them into execution.

Under pressure of the 80th Congress, which had before it a wealth of testimony regarding Communist methods of infiltration and subversion, there was established in 1947 a loyalty program for Federal employees.

That program was so loaded down with technicalities that it soon became apparent it could not prove effectual. It was necessary under this program to prove present disloyalty to the United States.

WEAKNESS OF 1947 PROGRAM

This means that, under that program, a man might be found completely loyal when a week or a month earlier he had been an admitted Communist. Again, loyalty being the principal test of whether or not he was a good security risk, the question as to whether he was a man of good judgment or was one who could not, because of his personal habits or for other reasons, be trusted with vital confidential matters, would not be given the consideration such matters deserved.

Consequently, even before Inauguration Day, President Eisenhower charged his new Attorney General with the task of drafting a new program which would provide for the removal of security risks from Government.

This included not only those of doubtful loyalty, but those who would be indiscreet under the influence of liquor or whose personal habits would render them liable to blackmail or pressure.

Other factors determining whether an employee shall be hired or shall continue in Government service include membership in Fascist or extreme rightwing organizations such as the Silver Shirts and the Ku Klux Klan.

No claim is made that every person discharged from Government employment under the Eisenhower security program is a Communist or a Communist sympathizer. And there should not be a public conclusion that dismissal implies that they are Communists or even Communist sympathizers.

In establishing this security program, the administration did not neglect the traditional concepts of our democracy and the rights of individuals.

The administration realized fully that the security program must not be used to create friction between minority groups or to provide an opportunity for action based on prejudice.

We must particularly guard against the inference of prejudice in any security case, for if the breath of prejudice is ever so lightly blown on any facet of any security case, then not only is that case immeasurably weakened but the whole program is in danger of losing the faith and confidence of the people. In fact, democracy itself is weakened.

Let no one think for a moment that this administration is not fighting with all its strength the insiduous attempt to make the word "Jew" synonymous with the word "Communist."

The Federal employee security program is based on the premise fundamental in our law that Government employment is a privilege and not a right. That principle is an implied part of every instrument of appointment.

Until 1912, any Federal employee could be summarily dismissed without cause or hearing.

Since that time certain procedural safeguards for the dismissal of employees have been provided by statute.

But the present Federal employee security program actually affords our Government worker more rights and opportunities for notice and hearing than has ever been known in our civil-service practice heretofore. This is something the critics of the program do not tell you about. It has been a sound program and has worked well.

There have been a few cases—and a very few out of the tens of thousands of cases processed in this program—which have received widespread publicity, but I think you will find in examining any one of these cases that if an error was committed it was administrative and not in the program itself.

Any program, it must be remembered, is manned by human beings and subject therefore to human frailty.

To reduce these possible human errors to the barest minimum the Federal employee-security program is and will continue to be under constant review by the Government and, as you know, proposals have already been submitted to the President which are designed to keep to an absolute minimum any errors in administration.

Every effort is made to protect the Federal employee's rights. He has a written statement of charges and an opportunity for a hearing, at which time he is given every chance to refute the charges.

He has at his disposal the advisory opinion of a security hearing board composed of men of high integrity and intelligence who are not employees in his own department or agency and thus under no pressure or fear of disciplinary action.

Finally, he has the right of appeal to the head of his department or agency who under this program has the sole responsibility for making a final determination.

Decisions are not based on irresponsible statements from snoopers or prejudiced individuals and wherever possible the employee does have the opportunity to face any person who has furnished derogatory information and to subject him to the most searching cross-examination.

Despite all the protections the security program provides for the Government employee, the Communists have centered their attacks on the refusal of the Government to disclose its confidential informants.

It is known from the prosecution of Smith Act cases and espionage cases that the Communists always raise this issue. They know that to require the disclosure of confidential information or informants would either make it impossible for the Government to get rid of security risks or would destroy the infiltration of the Communist Party by the FBI.

Nothing would serve the interests of both the extreme left and extreme right better than the weakening or destruction of the FBI's informant system. It is the great bulwark of protection against the fifth-column activities of both the right and the left.

The effectiveness of the program can be measured by the outcries of the Communists. It must be good, because they are screaming louder than ever.

When you remember that it took only one spy to turn over the most important secrets of the atom bomb, and when you realize that atomic weapons can be carried or brought into this country secretly and by stealth, you appreciate how thin is the thread upon which the security of the Nation rests. You realize how vital it is to provide the strongest possible tests to protect our country against the very real threat of espionage, sabotage, and subversion with which we are faced in this era of cold war.

It is for this reason that I believe it is so necessary for the public to have a real understanding of the Government's security program.

The Communist attack against the security program also centers upon the use of informants as witnesses.

Those critics of the security program who say the use of these witnesses is a novel practice and a sharp departure from the American tradition of law just don't know what they are talking about. Such testimony has been recognized by the courts throughout English common law and American constitutional history. The ancient informer suit has in a sense survived even to the present day, and is reflected in the fact that certain Federal statutes contain provisions for awarding informers a share of fines imposed. Judge Learned Hand's opinion upholding the first Smith Act conspiracy case, the celebrated Dennis case, tried before Judge Medina in 1949, contained this statement by Judge Hand:

"Courts have countenanced the use of informers from time immemorial; in cases of conspiracy or in other cases when the crime consists of preparing for another crime it is usually necessary to rely upon informers or accomplices because the criminals will almost certainly proceed covertly."

Now let us examine for a moment some of the former Government witnesses who have been subjected to the most severe attack. Most of the former Communists who have appeared as expert witnesses have at one time or another held party positions. Each of them has spent long years in the party being trained in the treacherous and deadly principles of Marxism-Leninism. Some of them were sent to Moscow to attend the Lenin school for specialized training. Some have served as official Communist Party instructors at training schools here in the United States.

Now, this you should know: All Government witnesses are subjected to the most intensive and careful interrogation in preparation for their testimony.

Government attorneys spend literally weeks with them reviewing their past activity and, most important, every effort is made to corroborate each item of testimony.

In each instance, their testimony has been subjected to extended cross-examination by able counsel. This cross-examination itself covers long periods, not only days but weeks, and the testimony has been weighed by numerous American juries and found to be credible.

I cannot emphasize too much the secrecy under which the Communists operate. The job of ferreting them out, of exposing them for what they are, and of prosecuting them successfully is made extremely difficult.

They resort to disguises, to the use of aliases, to secret meetings, and fictitious passports. They use codes to communicate in secret and have a security program of their own which is extremely harsh and strict.

As you know, the FBI has undercover agents in the Communist Party to report to the Government on Communist activities.

Incidentally, so the current story goes, the Communist leaders are so red-faced over FBI activities that they now open their meetings with this greeting: Welcome comrades and all FBI agents present.

Many of these persons who have infiltrated the Communist Party have spent and are spending long bitter years masquerading as Communists. The experiences of these patriotic citizens have in some measure been revealed through testimony.

They have suffered all types of personal indignities from fellow citizens because of their presumed Communist activities. One informant, for example, had to discontinue attending church because of the antagonism shown him because of what were believed to be his Communist activities.

In almost every instance these witnesses have been publicly acclaimed for the service they have performed.

Because of the tactics employed by the Communist Party in its effort to smear Government witnesses, a great deal of courage is required by a former Communist or confidential informant who testified against Communists.

Any person who is familiar with the workings and methods of the party is fully aware that if he ever testifies against Communists he will be branded in the Communist press as a stool pigeon and a spy.

He has heard the party officials on innumerable occasions refer to this country as a "Fascist dictatorship," to Government officials and prosecutors as "tools of the imperialist warmongers," to the FBI as the "Gestapo police," and to religion as the "opium of the people."

We cannot lose sight of the fact, however, that the Communists are continuing their fight against the use of informants.

Their attack on Government witnesses is devious but unrelenting.

One such witness, Harvey Matusow, has achieved considerable notoriety in the past few months. He now claims he lied in his testimony to the Government.

Yet, before being used as a witness, he underwent exactly the same procedure as I have described, and as of this day, despite his protestations, there is no evidence that Matusow lied regarding those matters in which he testified for the Government as a witness. In an action before the Subversive Activities Control Board to establish that a certain organization was a Communist-front organization, his testimony was amply corroborated by independent evidence.

In the case where he figured most prominently—the Jencks case—the Federal court upon a hearing of the matter was convinced that his testimony was the truth and in sentencing him for contempt made this statement: "It is my firm conviction moreover that this hearing was deliberately brought on for the purpose of attacking the judgment of this court, attacking the Federal Bureau of Investigation and the Justice Department, in a carefully thought-out scheme to generally discredit by these means the testimony of undercover agents and former Communist Party members who give evidence against the Communist Party of the United States and its adherents."

As a member of the Internal Security Committee of the Senate, I participated in a hearing in Salt Lake City, Utah, which had for its purpose the investigation of any possible infiltration of Communists into the International Mine, Mill, and Smelter Union.

Harvey Matusow was a witness at that hearing.

His statement before that committee was to the effect that he knew Mr. Jencks, one of the high officials in the International Mine, Mill, and Smelter Union; that sometime previously he had met Mr. Jencks at a ranch in New Mexico, which the witness observed was owned by a person who was a Communist and where secret Communist meetings were held. He stated that a conference at this ranch was attended by Mr. Jencks and Matusow and others. The witness said Jencks told those present that strikes were to be ordered in the copper mines in the West, the effect of which would be to slow down the United States war effort in Korea.

I was impressed that Matusow was telling the truth. There was corroborative evidence in the record supporting his story. Mr. Jencks was given the opportunity to affirm or deny the Matusow testimony. He refused to do so, claiming protection of the fifth amendment. There was no indication that Matusow was not telling the truth. Later I read Matusow's book, False Witness. I also heard him testify recently before the Internal Security Committee of the Senate. There was no repudiation so far as I recall of his testimony that he met Jencks at the New Mexico ranch; that he had a conference with him and others; that a strike was called in the Kennecott open cut mine in Utah and other places in the West; that the International Mine, Mill, and Smelter organization was the union which represented the copper miners in this strike.

The only thing, as I recall, which was denied was the statement that Jencks had discussed a plan for calling a strike in the copper mines to slow down the war effort in Korea. So I feel that I can add my personal testimony to the statement made by the Federal district judge of Texas that Matusow's testimony in the Jencks' case, as well as in the hearing at Salt Lake City, was true.

Much has been made of the Matusow change of position. I submit in all fairness that, considering all the circumstances, the Government and the committee of the Senate were not negligent in these instances.

I am firmly convinced that his change of position, his denial of his previous testimony came about as the result of inducements held out to Matusow which would be to his financial advantage. Just who brought about this change and the circumstances surrounding it are matters still under investigation.

I cannot tell you a surer way to do irreparable harm to our Communist prosecutions and to our security program as a whole than to be lulled into aiding the campaign of the Communists, their adherents, and the world assortment of leftwingers who fawn upon them. Never forget that the security program is designed to protect the Government—your Government, and that means you—against the boring-from-within tactics of the Communists and the extreme right elements. We must prevent them from infiltrating into the ranks of Government. You would not want these same kind of people in your own business.

And I would add that in cases where there is a reasonable doubt that the employee under investigation is a safe security risk, then that doubt should be resolved in favor of the Government and the people of the United States. That person would then be removed from the ranks. It will be in his own interest as well as all of the people in the United States. We cannot in these tragic and dangerous times gamble with the liberties and lives of the people of this country including the life of a citizen who may be determined to be a security risk.

I say particularly to this audience to avoid the whispered campaign of the pro-Communist and the pro-Fascist that the security program is directed against any certain minority or group. That is a typical Communist tactic, to throw dust in the eyes of its opponents and to obfuscate the issue by raising a false and collateral one. When you hear such whisperings, remember that of all the great powers in the world today it is the Soviet Union that is being charged in our newspapers with anti-Semitism and of all the countries from which Jews wish to emigrate to Israel it is the Soviet Union and its satellites which create the greatest and most rigid barrier.

In the book of Passover or Haggadah, which is read at the Seder services, your sages say, "In every age, each Jew should feel as if he himself was emancipated from Egypt." This is good counsel to all people at all times, for freedom can never be taken for granted. Ten years ago the Nazi threat was terminated through blood, sweat, and tears. Today freedom is threatened by the Soviet conspiracy and, as the Israelites of old struggled to be unshackled from the chains of slavery of a Pharaoh, so must all freedom-loving men today do everything they can to prevent the tentacles of communism from shackling each and every one of us to everlasting slavery. In the battle we are waging today we must strive with all our might to halt the inroads of tyranny and dictatorship. In the spirit of the Passover holiday we must resolve to sacrifice to make men free to protect the dignity of man, to enable all men to live in peace and security.

At the same time we must have faith and confidence in our ability as freemen to achieve the peace and security which we all seek. We must have full confidence in the ability of a democracy such as ours to solve its difficult problems and to meet, as it has before, the challenge to its continuance. B'nai B'rith is a vehicle which enables man to join in the battle for democracy being waged today. Your organization can and does provide the tools by which the sinews of this battle can be further strengthened and utilized. I take this opportunity, then, to congratulate you on your past achievements, to wish you success in your present deliberations, and to extend to you my sincerest hopes for all success in your future patriotic endeavors.

A Salute to REA on Its Twentieth Anniversary

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

A SALUTE TO REA ON ITS TWENTIETH ANNIVERSARY

PRESIDENT ROOSEVELT CREATES REA

One of the momentous acts of our great and distinguished former President Franklin Delano Roosevelt was the creation of the Rural Electrification Administration in Executive Order 7037 on May 11, 1935. Now,

neatly ensconced in a bound volume of Executive orders of 20 years ago, it turns out to be one of the greatest achievements of his distinguished administration.

It is of historic interest to note that this Executive order was issued during the dark depression days of 1935, not under a regular act of Congress, but pursuant to the Emergency Relief Appropriation Act of 1935, which was approved on April 8, 1935, under Public Resolution No. 11 of the 74th Congress. Note how closely the creation of the REA by Executive order followed the passage of the Emergency Relief Act, namely by 1 month and 3 days.

Here are the momentous words of President Roosevelt in that now famous Executive order:

"I hereby establish an agency within the Government to be known as the Rural Electrification Administration, the head thereof to be known as the Administrator."

In the following pithy language of this Executive order President Roosevelt gave the REA broad power to really do a job whether it was the generation, transmission, or the distribution of that electric energy:

"I hereby prescribe the following duties and functions of the said Rural Electrification Administration to be exercised and performed by the Administrator * * *.

"To initiate, formulate, administer, and supervise a program of approved projects with respect to the generation, transmission, and distribution of electric energy in rural areas."

What a contrast this is with the so-called partnership policies today which shy away completely from having the Government aid in establishing standards and providing assistance that permits the people back home to really do a job.

Likewise, it is of historic interest to note that this famous order was basically concerned with providing jobs for the vast army of unemployed at that time, as the following language of the Executive order discloses in providing first preference for those on relief:

"*Provided*, That insofar as practicable, the persons employed under the outlines of this Executive order should be selected from those receiving relief."

As a closing note to this historic Executive order which has done so much to start rural America on its way to equality with the comforts and the opportunities and the good life of our city neighbors, a pitiful sum was made available to launch this now famous program on its way, for the Executive order only allocated $75,000 for administrative expenses:

"For the administrative expenses of the Rural Electrification Administration there is hereby allotted to the administration from the appropriation made by the Emergency Relief Appropriation Act of 1935 the sum of $75,000. Allocations will be made hereafter for authorized projects."

So, Mr. Speaker, I believe it is fitting that we now pause and pay the highest personal tribute to this great American, this distinguished statesman, who by this famous Executive Order 7037, made REA possible.

THE INSPIRING LEADERSHIP OF SPEAKER SAMUEL RAYBURN

Mr. Speaker, after paying this well-earned historic tribute to our former great President, Franklin Delano Roosevelt, let us recognize the obvious fact that it is one thing for the President to draft an Executive order, and it is quite another for the Congress to pass legislation which will make such temporary actions possible.

It is, therefore, proper that we now turn to our distinguished Speaker of the House of Representatives, the Honorable SAMUEL RAYBURN, and pay to him the just tribute that he personally and historically has so well earned in the establishment of this national vital organization, the REA.

After the President created the REA by Executive Order 7037 on May 11, 1935, the long, difficult job remained of providing suitable legislation in Congress. Those of you who are personally familiar with this congressional area know the difficulties under which such legislation was created. Far from being an easy task, it challenged the finest leadership of the late, distinguished Senator George W. Norris, of Nebraska, and our present Speaker of the House, the Honorable SAMUEL RAYBURN. It is a long story. Abbreviated time only permits us to condense into a few short conclusions.

Nevertheless, under the distinguished leadership of our Speaker, the Honorable SAMUEL RAYBURN, on May 20, 1936, a temporary emergency relief program sponsored by REA was made into a permanent, independent agency of the Government known as the Rural Electrification Administration. It was Speaker RAYBURN'S vigorous leadership that made possible the passage of the Rural Electrification Act of 1936, approved May 20, 1936.

Mr. Speaker, in my humble opinion, long after the dust has settled on many temporary activities of Congress which caused much shouting and tumult at the time, your splendid leadership in helping to create a permanent REA will be remembered as long as people live in America. I proposed that the Members of this body pay a rising tribute to you on this memorable occasion.

WHAT THE REA HAS DONE

Mr. Speaker, volumes and volumes of statistics have been compiled upon the accomplishments of REA. I am afraid if I presented them to this body only in part, that after I had proceeded for only a few moments all of us would have rural electrification statistics indigestion. So I propose to give you only the highlights—a few things that show what a tremendous program the REA is and how vast and significant are those accomplishments.

Take, first of all, the basic question of how much has REA really accomplished in electrifying rural America. Mr. Speaker, let us recall that back in 1934, before the REA was established, less than 11 percent of all the farms in the United States had central station electric service. Keep that figure in mind—11 percent in 1934.

And what is the picture today? Mr. Speaker, I am happy to tell you that this tiny figure of 11 percent has now climbed to 94 percent. Let me repeat that figure—94 percent.

I believe everyone will agree that an increase in rural electrification from less than 11 percent to 94 percent is a tremendous accomplishment. How was this remarkable accomplishment made possible? Very simply. The people received the genuine aid of your Federal Government through a real partnership, not a phony one. They were given the necessary technical and financial aid to help them do the job, and largely through independent private corporations of their own choosing. As a result, the costs were brought down to a price that people could afford to pay.

In the olden days, retail rates of 10, 12, and 15 cents and more a kilowatt-hour were not uncommon. And what do the REA users pay for their electricity today? Mr. Speaker, you will be interested in knowing, that in 1954, the average rates paid by REA consumers of electricity was around 3 cents a kilowatt hour. This is getting electricity down to a price that the common folks use it in large quantities.

As a result, the amount of energy purchased by the REA consumers increased, from some 402 million kilowatt-hours in 1940, to over 14 billion kilowatt-hours today.

Just look how the membership of this splendid organization of private REA borrowers has grown. Back in 1935 they had some 6,000 miles of lines which served about 26,000 persons. Now, they have over 1,365,000 miles of line serving over 4,250,000. At an average of 5 to the farmer consumer, this means that some 20 million persons in rural America are receiving the blessings of this marvelous program.

Our time is short, Mr. Speaker, and I merely want to close with these salient remarks. The REA has become a vital part of the bones and sinews of rural America, which means all of America. It is doing a magnificient job. We, in Congress, who are its friends, are determined that this splendid job shall continue, and we will not tolerate any political interference with its administration which seeks to curb the forward march of rural electrification in America under the brilliant banner of the REA cooperatives.

Waste in Surplus Property

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the April 19 edition of the New York Herald Tribune entitled, "Waste in Surplus Property."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of April 19, 1955]

WASTE IN SURPLUS PROPERTY

The Hoover Commission report on surplus property is unanimous. None of the members had reservations or made dissents to any of the recommendations. This may stem in part from the fact that in dealing with the problem of Government property in excess of requirements, the Commission made virtually no policy proposals; its suggestions were directed, rather, at improving the administration of procurement and disposal. However, these recommendations are of very great importance. As the Commission points out, an additional cent received on each dollar cost of property sold would yield an additional $20 million yearly.

This saving could come merely from improvements in selling surplus stocks. The Commission recommends a number of such improvements—better advertising methods, for example; provisions for adequate display of samples and for sufficient time to allow inspection; consultation with civilian merchandising experts.

Much larger economies would result, the Commission asserts, "from more efficient property management throughout the Government and particularly within the Military Establishment, which accounts for about 99 percent of all goods bought and stocked by the Government." To a very large extent, such management requires greater care in stockpiling and purchasing for consumption. The accumulation of 128 years' supply of gear drives is an extreme instance of the need for such qualities.

The United States will be disposing of surplus property at the rate of about $2 billion a year for several years to come. The first requirement is to insure that it is really surplus—that no Government agency will be

buying more of the same goods in ignorance of what is on hand. The second is to make certain that the Government can sell its surplus in the best market. The third is to guard against the future acquisition of large, useless stocks which in their turn must be given away for nothing or sold at a fraction of their cost. For this whole process, essential to the economical functioning of Government, the Hoover Commission has given sound and detailed blueprints.

Behind the Iron Curtain—How the Russians Look at Religion

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. PAYNE. Mr. President, in the past few weeks I have inserted in the Appendix of the RECORD several articles written by May Craig, Washington columnist for the Guy Gannett newspapers in Maine, which were written during May's recent trip to Russia. These articles have given us a much clearer picture of life behind the Iron Curtain. Usually visitors to the Soviet countries see little concrete evidence of anti-Americanism on their carefully guided tours. May visited a Museum of Religions in Leningrad which she has described in a column entitled "How the Russians Look at Religion," which was printed in the Portland (Maine) Press Herald on May 4, 1955.

I ask unanimous consent that this column, which describes the violent propaganda attack against the United States and the Catholic Church in the Museum of Religions in Leningrad, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald of May 4, 1955]

BEHIND THE IRON CURTAIN—HOW THE RUSSIANS LOOK AT RELIGION

(By May Craig)

LENINGRAD.—Communism has always condemned religion and tried to destroy it, short of absolute forceful abolition. Communism tolerates no individualism, no other allegiance, no deviation in thought, therefore religion must be destroyed. While some churches are open for services (including a Baptist church in Moscow), many of them have been turned into museums and libraries.

In Leningrad the ancient and handsome Cathedral of Notre Dame of Kazan has been turned into a Museum of Religions. A guide for the museum, interpreted by a very poor interpreter, said that the aim of the museum is to show the development of various religions, as a scientific study, the evolution of religions. Only two were open yet, Christianity and the Greek, they said; the others are under construction, and we saw, behind curtains, the scaffoldings. Most attention was paid to Christianity; the Greek exhibit consisted mostly of plaster reproductions of famous Greek gods and a colored plaster model of the Oracle of Adelphi.

There was a sketchy Judaic collection, laying foundation for the Christian exhibit which was obviously the major effort. The guide said that exhibits of Islam, Buddhism and others were in preparation. The Christian exhibit was extensive, beginning with the doctrine of the Virgin birth. There were charts explaining the doctrine of the Trinity. Nature of the exhibit was indicated in a large painting showing a hideous, slave-driving fat man in top hat and fine clothes, obviously the "millionaire landlord" type, leaning over a large cross and wielding a whip on the bending, tortured bodies of black, brown and yellow people, while in the foreground, Jesus is departing. This the guide said, illustrates Christianity and colonial policies.

The interpreter seemed so halting in her translation that I got the idea that she was trying to soften some of the words spoken by the guide, the printed captions on statutes and pictures, though her English was not good at any time.

The exhibit included a running story of Christianity in its most unlovely aspects, the torture of heretics, the fat monk and the starving peasant, the grinning plotting Jesuit, the persecution of scientists—Bruno at the stake for maintaining that stars and earth rotate. There were fearsome presentations of cult of witches and Satanism, and a chamber of an alchemist, the scientists of the Middle Ages who were banned for research.

There was the massacre of St. Bartholomew when French Catholics slaughtered Protestants. There were horrific presentations of the inquisition, and the biggest single piece is a torture chamber, with priests on a dias presiding, the torturer producing his brazier, instruments of torture all around and a dying victim on a rack. This is a large exhibit in a glass case.

There were representations of the crusades, "force used to kill ideas." The exhibits led up to modern times. The index of forbidden books by the Vatican; cartoons ridiculing church and saints. All the way through the plain purpose was to show that there are many religions, all claiming to be the right one. Since all cannot be, the implication is that none has any validity. Once the guide used the words "Christian mythology," thus lumping them all together. All through the exhibit, religion was made a welter of ridiculous fairy tale, enforced by torture and suppression of thought. This inescapably led to the Communist doctrine of atheism, the destruction of religious belief, which leaves the way open for communism to become the only religion, to reign supreme, the state on the altar.

Virulent attack was made on the Pope, in cartoon and poster. Then the exhibit got to the United States, a prime objective. A hand and arm labeled U. S. A. was shown pouring coins into the head-mitre of the Pope, and out of the Pope's mouth comes the word "Anathema." The attack on the Catholic Church and the United States together demonstrated the fear of the strong resistance of catholicism to communism; the fear of the power of freedom as embodied in the United States form of government. The Catholic Church and the United States must be destroyed—that is the aim. The museum was full of Russians, looking at the exhibits—this is a powerful piece of propaganda, the stronger because there is truth in the sins of Christianity, from the burning at the stake by the Catholics to the witches who were burned in Salem; propaganda against the democracy of the United States. In one place there were large bronze statues of young men kicking over a bronze block labeled U. S. A.—this was part of an exhibit showing young Russia marching toward freedom and light and education through revolution and communism. This is a very clever effort to destroy religion and get faster hold on the people of this country. It should not be underestimated.

Nor had they forgotten propaganda against lynching of Negroes in the United States, with some genuine photographs of real lynchings that I had seen in our own newspapers at home. And pictures of Ku Klux Klan. They exploit every incident that can be used to our disadvantage—because the United States is presented as the prime enemy among nations.

Address by Hon. Lyndon B. Johnson, of Texas, Before Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished majority leader [Mr. JOHNSON of Texas] before the 64th Continental Congress of the Daughters of the American Revolution, in Washington, D. C., on April 21, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. LYNDON B. JOHNSON, OF TEXAS, BEFORE THE CONTINENTAL CONGRESS OF THE DAUGHTERS OF THE AMERICAN REVOLUTION, CONSTITUTION HALL, WASHINGTON, D. C., APRIL 21, 1955

To me, as a Texan, there is a particular significance in addressing this great body on this historic anniversary.

It was just 119 years ago that a small group of Texans stormed the camp of Santa Anna at the junction of the San Jacinto River and Buffalo Bayou.

By ordinary standards, it was a desperate gamble. The Texans were outnumbered 2 to 1. They were torn and haggard from an unbroken string of defeats—San Antonio, Agua Dulce, Goliad, Refugio, and Victoria.

Santa Anna was in a position that he thought impregnable. His troops were flushed with an unbroken string of victories and had been strengthened by the addition of 400 battle-hardened soldiers under General Cos.

So confident was he that his afternoon siesta was well under way when the charge began. His slumbers were suddenly interrupted by 800 Texans who burst into the camp singing "Will You Come to the Bower" and shouting the immortal battle cry: "Remember the Alamo; remember Goliad."

Scarcely had Santa Anna blinked the sleep from his eyes when the battle was over. His entire force—consisting of 1,600 men—had been killed, captured, or wounded. The successful campaign of a tyrant had turned suddenly into a triumph for liberty.

Once again free men, united under a great leader, Sam Houston, had proved the superiority of the ideas under which we all live. The immediate result was freedom—freedom and independence for the Republic of Texas.

In my native State the memory of San Jacinto will always remain as fresh and as real as the eternal promise of spring. It will hold forth forever the Divine pledge of victory for those whose hearts are courageous and who march under the banner of liberty.

But in a large sense the meaning of San Jacinto is not confined within the borders of Texas. It is true that it led to independence and the Republic. But beyond the

Republic—just across the waters of the Sabine River—was the United States of America, beckoning with the hand of brotherhood.

The Texans who fought at San Jacinto were Americans—led by one of the giants of American history. Sam Houston was a man who never faltered in his allegiance to the ideals of Valley Forge and Bunker Hill. He died as he had lived all his life—dedicated to the spirit of the Constitution.

It is for these reasons that I address you tonight with a heightened sense of the solemnity of this occasion.

I have never shared the feeling of those who look upon history with scorn. I have never agreed with the contention that the symbols of bygone days have no value in the present.

A people who ignore the past will never survive to meet the future. A people who are contemptuous of their ancestors can never inspire their posterity.

History demonstrates one fact conclusively. It is that every nation which has lost its sense of patriotism—its sense of historical continuity—has perished. Should we lose those values our country would be no exception.

For the tremendous work you have done in preserving the ideals of America, my congratulations. We are stronger because you—the Daughters of the American Revolution—have labored to keep before us the inspiring deeds of our great men.

Paging through your manual on the objectives of the DAR, I was greatly struck by one phrase in particular. It described the work of your historical department as "preservation of the deeds of the past, holding fast to ideals which make the present, and helping to build a future America."

I was struck by that phrase because it describes so perfectly the major task which should be before all Americans. The past has led to the present and, unless we understand both and act upon the understanding, there will be no future.

We are living in a time that is usually called the atomic age.

In reality the phrase is used loosely. Thus far the overwhelming mass of our knowledge of nuclear physics has been used solely for weapons of destruction. The atom is still a long way from active participation in our peacetime pursuits.

Nevertheless, it has become a key fact in our foreign relations and in our national defense.

The atom dominates our preparedness program. It is a compelling reality at every international conference. It dominates the thinking of our people beyond any other event of the 20th century.

One of the outstanding features of the "cold war" has been the atomic race between the East and the West. Our top experts assure us that we are ahead in that race—not only in the development of the atom but in the even more dreaded hydrogen weapons.

There is every reason to believe that those assurances are correct.

However, we confront another danger—one which I would like to discuss with you tonight. It is that we—the people of the United States— can become too emotionally dependent on atomic weapons and leave ourselves vulnerable on other fronts.

I am not raising this point in any spirit of contention. I am not arguing that our defense planners have missed some boat. I am not claiming that a wrong turns has been taken which will lead us down the road to disaster.

My sole objective is to bring before your organization—which has never faltered from its devotion to national defense—a point which has not had sufficient public discussion.

In the years that lie ahead, our Nation will devote a large—possibly an increasing—share of its national budget to atomic and hydrogen weapons. We can not escape this grim necessity. It flows from the very nature of the modern world.

We will stockpile every type of nuclear weapon. We will develop every type of atomic carrier that can bring those weapons to a potential enemy. We will remain in a position of atomic readiness—on the alert to retaliate against aggression.

But it is possible to foresee a situation in which we could go to war without unleashing the atomic power that is at our command. It is possible to foresee a situation in which it would be against our interests to conduct hostilities on the atomic level.

Should that happen, the impact upon our people would be deeply disturbing. They would be unprepared for the realities and an unprepared people unite against an enemy only with difficulty.

The difficulty arises from a simple fact that is too often overlooked. It is that an atomic weapon is very much like a sledge hammer—a mighty poor instrument for swatting flies in a greenhouse.

It cannot be used to defend our troops when they are fighting at close quarters. It cannot be used effectively against an enemy whose methods of organization are primitive and who depends little upon massed centers of supply.

The strides in the development of atomic weapons have been enormous. Every stride has meant a solid building block in the wall of our security. But we would be sadly—tragically—mistaken if we thought that the atomic wall alone was enough.

There is no patented medicine that will assure our survival—not even if it bears an atomic label. Nothing could lead to our destruction more quickly than to delude ourselves into believing that there is a cheap, easy solution to our preparedness problem.

There are far too many instances in the history of the world where reliance upon one type of strength has led to no strength at all.

Before World War II, the French placed their reliance in the infantry and Maginot line. Both quickly crumbled before the combined onslaught of the Nazi Panzer divisions and Stuka dive bombers.

The Nazis, in turn, had placed far too much reliance upon tactical air weapons. In the final showdown, they were incapable of defending Germany from the strategic bombing developed by the Allied Powers.

"Gadget thinking" in military matters has led to the destruction of many great nations. We must not make the same mistake.

We must realize that the ground forces still occupy a fundamental position in modern defense. We must realize that the Navy is still essential to modern warfare.

All of the services must be modernized and streamlined. But that does not mean that they should be weakened in the hope that some miracle weapon will compensate for the loss of strength.

We are, of course, fully justified in using atomic weapons where they will save American lives and shorten the fighting. But there are too many situations in which weapons of mass destruction will not achieve those goals.

There is also the frightening prospect that some day these weapons will become capable of worldwide devastation. They may become so powerful that they cannot be used under any circumstances.

On that day, atomic weapons could be another Maginot line—costly but useless. The Nation that had maintained defenses we now consider conventional would be triumphant. The Nation that had placed its trust solely in atomic weapons would bow to an alien yoke.

This is not an appeal to abandon atomic weapons—far from it! We must push ahead with all possible research into that field as though our lives depended upon it—for indeed they do.

This is a plea for balance—for public understanding of the tasks that lie before us as Americans. Without that balance, we will not be truly strong as a Nation.

We cannot build our defensive strength solely upon the atom any more than we can build our diplomatic strength solely upon the atom. I do not believe that our military leaders have any illusions upon that score. But there will be little strength of any kind unless our people as a whole are informed of the facts.

No nation can be any stronger than the will of its people. Since ours is a democratic form of Government, the will can exist only when it is informed.

We are entering a stage of this Congress where the questions I am discussing today will assume paramount importance.

The appropriation bills that determine the size of our Army, Navy, and Air Force are grinding through the committees. Manpower legislation cannot much longer be deferred. Money for our atomic programs will become a "must" by the end of this fiscal year—only a little more than 2 months away.

These are not routine questions. They involve two fundamental issues that are dear to the hearts of all Americans—the survival of our institutions and the defeat of communism.

I know of no organization more dedicated to those goals than the Daughters of the American Revolution. I know of no group which has followed its course more faithfully—refusing to be turned aside by any opposition, no matter how strong and no matter how vehement.

You are meeting in our Nation's Capital where some of the great decisions of our history are being made. Those decisions will determine the shape of our future—and whether we have a future.

Soon, you will be returning to your homes and your communities. You will be back among your friends and neighbors—among the people who look to you as individuals for leadership.

Your words will carry great weight because in a unique sense you are the custodians of the Nation's great traditions.

I know your guidance will follow the spirit of the Founders of our Republic. I know you will walk in the footsteps of those great men who combined prudent deliberation with bold action; patriotic courage with grim determination.

Our country is threatened as it has not been since its foundation. The forces of communism are on the march. They have swallowed up already hundreds of millions of the world's people. They are reaching out greedily for more slaves.

The ultimate objective of the Communist assault on liberty is the United States. The Kremlin will not feel secure as long as our free institutions stand.

Our people have the will and the courage to safeguard our liberties from the Communist attack. They need only the unity that comes from informed guidance and frank discussion of the problems before us.

With that understanding, they will bear any burden, no matter how heavy, and freedom and the way of life for which our ancestors fought will triumph on this earth.

Local Financing and Control of School Problems

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "School Problems Best Met by Local Financing, Control," published in the Ohio State Journal of April 6, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCHOOL PROBLEMS BEST MET BY LOCAL FINANCING, CONTROL

The quality of the public schools of the United States is suffering because of overcrowded classrooms, financial neglect, and poor teacher morale, according to a voluminous report compiled by a group of educators and presented at a regional convention of the American Association of School Administrators in Cleveland.

CROWDED CLASSES

High quality education, the report declares, cannot be produced under such conditions as overcrowded classrooms, long hours and inadequate salaries for teachers and administrators. It adds that a great deal of improvement in working conditions has taken place in the public schools, but much of it has been in building construction, lighting, heating, ventilation, sanitation, and instructional material.

Meanwhile, it is observed, teachers still work long hours, carry armloads of paper home for night and weekend work, coach plays, sponsor clubs, police lunchrooms, and perform many tasks outside the hours of the instruction room and the regular school day.

OUTSIDE DEMANDS

It was commented that teachers spend 4 or more years preparing to do a good job of teaching, but on the first job discover that a large part of the teaching day and a lot of home time must be devoted to work that calls for no professional training.

To many citizens it probably seems that they have been most generous to the schools. In election after election they vote for bond issues for new school buildings and modernization of old ones and to renew and increase school operating levies primarily so the salaries of teachers can be increased. Yet it appears that what has been done is not enough.

CONTINUING INCREASES

The fact is that the needs of the education of our young are never-ending, always increasing. For one thing, the general population increases and the increasing size of families have increased the need of classrooms and that means new or expanded school buildings. It means buildings in new residential areas and modernization of facilities in the older sections. And from all indications this need will continue to climb through the years of the immediate future. The problem is nationwide but in some localities, as in rapidly growing Columbus, it is greater than the average.

And in a competitive employment field, the shortage of teachers is not to be wondered at. The shortage is not entirely due to lack of professionally trained persons. Many who are qualified for teaching have been attracted from the profession by higher salaries offered in the business and industrial world. The report made to the school administrators meeting in Cleveland stressed that higher salaries would keep teachers in the profession.

In the Columbus School District, teachers' salaries have been raised several times in recent years, but they are not yet commensurate with the importance of the task with which the teachers are entrusted.

SHORTAGE ALARMING

"Schools play a more important role in today's society than in any period of our history," said the report. "Yet pupil enrollments are excessively large. The teacher shortage is alarming. In many places school-building facilities are out of date and overcrowded. And money with which to provide top grade public school education is inadequate."

What are we to do about it? How can the money be raised to provide the best that can be obtained for the young people who are to be our future citizens, our social, business and political leaders?

Naturally the money must be raised by taxation. We shall have to keep voting for school levies and school bond issues, or else relax our present limitations on tax levies so as to permit higher taxes without so many special levies having to be submitted to the voters.

BURDEN OF TAXATION

But with Federal taxes taking such a large part of our earnings and incomes, plus the local taxes necessary for our schools and local governments, how can we stand any stiffer taxes?

One answer is for the people of the United States, right down into each and every community, to insist upon, work toward and accept the results of reduced Federal spending. With reduced Federal spending will come lower Federal taxes and then a larger part of the total tax dollar would become available by local approval at the polls for spending on our local public schools and our local governments in general.

UNITED STATES CONTROL NOT ANSWER

The problem cannot be met adequately economically or properly in any sense by turning over any part of the school financing problem to the Federal Government as some people propose. Such a move would only increase the cost of the Federal Government, increase Federal taxes without bringing about any local reduction and lead to bureaucratic inefficiency waste and inequality of distribution and, worst of all, Federal regulation of the schools.

The school financing problem can best be solved by keeping school financing and school control close to home, through a shift in the tax dollar from Federal bureaucracy to local, home rule budgeting, and administration by locally elected boards of education, responsible directly to the voters of the various communities.

The Command Management School at Fort Belvoir, Va.

EXTENSION OF REMARKS

OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. TUMULTY. Mr. Speaker, in recent years the Army has come in for some critical examination by the Members of this body, and it is a great pleasure to bring to your attention a new activity of the Army which merits close and sympathetic consideration. I am referring to the Command Management School at Fort Belvoir, Va.

It was my privilege, at the invitation of one of the students, Col. John C. Lackas, Assistant Comptroller for International Affairs, Office of the Comptroller of the Army, to spend an afternoon and evening participating in this farsighted and, at the same time, intensely practicable program. Fort Belvoir is, of course, the Army's Engineer Center and, under the able leadership of Maj. Gen. Louis W. Prentiss and his chief of staff, Brig. Gen. Max S. Johnson, has maintained and enlarged the glorious tradition of the Corps of Engineers. Being the home of the Engineer School, the oldest service school in the United States Army, and the Engineer Research and Development Laboratories, it is fitting that the Army's newest school be in such illustrious company.

Under the operational control of the commanding general of the Continental Army Command, Gen. John E. Dahlquist, with the invaluable assistance and technical guidance of Lt. Gen. Laurin L. Williams, comptroller of the Army, and the continuing support of Maj. Gen. John H. Stokes, Sr., commanding general of the military district of Washington, the Department of the Army has established this school for the intensive and advanced managerial training of senior officers from all of the various branches of the Army. I am happy to say that the Command Management School has recently become a permanent activity and will be a continuing source for the improvement of management skills of commanders. These capable and experienced officers, guided by a carefully selected staff and faculty headed by Col. Frank Kowalski, Jr., commandant, contribute, and thereby enlarge, their knowledge and comprehension of the tremendous and complex nontactical management problems that must be met and solved if our Army is to maintain and increase its essential combat effectiveness. The enthusiasm and keen interest with which the class members and faculty attack the problems of expenditures, efficiency, coordination, and productivity described in their case studies bodes much good for the Army's future relations with this body. These are men who clearly understand their responsibilities as custodians of our Nation's resources as entrusted to them by the Congress for our defense.

Every 4 weeks a group of about 50 senior officers and key Army civilian officials, with a few from the Navy and Air Force, become students again for a period of 3 weeks. Included in the five classes which have completed this course of instruction were 2 major generals and 10 brigadier generals. Let me state emphatically that this is no snap course. The all-day sessions which are scheduled to 10 p. m. are days of intense application, making the final diploma a much valued and respected document. The materials considered, the problems analyzed are fundamentally pragmatic and concern the day-by-day, week-by-week, and budget-by-budget workings of the Army. The solutions arrived at are equally realistic and valid.

We, the Congress of the United States, are in effect the great board of directors of the United States Army; we make the the allocations, we periodically examine its functioning, we check its balance sheets, but we cannot be the actual administrators. We now have a new ally, a new support, the Command Management School. Quietly working and spreading its influence throughout our Armed Forces, it will, I am convinced, justify the confidence expressed in it by Hon. Charles C. Finucane, the Under Secretary of the Army, who said of this

school: "I think the Army has done a superb job, and this school is a tool that can be used to pass on the new techniques that have been developed to those who have actual operating responsibilities."

As a former enlisted man, I was very impressed with the work done and the interest generated by this group of officers. I enthusiastically commend the Command Management School to the Congress and suggest a personal visit while the course is in progress. You will find it, I am sure, a most refreshing and stimulating experience, and through this informal contact we may all gain a clearer perspective. The motto of this important addition to our arsenal of skills might well serve for us all: "From knowledge the power of decision."

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. BUTLER. Mr. President, yesterday, May 10, was Rumanian Independence Day. I ask unanimous consent to have printed in the Appendix of the RECORD a statement commemorating this significant day in the history of these gallant people.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BUTLER, COMMEMORATING RUMANIAN INDEPENDENCE DAY, MAY 10, 1955

May 10 is a significant day in the history of the Rumanian people. On this day in 1866, the Rumanian dynasty under Charles, Prince of Hohensollern-Signaringen, had its glorious beginning. Also, on May 10, 1877, Rumania declared its independence from the Ottoman Empire and thenceforth flowered into one of the leading nations of Europe—the home of people who cherish liberty and independence and whose culture has added immeasurably to the heritage of western civilization.

Despite their strong will for freedom and long struggle against the forces of oppression, the Rumanian people this year again awoke on the anniversary of their independence to view their land in the grips of an oppressive, dictatorial force bent upon reducing them to spineless slaves. The Rumanian people and their millions of friends cannot foretell the day when their country will again take its rightful place among the free nations of the world. Yet, with faith in God and with knowledge of the Rumanian people's indomitable will, their courage and love of liberty, freedom loving people everywhere are confident that this eventful day will come. The future remains the source of our hopes.

Meanwhile, these gallant people who love freedom, but are not free, keep the fine traditions of their country alive and the flame of Rumanian independence burning in their hearts. On this anniversary of independence, the American people reaffirm our past pledges of friendship and support and join in prayer that the day of liberation from the Communist yoke is not far off.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. LEHMAN. Mr. President, on May 8 our distinguished colleague, the senior Senator from Rhode Island [Mr. GREEN], who also is the senior Member of the Senate, delivered a most thoughtful address before the Polish-American Congress, at a rally held at Town Hall in New York City. His address dealt with some of the issues which should concern all of us here in the Senate—issues which are of special interest to Americans of Polish descent. The occasion of the rally was the observance of Polish Constitution Day.

The Senator's speech, which included extensive reference to the need for revising the Refugee Relief Act and the McCarran-Walter Act, deserves to be widely read. I ask unanimous consent that this fine address by our beloved colleague be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. THEODORE FRANCIS GREEN AT POLISH-AMERICAN CONGRESS RALLY, AT TOWN HALL, INC., NEW YORK CITY, ON MAY 8, 1955

Mr. Chairman and members of the Polish-American Congress:

I thank you heartily for the invitation to address you here on Polish Constitution Day. It is, of course, always a pleasure to meet with you of the American Polonia. Over the years, I have attended many gatherings organized by Polish-American organizations. The warmth of feeling and high level of discussion which have always characterized such meetings, have, each time renewedly been a fresh source of gratification to me.

Added to my pleasure today at being invited to speak at this rally in Town Hall is my realization of the importance of this occasion. Our purpose in meeting here now is to stage a demonstration which will remind everyone of the cause of Polish independence, and which will reawaken the conscience of all Americans to the suffering of the Polish people who are striving to maintain their national life in the face of ruthless Communist oppression. We are here to serve notice that we have had enough of empty words and hollow promises. We are here to state that we will not be satisfied with fantasies about a nonexistent policy of "liberation" fantasies which mock the hopes of the enslaved Poles for an end to the terrible reality of their oppression. We are here to demand action.

I am especially aware of the importance of our task now, because I was involved in the work of bringing independence to Poland almost 40 years ago. At that time I was working with a President of the United States who was not content just to issue statements about "liberation"—but who also worked with all his energies to accomplish what he felt to be his sacred duty, namely, to bring freedom to the Polish nation. Some of you may yourselves have participated in the work which went on then here in America on behalf of Polish independence: Others of you have heard about it from your fathers. You know that President Woodrow Wilson's idea about "self-determination" was not only a campaign promise. It was also a living principle which guided his policies and his actions. President Wilson dedicated his life to the idea that men have the right to choose their own national identity and form of government. He never allowed our country's allies to forget that Poles had been illegally deprived of that right. He fought tirelessly at the international conference tables to have that right restored. Polish independence was one of President Wilson's Fourteen Points. He made it a prerequisite of world peace.

I had the great privilege of seeing personally the results of President Wilson's efforts, when the President of Poland invited me to visit that country on the 10th anniversary of Polish independence. I stayed in Poland for several months, traveling through the country and meeting the people. Everywhere I went, from the official receptions in Warsaw and the Wawel Palace in Cracow, to the small villages and the countryside, I was impressed by a sense of unity and of progress. The same industry, the same devotion to democratic principles, the same selfless dedication to the common good, which I had observed here at home among Americans of Polish descent, I found clearly in evidence in Poland itself. Everywhere I went, I found a feeling of friendship and gratitude to America. To the people of Poland, America had become the country of Woodrow Wilson, the adopted land of their friends and relatives—the nation which had kept them in mind when they were enslaved.

You and I are thinking of Poles, again living under a foreign tyranny. Perhaps I should better say existing instead of living. We wish that those Poles were still comforted by the thought that America has not forgotten them, that America will not rest until they are free. But, I am afraid that there are moments in which they cannot help but wonder if this is so. Certainly the Soviets have not failed to inform them that the United States, the country which they had always thought was a haven for the oppressed, has now reduced by statute Americans of foreign birth to the rank of second-class citizens. Word must have reached reached them that many of their countrymen who managed to escape from communism are living in displaced persons' camps in Germany, because America refuses to admit them. They must wonder why the United States, which they know is rich, cannot let them hear more of the Voice of America broadcasts which might be comforting to them. They have heard blusterings about liberation, which seemed to call for new sacrifices on their part in the fight against communism, but did not mention one specific thing which we would do to bring the day of liberation nearer.

We Americans are aware of even more disquieting facts, and we are wondering what our administration's policies add up to in this critical period.

More than 4 years ago, the United Nations passed the Genocide Convention, an international law intended to protect the people of Poland and other enslaved nations from the brutality of the Soviets. This law still remains unratified by the United States. Why? Because just a few weeks after the inauguration of President Eisenhower, his Secretary of State declared that the new administration would not press for the ratification of the convention.

We have also known for sometime that something has been terribly wrong about the way in which the present administration has been handling the refugee-relief program, which President Truman had launched in order to enable refugees from communism to come to the United States and here resume useful lives again. Everyone in our country, and perhaps all newspaper readers, radio listeners and TV viewers around the globe, should now be fully aware, following

the explosive firing of Edward Corsi from the State Department, that the highly-touted refugee program of this administration has been a dismal failure. The obvious reason is directly traceable to the lack of genuine sympathy on the part of this administration, and especially among the very personnel charged with putting the Refugee Relief Act into effect. We now know that the administration has actually sabotaged the relief program. There are about 50,000 Polish refugees living in Germany alone. Among them are many veterans and children of veterans of the Polish Armed Forces, who fought for us in Africa, Salerno, Monto Cassino and almost every other battlefield of World War II. They are living under very bad conditions, many suffering deprivation and disease. But, our administration has not only failed to come up with a program that would help our friends there, it has also actually frustrated the expressed wishes of the American people and their Congress by refusing to admit these refugees to America.

The question logically arises, since this heavy criticism is leveled at the Republican administration—What are responsible Democrats doing about the situation?

I am happy to answer that question by calling attention to the bill recently introduced by the senior Senator from New York, Mr. LEHMAN, to revise thoroughly the Refugee Relief Act. Cosponsors with him were Senator HUMPHREY, of Minnesota; Senator KEFAUVER, of Tennessee; and Senator DOUGLAS, of Illinois.

Although he voted for the original refugee-relief bill because he believed in its expressed purposes, Senator LEHMAN warned at the time of passage that there would probably be a day of rude awakening. We have now seen that day. The act contains provisions robbing it of its truly humanitarian features and turns it into a prescription for delay, disappointment and disillusionment. Unsympathetic, and downright obstructionist administration of the act under Scott McLeod, the Security Chief in the State Department, compounded the shortcomings of the faulty law. One of the first things the Lehman amendments would do is remove the program from the State Department Security Bureau, where it does not belong, and place it under a full-time administrator, who would be free from all other duties.

Of especial interest to you, also, should be the Lehman proposal to eliminate technical distinctions between so-called refugees and so-called escapees, and to establish only one category to include those who have escaped from behind the Iron Curtain and those refugees from the aftermath of World War II. In addition, the opprobrious term "ethnic" is struck from the act. Other improvements are in line with returning the program to its avowed humanitarian purposes.

But, although the refugee program is presently holding the attention of the public, we must not lose sight of our fundamental national immigration policy. Our policy today, of course, is unfortunately expressed on the statute books in the terms of the McCarran-Walter Immigration Act. How have the Republican leaders stood on that act? Here, again, we have examples of broken campaign promises.

During his 1952 campaign, candidate Eisenhower repeatedly attacked the provisions of the McCarran-Walter Act and demanded that "a better law must be written." He also stated that "getting rid of second-class American citizenship * * * includes rewriting the unfair provisions of the McCarran Immigration Act." After his election, President Eisenhower renewed his general promises to the people and suggested to Congress some generally innocuous improvements in the law. But, I would be less than candid if I did not add that these suggestions were not backed with determination and enthusiasm of the sort he displayed in his fight over the tax program or other administration measures.

Again, in the light of the failures and broken promises of the Republican leaders, what have responsible Democrats done about this matter?

The answer is that we have proposed amendments to bring a spirit of humanity back into the law under the outstanding leadership of HERBERT LEHMAN. I am very happy to be a co-sponsor, with him and 11 other colleagues in the United States Senate, of an omnibus bill to replace the harsh McCarran-Walter Act. We have called for early public hearings on this and other pending bills.

We would preserve, naturally, the technical improvements made by the McCarran Act over previous laws, and the 2 or 3 advances made—such as according husbands and wives equality before the law—but in a real sense we propose a new law, consistent with the finest traditions of the United States of America as a haven for the oppressed of the world, and consistent with our legitimate concerns for national security and economy, and consistent also with our very great responsibility as a world force for good, especially when evil is rampant.

Our bill conforms to recommendations of scores of religious and nonsectarian organizations interested in a sound immigration and citizenship policy. As a point of approach, we have chosen to call our bill "the Immigration and Citizenship Act" to stress this difference from the present Immigration and Nationality Act of 1952.

Our bill recognizes that a regulated amount of immigration, with intelligent regard for legitimate selection, resettlement, and integration, is not a threat to American institutions, but is a decided benefit to us in every way. We are working hard to have early action taken on this measure.

Many of our fellow Americans are now deeply disturbed about the administration's Asian policy, a policy which seems to consist of talking about the liberation of China while so weakening our alliances that we may have difficulty in preventing the Communists from taking over additional territories. We, who have followed the administration's policies regarding Poland, have become hardened to the liberation talk, and know that as far as this administration is concerned, this is a word which has lost all meaning. But the policies which are weakening the moral and physical position of the United States are something we can never become hardened to.

Modern history has taught us that we can only deal with dictatorships if we are strong. It would seem that this lesson should have been impressed upon everyone by the catastrophic events of the 1930's and the war that followed. Evidently these tragic events were not dramatic enough to impress our present leaders. The administration has failed to carry on President Truman's policy of building up our military strength. It has cut our Air Force, reduced our Armed Forces, and instituted a program of economy in civil defense. It is difficult to estimate to what degree our own security has been imperiled by this program. One thing is certain—with each day the United States has failed to build up its strength, one day has been added to the period of suffering and terror in the lives of the people behind the Iron Curtain. For the Soviets will never give up the territories they rule until our strength leaves them no choice but to retreat.

What conclusion should we draw from the facts to which I have drawn your attention? Our immigration and citizenship policies are so much a part of our American life, determining how we live with each other in our communities, how we deal with other people abroad—and even how we appear to people in other parts of the world, that we can no longer continue to preach freedom and brotherly love on certain holidays, such as this Polish Constitution Day, unless we insist that our daily actions and our laws substantially carry out these sentiments. We would do well to take heed of the action taken by Polish patriots 164 years ago, when the Polish Diet adopted the great May constitution. At that time Poland was facing its certain partition at the hands of Russia, Prussia, and Austria. It was a period of crisis, yet the Poles chose that moment in their history to institute drastic internal reforms and strike a bold blow for democracy. They could have adopted a course of inaction, written a constitution filled with vague generalities. They could have listened to the voices of weak and fearful men. They did not do so then. We Americans, especially you of Polish descent, facing another critical period, will not do so now.

Anti-Defamation League Freedom Forum

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Robert E. Sherwood, the eminent Pulitzer prize playwright, at the Anti-Defamation League Freedom Forum sponsored by the Anti-Defamation League of B'nai B'rith, at the Waldorf-Astoria Hotel, in New York City, on April 28, 1955.

Mr. Sherwood is a man well acquainted with the great traditions of liberty and freedom for which our country has so long stood as a beacon light to all the world. As the author of the great play, Abe Lincoln in Illinois, he has helped to characterize the personality, views, and achievements of one of the noblest Americans.

I think that Mr. Sherwood's analysis of some of the current and prevailing threats to civil liberties in our country should be made available to Members of the Congress and to the public as a whole.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INDIVIDUAL FREEDOM AND NATIONAL SECURITY

I am greatly honored to be asked to give the first talk at this freedom forum of the Anti-Defamation League on the subject of "Individual Freedom and National Security."

There are no subjects more important to American citizens today.

We all know of many, far too many, instances in recent years where individual freedom has been threatened—and worse than threatened—in the arbitrary name of national security. But I should like to remind you of just one of these instances: The case of John Paton Davies, a member of our Foreign Service, of long experience and unassailable integrity, who was attacked by Senator MCCARTHY and because of this attack was fired last fall by Secretary John Foster Dulles.

Please forgive me if I dwell at some length on this particular case.

I knew Davies slightly when I was in Government service during the war. He was closely associated with General Stilwell in

China. I learned more about him after the war when I was working on the papers of the late Harry Hopkins and I read reports that Davies had sent back to Washington.

After Davies was fired, it appeared—perhaps unfortunately for Mr. Dulles—that he had once been on an airplane flight with Eric Sevareid—a flight over the infamous "hump," over the Himalayan range between India and China which our aircraft had to cross and where many young American lives were lost delivering aid to the Chinese.

I quote from the broadcast Mr. Sevareid made over CBS describing this flight:

"There came a terrifying moment when the passengers, mostly GI's, stood near the door, trying to summon the courage to bail out of the crippled plane. Precious moments passed. Then 1 of the 3 civilians aboard, the diplomat who clutched a dispatch case to his chest, gave us a wry smile and leaped out. His action broke the paralysis; we all followed; and all of us, but one, survived.

"In the weeks that followed we were never entirely sure we would get out of those jungle mountains; in such circumstances men learn truly to know one another; who is weak, who is afraid, who is impetuous, and who is strong, and calm, and prudent. As time passed the GI's and I began to recognize the civilian with the carefully guarded dispatch case as one among us with a calm, natural courage, as one who would never panic, who never complained.

"I thought then, as I think now, that if ever again I were in deep trouble the man I would want to be with would be this particular man. I have known a great number of men around the world, under all manner of circumstance. I have known none who seemed more the whole man; none more finished a civilized product, in all that a man should be—in modesty and thoughtfulness, in resourcefulness, and steady strength of character.

"The name of this man is John Paton Davies. He is the man Secretary of State Dulles, on the recommendation of a five-man board, has just broken on the wheel of official disgrace. The Foreign Service officer dismissed, 3 years short of retirement and pension, after giving 23 years of his life—and almost life itself—in the arduous service of his Government. Eight times he was investigated; eight times he was cleared. One by one the politically inspired charges of communism or disloyalty or perjury were dropped; the ninth board came up with something new, called defects of character. Mr. Davies is not, concluded the board and Mr. Dulles, of sufficient judgment, discretion, and reliability.

"Sufficient, one may ask, unto what? Their test can only have been of supernatural design. I saw their victim measured against the most severe tests that mortal man can design. Those, he passed. At the head of the class."

That concludes the testimony of Eric Sevareid on John Paton Davies, whom he encountered by chance.

The basis for the charges against Mr. Davies—that he had lacked "sufficient judgment, discretion, and reliability"—was not revealed, although Mr. Davies asked and asked again that the State Department publish the full record.

Mr. Dulles was content to say, pursing his lips, that the continued employment of Mr. Davies "is not clearly consistent with the interest of the national security."

As you will remember, Mr. Dulles said the same thing about the publication of the Yalta papers. That was said one day last month, but 2 days later the Yalta papers were deliberately leaked to the New York Times.

Peter Edson, writing in the Scripps-Howard newspapers—of which the Daily Worker is not one—Mr. Edson said:

"Secretary of State John Foster Dulles' firing of John Paton Davies, after 23 years as a career diplomat, spotlights again the fact that the State Department 'cleanup' is still going on.

"As a matter of fact, it will never be ended. No State Department employee can have any assurance that he has been investigated and cleared for the last time.

"In the case of John Davies, he was investigated and cleared eight times. The ninth time they fired him—not for disloyalty—but for 'lack of judgment, discretion, and reliability.' That is the pattern for the future."

And, if I may say so, that is a pretty terrifying pattern for a great democracy which relies to a large extent upon its Foreign Service in the cold war or a hot war against communism.

In the Washington Post, Malvina Lindsay wrote that, as a result of the firing of Davies, and similar actions, "both Uncle Sam and the business world face a falling market in human skill."

Miss Lindsay went on to say:

"The armed services are failing to attract enough officer material to give adequate leadership to the defense forces that must be maintained.

"Both Government and industry are up against a dwindling supply of scientists and technicians, while the Soviet Union threatens to gain supremacy in this commodity.

"If the present trend continues, the half trained and the mediocre will take over most of the important jobs. They will largely run the Government, direct defense, handle foreign relations, determine the production of goods."

As a comment on that, I would quote a lady who has gone far in the business world. Miss Dorothy Shaver, the president of Lord & Taylor. Miss Shaver said:

"In industry, among both executives and staff, I see a growing unwillingness to exercise independent judgment, to question company dogma. Fewer people are willing to voice original ideas which contradict accepted policy. In short, fewer people will risk their judgment in support of what they believe. Yet what, if not personal initiative, has sparked the whole growth of American industry?"

A Untarian minister in Washington said that the firing of John Paton Davies was "an act of cowardice," and he asked, "How are we to defeat communism with cowardice? What a long way we have departed from our former great traditions. How ominously our moral strength has ebbed away."

Only the other day you and I read of the dismissal, again by John Foster Dulles, of Edward Corsi, a liberal Republican, who was appointed to carry out President Eisenhower's program to make this country a haven for a pitifully small number of refugees from Europe.

And, incidentally, I have visited some of these refugee camps in Europe—camps filled with people from behind the Iron Curtain—men, women, and children who listened to our propaganda broadcasts over the Voice of America or Radio Free Europe, and who risked their lives to escape past the machine guns of the Communist frontier police, and through the mined fields and the barbed wire—to escape to freedom.

And what hope have they of achieving freedom?

At this moment, practically none.

Mr. Corsi saw their predicament—he understood their shocking predicament—and he wanted to do something about it, in accordance with the President's pledges. So Mr. Corsi is out.

You and I read that one of the prime reasons for Mr. Corsi's dismissal was that he is a "freewheeler."

Let me read you a quotation from a speech made last year by Richard L. Bowditch, president of the United States Chamber of Commerce. Reminding his associates of certain essential truths which some of them may have forgotten, Mr. Bowditch said:

"This Nation was conceived and rose to world leadership on the ideas of nonconformists and freewheelers, of individuals with bold, far-reaching minds who insisted on crossing the frontiers of the unknown. • • • They dared to disagree on many things, but our country and our culture are infinitely richer and stronger for their challenge."

Now, Secretary Dulles can and does attempt to dismiss the firing of Mr. Corsi and Mr. Davies and others, by snide remarks implying their incompetence, despite the fact of their record in service to previous administrations, both Republican and Democratic.

All that Mr. Dulles needs to know, evidently, is that one of his trusted and faithful aides—in the case of Mr. Corsi, one of his old friends and supporters, is under fire from Capitol Hill, and then the dread blade of the guillotine comes crashing down—and a few gratuitous insults are spat at the dismembered corpse.

It seems to me that the most ominous apologia for the firing of John Paton Davies was written in an editorial in that deservedly respected newspaper, the New York Herald Tribune.

Admitting that the record of investigations—nine investigations—of Mr. Davies revealed no evidences of any disloyalty to our country—they revealed no evidences however remote of any affiliation by Mr. Davies for the Communist Party or any Communist cause or any Communist-front organization, or, indeed, for anything in any way subversive—the Herald Tribune went on to say editorially:

"The regulations under which Mr. Davies was dismissed reflect the realities of the cold war. To provide maximum safeguards against infiltration, subversion and error, doubts of the reliability of a Government servant are to be resolved in favor of national security, rather than of the individual concerned. This is a stern test and one that can work hardship to loyal citizens. It is a test, however, that the American people have resolved must be imposed for their own protection. The administration is applying it in full consciousness of the complex factors which are involved, but with the safety of the Nation as the primary consideration."

Thus spake the New York Herald Tribune, whose partisan heart sometimes rules its temperate head.

I think that we, the American people—the taxpayers, who pay the salaries of John Foster Dulles and Scott McLeod—I think that we would like to know; just when did we resolve that the rights of the individual American citizen should be subordinated and indeed destroyed by some undocumented interpretation of what some official tells us is national security?

When did we authorize our paid servants to apply this "stern test" which, according to the Herald Tribune "can work hardship to loyal citizens?"

At what point in our history did the American people resolve that they must be protected by such unconstitutional, undemocratic, unrepublican, star-chamber procedures?

And I would say further—in reply to the Herald Tribune's sanctimonious defense of Mr. Dulles—I would say that if our national security is to be rated above the security, the civil liberties, the dignity of every individual American, then our national security is not worth defending.

It is certainly not worth the honored and treasured paper on which our Declaration

of Independence and our Constitution were written.

If our constitutional system is to be superseded by an acceptance of the kind of heartless, soulless, callous tyranny against which our ancestors have fought for centuries—on this continent and in the Old World from whence we all came—then we had better yield to the Russian and Chinese Communists, whose methods we often seem to be imitating so sedulously, and who are so much more efficient at this kind of oppression than we are.

The other day I read an article by Mark Ethridge in The Saturday Review. As the distinguished publisher of the Louisville Courier Journal, he criticized the American press for its failure to say, and loudly, to politicians of both parties, "Quit playing politics with our freedoms. They are too hard-won to be kicked about in your cheap and silly game."

Mr. Ethridge quoted Edward Livingston who wrote, in 1789—the year when our Constitution went into effect—"If we are to violate the Constitution * * * the country will swarm with informers, spies, and all the odious reptile tribe that breed in the sunshine of despotic power to convey your words distorted by calumny to the secret tribunal where fear officiates as accuser and suspicion is the only evidence that is heard."

It is an ironic fact that whenever you study the motives and objectives of some so-called patriotic organization, or group—which wraps itself in the Constitution and urges a "return to our constitutional form of government"—you will observe that this organization seeks to preserve our Constitution by amending it, distorting it, disembowelling it.

In the 83d Congress, dominated by Republicans who rode into power on General Eisenhower's coattails, there were proposed about a hundred amendments to the Constitution, including the Bricker amendment, which was firmly opposed by the President and his administration and was defeated in the Senate only by the majority of Democratic votes.

If I seem to be too partisan in these remarks, let me add that the sacking of Mr. Corsi was due to the pressure brought to bear on the State Department by a Democrat, Congressman WALTER, cosponsor with another Democrat of the infamous McCarran-Walter Immigration Act.

The evil that we confront in our body politics crosses party lines. It crosses sectional boundaries—economic strata.

There is an article that I should like to call to your attention. It is called The Pseudo-Conservative Revolt and it was written by Richard Hofstadter, professor of history at Columbia University. It was published in a recent issue of The American Scholar and is being given wider circulation, which it deserves, by The Fund for The Republic of the Ford Foundation.

As Professor Hofstadter points out, quoting Adlai Stevenson, the true conservative is "dedicated to conserving all that is best, and building solidly and safely on these foundations."

And I believe it may be said that the best, the most far-reaching statesmen in both of our great parties adhere to this principle of true conservatism.

But—the pseudoconservative—by Professor Hofstadter's definition is another matter.

One of them was the lady who, when General Eisenhower won the Republican nomination over Senator Taft at the convention in 1952, stalked out of the Chicago Hilton Hotel declaiming, "This means 8 more years of socialism."

The pseudoconservative believes—and I am still quoting Professor Hofstadter—"that we had no business to be fighting communism in Korea, but that the war should now be extended to an Asia-wide crusade against communism * * *.

"He believes himself to be living in a world in which he is spied upon, plotted against, betrayed, and very likely destined for total ruin * * *

"He is opposed to almost everything that has happened in American politics in the past 20 years. He hates the very thought of Franklin D. Roosevelt.

"He is distrubed deeply by American participation in the United Nations, which he can see only as a sinister organization.

"He sees his own country as being so weak that it is constantly about to fall victim to subversion; and yet he feels that it is so all-powerful that any failure it may experience in getting its way in the world—for instance, in the Orient—cannot possibly be due to its limitations but must be attributed to its having been betrayed * * *.

"He would much rather concern himself with the domestic scene, where communism is weak, than with those areas of the world where it is strong and threatening.

"He wants to have nothing to do with the democratic nations of Western Europe, which seem to draw more of his ire than the Soviet Communists, and he is opposed to all 'give-away programs' designed to aid and strengthen these nations."

It is hardly necessary to add that such a pseudo-American would be, by fundamental nature, anti-Semitic.

He would be in the mob burning a fiery cross in front of a house occupied by Negroes in a new real-estate development.

He certainly does not care for the sentiments expressed by Emma Lazarus in the verse that is engraved on the Statue of Liberty * * * and as Edward Corsi sought to interpret them.

Perhaps the ultimate absurdity of pseudo-conservatism was achieved by officials of the American Legion who denied to Paul Hoffman the use of their auditorium in Indianapolis. Mr. Hoffman, of course, is an eminently respectable Indiana industrialist and an ardent supporter and intimate adviser of President Eisenhower, but the Legion authorities denied his right to speak because he was appearing as an advocate of the American Civil Liberties Union.

The Indianapolis Times published an editorial on this incident under the heading, "How Silly Can You Get?"

But, as we have seen, such silliness can be compounded into mania, and such mania can be compounded into totalitarian tyranny—the very destruction of our constitutional system.

It seems to me that the primary question for consideration by this forum is whether our country can afford to purchase national security at the cost of individual freedom. I believe that we cannot.

We are free to admit—we have always been free to admit—that in time of war, of national emergency, we may be drafted for service in the Armed Forces—and, in my opinion, we should also be liable to draft for national service in war—in factories, on farms, in hospitals, or in any other capacity where we may be able to serve our country's cause.

But—we have the right to ask: What is that cause?

And we don't have to ask our Government for the answer. We can provide our own answer, each of us, individually.

Throughout our history, we Americans have served, we have worked, we have fought for one thing: Freedom. As long as our country deserves its name, we shall continue to serve, and to work, and to fight, and to die for one thing: Freedom.

It is on that principle—and only that principle—that our national security is based.

Today, as we all know, there are internal as well as external threats to our individual freedom. The internal threats have been handled, with admirable efficiency and with justice, by the Federal Bureau of Investigation. And, having had an opportunity to see something of the operations of the FBI, I can testify that this is no work for amateurs—particularly those whose chief motivating force is hysteria.

I would quote my friend and former associate, Elmer Davis: "This Nation was not built by cowards; it will not be preserved by cowards."

And I would say, this Nation will be preserved, as it always has been, by Americans who know that they represent, in the words of Abraham Lincoln, "The last, best hope of earth."

And I would express my profound conviction that such Americans, such pure Americans—regardless of their racial or religious or social backgrounds—such pure Americans are in the overwhelming majority in our country, and their principles and their common decency will prevail.

Address by Hon. Thomas E. Martin, of Iowa, Before Republican Women Volunteers

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an outstanding speech delivered by the distinguished Senator from Iowa [Mr. MARTIN], which I think is worthy of general attention.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR THOMAS E. MARTIN, OF IOWA, BEFORE THE REPUBLICAN WOMEN VOLUNTEERS, CONRAD HILTON HOTEL, CHICAGO, ILL., APRIL 20, 1935.

Thank you, Madam Chairman. It is a real privilege to come back to the Middle West and a great honor to be asked to speak to the Republican Women Volunteers of Chicagoland. I know of the excellent work this great group has done in the past. I know that a large measure of the credit for any political victory in any State must be accorded the hardworking and diligent women. That was true in my case last year. Their dedication to the Republican Party and the work and energy they contributed in our behalf cannot be over estimated. I also know that the Republican Women Volunteers of Chicago assume that same important position in the Illinois scheme of politics. I commend you most heartily on your past efforts and wish you all good luck and success in your coming ventures.

I must make my position clear immediately. I'm extremely happy to be here, but at the same time I'm sorry that your original speaker couldn't make it. STYLES BRIDGES has compiled a record second to none in the United States Senate. The record of leadership he has compiled fills the political slate. You could have chosen no more competent speaker nor any better Republican spokesman than STYLES BRIDGES. He was extremely sorry that the virus bug caught him at exactly the wrong time. When I last talked to him yesterday morning he was still determined to get out of bed and make this trip, but his doctor forbade it. His final words to me were "Tell them how sorry I am that illness cancelled my appearance. Give them my very best."

I am fully aware of the great Republican traditions and leaders that are represented here this noon. One of the most pleasant and inspiring byproducts of holding office as I do is the chance to meet and talk with people like yourselves—people that are tied inexorably together by the great principles of the Republican Party. Many of us have loved this party of our for many years. Like every other institution of modern times it has experienced its ups and downs. I know that you feel as I do—that despite the dire predictions of the impending crumbling of the Republican Party, made by partisan critics who whistle in political darkness, I sincerely believe that we are entering a period of great Republican ascendancy—and loyal Republicans like yourself will make it so.

As you know, we are today starting to draw the lines of the 1956 campaign. If we expect to win the political victory we need and deserve we must have a story to tell the American people. We must have a reasonable, accurate, compelling political "pitch" to make. We must give the American people a reason to vote Republican. We must tell them why.

As our political parties begin to shape up for the coming campaign and election, there is a crying need that once again we draw the lines of distinction between the Republican and Democrat Parties. The future of our country depends on our ability—on yours and mine—to draw that line of separation. We must ask ourselves and our neighbors—Where will the Democrats take us if they again assume the reins of government? What are the fundamental differences between their philosophy and ours? What does a Republican vote mean?

Search as you will, you cannot find this difference in the general aims of the two parties. Both stand for peace and prosperity. Both want to improve the welfare of the people at home and to safeguard their security and existence by adept and astute handling of international problems. This similarity in goals is not surprising. Both parties depend on attracting votes for their existence. These generalities are aimed at this broad target.

But political parties don't live on generalities. In the course of political action they make records. Through their devotion to certain causes and their suport of individual issues and their opposition to others, they make their stand. They point the path they will travel to the generalized goals of peace and general welfare. That's the way you discover the real differences between parties. That story tells the tale. And that story also tells the why—the reason—the importance of a Republican vote.

One of the obvious differences between the two major parties of today lies in the field of allocation of governmental power. The Founding Fathers of our country were acutely aware of the dangers of government that concentrated most of its power at one source. They fought a Revolutionary War to escape the terrible and arbitrary power exercised over helpless subjects by kings, tyrants, dictators, and bureaucrats. Carefully and diligently they constructed a Constitution that established a government of laws, not of men. One hundred and sixty years of political developments in the most trying period of history's long pages have proven the wisdom of their philosophy. We have been a haven from the scourges of tyranny. We must continue to be so.

Perhaps the most significant contribution to the field of political science made by our country is the establishment of a Federal system—a government wherein the power is divided between the National and State government. The Constitution apportions certain powers to the National Government and reserves the residue of powers to the State and local levels.

My friends, the Republican Party still believes in the Federal system. We still believe that the National Government should do those things which the Nation requires and which cannot be done by States, localities, or individuals. We still do not believe the best interests of the most people can be solved by piling bureau upon bureau in Washington. We still do not believe that all knowledge and wisdom stems from Washington. We do not believe that Washington has a monopoly on all ideas, on all answers, on all intelligence. A man's I. Q. doesn't triple by crossing the Potomac. The Republican Party does not believe in centralizing all power in the Nation's Capital.

The brave men who wrote our Constitution 167 years ago knew that too much power concentrated in any one place holds great danger to human freedoms. But the Democrat Party of today seems to have forgotten that truth. Starting in 1933, a frightening trend began to appear in Washington. The National Government, like Topsy, "jes growed." It began to chip away in some of the fields previously reserved to the States. It began to glut itself on the diet of powers that had belonged to the States. That trend continued and blossomed for 20 years. The sphere of power of the National Government swelled and bloated, and the residue of State powers shrunk and diminished. It wasn't until the election in 1952 that the road blocks along the trail to centralization were built.

We Republicans have been in power in times of crisis. We realize that changing times demand changing methods of government. We met change as it came. But never did we consider any crisis so critical that we had to change our basic philosophy to meet it. Never did we match the exigency of the moment against our Constitution—and find our Constitution wanting.

My friends, make no mistake. Should we return the New Deal Democrat Party to power, we will return to the trail of centralization. The real Democrats of today—the Adlai Stevensons, Walter Reuthers, Hubert Humphreys—the Neubergers—yes, and the Douglases—these, and all the other ADA apostles—they scorn States' rights. They advocate an all-powerful centralized Federal Government. They advocate Government planning on a huge scale for all our people. They follow the theory that pursued to its logical end would mean our people would be dependent for their lives, their property, their enterprises, and their very freedoms on a bureaucratic government in Washington.

That's one reason why—that's one importance of a Republican ballot—a vote for the freedom of self-governing people and a vote against the downright slavery that accompanies an all powerful, centralized government.

That same pattern of increased power was demonstrated in the relationship that existed between the executive and legislative branches of government. Again, the basic structure of relationship between these two branches of government is spelled out in the United States Constitution. Again, the underlying philosophy has been disturbed and distorted by the attitudes of the last two Democrat Presidents.

I well remember the shock I received when I first became a Member of the House of Representatives in 1939. I watched aghast while a major portion of the legislation we were to consider was written in the executive branch of government. I was stunned to learn that so many of these important measures were written, not by individuals in Congress, but by members of the President's staff or advisers. All too often such proposed legislation received the rubber stamp of approval of the Democrat-controlled House and Senate. Sometimes I think the Congresses of the middle and late 1930's were the highest paid choruses in the world. They nodded approval and the executive's program became a reality.

This is not the way we Republicans believe. This usurpation of legislative authority by the executive was a trade-mark of Democrat administrations. But it is not ours. Our Republican President has never asked Congress to be sleepwalkers. Contrast the New Deal rubber-stamp procedure with the procedure followed in tax revision by the Republican administration and the Republican 83d Congress. I know because I served on the Committee on Ways and Means of the House of Representatives in the 83d Congress. DAN REED as chairman of that great committee proved to be one of the greatest legislators of all time.

President Eisenhower received an exceptionally high percent of passage of his program. But his success was due to the quality of the program. The Members of the 83d Congress passed it because they knew it was best for the country. Under Republican leadership in the White House we are asked, consulted, and advised. But we are not told. I repeat, my friends, we are not told. The previous Democrat administrations took us on a long trip into the never, never land of executive domination of Congress and of the State governments. Now we are back from that jaunt into fantasy. And personally, I'm glad to be back home.

There is another basic difference between the two major political parties in the United States. This refers to the type of economic system under which we shall operate. The Democrat Party obviously believes that a centralized Federal Government holds no threat to the freedoms of the individual. It obviously believes also that the National Government should extend its sphere of influence and control into the fields of national economy. During the past 20 years we've watched a constantly growing trend to substituting a government-controlled economy for the free-enterprise, competitive system that gave this country the highest standard of living in the history of the world. You and I have watched that substitution being made—and I, for one, don't like it. I say to you, let's keep the first team in the game. A Republican vote next year means a pat on the back for the Republican leadership that made Paul Bunyan strides toward returning us to the philosophy on which we were founded.

The extent to which the Federal Government had entered the domain of private business would be far too cumbersome and time-consuming to annotate in this brief statement. But let me list a few instances to prove my point.

In 1953, the Department of Commerce sold the Government's Inland Waterways Corporation. This agency had lost more than $15 million of the taxpayers money. It owned 20 towboats and 273 barges on the Mississippi and Ohio Rivers. It is with us no more.

The last Congress set up a special Commission to handle the sale of the Federal Government's $555 million synthetic rubber industry to private industry. They are with us no more.

Congress passed and the President approved legislation giving the States rather than the Federal Government control over 85 million acres of submerged tidelands off the coast of the United States. This was a major defeat to Democrat advocates of centralized ownership and Federal control of land. The Federal control of tidelands is with us no more.

I might add, parenthetically, that this program was characterized as a great "giveaway" program by Democrat leftwingers. The latest estimate is that the Federal Government will receive $6 billion in revenue from

the off-the-shore oil land. If this is a give-away I'd like a little more of the same.

Under Republican leadership the Reconstruction Finance Corporation, one of the most unsavory of the Democrat agencies, was stripped of its lending powers. It is with us no more.

Congress suspended a $60 million plan for Federal development of the Coosa River in northeast Alabama. It never was with us, but only because we Republicans stopped it. A Republican Congress authorized private power companies to take over the work of constructing dams for hydroelectric power.

The Interior Department closed down a Federal Government plant making synthetic gas from coal in Louisiana, Mo. That saved the taxpayers $10,000 a day. This operation was turned over to private industry and it's no longer with us.

On and on the list goes. Back in my home State of Iowa we received the 24-carat treatment. The previous Democrat administrations took a long look at the farmers of the Nation and they decided that they, too, should take their place in line and become a part of this nationally planned economy. They tried to control and point his life. They tried to tell him what to plant, where to plant it, and how much of it to plant. They tried to tell him where to sell his products, at what time to bring them to market and at what price to sell them. They tried to smother him with the Brannan plan. With this Alice in Wonderland scheme they envisioned the fixing of the farmer's income through subsidies and complete income guaranties. The traditionally independent farmer was offered the traditional Democrat plan of government controlled economy. And he wouldn't buy it. He didn't want the pig or the poke.

My friends, the difference between the two parties in this field boils down to this: The Republican Party believes the economic strength of the Nation is based on the freedom of each individual to work and live as he chooses. We believe the Federal Government should be a partner with the States, the localities and the individuals. We believe Government should permit the people to stand on their own feet and walk around.

The Democratic Party believes the Federal Government should be a crutch upon which all other levels of government and the people themselves will lean. But crutches are used only by unfortunate people who are incapacitated. The Republican Party does not believe that the States, the localities, or the people themselves are crippled. We have too much confidence in them. We will not subscribe to the wedge-driving theory of Government entrance into private lives or private businesses. As far as we are concerned, the door to such Government entrance will never be opened.

There are many more differences that we might point up. For example, I believe there is a basic difference between the two parties on internal security. We Republicans know that the avowed aim of Communist leaders is to conquer the world. Time after time, in place after place, they have subscribed to the doctrine of world domination. We have watched country after country disappear behind the Iron Curtain. We know that the United States is the prize country. We know that our subjugation would be the signal cry for their complete success.

And we know also that countries can fall without a single shot nor an isolated battle. We know the importance of internal security. We know that the entrance of a Communist into a policymaking job in our State Department is not a red herring; it's a tragedy. We know these things, and we have done something about it. Between January 1953 and June 1954 some 2,400 security risks were weeded out of Federal employment. The Justice Department has deported 105 alien subversives and ordered the deportation of another 329 aliens with records of subversive activity or affiliation. Since we Republicans took over, 41 Communist leaders have been convicted and another 35 have been indicted under the Smith Act. We did not ignore the danger from within. We did not blithely turn our head when the snake-like head of communism appeared in our own Government. We did something about it. This, too, is a sharp contrast and difference between the Republican and Democratic Parties.

I could go on and on, reciting the constructive achievements that form the Republican record. We have reduced our appropriations and spending. We have reduced our taxes and at the same time acted to spur our business and economy into the greatest peacetime prosperity in history. We halted inflation and we stabilized the dollar. We needed price, wage, and rent controls. In short, my friends, we have done what the American people wanted us to do.

This is the record, the past—a past of which we are proud. What about the future? What's in store for us, the Republican Party? What is our challenge? What should we do?

Let me first interpose one word of warning. No Democrat horses will be spared in the 1956 campaign. Although I hesitate to make political forecasts I will stick my political neck out far enough to make this prediction. In the coming year and a half you will witness many surprising political attacks. You will see how badly the 1952 defeats hurt the Democratic Party—and how much they want to win the elections next year. They will pull every stop toward that end. They have already started.

President Eisenhower himself has not been immune to attack by the Democrats. The Speaker of the House of Representatives, SAM RAYBURN, termed the President "inept." Former Democrat National Chairman Stephen Mitchell accused the President last year of having made an "unholy alliance with Senator MCCARTHY for the purpose of the next election." Of course, this same Mr. Mitchell implied that the President was trying to steer some unethical profits into the pockets of his friend, Bobby Jones, through the Dixon-Yates contract. It is interesting to note that not a thread of proof of the charge was advanced when the blast was made—nor has any proof been offered since the charge to indicate that Ike has taken a page from Harry Truman's book to make deals with his friends. The proof is lacking because the charge is false. But that's the pattern of things to come. And then last month the absolute high in incredible criticism and the absolute low in political decency came when President Eisenhower was berated for going to church. One of the moot questions of political history is "How frantic and panicky can a political party get?" I think I know the answer now.

I might add in passing that these attacks come on the heels of the pious statement of Democrat leaders that they will support the President. If I may have a moment of your time to analyze these statements I would like to read these statements and then give you my translation. Following the lead of the New York Times political writer, Arthur Krock, who compiled a glossary of a few Democrat statements and annotated them with the real meaning, it would sound like this:

Democrat statement: "We will support the President when he is right and oppose him when he is wrong."

Translation: That means that the President is right whenever he agrees with the Democrats and he is wrong when he doesn't. Of course, the Democrats reserve the right to determine what the President is supposed to agree with.

Democrat statement: "We will not oppose just for opposition's sake."

Translation: That means that this is the smog-generator technique. It means that this is exactly what they will do but they will never admit they are doing it.

Democrat statement: "On certain matters we differ with the President, but only on details."

Translation: This means that on vitally important matters there will be only differences of opinion. Of course those insignificant differences include such things as the basic structure and allocation of national defense, the whole nature and administrative system of foreign economic aid, the fundamental grounds for the tax program, and, in fact, the entire domestic political philosophy of the President.

Democrat statement: "We only want fairness to the farmer and the consumer."

Translation: This fairness implies fixed, interoperating high subsidies for both the farmer and the consumer. It also means the cost will be covered by higher taxes and by increasing deficit financing.

In short, my friends, the general platitudes of the Democrat leaders about Presidential support as supplemented by their proposals and their opposition to administrative measures could be translated into one simple phrase: "Politics above all else."

It seems to me that a victory in any political contest comes as a result of combining three factors: a sound program, good candidates, and devoted workers. I have already referred to our program. I think without question it is a record of achievement. I know it can be sold to the American people because it is right.

It is very difficult to succinctly describe a program with many phases and various ramifications. But it is natural that the leader of the program, the man who was intricately concerned with its development should come the closest to putting on paper the philosophy behind the Republican Party. At a press conference on the 27th of January last year, President Dwight Eisenhower was asked to describe the Republican philosophy. May I quote you his answer.

"When it comes down to dealing with the relationships between the human in this country and his Government, the people of this administration believe in being what I think we would normally call liberal; and when we deal with the economic affairs of this country, we believe in being conservative."

This comes the closest to it. I have just finished an annual questionnaire that I conduct in Iowa. Each year since 1950 I have polled my district on the significant problems that face Congress. Until this year I had confined that poll to my own district. This year, for the first time, I polled the entire State since I now represent all Iowa. Although the answers to the 36 questions are far too time-consuming to analyze here, one conclusion is inescapable. The people of Iowa are impressed—they are impressed most favorably by the Republican Party and they are impressed most favorably by the Eisenhower administration. A good illustration is given in the 80-percent approval of President Eisenhower's foreign policy.

If I may be entirely personal for a moment, last fall I conducted a campaign over the whole State of Iowa. I went into almost every village and hamlet of Iowa. To each person I met, in each meeting I addressed, in every press interview I had, I told the same story. "This is what we Republicans have done," I said. "I'm willing to stand or fall on that record." I staked my political future on that record because I believed it was right. The fact that I am, today, privileged to serve in the United States Senate is graphic proof of what Iowa thought of the Republican administration.

We have the program. We need outstanding candidates. I'm more than happy to be in Chicago for several reasons. One of the most compelling is that this is the home

State of one of my closest friends. EVERETT DIRKSEN and I have been friends for a long time. I knew him as a real leader in the House of Representatives. I'm honored to be associated with him in the Senate, where again he is an outstanding leader. Further, Senator DIRKSEN had an effect on my political life that perhaps even he doesn't know. I watched with great interest his campaign in 1950. I knew that he had challenged one of the stalwarts of the Democratic Party. It took great courage to take on the Democratic majority leader of the Senate. I watched the way he conducted his campaign. I watched the energy and enthusiasm he showed. I witnessed the careful planning and the long months of hard work. I saw him hit the opposition hard and often. This was no casual campaign—no one speech a day, with many days off. This was the east-to-west and north-to-south fight that appealed to me.

I would not be so presumptous as to compare my victory in 1954 with Senator DIRKSEN's in 1950. But this similarity does exist. Each of us had a tought fight in unseating a well-established opponent.

That admiration for Senator DIRKSEN, the man, the statesman, and the campaigner, has not diminished during the years. During my service in the House of Representatives, in more instances than I can count, I asked him to come to my First Iowa District. He never failed. It was natural that when I was running over the whole State I should call on him again. And again he did not fail.

That same devotion to Republican causes that marked his 1950 campaign was put to national use last year. He was selected to fill one of the most important and one of the really vital spots in Republican Party circles. He was the national senatorial campaign director. I met him on both coasts, with several stops between. His work was evident everywhere. He was valuable beyond description.

One of the trade-marks of Senator DIRKSEN—and a real compliment, I believe—is that they ask for him to come back. When he addresses a meeting, they ask for a return engagement. The people of my own district—the people of the entire State of Iowa—say to me: Get Senator DIRKSEN back. And he does not fail.

My friends, now we are making the same request of you. Next year Senator DIRKSEN comes up for reelection. We want him back. I refuse to contemplate the loss we would suffer were he not reelected. His record, his qualifications, his leadership is not expendable. We want him back. And you will give him to us.

I have spoken at some length on the type of campaign that Senator DIRKSEN waged and the way I tried to emulate it. But it has one restriction. No matter how energetic the candidate is—no matter how many hours a day he works—no matter how many miles he travels, it is a physical impossibility for him to see every voter. We must depend on the spider web-like organization. I can promise you that EVERETT DIRKSEN will see as many people as humanly possible. But those people must see others. The web must grow in all directions.

I mentioned that a political victory is the result of three factors: a sound program, good candidates and devoted workers. The Republican Party has all three. Our program stands the test of inspection. Like a suit made of the finest goods, it wears well, it stands up. We can take it to the people of America with no hesitancy. We must build our campaign on it.

We have candidates that will carry our banner well. You know how I feel about Senator EVERETT DIRKSEN. I know you will return this great leader to the Senate.

I find it impossible to conclude this afternoon without referring to the greatest achievement of all—the thing that has been most impressive to the citizens of Iowa as well as those of 47 other States. The war in Korea has ended. Certainly this is a tribute to the President of the United States.

I have known President Eisenhower well throughout my entire service in Congress because I served on the Committee on Military Affairs of Congress from 1939 to 1947. I was the only civilian present when Ike was notified he was to be promoted to Brigadier General. I saw him assigned to London and destined to go to the top command of the Allied Forces. He earned that assignment by his thorough preparation and comprehension of the situation confronting us there and by his great devotion to duty. He had fortitude, courage, ability and determination. Drugstore quarterbacks who had never commanded a squad told him, "You can't cross the English Channel. You'll have to go through Spain and the Pyrenees Mountains. You can't cross the Channel. You'd better come up through the soft underbelly side of Europe. You can't cross the channel." But Ike crossed the channel and held the Normandy beachhead against the powerful German military forces.

When Ike became President, the Russians remembered all this and in my opinion, the end of the Korean war was not without significance. So also is our continued peace in the wartorn world of today.

Red China and Red Russia respect Ike's qualities and they have also observed closely America's unity in support of him today in facing our postwar problems. They know full well that in America we can disagree with him openly on some issues and yet support him vigorously. They also know that Ike is not a name-calling, face-making, fist-shaking, letter-writing piano player.

Let's stand united in support of our great President and move forward to continued peace, prosperity, and progress.

We have the program—we have the candidates—and we have devoted workers—people like yourselves. People who believe in the Republican philosophy and are willing to work for it. Let's each one of us here and now pledge ourselves to be a one-person committee for vigilance. There is no magic formula, no "open sesame" for political victory. It comes as a result of dedicated, energetic work. That is your job. Good luck to you all.

United States Tariff Policy Hurts West Virginia Towns

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a factual article entitled "United States Tariff Policy Hurts West Virginia Towns," from the May 9, 1955, issue of the Charleston Daily Mail. Incidentally, the Charleston Daily Mail is one of the principal Republican newspapers of West Virginia. This article, of course, is concerned with only one aspect of the damage to the economy of my State which is caused by the present tariff policy. It does not discuss the damage to the coal industry of the State, which is in an even more depressed condition.

There being no objection the article was ordered to be printed in the RECORD, as follows:

UNITED STATES TARIFF POLICY HURTS WEST VIRGINIA TOWNS

PADEN CITY, W. VA.—The vital, complex fight over the Nation's tariff laws gets down to bread and butter terms in two different kinds of signs you see along the Ohio River these days.

Along the river highway outside of Paden City, there's a sign advertising 80,000 square feet of factory space for sale or lease. This is the epitaph of a 40-year-old glass company which gave up 4 years ago because of low-wage Japanese competition in table glassware. About 450 of the town's 2,500 people lost their jobs.

Now, follow the same river west, around the southern bulge of Ohio, until you reach Evansville, Ind. Here you see help wanted signs. Here, the town is booming practically because of foreign trade.

The two kinds of signs reflect many of the grassroots stakes in the fight just now ending in Washington. Last week, the Senate passed the bill empowering President Eisenhower to cut United States tariffs to spur world commerce.

POTTERIES ALSO HIT

In Paden City, the sign for the defunct glass works is symptomatic of the troubles plaguing many of the glassware and pottery factories in this northernmost corner of West Virginia. Some have shut down completely. Others are working part-time. Unemployment has been running from 8 to 14 percent in this part of the State.

Representative ROBERT H. MOLLOHAN, Democrat, who represents the area and voted against the administration bill authorizing a gradual, 3-year lowering of tariffs, says the bill could mean that glass and pottery will be practically wiped out as a domestic industry.

Next to the dark-glass works is the Paden City Pottery Co., the town's sole surviving employer of any importance. "Before Japan," as they put it here, the pottery firm employed 850 men and women. Now it employees 475, 2 or 3 days a week.

M. C. Sondles, president of the firm, held up a plate, saying:

"Pretend this represents $1 of production cost. This third is materials, the other two-thirds is labor cost. Out of our cost-dollar, 66⅔ cents is labor. In Japan labor would amount to less than 7 cents.

"So if they paid exactly what we do for materials, it costs them 40 cents to make what costs us a dollar."

MANY ON RELIEF

What became of the glassworkers and laid-off pottery employees?

"A few of them go in the new chemical plants up and down the river," Sondles said, "but most of the people learned their trade here and grew up in the business. They were too old to move."

In town, the tradespeople report that the laid-off workers draw unemployment compensation while it lasts.

The United States Potters Association once had 43 members. Now it has 31, of which 23 make earthenware, the rest, china. The 23 earned a total of $4,150,000 in 1947. Last year, largely because of foreign competition, they had a combined loss of $1,100,000.

This was reported by Joseph M. Wells, secretary-treasurer of the Homer Laughlin Co., at Newell, one of the world's largest producers of fine table earthenware. His own firm, he said, once employed 2,800; now it is "25 to 30 percent down in production and jobs, and about 80 percent in earnings."

In the chinaware trade, Wells estimated, foreign producers now command about four-fifths of the United States market.

And then there is the marbles industry. Six of the seven United States companies which make marbles—Vitro Agate, Marble King, and the other brands familiar to schoolboys—are in West Virginia.

Roger W. Howdyshell of St. Mary's told the House Ways and Means Committee the Japanese will soon put the United States marbles industry out of business unless Congress helps.

The Essentiality of the Jeweled Watch Industry

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence between nine Senators and Secretary of Defense Wilson concerning the essentiality of the jeweled-watch industry. Mr. Wilson's letter is in reply to a letter signed by Senators LEVERETT SALTONSTALL, EVERETT MCKINLEY DIRKSEN, EDWARD MARTIN, MILTON R. YOUNG, CARL T. CURTIS, STYLES BRIDGES, WILLIAM LANGER, W. A. PURTELL, and ROMAN L. HRUSKA.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
Washington, D. C., March 30, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. SECRETARY: A transcript of your press conference of last week indicates that an inquiry was made concerning the declassification of a report which purports to show that the jeweled-watch industry is not essential to the national defense and that in your reply you did not attach much importance to the report.

We are certain that since that time you have noticed the vitriolic attacks by newspapers and others on the President for his watch decision, most of which label the decision as one of political expediency. Inasmuch as both you and Assistant Secretary Pike have appeared before congressional committees to testify that the jeweled-watch industry is essential to our security, the release of this limited report, which has never been officially discredited, has resulted in great confusion.

We understand that at the same time the report was published, your Department issued a release covering part of Mr. Pike's testimony to the Senate committee, but the press release stated that this report supplemented Mr. Pike's testimony so that the report seemed to be a later or more important expression of the Department of Defense view.

The fact is, Mr. Secretary, that the report cannot be reconciled with Mr. Pike's testimony. The release should have stated that it was superseded by Mr. Pike's views, which indeed was the case. The continued effort of the authors of the report to preserve an appearance of validity for it cannot result in anything except prolonged confusion in the press and embarrassment to the people who have supported the decision.

The declassified report does not appear to take into account many of the facets of the problem. Some of the omissions which were brought out in testimony before the Senate Armed Services Subcommittee are: (1) It does not mention at all the jewel-bearing problem and the importance of the jeweled-watch industry in that field, notwithstanding that the WPB report on the jewel-bearing problem in World War II says, in so many words, that the jeweled-watch industry saved the day with respect to crises in the supply of jewel bearings for both instruments and timepieces; (2) it does not mention the role of the jeweled-watch industry in research and development, which has been a critical one; (3) in some of the material still classified, the figures reveal that proper consideration was not given to the research and development—and in some cases actual production—of electromechanical fuses, magnetic-influence fuses, miniaturization of fuses for rockets, timers for unattended Arctic weather stations, certain essential components for all types of guided missiles, new types of mines and torpedoes, and special timing devices for gyroscopes in guided missile systems. (The report inexplicably omitted entirely any mention of the important role of the industry in the guided missile program, notwithstanding the fact that General Bradley and others clearly informed the authors of the report that an essential mechanism for one of the prominent missiles was made only by a jeweled-watch company and that no suppliers outside the industry could make it because it contained a jeweled-watch movement; (4) it comes up with the conclusion that the Defense Department will need only 244,845 jeweled watches in the event of another war, notwithstanding that requirements were over 6 million in World War II, over 5 million in direct procurement, and the balance by requisition of imports.

If these are not the facts, we would like to know. But if they are, we believe it would be a service to the country and to the people who fought to preserve an essential industry if you would issue a prompt statement clarifying the situation.

Sincerely yours,

STYLES BRIDGES, WILLIAM LANGER, W. A. PURTELL, ROMAN L. HRUSKA, LEVERETT SALTONSTALL, EVERETT M. DIRKSEN, EDWARD MARTIN, MILTON R. YOUNG, CARL T. CURTIS.

APRIL 27, 1955.

GENTLEMEN: I am sending the original of my reply to your letter of March 30, 1955, to Senator SALTONSTALL simply because of his continued and early interest in the subject of the essentiality of the jeweled watch industry. A copy is being delivered at the same time to each Senator who signed the letter.

I wish to emphasize that the release of the declassified Department of Defense report on the essentiality of the jeweled watch industry on February 28, 1955, was a routine matter and did not in any sense change the position that the Department of Defense took with regard to the horological industry last summer.

The Department of Defense endorsed the tariff increase by letter on July 1, 1954, to the Director of the Budget, Mr. Rowland R. Hughes, a copy of which is attached. You will note this endorsement supported the essentiality of both the jeweled and nonjeweled watch industries. This letter, and the testimony of Mr. T. P. Pike, Assistant Secretary of Defense (Supply and Logistics), on June 30, 1954, before Preparedness Subcommittee No. 6, represents the authoritative statement of the Department of Defense on the essentiality of the horological industry.

The conclusions of the Department of Defense report of April 26, 1954, on the Essentiality of the Jeweled Watch Industry are apparently misunderstood and perhaps not clearly stated. In the course of the study it became apparent that the entire horological industry (the nonjeweled watch and clock producers as well as the jeweled watch manufacturers) was essential to the mobilization base. In order to express this conclusion forcefully, it now appears that the emphasis placed on not recommending special or preferential treatment to any one company of or segment of the horological industry, has been interpreted as not recognizing the essentiality of the jeweled watch industry. I regret this inference and trust that this clarifies any misunderstanding.

The mobilization requirements of the Department of Defense for jeweled watches are exceedingly low. This is the result of a sound policy to issue jeweled watches only in cases where there is an operational need for a jeweled watch. In addition, the Department of Defense, as a further means of economy, has encouraged the use of nonjeweled watches and will continue to encourage this practice. These are produced by the nonjeweled watch (or pin lever) manufacturing segment of the horological industry.

The Department of Defense does not expect jeweled watches to be the jeweled watch industry's only basis of essentiality. It expects the jeweled watch industry, together with the balance of the horological industry and other capable manufacturers, to the degree that they are able, to continue to design and produce very complex timing mechanisms, control devices, gyroscopes, and similar items which must be miniaturized and ruggedized if they are to be used in modern military equipment (items 1, 2, and 3 in paragraph 5 of your letter).

Certain additional information should be understood. The Department of Defense has supported the increase in tariff for watches only because this appeared to be an exceptional case and it did not appear to be at the expense of any other industry essential to the mobilization base. In general, the Department of Defense feels that the tariff policy covered by the extension of the Trade Agreements Act as represented by H. R. 1 is necessary for the greater good of the national and industrial economy, including the defense economy. No action or statement of the Department of Defense should be construed or quoted in any manner as opposition to the policy of extending the Trade Agreements Act.

I hope this reply is satisfactory and that it will clarify the Department of Defense policy as conveyed in the Department of Defense report, Mr. Pike's testimony as to the essentiality of the horological industry, and my own testimony on this subject in connection with the hearings on H. R. 1 before the House Ways and Means Committee.

At your suggestion, I am making public, through a press release, this exchange of correspondence.

Sincerely yours,

C. E. WILSON.

Attachment: Hon. LEVERETT SALTONSTALL, Hon. EVERETT M. DIRKSEN, Hon. EDWARD MARTIN, Hon. MILTON R. YOUNG, Hon. CARL T. CURTIS, Hon. STYLES BRIDGES, Hon. WILLIAM LANGER, Hon. W. A. PURTELL, Hon. ROMAN L. HRUSKA, United States Senate, Washington, D. C.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., July 1, 1954.

Hon. ROWLAND R. HUGHES,
Director, Bureau of the Budget.

DEAR MR. HUGHES: Reference is made to the letter dated June 1, 1954, from the Bureau of the Budget requesting the views of the Department of Defense on a proposed Presidential Proclamation entitled "Modification of Trade Agreement Concessions and Adjust-

ment in Rates of Duty With Respect to Certain Watch Movements."

A majority of four Commissioners find that watches and watch movements are being imported into the United States in such quantities as to cause serious injury to the domestic industry and recommend that the President increase the scale of duties by 50 percent. A minority of two Commissioners fail to find such injury and recommend no change in duty.

The Department of Defense is vitally concerned with the production capacity of the jeweled and non-jeweled watch industry to meet military mobilization requirements. This industry produces such products as jeweled watches and movements, mechanical time fuses, and other special timing devices which are essential to the conduct of successful military operations. In view of the findings of the Tariff Commission and because of the fact that the higher rates of duties should tend to arrest the decline in domestic production this Department favors the proposed Presidential Proclamation.

With respect to any evaluation of possible adverse impacts of the proposed increase in duties upon our international relations and trade, this Department defers to the opinion of other agencies having the primary responsibility in these matters.

Sincerely yours,

ROBERT TRIPP ROSS,
For the Assistant Secretary.

The Honorable Gracie Pfost Crusades for Dam at Hells Canyon

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. TUMULTY. Mr. Speaker, there recently appeared in a nationally circulated newspaper the following article on the activities of Representative GRACIE PFOST, of Idaho. Those of us who entered the Congress with the energetic and attractive Mrs. PFOST, were made quickly aware of her persuasiveness and ability. Her district should be proud of her. The following news story does simple justice to our charming colleague, and I must say Uncle Sam wears his petticoats well:

PETTICOATS IN OUR GOVERNMENT—REPRESENTATIVE GRACIE PFOST TAGGED "HELL'S BELLE" AS SHE FIGHTS FOR DAM AT HELLS CANYON

(By Ann Cottrell Free)

WASHINGTON, April 9.—Public power's red-haired darling and defender is busy this month generating thousands of kilowatt-hours of her own.

Representative GRACIE PFOST (pronounced "Post") is using her private kilowatt-hours in the crusade for a great Federal dam at Hells Canyon on the Idaho-Oregon border.

Idaho's Democratic Congresswoman—sometimes referred to as "Hell's Belle"—is only 5 feet 2 inches tall and weighs 127 pounds. She is, truly, a bundle of energy—much of it dedicated to damming the Snake River.

"This river, winding through my State into Oregon, holds one of the keys to the development of the Northwest," Mrs. PFOST explains.

She was the first of four House Members to introduce a bill authorizing the United States Government to build a single multiple-purpose dam across the Snake. Private power wants to see the river harnessed, too—but it wants to do it by building three separate dams. Thereby hangs the hassle going on today.

Tireless GRACIE has flown 6,000 miles to Idaho and Oregon and back in recent days with two congressional committees to listen to on-the-spot arguments of both sides—public and private.

Though born 49 years ago in a log cabin in the Arkansas Ozarks, GRACIE typifies the State she now helps represent in Congress. When you see her handsome, healthy, freckled face you think of the sunshine on mountaintops, green forests, and clear, frolicking streams.

"At the age of 2, I was perched behind my mother on horseback," she says, "and by the time I was 5, I was following my brother up trees. And at 10 I was driving a team of horses down the road."

An admitted tomboy, GRACIE was certainly not without femininity. She was married at 17 to John Walter Pfost, a master mechanic.

But that old tomboy streak is still there, especially at campaign time. She has found herself in a birling (log rolling) contest at a lumber camp and got a dunking in an icy stream. She's taken part in gold-panning contests and ridden a silver palomino, decked out in her cowgirl finery, in a round-up parade.

It was an obvious understatement when she remarked, "I thoroughly enjoy campaigning."

The road to the National Capital led from the county courthouse. In 1939 she was deputy county clerk for Canyon County and she served later for 10 years as county treasurer. She tasted the national political pudding as delegate to the Democratic National Convention in 1944. She ran first for Congress in 1950 and was defeated. Undaunted, GRACIE tried again and won, beating the GOP incumbent. This is her second term.

Representative PFOST does think of other things sometimes besides Hells Canyon. She looks out for the lead, zinc, and gold-mining industries and keeps her eye on the farm situation. Recently she took a much-needed action that will benefit all House Members and persons who visit the House Chamber.

When visitors ask their Congressmen for cards of admission to the House gallery they will from now on find printed on the reverse side of the blue card rules of gallery etiquette.

"How were people to know that they were not allowed to take packages or cameras into the galleries or to take notes?" GRACIE had wondered. "Now with the rules before them, they will not be embarrassed by a tap on the shoulder."

To GRACIE PFOST can go the credit for suggesting to the proper authorities that the rules be printed on the cards.

Mrs. PFOST is a businesswoman as well as a politician. She has owned and operated a real-estate business back home. But the real estate she's most interested in right now is a project she wants Uncle Sam to take over—the building of a great superdam at Hells Canyon. And she looks like a girl who will never say die.

Small Business Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include remarks I made before the 10th annual meeting of the National Tool & Die Manufacturers Association on May 10, 1955, in Washington, D. C.:

Mr. President, our country's industry and commerce has been brought to its present strength by a lot of small businesses growing into large businesses. The hope of every person or group upon entering business is to make their business grow and prosper. We in the Congress of the United States are trying to help keep these incentives alive. We are trying to keep the door of opportunity open and to foster the basic principle of the American way; namely, to continue an equal opportunity for all who are willing to risk their time and money in a business venture. Once we depart from this premise or permit ourselves to drift into a position where only a few may have business opportunities we shall have indeed lost our way.

Equal opportunity for all is the touchstone of our greatness, not only in the business world but in every single aspect of our national life.

It was with these thoughts in mind that I introduced a bill in the 83d Congress to create the first peacetime small-business agency in our history. As you know, we were successful, and the Small Business Administration was created as an independent agency.

May I point out briefly that the Small Business Act of 1953 provided for 4 principle programs of assistance to small business.

1. To counsel with small firms on their financial problems and to assist them in obtaining needed credit, if private credit is not available on reasonable terms, to participate in loans by private lending institutions, or to make direct Government loans to the firms;

2. To make loans for rehabilitation of small businesses and homes damaged or destroyed by natural disasters, such as hurricane and floods;

3. To help small businesses obtain a fair share of Government contracts for supplies and services; and

4. To assist small firms in solving their management and production problems.

Without going into detail, I can assure you that the Small Business Administration has made great progress in each of the four main fields of its endeavors. It is not an easy task to set up an organization of such major importance as the Small Business Administration and have it running with the precision of a fine machine in the first very complicated year of its existence. It is somewhat like building a machine, plans need to be made and translated into blueprints. A staff of good workmen must be assembled to take those blueprints and start work on what will be in the end a fine finished product. This has been the course of the Small Business Administration. Its plans have been well laid and have been carried into effect with precision, aggressiveness, and a high degree of skill. Small-business men and small-business organizations throughout the United States have applauded the efforts of the Small Business Administration and are urging its continuance as a permanent agency of the Government.

We must recognize that there is opposition to any form of agency designed to assist small business in its dealings with the Government. Most of this opposition ignores the facts of small business operation. It ignores the fact that small business cannot maintain representatives in Washington, and dozens of other points throughout the United States, to take care of their interests. The opposition ignores the fact that when there is no other source of working capital or long-term capital available that it is right and proper for small business institutions to turn to their Government for aid and counsel in financing operations. To say this does not mean money loaned to small businessmen through a Goverment lending agency is to be disbursed on an unsound or unrealistic

basis. The money the Government lends to small and independent business must be disbursed with every expectation, both on the part of the borrower and the Government, that the money will be returned to the Treasury with a fair rate of interest.

The work of the Small Business Administration in the field of Government procurement is gradually and surely producing results. When you consider the ramifications of the purchases of its needs by the Government and the enormous but necessary sums of money required to pay for these purchases, the problem of the Small Business Administration is easily recognized. In its efforts to secure a fair share of the purchases of the Government for small business, the Small Business Administration must necessarily intrude into the affairs of other departments and agencies and particularly the Department of Defense. Those charged with the responsibility of purchasing supplies and equipment for the Government could not be expected to welcome this intrusion with enthusiasm. But in spite of these natural human feelings about having others, even Government agencies, interfering or intruding in our affairs, the Small Business Administration has been successful in securing a high degree of cooperation from every Government agency. This to me, and I am sure it will to you, bespeaks well of the character, ability and resourcefulness not only of SBA officials but the officials of all the departments and agencies with whom the SBA must deal in carrying out the mandate of the Congress.

In the field of management and production problems the Small Business Administration has found a welcome which is as surprising as it is gratifying. This is not to say that officials of SBA in charge of these programs know all the answers to management or production problems. But they do have access to sources of information which have been gathered together that supply many of the answers to problems troubling management and production of small-business men.

The response, as I have indicated, to the management aids and the recently launched production assistance programs has demonstrated the value of both programs. In some reepects, as we have all learned in life, it is as important to know where to look for information as it is to have the information. The principal job is to get the information broadcast far and wide in order that all may have access to it. In the small-business field this is just exactly what the SBA is doing and doing successfully.

There is little doubt but that the Congress will continue the SBA, perhaps indefinitely, beyond its date of expiration of June 30, 1955. It has proven its worth in the short time of its existence. As the years roll on the SBA will become a major factor in keeping the door of equal opportunity open and strengthening the small-business institutions of our country in order that they too may grow and prosper.

As you well know the antitrust laws were designed by the Congress to do the very thing the word antitrust indicates. In other words back in the eighties and nineties the Congress decided that trusts as such were not good for American business or the American people, and so was born the first of a series of antitrust laws now on the statute books.

We have antitrust laws not only dealing with monopolies but with unfair trade practices of every type and description. Over the past 75 years we have come to accept the body of our antitrust laws as an integral part of the American business scene. However, there has always been a vast difference of opinion on the laws themselves, the application of the laws, the enforcement of the laws, and the judicial opinion which have confirmed certain aspects of the antitrust laws.

In view of the importance of the antitrust laws on our business life, it is desirable to stop occasionally and take a look at the laws themselves and the enforcement of the laws. I am sure it was with this in mind that Attorney General Brownell appointed, August 27, 1953, a national committee to study the antitrust laws. After 19 months of work the distinguished group of some sixty persons composed of lawyers, teachers, and Government officials reported to the Attorney General on March 31, 1955.

The report has provoked much discussion and considerable controversy. This is good because by free and open discussion and the expression of opinion from all walks of business and professional life, this report will come to occupy an important place in our continued struggle to improve and evaluate our opportunities.

Undoubtedly there will eventually be legislation based on the findings of this particular antitrust report. In speaking of the report it does not necessarily mean that I agree with every finding of the report. As a matter of fact, Assistant Attorney General Barnes, who is in charge of the Antitrust Division of the Department of Justice, recently testified at a Senate hearing, that neither he nor Attorney General Brownell agree with all of the findings of the report. That in itself bespeaks to my mind of the honesty of effort and the fair consideration which each recommendation of the report will receive at the hands of the administration.

There are many other aspects and ramifications of the SBA and its relationship to our economy that might be discussed, but time does not permit.

It is always nice to meet with your excellent organization of small-business operators, and Mrs. Hill and I have enjoyed this pleasant occasion.

A Bill To Amend the Refugee Relief Act of 1953

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. DAVIDSON. Mr. Speaker, I offer today for the consideration of the House a bill designed to completely revise the so-called Refugee Relief Act of 1953.

When President Eisenhower signed this law 2 years ago, he pointed out that its purpose was to welcome to our shores and give asylum to over 200,000 victims of Nazi and Communist oppression. These political refugees and escapees from behind the Iron Curtain were to be permitted to come to the American haven during a 3-year period ending in 1956.

President Eisenhower said pridefully in August 1953:

It—

This law—

demonstrates again America's concern for the homeless, the persecuted, and the less fortunate of other lands.

This is "a great humanitarian act."

Nothing could have been further from the truth. This law is an immoral deception and a fraud. It is unworkable and unworthy. It belies the promise and frustrates the hope which our beloved country holds out to the world. It is a deceptive fake which decency demands we rectify.

Today, with virtually one-half of the statutes term having passed, some 563 refugees have been able to clear the mountainous hurdles and traps set for them before reaching these shores. You ask, "What hurdles?" "What traps?" Let us set them forth for you.

Suppose you wanted to sponsor the relocation of a refugee family in this country. What would the procedure entail? You would not be confronted with red tape alone, you would run smack into legal barbed wire.

First, you would have to execute a binding agreement with the government personally guaranteeing that the alien and his family will not become public charges. Please produce supporting affidavits as to your own employment and income, your bank credit and a copy of your last income tax return.

Second, supply proof that your alien has a job waiting for him; a particular job with a named employer and at a stated wage. This job must not displace any other jobholder. Have these facts certified by the local United States Employment Service and then by the Department of Labor in Washington. And, be sure to see to it that the job is held open for him until the refugee gets here—8 months from now—if at all.

Third, produce information that you have provided housing for him—give street address, description of accommodations, and the name and address of the landlord.

Getting tired? All right, mail all these documents to the Refugee Relief Administration at the Department of State in Washington, but, do not sit back with a sigh of relief. Your refugee is having his own heartaches on the other side of the ocean.

First, he must get the O. K. from some government to emigrate, along with a guaranty from that government that they will readmit him, if at any time and under any circumstances his residence in the United States is terminated.

Second, the alien applicant must prove that for the last 2 years he has been politically and ideologically pure of heart. He must get security clearance. This is far from easy, but it is his job.

Cabell Phillips, writing for Harper's Magazine, April issue, after an exhaustive study, characterized this as a "phony refugee law" which stands on our books as a national disgrace.

The present law is not alone a vicious fraud, its very administration compounds the deception.

In offering this bill, I join forces with a great humanitarian Senator, HERBERT H. LEHMAN, who has made the extirpation of this calculated piece of legislative hypocrisy and administrative chicanery one of the prime objectives of his distinguished career.

Our bill provides the following major changes in the refugee relief law:

First. Place the administration of the refugee-relief program in a new office of Administrator of the Refugee Relief Act, with the present Administrator having this responsibility taken from him.

Second. Provide for sponsorship and assurances for refugees by recognized welfare agencies.

Third. Increase the number of visas available by 15,000.

Fourth. Extend the termination date of the act to December 31, 1960.

Fifth. The definition of the word "refugee" is broadened.

Sixth. The 2-year documented history provision of the present act is repealed; while the more than adequate security requirements of this act and of the basic immigration law remain in force.

Seventh. Certificates of readmission to country of departure would no longer be needed.

Eighth. The term "ethnic" is stricken from the act.

Ninth. The maximum age for orphans eligible to be admitted under section 5 of the act is raised from 10 to 14.

Tenth. The provision for adjustment of status of aliens presently residing in the United States is broadened and liberalized.

Eleventh. The visa priority system, having proved unworkable and meaningless in practice, is repealed.

Mr. Speaker, an honest, yes, and Americanized refugee relief act can mean much to us all. This country is loved by those of us who are fortunate enough to have been born here. It will be cherished and enriched, as it was in the past, no less by those who pray daily to enter it as the land of their choice.

Let us now so act as to give meaning to those immortal words which grace the symbol of our ideology, the Statue of Liberty, which proclaims to the world:

Give me your tired, your poor,
Your huddled masses yearning to breathe free.
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door.

Let us unlock the golden door.

Profile of America

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mrs. ST. GEORGE. Mr. Speaker, I have been deeply concerned at the virtual banning of the book Profile of America by a subcommittee of the Appropriations Committee.

This book has received the highest praise from everyone who has read and studied it. Of course, I am well aware that the subcommittee has not had the time to do either with the tremendous volume of work before them.

Some of us have said so often, and so loudly, that we disapproved of book burning, censorship, and all other evils that would shackle the human mind and spirit. Now we are taking a history of our country, carefully edited, taking all facets of that history from the beginning to the present, and because it is not a Pollyanna primer for backward children, because it mentions duststorms and includes an excerpt from Thoreau, one of our acknowledged classics, we say it cannot be sent abroad. This would be funny, if it were not tragic.

Here is a rare book that shows America as she is. All her greatness, her strength, and above all, her freedom. All that has made her powerful today. The saga of the free individual and of free enterprise. That such a book should be banned is, at worst, great comfort to our enemies and will be food for their propaganda specialists. At best, it shows that we are not yet adult in our thinking.

Mr. Speaker, I am inserting a letter from Father Davis, S. J., of America, and some excerpts from reviews from leading newspapers all over the country:

AMERICA,
New York, N. Y., April 29, 1955.

DEAR MISS DAVIE: It was disconcerting to learn that overseas distribution of your fine book, Profile of America, is running into difficulties. I certainly hope that the problems can be solved.

In my review of Profile (America, December 25, 1054, p. 343) I wrote: "Builders of home libraries can go out confidently and buy this book for their collections." I feel sure the USIA must have agreed with this judgment when they chose your volume for use in their information program in other countries.

Your book gives a good, rounded presentation of American life. In the hands of those who are hungry to know about America and its life your Profile of America should do immense good. Too often people in other lands know only what hostile propagandists choose to tell them about us. I have seen how this works in France. Your book, on the other hand, will give foreigners a glimpse of the complex reality of America as we Americans know it—its diversity, its challenge, its tradition and its hopes. Even those who can't read will learn about us through your well-chosen and magnificent pictures.

Cordially,
REV. THURSTON N. DAVIS, S. J.

EXCERPTS OF REVIEWS FROM NEWSPAPERS

Maine: "No more valuable and fascinating gift book can well be imagined than the Profile. It is assuredly the ideal book of information for a friend abroad, eager to know all about this country. We know of no other single volume which tells the story of America so comprehensively nor so vividly presented. It is a rare, well-balanced book of knowledge, documentary in every detail, in which virtually every aspect of America is touched upon." (The Lewiston Daily Sun, Lewiston-Auburn, Maine, January 8, 1955.)

Massachusetts: "A stunning volume about our country * * * With claims to immortality * * * The actual words of hundreds of people who have said something worth recording at some particular time or about an important issue, fill this book. The huge gallery of pictures is a delight and an education in itself * * * Every family in America should have a copy, to own with pride." (The Boston Post, December 5, 1954.)

Ohio: "In this magnificent volume American life and history are truly mirrored. Historic documents are recorded * * * Every facet and aspect of American life finds its place in these pages. This volume does, indeed, present an absorbing profile of America." (Cincinnati Enquirer, December 17, 1954.)

Kentucky: "This is one instance in which the buyer receives more in quality than he bargains for * * * Not only is it good reading for the entire family but it is something of a literary wonder drug to be taken freely at the first sign of pessimism about the American way of life." (Lexington Herald.)

Texas: "This book is a treasure. It should have wide circulation abroad and should be in every school as well as public library." (Wichita Times, Wichita Falls, Tex.)

Louisiana: "No review does justice to this book which does not mention the large quota of breathtaking illustrations * * * They give the book an additional visual dimension." (The Picayune, New Orleans, December 19, 1954.)

Florida: "If you have friends in Europe who want to know what our country is really like, Profile of America answers as nearly as one book can, the question, 'What is the United States?'" (The Miami Herald, November 21, 1954.)

Tennessee: "One of the most vivid and interesting documents of America I have ever seen. It is originally conceived and beautifully executed. It will be of the greatest use. I can commend the volume without hesitation." (Dr. Harvie Branscomb, dean, Vanderbilt University.)

National: "A highly effective and in the best sense a patriotic book." (Time magazine, December 6, 1954.)

Address by Hon. William F. Knowland, of California, Before Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Senator from California [Mr. KNOWLAND] before the 64th Continental Congress of the Daughters of the American Revolution, in Washington, D. C., on April 21, 1955.

There being no objection, the adress was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. WILLIAM F. KNOWLAND, BEFORE THE 64TH CONTINENTAL CONGRESS OF THE DAUGHTERS OF THE AMERICAN REVOLUTION, CONSTITUTION HALL, WASHINGTON, D. C., APRIL 21, 1955

In the 10 years since the Yalta Conference of February 4–11, 1945, great advances have been made by the Communist world.

At that time there were less than 200 million people behind the Communist Iron Curtain. Today, over 800 million people have lost their freedom to the most godless tyranny the world has ever known.

The world balance of power has been so upset that no prudent person can ignore the realities of the situation. Not only the future of this Republic but the hope for a free world of free men largely depends upon the policies that we follow and the firmness with which we and the free nations deal with future Communist aggression or threat of aggression.

Recognizing the inherent danger in further Communist conquest, the Government of the United States has undertaken a series of commitments under the North Atlantic world of freemen largely depends upon the Alliance, the ANZUS (Australia-New Zealand-United States) Mutual Defense Pact,

and mutual-defense pacts with the Republic of the Philippines, the Republic of Korea, Japan, Southeast Asia, and the Republic of China.

The last two treaties were overwhelmingly ratified by the Senate during this session of Congress.

In a display of national unity that should have encouraged our friends abroad, given courage to the neutrals, and opened the eyes of the would-be aggressor, the House of Representatives passed the Formosa resolution by a vote of 409 to 3 and the Senate by a vote of 85 to 3.

As a Republican I wish to pay tribute to Senator GEORGE, Senator JOHNSON, Congressman RICHARDS, and Speaker RAYBURN for their cooperation in helping to make such overwhelming majorities possible.

This action had no sooner been taken and the two treaties ratified than diplomatic moves started on the part of certain Asian and European powers to bend the line of defense in the Pacific and lay the groundwork for a conference which would have all the unfortunate results of a Munich, a Yalta, or a Geneva wherein the aggressor gains his objectives at the conference table.

Let us examine the record of the United Nations as an agency for effective collective security as envisioned by some or as a basis for a world government as contemplated by others.

World War II had not yet terminated in 1945 when the United Nations Conference was held in San Francisco. The people of the world did not know that we were on the threshold of the atomic age though those high in Government had reason to believe a vast new power that ultimately could be used for destructive or constructive purposes was soon to be unveiled.

Hopes were high everywhere that the Soviet Union, though a dictatorship, had learned the folly of aggression and of war and because of the vast help given by the free world to them they would be willing to help establish a system of international law and order to preserve the peace of the world for ourselves and our children.

Unfortunately both during the San Francisco conference and in the 10 years that have followed a vast propaganda effort has taken place to build the United Nations into something which its charter provisions could not or did not permit it to become. In the United Nations different people envisioned different things.

Some envisioned it as a mighty force of collective security that would rally most of the nations of the world to resist aggression and preserve the peace. In moments of oratorical fancy some even suggested that the fact the United Nations was in being would warrant free nations to scrap most, if not all, of their armed forces and place their reliance upon the police power of the United Nations and the collective moral persuasion of that organization. On June 25, 1950, this concept was shattered.

When the Communist forces crossed the 38th parallel, the United Nations Security Council promptly acted and first called upon the Communist aggressor to cease the aggression. The Communists, of course, forthwith showed they were not impressed by a United Nations resolution or the adverse moral reaction of that organization. The Security Council next called on the 60 members of that organization to give aid and support to the victim of the aggression, the Republic of Korea.

What is the record on this? After 3 years of the Korean war, of the 60 members of the United Nations only 17 contributed a single soldier, sailor, or airman to the resistance of aggression. Outside of the United States of America, the other 16 contributed armed forces in the amount of 45,000. The United States of America alone contributed more than 450,000, and we rotated more than 1 million men through the Korean theater of war. The little Republic of Korea, which was the victim of the aggression, supplied over 600,000.

This means that of the United Nations members the United States of America supplied more than 90 percent of the manpower and better than 90 percent of the resources.

When the forces of the Republic of Korea, not being a member of the United Nations (having been kept out by a Soviet veto), are added to those of the United States, it means that our two nations alone supplied better than 95 percent of the manpower.

Does this indicate that the United Nations is an effective instrument of collective security? The answer must come back in the negative.

Our associates in the United Nations so tied us down that a stalemate was all that could be gained after 3 years of struggle in Korea.

We were denied the right of hot pursuit and the enemy was protected in his sanctuary across the Yalu.

With that example are you prepared to risk the future of our Nation and the safety of our people upon the collective ability of the United Nations to function in the event of aggression? The answer likewise must be in the negative.

There are some who have envisioned the United Nations as a world state to which openly or clandestinely, individual nations would surrender their sovereignty. Some of the more enthusiastic proponents of this type of superstate compared the San Francisco meeting with that of our own Constitutional Convention at Philadelphia. Of course, the two gatherings are not comparable when one considers the building of a government upon which man might depend for the protection of his life and his religious, economic, and intellectual freedom.

In the first place, those who met at Philadelphia spoke a common language and had a common heritage. True, they had come from different areas of the world, but they or their predecessors had come seeking a new way of life, freedom from Old-World tyranny or a desire to worship God according to the dictates of their own consciences.

They had fought a common battle against the mightiest empire of that time. They had carried over from the old country the background of the Magna Carta and of representative government. They had had experience as an independent nation, much of it unsatisfactory, under the Articles of Confederation.

With that background, under what I believe was divine inspiration, drafted the greatest document produced by the mind and hand of man for his self-government and protection of his natural rights.

A little more realistic understanding of the history of the nations gathered in San Francisco should have made it clear that such an organization could not be and should not be considered a basis for world government.

There is no common language or common heritage. Nations which have had no experience with representative constitutional government sit on equal terms with those that have had long experience. Nations of less than 1 million have equal representation with those of over 300 million. The Soviet Union, which is perhaps the most tyrannical government since western civilization entered the modern era, sits as an equal partner with nations with long-established constitutions of law, order, and a respect of the rights of man.

Now, there are those who urge the admission of Communist China which was the aggressor in the Korean war. This, together with the other Communist states, give that system of tyranny over 800 million people.

As for me, as long as I have a voice or a vote in the Senate of the United States, I shall never consent to permitting the guaranties of freedom under our Constitution being modified directly or indirectly by any organization having in powerful policy positions nations which have no appreciation of or respect for free institutions.

I am opposed to any form of world government wherein American freedom guaranteed by our Constitution and Bill of Rights is compromised or diluted in the slightest by comembership with Communist tyranny.

It is one thing for the American people by deliberate choice, after thorough debate, to amend our Constitution to meet changing conditions. To allow it to happen by default would be a betrayal of our responsibilities.

We must not permit court decisions of executive agreements to raise such to the status of treaties. Nor will we long preserve our Constitution, drafted at Philadelphia under the chairmanship of George Washington, if we fail to challenge any effort to amend our Constitution by use of a loophole which may provide a treaty or executive agreement shortcut to what was intended to be a difficult process.

Lest we be gradually edged into such a world state before we learn too late wherein we have been taken, I believe that every candidate for public office—executive, legislative or judicial—should be asked to give a forthright view upon this great public issue. It is later than you think.

It is important that we have a system of effective collective security and to demonstrate to the Communist world that there will be no further retreats or the abandonment of free people into Communist hands.

This Nation will live up to all of its treaty obligations, and we have the right to expect that our allies will do likewise.

I have a deep conviction that the American peope and those throughout the free world who understand the dangers facing us will never again pay the price of another Yalta or another Geneva in order to buy a temporary respite from the insatiable appetite of international Communists to destroy human freedom.

I am strongly opposed to the admission of Communist China into the United Nations.

Despite the lessons of history, the voices of appeasement appear to be growing at home and abroad. Some suggest that Quemoy and Matsu be allowed to pass into Communist hands. It is my strong belief that such an event will be looked upon as a great Communist victory in Asia and will undermine the remaining confidence the free anti-Communist nations of Asia have in the Government and the people of the United States.

Why is it that the voices of appeasement always urge that our friends and allies be the ones to give up territory or to yield up more people to communism? Why do they not suggest that it is time for the Iron Curtain to move backward rather than forward? The fact of the matter is that Quemoy and Matsu are as important to free China as Western Berlin is to Free Germany.

What military or civilian official would try to maintain that Western Berlin, a metropolitan island completely surrounded by Soviet territory, is defensible in and of itself? The fact of the matter is that our garrison in Berlin, the wives and children who accompany them, are hostages to potential Soviet aggression.

We have felt it important, however, to maintain this island of freedom in the heart of Soviet territory despite the fact that it is aggravating to the Communists of the Soviet Union and of Eastern Germany, because it is important to the morale of the free German Republic and it is a beacon of hope to the Germans behind the Iron Curtain that some day they too may be free.

The reason that Western Berlin has not passed behind the Iron Curtain is the fact that the Soviet Union knows that any attempt to take over the area by force would immediately involve the western allies in military action.

Though we took some grave risks, we broke the 1948 blockade of Berlin by the airlift. There are now indications that the Communists are again attempting to strangle the economic life of the island of freedom.

Have they been encouraged in this new action by the voices of appeasement here and abroad which have indicated that we must placate communism when they get aggravated, for otherwise we may be risking armed conflict.

Does history teach us that this is the way to a lasting peace? The answer, of course, is "No."

At Munich, Chamberlain and Daladier succumbed to the threats and pleadings of Hitler that if they would but agree to turn over the Sudetenland area of Czechoslovakia to him that he would have "no further territorial demands in Europe."

Without the consent of the Government of Czechoslovakia this sordid deal was made. To salve their conscience, Great Britain and France agreed to guarantee the frontier of the reduced Czechoslovakian State.

Seven months later, Hitler's legions took over the balance of Czechoslovakia. The conscience of the two guarantors was disturbed and several speeches were made as to the immorality of such aggression. But the guarantee given 7 months before did not save the people of Czechoslovakia, for by then they had lost their will to fight, largely because they had lost their faith in the western allies to do anything more than to talk and to appease.

What deadly parallel does this furnish to the situation in the Formosa Straits today?

Quemoy and Matsu have never been Chinese Communist territory and they are not today.

That these outposts have a military value, no man can deny, for they certainly make more difficult the launching of an amphibious assault out of Amoy and Foochow as long as the Free Chinese control these islands.

But equally important as their military value is their psychological value. Their loss by appeasement will bring as much despair to Free China as the deal at Munich for the Sudetenland caused despair to the free people of Czechoslovakia.

It will also shake the confidence of our friends in Korea, Japan, the Philippines, Thailand, Pakistan, and elsewhere where people understand the brutal and aggressive nature of communism.

I again want to emphasize that in my opinion the morale value of Quemoy and Matsu is as high for Free China as is that of Western Berlin for Free Germany.

There are some who believe that you can distinguish between a Communist assault on Quemoy and Matsu in and of themselves and Quemoy and Matsu as stepping stones toward Formosa and the Pescadores. What nonsense is this? When the assault is underway, are we to inquire through the good offices of Mr. Hammarskjold, of Mao Tse Tung and Chou En-Lai in Peiping as to whether their assault is only for the possession of these outer ramparts?

If at such a time, with tongue in cheek, the Communist leaders believe that it would be to their advantage to prevent American support going to our ally, the Republic of China, and they reply that their temporary objective is only Quemoy and Matsu will we ask them to reinforce their statement by saying: "Do you guarantee this with a cross-your-heart-and-hope-to-die asurance?"

In the light of the bald-faced violation of the Korean armistice and the Geneva agreement what would such an assurance be worth?

I wish to share with you two letters, one from Pilot and one from Bataan death-march veteran. (Letters read.)

This Nation was not born nor did it grow to its position of greatness based on a policy of fear, but rather one of faith and courage.

As an American citizen and as a Senator of the United States, I am convinced that if we will only use the same faith and courage that motivated the men who sat at Philadelphia and under what I believe to have been divine guidance, gave us first our Declaration of Independence and later our Constitution, there are none of our great domestic problems which we as a free people cannot solve and there is no foreign foe we need ever fear.

Sumner Pike, Maine, and the Atom

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. PAYNE. Mr. President, every State is naturally proud of its distinguished sons, and the State of Maine is particularly proud of Sumner Pike. After a successful career in business, Sumner Pike entered Government service. In 1939–1940 he served as business adviser to the Secretary of Commerce; from 1940 to 1946 he was a member of the Securities and Exchange Commission; and from 1942 to 1946 he also served as director of the Fuel Price Division of the Office of Price Administration.

When the Atomic Energy Commission was created in 1946, Sumner Pike became one of the five original commissioners. He served as a member of the Commission, and for several months was Acting Chairman before he retired to go home to Maine in 1951. Home for Sumner Pike is the town of Lubec, which is on one of the most eastern points of land in the United States.

Sumner Pike has had one of the most active retirements of any man I have ever known. The people of Maine were naturally anxious to take advantage of his experience and ability, and he was prevailed upon to become Chairman of the Maine Public Utilities Commission. He is currently scheduled to take over the newly created job as Maine's coordinator of atomic energy, which will be the first post of its kind in the Nation.

It has been one of the great privileges of my life to know Sumner Pike and count him as a friend. His boundless energy and straightforward frankness are a welcome contrast to the pussy-footing attitude of some public officials.

On May 5, 1955, an article by Richard H. Cunningham entitled "Sumner Pike, Maine, and the Atom" was printed in the Worcester (Mass.) Telegram. I ask unanimous consent that this article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"THE HUMAN DYNAMO"—SUMNER PIKE, MAINE, AND THE ATOM

(By Richard H. Cunningham)

Maine's biggest natural resource in atomic energy is not uranium, but 64-year-old Sumner T. Pike, 1 of the 5 original members of the Atomic Energy Commission, and for some months its Chairman.

With Pike as chairman of the State's public utilities commission, Maine has already moved swiftly to take full advantage of atomic power possibilities. Maine is looking toward atomic power as a natural complement to its vast hydropowerplants which Pike also wants developed.

Governor Muskie told me he hopes to persuade Sumner Pike to become Maine's coordinator of atomic energy, the first job of that type in New England. Mr. Pike was not surprised when I later passed along the governor's remark to him. He is obviously ready to step into the post, a natural for him.

Maine has become the first New England State to adopt its own baby atomic energy law. Mr. Pike could be excused for his pride in noting that one section of Maine's laws had to be rewritten so that he, as chief of public utilities, could accept the post of atomic coordinator when it is offered.

"They're been more strict about their public utilities officials up here than they were about the activities of the members of the Atomic Energy Commission down in Washington," laughed Mr. Pike. "It used to be that I couldn't be anything other than a justice of the peace or a notary public while serving in this job. The legislature changed that, however."

HAPPY MAN

Sumner Pike is as happy in his Augusta job as Maine is obviously happy about having such a distinguished and experienced man to guide its power program. A Maine native, he fits into the State scene as comfortably as an old shoe. The fact that he's "leftist, as Republicans go," doesn't bother him a whit in his Maine government job.

Mr. Pike was persuaded to take the Maine post after he suddenly resigned in 1951 from the Atomic Energy Commission. "I just figured I had run my string out," he said then. He had planned on retirement, a period of fishing and loafing back home in Maine. His native State insisted on putting him to work.

"I like the direct personal contacts up here," said Mr. Pike, when I suggested he must miss the hurly-burly of Washington. "It's fun to have such direct relationships with people, and to have your office on an open-house basis most of the time."

Mr. Pike has lost none of the fiery spark that helped make him a controversial figure on the national scene. Wealthy in his own right as a result of fortunes made in oil and stocks, the onetime Boston utilities office clerk has the kind of rugged independence that Maine Yankees most admire. "Oh, that's a lot of hogwash," he told a telephone caller who interrupted our conversation.

ATOMS FOR PEACE

It was of atomic energy for peace that Mr. Pike most wanted to talk. He proved to be conservative in his predictions about the atom, but there was no mistaking a note of liberalism in his thinking when he said that New England has been throttling itself worshipping its own ideologies while other sections have been developing vast powerplants—including public power.

He added quickly, however, that he considered himself one of the "private power group." He praised the private public utilities for being anxious to get going on atomic power for New England. He cited the progress made by the Yankee Atomic Electric Co.

"No, I don't believe Maine should go off galloping by itself on this atomic power business. But it is a sign of Maine's intense interest that she has already passed an atomic energy law."

This law asks that the State adapt laws and regulations to meet new conditions to help the "healthy development" of industries producing or utilizing atomic power. It calls upon the State to initiate continuing studies of atomic power, and to name an atomic coordinator to keep the State informed fully of developments in the field.

"Frankly, I don't believe that atomic energy will radically change the whole industrial face of New England," he said. "It will be 10 years before atomic power reaches a stage of even small general use, and after that, it will grow rapidly." He said he disagreed with Admiral Strauss' view that atomic power will be so cheap, it won't even have to be metered. He said he thought it might be even more expensive than hydroelectric power, "because it will take more skilled men to operate an atomic plant."

"The big value of atomic power to New England," he said, "will be in the fact it will make us that much less dependent on the fossil fuels—coal and oil—for power. Maine's hydroplants aren't sufficient in midsummer, when the streams and rivers are at low level. For each hydroplant, Maine now must have a coal- or oil-fueled one to serve during water droughts."

THE FUTURE

"Within 15 years," Mr. Pike said, "I expect serious shortages of the fossil fuels, whether from local economic causes or from disturbances internationally. Only a few months ago, we almost lost all of the Persian Gulf oil. And down in Pennsylvania, thousands of men are leaving the coalfields. In 15 years, atomic power will really begin to prove its value to New England."

Meanwhile, the main contribution of the atomic age to this region will be in what Mr. Pike called the atomic byproducts. He said that if he reads politics right, Kittery, Maine, will build the next atomic submarine. The Maine paper and textile mills are already finding important uses for an atomic-powered thickness indicator. Research Row in Cambridge is expanding so rapidly, he said, that "it must expand right across all of the New England States." He cited the work on atomic energy being conducted at the Pratt & Whitney aircraft laboratories at East Hartford.

Mr. Pike said he was "deeply disappointed that our New England colleges and universities are not taking seriously enough their responsibilities in atomic research.

"There are too many dear old souls in our New England colleges, and they don't seem to understand yet the importance of the atomic age. Brookhaven (atomic center) hasn't been doing the job it should be doing in spreading the gospel of the atom among the colleges. The little University of Connecticut, down in Storrs, is doing far more, for instance, in the field of atomic energy than Yale University, which should be doing a major job in this field."

POLITICALLY STRONG

Mr. Pike has strong political backing for his atomic energy ideas. Governor Muskie emphasized the State's good fortune in having Mr. Pike there.

Senator James L. Reid, the senate Republican leader, has made an intensive study of the atom. "I did it as a hobby," he says. "But it is beginning to pay off now." Senator Reid, probably the only legislator who can diagram atomic energy to illustrate his senate speeches, said he had read the original Smythe report on atomic energy "some 17 times."

Senator Reid has called for a $75,000 appropriation to launch the Maine Development Commission on atomic research in relation to industrial possibilities. And Denis O'Brien, industrial agent for the Maine Development Commission, says the State considers Sumner Pike as the "human dynamo" of its atomic program.

Tribute to the Late General Peyton Conway March

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. ALLOTT. Mr. President, General Peyton Conway March, a distinguished soldier of World War I, passed away in Washington, D. C., April 13, 1955, at the age of 90. One of my constituents, Pfc. Wilbur M. Hargreaves, of Holyoke, Colo., was one of the general's attendants during his last illness. The words of condolence and comfort which he addressed to the widow of General March are among the most eloquent that I have ever been privileged to read. She has most graciously consented to their publication. I ask unanimous consent to have them printed in the Appendix of the RECORD.

Also, at the request of Mrs. March, I ask unanimous consent to have printed in the Appendix a message of condolence which she received from His Excellency, Monsieur Maurice Couve De Murville, Ambassador Extraordinary and Minister Plenipotentiary from the Republic of France to the United States.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

MESSAGE OF CONDOLENCE FROM PFC. WILBUR M. HARGREAVES, HOLYOKE, COLO., TO THE WIDOW OF GEN. PEYTON CONWAY MARCH

DEAR MRS. MARCH: No matter when or how death comes, it is always a shock. I returned to the suite Wednesday evening about 7:30 p. m. to see how the general was getting along, and of course, was told the news. He was still in the room when I arrived, so I saw him before he was taken away. It was hard for me to reconcile myself to his passing; he looked so well at 3:30 p. m., when I left. His color was good and he was restful. All the next day I could only think of the general, and I felt as though I was lost without him to care for. My heart went out to you, Mrs. March, for I remembered you saying that he was all you had left in this world. Friday evening, as my friend and I knelt in his little room for prayer to welcome God's Holy Sabbath hours, I prayer so earnestly that Jesus would comfort and strengthen you during this hour of deep sorrow, for I knew what you were going through. Only God knows the emptiness left in the soul when a loved one has departed from us, for "surely He hath borne our griefs, and carried our sorrows." (Isiah 53:4.)

But it should give us great comfort to know that the general didn't suffer, as so many do, with agony just before they die, or perhaps years, until they die. The general had been greatly blessed of God with a long and eventful life in the service of his country and his fellow men. Not many are privileged to live 20 years beyond the allotted "3-score years and 10." And he had been blessed with good health, being free from the diseases which plague mankind and cause so many untimely deaths. He was strong until the last, and then he slipped away so quickly and quietly. And now he rests. He sleeps in the grave, awaiting the resurrection. What a comforting truth to know. And one thing is certain; his eternal destiny is in the hands of our gracious Heavenly Father who is infinitely loving in His justice and His mercy.

I am thankful, Mrs. March, that God so ordered my steps that in His providence I had the honor and the privilege of serving the general during the closing twilight hours of his life. He had many admirable qualities which I respected very highly. Needless to say, I became attached to him. My only regret is that I didn't do more and do better. May God forgive me for this. I also want to thank you for every kindness which you extended to us boys while we attended the general. We all appreciated these expressions from you. You showed us every courtesy becoming of the wife of a man of such high rank. You made us feel like "one of the family."

Mrs. March, may it give you comfort to know that the general may not sleep very long. The signs of the times and the fulfillment of Bible prophecies in connection with the second advent of our Lord to this earth tell us that His coming is most certain to be in our day. Let us get our lives in readiness that we may be prepared for His glorious appearing in the clouds of heaven with all His angel host, so that we may be reunited with our loved ones whom death has separated from us. Oh, how tragic it will be, if we are unready when He comes, and thus be separated from loved ones forever. May God help us that this may not be.

If there is anything at all that I can ever do to help you, Mrs. March, please do not hesitate to let me know.

PFC. HARGREAVES.

WASHINGTON, D. C., *April 14, 1955.*

Mrs. PEYTON MARCH,
1870 Wyoming Avenue NW.:

Please accept my heartfelt condolences and be assured of my deepest sympathy in your great sorrow. The prominent part which General March played in the First World War and in our common victory will always be remembered with deep appreciation by my countrymen.

MAURICE COUVE DE MURVILLE,
French Ambassador.

Hawaii and Alaska Statehood Bill

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, I rise in support of the amendment.

The committee discussed this very, very carefully. I wanted to ask the

chairman of the committee a question about the bill and the procedure. We are on the last amendment. A motion to recommit will come from this side. I have notified my colleagues to vote against the motion for recommittal and vote for the bill. I hope the gentleman will also make that clear as far as his position is concerned.

Mr. ENGLE. I certainly concur in that. We will never get this bill to the Senate by recommitting it. I hope this House will vote down the motion to recommit and vote the bill favorably to the other side.

France Pirates From United States Industry

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HOSMER. Mr. Speaker, a steadily increasing amount of pirating of United States industrial ideas is being done by France. This is contrary to our international agreements with that country and contrary to basic business ethics.

I have requested the State Department to make a full investigation of the facts and circumstances set forth by the following United States victim of this practice, as set forth in a letter to me:

HAMER VALVES, INC.,
April 28, 1955.

Hon. CRAIG HOSMER,
House Office Building,
Washington, D. C.

DEAR MR. HOSMER: May I refer to my letter of June 25, 1954, to the Department of State, a copy of which was sent to your office, as well as to Senators KNOWLAND and KUCHEL.

We certainly do appreciate the assistance you gave us last year. I regret now to report that our attempts to deal with the French have failed. SAPAG is a copyist; we negotiated with them for months and months but all they seemed to do was stall. They appeared to want a legal license to manufacture our products in France, but they wanted us to give it to them at practically no charge. We have a very successful license arrangement with an English concern which pays this company a royalty fee on the earnings from the sales of English-made Hamer products; of course, we want the same type of royalty agreement with the French.

Now that the negotiations have collapsed SAPAG is proceding to manufacture and sell Hamer products under their name without permission from us. We may or may not be able to take them into court, as it remains for us to determine whether or not our patent applications will bear a test in French courts. We feel, however, that this is more than a matter of legality—this is a breach of of moral conduct.

I am enclosing copies I have made of pictures and literature sent us from France which shows the SAPAG valve. Compare it with the Hamer literature enclosed; of course, it is a direct copy.

At a recent meeting of the Nomads, a group of men representing local industrial manufacturers, the speaker of the evening reported on his recent travels abroad, including France. He stated that American industry was facing a serious problem as the French are making a business of copying American products. Do you remember many years ago how we used to speak of the Japanese of copyists? They were pikers compared to modern France.

The purpose of this letter is to ask if you will urge the State Department to make formal protest on behalf of United States manufacturers. Should we not inform France through the proper channels that this is a serious matter to the American businessman and that the reputation of the French is sinking.

Mr. HOSMER, I can assure you that this opinion is not ours alone. We can back this up with the voice of other reputable people.

It hardly seems fair that the French people would stoop to such methods after the American people spent so many lives and so much money for their defense. We wonder if it may be possible to bring them to their senses with diplomatic protests.

It happens that the United States Navy at Port Hueneme has done business with SAPAG. We are also advised in the Department of Commerce World Trade Report dated July 27, 1954, that the American forces in France have purchased from them. Under the circumstances we feel that it would be unfair for any agency of our Government to continue support of a foreign firm that is copying American goods. I believe that such firms should be removed from the list of approved manufacturers. If official action is taken and SAPAG is advised of it by their Government I believe they may seriously reconsider their relationship with us.

May we again have your assistance on this matter?

Thank you.

Yours very truly,
HAMER VALVES, INC.,
MAURICE E. HOLLADAY,
Vice President.

False Witness Against Reclamation

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. UDALL. Mr. Speaker, it appears unmistakable that one of America's most widely circulated magazines, the Reader's Digest, has opened its pages to special pleading, or, perhaps more properly, has become public-relations agent for the new Hoover Commission.

In recent weeks it has been necessary for two of my colleagues—Senator GORE and Representative ROGERS of Colorado—to challenge the accuracy of material published in this magazine, and it has now become my duty to follow in their path and to make known certain falsehoods and half-truths that appeared in the May issue of Reader's Digest. I refer to the article Dollars Into Dust, a slashing, reckless attack on reclamation in general and the Upper Colorado and central Arizona projects in particular.

The prejudice behind this article and its distortion about the "almost unbelievable Government extravagance" in Bureau of Reclamation projects should shame the editor of any honest, impartial magazine. One is tolerant of those who mislead through want of information. But, on the other hand, it is hard not to be indignant when reporters go into the field and glean the truth only to ignore it when it hurts their purposes.

The damage done by the misinformation in this article can never be completely undone, but I submit for those who read our RECORD the following statement and editorial which shed the light of truth on the Digest's latest example of shabby journalism. The statement was made late last month in Phoenix, Ariz., by Mr. David Brinegar, executive secretary of the Central Arizona Project Association. The editorial, printed soon after Mr. Brinegar's statement, was written by the respected editor and publisher of the Arizona Daily Star, Mr. William R. Mathews. The statement and editorial follow:

STATEMENT OF MR. DAVID BRINEGAR, EXECUTIVE SECRETARY OF THE CENTRAL ARIZONA PROJECT ASSOCIATION

Mr. Harvey had answers to every one of those false statements, but chose not to use them.

When he was here I gave him the facts about the Central Arizona project. Late in September 1954 he asked not only for facts on the Central Arizona project, but assistance in obtaining information about the upper basin project. Through John Geoffrey Will, of Denver, then executive secretary of the Upper Basin Commission, I obtained the upper basin material Mr. Harvey wanted.

The article published in Readers' Digest under the names of Mr. Miller and Mr. Harvey presented none of this material. It repeated a large assortment of propaganda statements almost verbatim out of California-published literature, with the implication that these statements were factual and could not be effectively answered.

For instance, the Digest article says that populous States would have to pay most of the bill for the Central Arizona project. That is false. The Central Arizona project would fully repay all its costs to the Federal Treasury and return an additional three to seven billion dollars of direct tax revenues to the Federal Government besides. This is not our estimate—this is the estimate of one of the most conservative agricutural economists in the United States, True D. Morse, formerly head of Doane's Agricultural Service at St. Louis and now Under Secretary of Agriculture.

The Digest article says that the Central Arizona project would irrigate only 226,000 acres. That is false. It would provide water for three-quarters of a million acres of the most valuable farming productionwise in America.

The Digest article says that the Central Arizona project construction cost would be $1,991 per acre. That is false. The cost of agricultural works never went beyond $400 per acre and several times was estimated lower. I suggest that in this instance the Digest was rather moderate. However, some Californians have used a figure as high as $5,000 an acre.

The Digest charges that there is a "concealed subsidy" to Arizona farmers of $9,200 an acre in the Central Arizona project. The Digest then lists, out of a California propaganda leaflet, figures indicating that New York State would pay $256 million of the project cost, and that other States would pay other large sums. These statements are false; all Arizona at any time asked was an opportunity to borrow the money from the Federal Treasury on a 70-year loan, cut to the same sound pattern as other large, multipurpose reclamation projects which have paid out, or are paying out, dollar for dollar.

The Digest uses other figures with an intentional shocking effect, whereas an analysis of the figures reveals there is no reason

for shock. The pump lift out of the Colorado River is stated at 1,000 feet and the length of the major canals as 300 miles. Does the Digest know that within southern California there is a pump lift of 1,615 feet out of the Colorado River, feeding a major aqueduct system totaling more than the mileage involved in the Central Arizona project aqueducts, and involving transportation of very nearly the same amount of Colorado River water? The Arizona pump lift would be 985 feet.

It astounds me to have people seriously ask, "Is the Central Arizona project feasible?" when all they have to do is look around on any trip to southern California and see completely demonstrated the feasibility of transporting a million acre-feet of water anually through 300 or more miles of aqueducts, with a 985-foot or higher pump lift.

The Digest repeats the old canard that the Central Arizona project would unduly enrich 420 large landowners. The Digest says that this is one surprising aspect of the Central Arizona project which has escaped notice. Either the Digest writers and editors are ignorant or deliberately deceptive. This is a propaganda statement made for 8 years by the Colorado River Association of California in virtually every piece of that California group's literature, and totally refuted by Arizona and the Bureau of Reclamation in testimony before Congress. More than 30,000 farms of all sizes would benefit, not one of them in any disproportionate amount.

The Digest, in the Leslie Miller-Holman Harvey article, has picked up a long list of old, widely disseminated, but quite answerable statements made by California propagandists in an effort to frustrate use of Colorado river water by Arizona. The facts concerning these things were available to Mr. Harvey and presumably also to Mr. Miller. Certainly, in any publication office as large and as important as the Digest's some research checking should be performed to avoid carelessly reproducing outright misstatements of fact.

I have written Dewitt Wallace, editor of the Digest, suggesting to him that if the Digest has an honest intention of thoroughly discussing reclamation, there are several outstanding writers capable of handling the stories factually. I wish every person who knows reclamation's true story of benefits would also write him.

The Digest has done a disservice to the entire nation, and particularly to the business of reputable gathering, checking, and publishing of factual information.

[From the Arizona Daily Star of April 11, 1955]

A DISTORTED STORY

The Reader's Digest, with its multimillion circulation, wields powerful editorial influence in the United States. When this power is used to promote a special-interest group it can become a telling weapon.

In the May issue, we see the unfortunate spectacle of the Digest not only promoting a special-interest group, but doing so with a disregard for facts which is surprising in a publication with the reputation the Digest enjoys.

In an article entitled "Dollars Into Dust" the Digest launches an attack on reclamation in the United States, and therein devotes several paragraphs to the central Arizona project.

The article is carried under the bylines of Lselie A. Miller and Holman Harvey. Mr. Miller is a former Governor of Wyoming, and Chairman of the Hoover Commission Task Group on Reclamation and Water Supply, and as such his name will carry great weight with those who read the article.

Unfortunately, it was Mr. Harvey, and not Mr. Miller, who visited Arizona gathering data for this report.

At the time he was here, Mr. Harvey was supplied with the facts about the central Arizona project. None of these appeared in the article.

To the contrary, the paragraphs devoted to the central Arizona project are based almost completely on distortions created by California interests who are battling the Arizona project with every means at their disposal.

And it is to the credit of these California interests, as propagandists, that they have been able to sell their distortions to a magazine with the circulation, influence, and reputation of the Digest. The article will mean much to the campaign they are waging.

The central Arizona project Association realizes how much this article can hurt Arizona, and answered the allegations in an article carried in yesterday's Star quoting David Brinegar, its executive secretary.

Unfortunately, such an article published in Arizona can do almost nothing to remedy the damage done by the Digest article, and with that realization, the association has written the Digest asking whether it is interested in publishing a fair appraisal of reclamation, and the central Arizona project, or whether this biased and inaccurate report is to go unanswered in its pages.

Whether through careless reporting and editing, or through intentional distortion, the Digest stands now in the position of pulling southern California's chestnuts out of the fire, and using the half-truths and untruths from California's own battle guide.

Whether the Digest is going to remedy the damage it has unfairly done to Arizona, and at the same time to its own reputation for accuracy and fairness, remains to be seen.

Hawaii and Alaska Statehood Bill

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, I yield myself 3 minutes, and I do that for the purpose of summing up very briefly some of the arguments that have been made. I think it should be remembered that the Gallup polls taken in the last several years have shown that the people of the United States are for statehood for Hawaii and Alaska by about 70 percent.

The debate here today has been honest and sincere and hard, just as it was in the days when they were trying to admit California and Nebraska and Mississippi. Honest, sincere men then made the same arguments that today have been made against Hawaii and Alaska, that those Territories ought not to come in as States. They did come in, and of course time has proved those men wrong.

May I point out also that the governors of 11 Western States in their conference at Albuquerque in 1953 went on record unanimously for statehood for Hawaii and Alaska. The President of the United States and former President Truman also favor it. The last three congressional committees that have been to Hawaii have come back recommending statehood for Hawaii. Both political parties time and time again have placed this plank in their platforms.

The bill before us is not a perfect bill. Under the rule under which we are working it is not even possible to change a comma or a couple of semicolons that ought to be changed in the bill. The Rules Committee reported out a rule that would not permit that. For the information of my colleagues, there are more than 50 committee amendments to this bill. I do not believe they should be considered en bloc. I do not know how long the House wants to stay here, for the Members have been here more than 7 hours debating this bill in an earnest and sincere manner. I do want some time upon these committee amendments. Under the rules of the House 5 minutes can be had on each side on each amendment, the fifty-some-odd amendments might well take considerable time. I suggest that the Members are getting a little tired. I am not part of the leadership, but there is another day coming. If the Members want to stay here until midnight, I am quite capable of doing it.

Mr. Chairman, I yield the balance of my time to my very able colleague, a member of the committee, the gentleman from Pennsylvania [Mr. SAYLOR].

Loyalty to Home State May Have Cost Trio Chance at Presidency

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. BAKER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an article published in the Knoxville Journal of April 24, which was written by one of Tennessee's most distinguished historians, Mr. E. E. Patton:

LOYALTY TO HOME STATE MAY HAVE COST TRIO CHANCE AT PRESIDENCY

(By E. E. Patton)

If, one of the shortest words in the English language has an extensive definition: supposing that; on condition that; in case that; whether; although; even though; condition; supposition.

In May of 1860, the Republican National Convention nominated Abraham Lincoln of Illinois as their candidate for high office of President of the United States and named Hannibal Hamlin, of Maine as his runningmate.

Briefly, Hamlin was born in 1809; served in Congress from 1843 to 1847 and in the United States Senate from 1848 to 1856. During this service he was listed as a Democrat and supported the administration of Franklin Pierce with ability and fidelity. He was elected Governor of Maine in 1856 as a Republican. He changed political affiliation because of his attitude toward the slavery issue. After his term of service as Vice President he was again elected to the Senate and served from 1869 to 1881 when he was appointed American minister to Spain.

He was capable and loyal to Lincoln and his administration, but there was a war on at that time, "testing whether this Nation, or any nation, so conceived and so dedicated could long endure." From December 1860, to June 1861, 11 Southern States went through the formality of passing ordinances of secession, declaring themselves out of the old Union and then members of the Southern Confederacy.

WAR CHANGES ATTITUDE

But sometimes a war will change the attitude of men and states and nations. Some of the border States sent thousands of men into the Confederate armies and some of them were represented in the Confederate Congress and Senate. Tennessee was the last State to pass an ordinance of secession. The middle and western sections of the State were overwhelmingly secessionist, while east Tennessee voted and fought 9 to 1 for the old Federal Union. In the early part of 1862, the Union forces under General Grant captured Fort Henry and Fort Donelson and this left the road open for the Federal forces to move on to Nashville and surrounding territory. In 1862, President Lincoln persuaded Andrew Johnson, a Senator from Tennessee, to resign his seat in the Senate and become the military governor of Tennessee with the rank in the army of major general.

When the Nation was approaching the election of 1864, Lincoln was of the firm opinion that it would be beneficial for the Union forces if a border State man, of even one from one of the seceding States, could be nominated as his running mate. He held no doubt about the ability or loyalty of Hamlin. It was merely circumstances that controlled the situation. Now let's take a look at 3 other men and see if 1 of them could have, would have, been nominated instead of Johnson.

THREE COLLEGE MEN

It will be remembered that Johnson never went to school a day in his life, yet he was well read and used good and correct language. But the other three whom we might have in mind, but for that ubiquitous "if," were college men; in fact, one of them was a graduate of West Point, and that meant scholarship.

The first of those three men was General Robert Edward Lee of the Commonwealth of Virginia. He was of prominent lineage; was a graduate, second in his class, of West Point; married to the great granddaughter of Mrs. George Washington. As far as the record shows General Lee was never accused or even suspected of anything criminal, illegal, unlawful, unethical, immoral in military, civil, and public life.

When the war—the Confederate War—came on, General Lee was stationed in Washington and had the confidence and support of President Lincoln and Gen. Winfield Scott, head of the Armed Forces of the Nation. It has been told, and there is no doubt of its authenticity, that President Lincoln had General Scott send a man to the home of General Lee and offer him the supreme command of all the armies of the Nation. He declined because his conscience told him that his first loyalty was to his native Virginia.

Had he accepted the generalship of all the armies the war would not have lasted so long and then General Lee would have been named as Lincoln's running mate—if.

John Bell was born 1797. He served in Congress from 1827 to 1841. He was elected Speaker of the House in 1834, defeated his colleague from Tennessee, James K. Polk. In 1835 and 1837, Polk defeated Bell for this high office. Nothing like this has ever happened to two men from the same State. It is known that Jackson was instrumental in Polk's defeat of Bell and this caused Bell to hate Jackson and scorn Polk. Bell was a Member of the Senate from 1847 to 1859. He was the candidate of the Constitutional-Union Party for the Presidency in 1860. When Tennessee seceded he went with his State. Had he remained loyal, he could have been elected in 1864—if.

NATIVE OF KENTUCKY

John Cabell Breckinridge is the last man of the if trio and he is one of the most outstanding characters in American history. He was a native of Kentucky, born in 1821. He had a classical education, was admitted to the bar when a very young man; was an orator of ability and one of the handsomest men that American ever produced.

He was elected to Congress when he was only 29 years of age and served with credit and distinction. The constitutional age for a Vice President is 35 and Breckinridge was a little over 36 when inaugurated. He presided over the Senate with fairness, ability, and courtesy to all Members. He was elected to the United States Senate for the term beginning March 4, 1861. Within 5 minutes after he laid down the Vice President's gavel, he was sworn in as a Senator. Lincoln called the Congress into extraordinary session on July 4, 1831, and Breckinridge attended this session. He was bitterly opposed to Lincoln's war plans for saving the Union. When the Congress adjourned, he went back to Kentucky, and failing to get the Commonwealth to endorse the Southern Confederacy, he joined the Confederate Army and remained in the army until the close of the war. He was expelled from the Senate in December of 1861. During the last few months of the Confederacy, Breckinridge was Secretary of War under Jefferson Davis.

Kentucky was a border Commonwealth; did not secede but had members in both house and senate of the Confederacy. Had Breckinridge remained loyal to the Union he would have been held in high esteem by Lincoln and would have had precedence over Johnson because of his superior education and his former experience in the Vice Presidency.

But there emerges that ubiquitous if.

Hawaii and Alaska Statehood Bill

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, I ask recognition on this amendment.

I do this to reassure my colleagues that the question of a constitution for the new State of Alaska is in the hands of Congress, because, on page 44, lines 3 and 4, it says:

The Congress shall within 60 legislative days after receipt thereof approve or disapprove said constitution.

This makes it an important part of the bill, because the Congress will be given an opportunity to have a look at the constitution that they may adopt in Alaska and thereby allay some of the fears of individuals who feel that something will be put in the constitution adopted that might be contrary to some of our philosophy.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Nebraska. I yield.

Mr. GROSS. And Congress will vote the constitution up or down without authority to amend either one of the constitutions that might be sent up?

Mr. MILLER of Nebraska. Congress will have a chance to approve or disapprove the constitution.

Mr. GROSS. What does the gentleman mean by amendments? Congress will have the right to amend the constitutions that are sent up to us?

Mr. MILLER of Nebraska. Congress will have the right to approve or disapprove.

Mr. GROSS. To amend or just to approve or disapprove?

Mr. MILLER of Nebraska. To approve or disapprove.

Mr. GROSS. Without the right to amend?

Mr. MILLER of Nebraska. That is right. I think that is under the same conditions adopted for all new States.

Fact and Fantasy on Ukraine and Byelorussia in the U. N.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, in a scholarly testimony submitted last week to the Senate Subcommittee on the United Nations Charter, Dr. Lev E. Dobriansky, professor of economics at Georgetown University and president of the Ukrainian Congress Committee of America, concluded his remarks on recommended measures of revision with the statement that—

This may not be peaceful in the sense of letting things be as they are, but things as they are cannot contribute to true peace.

In contrast to the hollow and pious utterances made about the presently constituted U. N. before this congressional committee, this logically integrated testimony demonstrates the complete truth of this statement and urges the expulsion of all Communist delegations from the U. N.

This recommendation fully supports House Concurrent Resolution 89 which I have submitted, calling for the same action by our Government. Moral leadership in world affairs demands such action. The analysis provided by this testimony shows how the United States can defeat Communist propaganda on such issues as imperialism and colonialism, by concentrating especially on the captive non-Russian nations in the Soviet Union. It instructively points out some fantastic notions still entertained by several people, some even in high places, with respect to Ukraine, Byelorussia and the other non-Russian na-

tions in the U. S. S. R.—this, despite the solid and remarkable disclosures of our own Select House Committee on Communist Aggression.

For further public enlightenment on these crucial captive nations in the U. S. S. R., especially among journalists and commentators who are notorious for their errors in equating the Soviet Union with Russia, in referring to these nations as "national minorities," in speaking of 200 million Russians, I insert Dr. Dobriansky's lucid statement into the RECORD:

FACT AND FANTASY ON UKRAINE AND BYELORUSSIA IN THE UNITED NATIONS

(Statement of Dr. Lev E. Dobriansky)

I am most grateful for this opportunity to submit certain factually founded views bearing on several proposals related to the revision of the United Nations Charter. In this respect it is my dutiful privilege to represent the Ukrainian Congress Committee of America which is a uniquely united national organization representing one and a half million Americans of Ukrainian ancestry whose resources of knowledge and understanding of problems pertaining to the Soviet Union are steadfastly devoted to the essential and primary interests of our Nation. In a real, interrelated sense this testimony enjoys the propitious occasion not only of the studious proceedings of this distinguished committee but also of the current Bandung Conference where deliberations on imperialism, colonialism and the natural struggle for national independence are of prime moment. For, in short, should a certain proposal be approved by this committee, it would certainly serve well the predatory interests of Moscow in contaminating further the minds of many members now attending this conference with the patent untruths that the United States is the "imperialist aggressor" at large in the world and that the U. S. S. R. is the great proponent of national sovereignty, freedom and independence.

The somewhat fantastic, explicit or implicit proposal to recommend the elimination of Ukraine and Byelorussia from membership in the United Nations indubitably points to this undesired result and to a total absolute disadvantage for our country in the cold war, not to speak of a hot one. It is my special purpose here to analyze this proposal in the limited time available and to demonstrate in the most succinct manner possible its glaring invalidity and falsity from the viewpoints of historical fact, international law and general, interpretative, political judgment. When one begins to reflect soberly on the crucial importance of Ukraine in the complex of world relations and to understand the economic, political and military strategical significance of this largest non-Russian nation, not only in the Soviet Union but in Eastern Europe generally, then it becomes obvious that an ill-advised proposal of this sort might cause considerable damage to our position in relation to the Communist imperial challenge.

RANDOM SOURCES OF THE PROPOSAL

In order to assume a full perspective on this issue and simultaneously to afford complete ground for the critical analysis developed here, I wish to reproduce for the benefit of the committee members what may properly be construed as random sources of the proposal. It is evident that these sources, extracted almost exclusively from the staff studies of this committee, run conspicuously short of elaborating with justification in historical fact and law on any of their closely relevant statements. Indeed, they appear to evince conceptions of thought that stand in striking disharmony with known realities in the Soviet Union. This reproduction will enable us to reduce in essential terms the criteria that seem to underlie the proposal:

1. In Staff Study No. 3 on the Problem of Membership in the United Nations, it is stated:

"The membership of the Ukrainian S. S. R. and the Byelorussian S. S. R., for example, might be considered a precedent for the admission of territorial entities of questionable sovereignty" (p. 12).

(a) Briefly, an appreciative understanding of the histories of Ukraine and Byelorussia, as so well shown in the Special Reports No. 4 and 9 (Communist Takeover and Occupation of Ukraine—Byelorussia) of Select House Committee on Communist Aggression, could scarcely regard these large non-Russian nations as mere "territorial entities of questionable sovereignty." Moreover, it should be recalled here that India was admitted into the U. N. before it attained to the status of a Dominion in the British Commonwealth. Nor should the fact be overlooked that Canada exercised sovereignty and enjoyed the right of legation long before the British Empire was transformed into a union of entirely independent nations.

2. In Staff Study No. 4 on Representation and Voting in the United Nations General Assembly, it is stated with reference to one-State one-vote principle:

"The only exception to this principle is to be found in the privileged position of the Soviet Union. At the San Francisco Conference, in accordance with an arrangement made at the Yalta Conference, Byelorussia and the Ukraine—which are constituent republics of the U. S. S. R. and do not qualify as 'states' in the strict sense of that term—were admitted as U. N. members. They each have 1 vote which, combined with that of the Soviet Union, make a total of 3 votes for 1 country.

"Actually, this arrangement involves far more than two additional votes for the Soviet Union. She is also entitled to two additional delegations. This not only triples her voting power, it triples her speaking power as well" (p. 3).

(a) Here, too, if we are to speak in the strict sense of terms, a sound knowledge of the Soviet Union and east European history compels us to view the U. S. S. R. itself as an empire, built on the imperialist foundations of the old czarist Russian empire, and not as a state, in the strict sense of that term. Amply supported by history and the major criteria of international law, Ukraine and Byelorussia possess in the fullest degree the same basic qualifications of a state as do Lithuania, Latvia, and Estonia, the free delegations of whom we continue to recognize, or Poland, Czechoslovakia, Hungary, and others which today find themselves in the expanded confinements of this empire. The term Union of Soviet Socialist Republics should not blind us in regard to the substantially identical histories, plights and enslavement of all these countries and national states in recent times. This nomer refers to an empire nucleus upon which Moscow seeks to erect some day the World Union of Soviet Republics.

(b) Furthermore, the apparent stress placed on the matters of two additional votes and triple speaking power becomes, in the light of the full facts of the case, an emphasis upon the superficial. First, it is well known by students of the subject, as well as attested to by Senator Vandenberg, Mr. Stettinius and others, that Stalin pressed for the admission of Ukraine and Byelorussia into the U. N. not for the mere reason of gaining 2 more votes but primarily and chiefly to appease the intense patriotic nationalism raging in these 2 countries at the time. Second, accounting for the other nations in the U. S. S. R. as well, Stalin, with typical Communist foresight, urged their admission in order to impress upon all colonial nations, such as those now attending the Bandung Conference, that Moscow metes out equal treatment to all the nations in the Soviet Union, the non-Russian and the Russian one. Third, it should be observed that with 2, 3 or more votes Moscow still falls far short of any majority in the U. N. Assembly, and with its possession of the veto it didn't even require the 2 additional votes to accomplish its undermining work. And lastly, speaking power is ultimately and soundly measured not by the number that speak but by the productive ideas, the telling facts, the dedicated passion by which only one need courageously make his stand. There is in Congress today a resolution submitted by Congressman MADDEN of Indiana, and fully supported by all the members of the former Select House Committee on Communist Aggression that provides infinite speaking power for our delegates in the U. N. if they would only, with forthright purpose, use the abundance of material accumulated by this unique committee on the endless crimes committed by Moscow against humanity.

3. Again, in Staff Study No. 4 on Representation and Voting in the United Nations General Assembly it is stated:

"The principle of 1-state 1-vote results in glaring ineqaulities in the General Assembly. Only 9 states can boast a population of 40 million or more. Some 26 states have a population of 5 million or under, including Iceland with 146,000 and Luxembourg with 300,000. Three countries—China, India, and the Soviet Union—contain more than half the total U. N. population of roughly 1,800 million" (pp. 4–5).

(a) Although from a scholarly viewpoint the statistics provided on the populations of the U. S. S. R., Ukraine and Byelorussia, on pages 20–21 of this study, are subject to rather severe criticism, it is evident again, in the above passage, tha the nature of the Soviet Union is not accurately understood. This inevitably reflects on one's understanding of the problem at hand. China and India, despite various regional differences in each, are national units with distinctive individual national consciousness animating a territorial embodiment known as a country. If we accept the sound definition of a country as "the territory of nation that has a distinct existence as to name, language, customs, government, and the like" (the Winston Dictionary, p. 223), then to characterize the Soviet Union as a country, in the same vein as China and India, leads us far astray. In truth, as an empire the Soviet Union embraces many countries in which reside different nations that speak different languages, that nurture different customs, that maintain separate governments, and the like. Ukraine, with roughly a population of 40 million, and Byelorussia with about 10 million are such countries, native lands to its respective peoples, as our country is to us.

4. In Staff Study No. 6 on Budgetary and Financial Problems of the United Nations it is stated:

"Senator ALEXANDER WILEY reports that on one day in 1952, for example, he listened to a member of the Ukrainian delegation in one committee of the General Assembly speak with great pride of the remarkable economic progress his country has made since the war. The Senator then went to another committee where he heard a second member of the Ukrainian delegation explain with equal fervor why his government was unable to increase its contribution to the U. N. budget" (p. 8).

4a. In Staff Study No. 4 on Representation and Voting in the United Nations General Assembly, in the preface written by Senator WILEY, it is stated:

"The General Assembly is based upon the idea of sovereign equality of states and the principle of one-state-one-vote prevails. The only exception to this principle is the Soviet Union which, under the agreement reached at Yalta, obtained the admission of

Byelorussia and the Ukraine as full members of the United Nations. This concession not only gave the Soviet Union three times the voting power she deserves; what is even worse, it tripled her speaking power in the General Assembly.

"Like many other delegates to the General Assembly, I have had to sit by the hour and listen to the repetitive tirades of the Soviet Union, Byelorussia, and the Ukraine. When the time comes to consider the revision of the charter we should protest this arrangement. Byelorussia and the Ukraine are constituent states of the Soviet Union—somewhat like Texas and New York are constituent States of our own Federal Republic. If they deserve separate representation, then we should seek additional votes for Texas, New York, Wisconsin, and the other States of the Union" (p. III).

(a) Immediately, in the first passage quoted above and with specific relation to our preceding critical observations, it will be noted that in reference to the delegates from Ukraine proper and accurate usage is employed in such terms as "his country" and "his government." This obvious contrast to the previous accounts indicates the degree of confusion that permeates these studies on this particular subject.

(b) Moreover, it is clearly evident from the first and second passages that Senator WILEY'S immediate experience with the behavior of the Ukrainian delegates, for which the people of Ukraine are hardly blameworthy, was not exactly a pleasant one. However, I am certain that the distinguished Senator, for whom I have great respect, will agree with me that disturbed feelings and subjective discomposure are scarcely acceptable bases for a proposal as serious as the one now under consideration. Also, one cannot but feel reasonably certain that the Communist delegates from Poland and Czechoslovakia contribute equally to the vitriolic tirades that cause mental disquietude for some of the other delegates. This is the nature of Communist tactics which, again, can be easily thwarted by the incessant and persistent use of the weapons of truth, fact and conviction which have been so remarkably fashioned by the Select House Committee on Communist Aggression and which, for the first time in our Government, penetrate deep into the heart of the empire within an empire, namely the Soviet Union.

(c) In these passages, too, the other points have been adequately treated above except one, namely the fallacious comparison made between Ukraine and Byelorussia and Texas and New York. When Senator WILEY first began publicly to draw this comparison last year, I felt compelled to write a detailed letter to him, pointing out the utter fallacy of this unfortunate comparison. I request the inclusion of a copy of this letter, dated November 23, 1954, in the record of these hearings. Furthermore, in all intellectual honesty, I cannot at this point refrain from stating that in full view of all the knowledge and data on Ukraine and the other non-Russian nations of the U. S. S. R. which have been made accessible here these past 5 years, it is most disappointing to witness utterances contravening the most elementary matters of fact. In this regard, whatever else might be thought of President Roosevelt and Prime Minister Churchill at Yalta, to their intellectual credit it must be admitted that they understood the basic structural distinctions between the United States and the Soviet Union and clearly recognized the essential facts that the latter is not a nation and a Federal republic like the former and that the position of Ukraine in the U. S. S. R. cannot be likened to that of Texas or any other State in the United States of America. In part of President Roosevelt's words, "the U. S. S. R. has a different national structure. The United States has one language and one foreign minister." (Yalta Conference records, New York Times, March 17, 1955.)

Before even delving into the reasons explaining the fallacy of this comparison, one could logically dwell on this significant point engendered by the comparison and draw his safe and sound conclusions. Are we to construe now that Lithuania, Latvia and Estonia, which suffered the same forced incorporation into the Soviet Union as Ukraine, Byelorussia and the other non-Russian nations had in the 1920's, are State counterparts of Idaho, Utah and Arizona? If Poland should nominally be included in the empire within an empire, although functionally its position now is the same in every basic respect as those of Ukraine and Byelorussia, would it be rational to regard it as a State counterpart of Nevada or Oregon? These pointed questions hinge on a historical projection of Russian Communist imperialism since the early 1920's, but aside from this they obviously would be answered logically in the negative. The instant span of historical time between the experiences of these nations with Russian Communist imperialism commencing in the 1940's and those of Ukraine, Byelorussia, Georgia, Armenia, Azerbaijan, Cossackia and Turkestan starting in the 1920's surely does not, therefore, transform the latter into States like Texas, Wisconsin, New York, Massachusetts or any of the others in our Republic.

If in a sound, scientific manner any parallel is to be drawn, it is between the United States and the Russian Soviet Federative Socialist Republic, for the two are integrated, federal structures. There can be no accurate analogy in constitutional or internation law, nor in history, between the United States and the Union of Soviet Socialist Republics. As shown in this memorandum on membership of the Ukrainian S. S. R. in the United Nations and the forthcoming U. N. Charter amendment, which was prepared for the Ukrainian Congress Committee of America by Roman Olesnicki, an author and close observer of East European affairs, and which I request be incorporated in the record of these hearings, the closest analogy to the Soviet Union is the British Commonwealth of Nations. In this connection it should be noted that the Crown, the Imperial Council, and Parliament in London exercise influence on the affairs of the Commonwealth's member nations, but this in no way detracts from their recognition as sovereign states.

Bearing this analogy in mind, then, one can now view the reasons as to why the comparison of Ukraine and Byelorussia with Texas and New York rests on completely spurious grounds:

1. The United States is a nation: the Soviet Union is an empire of nations with different languages, separate histories, diverse cultures, many native lands;

2. The inhabitants of Texas, Wisconsin, New York, etc., are conscious integral parts of a single nation: those of Ukraine and Byelorussia, as well as of other non-Russian nations in the U. S. S. R., are conscious, integral national units in themselves;

3. A Texan visiting or residing in Wisconsin or New York is in every basic respect "at home"; a Ukrainian or Byelorussian in Georgia, Turkestan, or the Russian S. F. S. R. is in a foreign land with a different language, customs, traditions, etc.;

4. True, Texas and others have their defined territories, flags, and seals, a State constitution, budget, administration, and judiciary: as any national state, Ukraine and Byelorussia possess all of this as well as additional major attributes of a sovereign state, including population with its own citizenship, separate ministries of foreign affairs and defense, individual national anthems, and the right to maintain foreign relations and own armed forces. Our Constitution in article I, section 10, denies to the States of the Union any participation in foreign affairs: the Soviet Constitution, in chapter II, article 18a, acknowledges the unqualified right of Union Republics to enter into direct relations with foreign states, and this right has been amply exercised by Ukraine and Byelorussia;

5. Neither Texas nor Wisconsin nor New York has the right of secession: Ukraine, Byelorussia, and other national states in the Soviet Union have this right.

The paramount fact of legal distinction is that in the one the source of all internal and external power is the Ukrainian nation, whereas in the case of Texas, etc., no such separate and independent source exists.

5. In an interview reported by the U. S. News & World Report of November 25, 1954, Ambassador Lodge stated:

"If they've got the Ukraine and Byelorussia, then we certainly ought to have Texas and I would add Massachusetts."

(a) Quite plainly, what was said in connection with Texas, Wisconsin, and New York applies equally and wholly to Massachusetts as well. This unthinking quoted statement is, as some of the previous ones, simply a product of a void of historical understanding concerning Ukraine Byelorussia, the several other non-Russian nations in the Soviet Union, and the very formation and development of the Soviet Union itself. As in numerous other fields of human knowledge, one cannot begin to grasp the meaningful significance of this considered proposal, as well as other political problems and issues regarding this important area, without the broad perspective and intellectual perception that history furnishes. Perhaps nowhere in official public print can one find the true, sequential historical presentation of the origin and development of Russian Communist imperialism, beginning with the destruction of the independent non-Russian states of Ukraine, Byelorussia, Georgia, and others in 1917–20, than in the innovating Summary Report of the Select House Committee on Communist Aggression (pp. 11–28).

The dominant, significant fact is that Ukraine, despite many political restrictions, was regarded as a sovereign state long before its admission into the U. N. It is little wonder that hardly a ripple of doubt or opposition was manifested at the time of its admission as a charter member. Even in the expansive framework of the imperial Russian Empire its sovereignty was recognized. When the non-Russian revolution of national independence swept the Empire in 1917–18, this sovereignty was completely asserted and crystallized in the form of the independent Ukrainian National Republic which in democratic, pluralistic terms of institutional authority was, therefore, not a new sovereign state but one delivered from relative captivity. This independent state of an always sovereign nation was quickly recognized by the government of Soviet Russia on December 17, 1917, followed soon thereafter by France and others. It was a signatory power in the Peace Treaty of Brest-Litovsk in 1918 and entered into treaties with Poland and other sovereign nations. Following its early victimization by Russian Communist imperialism, Ukraine, now in the form of the Ukrainian Soviet Socialist Republic, was a signatory to the 1921 Treaty of Riga, along with Poland and the Russian S. F. S. R. Its entrance in 1923 into the so-called voluntary union of equal republics, known as the U. S. S. R., was on the basis of a sovereign state which has been observed constitutionally ever since. These are only a few of the essential facts that cannot be ignored, and for a more detailed account of this phase of the issue I wish to submit into the record of this proceeding a memorandum written by Dr. S. Wytwycky, president of the Ukrainian National Council, an emigre body in Western Germany.

(b) From the viewpoint of international law Ukraine possesses all the attributes of

a sovereign state, although its general political position is no different from that of Poland or Czechoslovakia. In its foreign relations it has signed a number of bilateral acts under international law, as, for example, the UNRRA treaty on relief, a treaty with Poland on minorities, and peace treaties with Italy, Hungary, Rumania, and Bulgaria. It is a member of numerous international organizations, like the Universal Postal Union, International Organization of Telecommunications, etc. In its being it meets with the criteria of a state as a person of international law as set forth, for example, in the Inter-American Convention of Rights and Duties of States at Montevideo in 1933, providing qualifications of a permanent population, a defined territory, government and capacity to enter into relations with other states. The majority of the original member states of the U. N. recognize this convention. Here, too, for a more detailed exposition of this issue in the light of international law and the complications and contradictions into which we would plunge ourselves with the Wiley-Lodge proposal, I ask for submission into the record the scholarly articles by Dr. Matthew Stachiw on U. N. Membership of Nations Dominated by Communists and by Dr. Bohdan Halaichuk on Has the United States Recognized Ukraine? both of which appear in the winter issue of the Ukrainian Quarterly, a listed scholarly journal devoted to East European affairs.

MAJOR POLITICAL CONSEQUENCES OF THE PROPOSAL

The contemporary complex of world relations and affairs renders it clearly axiomatic that whatever we propose and do in whatever sphere of our foreign activities, precipitates repercussions in other quarters of the globe. Consideration and official action on this proposal will certainly not be without its major political consequences. The reasoned analysis pursued here leads to the following logical consequences of a character definitely unfavorable and adverse to the position of our country in the present struggle:

1. Based on a gross misconception of modern East European history and unfamiliarity with concrete data, the proposal will be viewed by the Ukrainian nation and people as another obstacle thrown in its path toward the achievement of genuine national independence. They remember the obstacles, born of ignorance, that were created by some Western democracies in the years following World War I, which contributed to the undermining of their independent Republic and the entrenchment of Russian communism that, ironically enough, threatens our very existence as an independent nation today.

2. Being tantamount to a negation of the distinctive national and cultural substances of the Ukrainian and Byelorussian peoples, which in any democratic analysis of sovereignty is its ultimate source and repository, the proposal stands to alienate rather than befriend the minds and hearts of these nations. In World War II the German Nazis alienated them and lost the war on the Eastern Front. Are we to incur such losses in the cold war and be ill-prepared for an ever possible hot one?

3. The proposal represents an irrational denial of the aspirations, untold sufferings, and heroic resistance of these two large Slavic nations against the foreign yoke of Moscow, and cannot but produce an unfavorable reflection on our own moral stature in world leadership.

4. This revisionist proposal, even if seriously considered, no less passed and officially submitted, provides Moscow with a powerful political weapon in its current efforts of consolidation in Ukraine and Byelorussia. In the past year it has gone to considerable lengths in pretending to be the guardian of the freedom and independence of these nations, as shown in the enumeration of events in this editorial in the Ukrainian Bulletin on Ukraine—the Unused Weapon in the War Against Communism (March 15, 1955), which I request be included in the record. Now Moscow would be able to point to "imperialist America" as the power denying these two nations recognition and membership in the world council of nations.

5. The proposal will unquestionably provide Soviet spokesmen in the U. N. with abundant propaganda ammunition against our country in their defense of the sovereignty of the Ukrainian and Byelorussian nations. In the eyes of the colonial and dependent nations of the world they will assume in some degree the role of the great defender of the cause of equal national sovereignty.

6. The proposal is doubtlessly no source of hope and encouragement to resistance groups in these countries, notably the Ukrainian insurgent army, whose political underground systems extend in activity and effect to distant places like Vorkuta and have contributed heavily to the grain and food crisis in the Soviet Union. On the contrary, it can only breed discouragement and disillusion.

7. This proposal to eliminate the Ukrainian and Byelorussian nations from membership in the U. N. constitutes a stamp of approval of imperialism and colonialism at the very moment when, as Senator MARGARET CHASE SMITH declared the other day before the Overseas Press Club, we should seize the initiative and show the Asian-African conference at Bandung that "we are the opponents of colonialism; that the Communists are the present-day advocates of colonialism." No better examples of Communist colonialism can be found than among the non-Russian nations in the Soviet Union. We should advance their national sovereignty, not deny it.

RECOMMENDED MEASURES ON REVISION

In conclusion, we are in total accord with the administration's decision favoring the convening of a conference on revision. We seek and favor in preparation for this event the following steps and recommended measures on revision of the U. N. Charter:

1. Complete rejection by this committee of any explicit or implicit proposal aimed at the elimination of Ukraine and Byelorussia as member states in the U. N.

2. Use and employment of every technical device to render clear and distinct expression and interpretation to our determination not to allow any legal encroachments upon the processes of law afforded by our Constitution as the supreme law of the land and any suggestion bearing on an imputed evolution of world government.

3. The moral and forthright ejection of the Communist delegations from the U. N. on the basis of a clear distinction between the sound recognition of nations and their peace-loving peoples and the incongruous recognition of hand-picked representatives who are parties to a criminal world conspiracy under the centralized direction of the Communist Party dictatorship in Moscow which behind its necessary Iron Curtain is planning for our destruction as a nation in these very moments.

4. On the basis of precedent set in the League of Nations, the concrete provision of vacant seats in the U. N. for the sovereign nations of federated Russia, Poland, Ukraine, Byelorussia, Czechio, Hungary, Slovakia, Rumania, Bulgaria, Lithuania, Latvia, Estonia, Georgia, Armenia, Azerbaijan, Cossackia, and Turkestan, as the sound formative groundwork of a universality of membership of nations and the truthful acceptance of representatives accredited by the free will of the individual nations.

Pious utterances about the ideals and objectives of the U. N. cannot obscure the criminal deeds and aggressions of Moscow against nations and peoples. They will surely remain hollow utterances until the truths of such crimes and aggressions are faced squarely, morally, and courageously. These recommendations are founded on fact and moral and political principle. They are based on the wealth of evidence and findings of the unique Select House Committee on Communist aggression. They rest on the knowledge of the long agonies and struggles of the Ukrainian and Byelorussian peoples who have exacted from their foreign oppressor observances which it is proposed that we deny to them. They put forth an investment in the future when all these sovereign nations could completely assert themselves in states independent of the Communist Party dictatorship in Moscow. They lay the ground for a tremendous show of initiative in demonstrating to the member nations now at the Bandung Conference that the United States is the true defender of the sovereignty of nations and that the Soviet Union itself is the empire of the worst kind of colonialism and imperialism. This may not be peaceful in the sense of letting things be as they are, but things as they are cannot contribute to true peace.

Report by Chief of Police Robert V. Murray on Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report made by the Chief of Police of the District of Columbia, Robert V. Murray, as chairman of the International Association of Chiefs of Police, in connection with the problem of juvenile delinquency.

Mr. Murray has compiled a thoughtful report, which includes the composite attitude of a number of chiefs of police. While there may be some parts of the report which I, as Chairman of the Subcommittee To Investigate the Problems of Juvenile Delinquency, do not agree with, nevertheless, in view of the great interest in the problem, I believe it should be printed in the RECORD for the information of all who are interested in the problem of juvenile delinquency.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF THE JUVENILE DELINQUENCY COMMITTEE, INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE, 1954

Compiled by: Chief Robert V. Murray, Washington, D. C., chairman.

Papers submitted: Chief H. J. Lawrence, Seattle, Wash.; Commissioner Beverly Ober, Baltimore, Md.; Commissioner Timothy J. O'Connor, Chicago, Ill.; Superintendent Edward W. Fallon, Boston, Mass.; Commissioner Thomas J. Gibbons, Philadelphia, Pa.; Deputy Chief Thad F. Brown, Los Angeles, Calif.; Chief Constable John Chisholm, Toronto, Canada; Superintendent Edwin Morgan, Detroit, Mich.

Other committee members: Commissioner Harold P. Caldwell, Omaha, Nebr.; Chief H. T. Jenkins, Atlanta, Ga.

This final report of the juvenile delinquency committee has been approved unanimously by the members of the committee.

The report represents a consolidation in summary form of material taken from the papers submitted by members of the committee. In addition to these papers, the report also contains material from other sources properly credited.

While all papers have been submitted for inclusion in the Police Year Book so that individual views will be reproduced as submitted to the committee, it would be too time-consuming and impractical at this time to present each in its entirety, although they well deserve such recognition; therefore, we shall endeavor to present no more than a brief review of the highlights of the material without indicating the various papers from which taken.

To all of the police executives who submitted material for the preparation of this report I wish to express my deepest appreciation; the papers were indicative of careful preparation and thorough exploration of the subject matter.

Everyone engaged in law enforcement recognizes that the problem of the juvenile offender is one of increasing significance. Without any elaborate compilation of statistics, we can agree that more serious offenses are being committeed by persons in the juvenile age groups, and that the age at which juveniles come into conflict with the law is gradually lowering. I believe we can further agree that the general citizenry of our country, particularly in our larger cities, have become increasingly conscious of the juvenile problem, sometimes almost to the point of hysteria. Citizen concern has been indicated through the establishment and expansion of youth programs throughout the country, the creation of a special juvenile delinquency project under the supervision of the Children's Bureau of the United States Department of Health, Education, and Welfare, and the comprehensive investigation of the Subcommittee on Juvenile Delinquency of the Committee on the Judiciary of the United States Senate, under the chairmanship of Senator Hendrickson.

Law-enforcement officers also recognize, however, that the juvenile problem must be viewed in its proper perspective as just one of the many complex activities confronting enforcement officials; that juvenile delinquency is the product of many factors in the community not within the scope of control of law enforcement; and that the role of the police in prevention and control of juvenile delinquency must be carefully delineated and defined in order to fulfill our responsibilities to the public and develop the proper working relationships with other community services.

There are those who have questioned, and justly so, the role of the police department in handling such juvenile cases as truancy, minor mischievous acts, and related juvenile actions. With all the organizations, programs, and activities designed for, staffed and equipped for, the handling of these juvenile actions, we find this problem together with other similar functions, assigned to us. Also, there is a question as to whether the use of large numbers of police officers in specialized activities such as boys' clubs, schoolboy patrols, and other delinquency preventive activities justifies itself. Could not other civilian agencies or groups just as effectively handle these programs?

On the other hand, when a serious crime is committed and we are called to investigate, there is no mistaking the role of the police department. Yet, although we rarely ever know whether it was committed by a juvenile or an adult until the individual is taken into custody, there are those who feel that the police should immediately, upon finding a juvenile involved, turn the case over to some other agency to handle. We cannot agree with this contention, although, of course, the first offender should be given every consideration if the crime is not too serious. But, when one serious crime after another is committed, the hardened young criminal should know that he is going to be dealt with accordingly. Many of these juveniles are juvenile in age only, but have the intelligence, physical appearance, and ability to commit some of the most heinous crimes known to man.

Mr. J. Edgar Hoover in the December 1953 issue of the FBI Law Enforcement Bulletin stated in part the following: "The juvenile crime problem has reached a point where it calls for a clear and unsentimental analysis of the offenses being committed by minors. The large number of children just beginning to reach the minimum delinquency age foreshadows a dangerous situation within a few years unless something is done to reduce the high crime rate prevalent in this segment of our society. The offenses being committed by minors are serious crimes, not the pranks of adolescent children. The gravity of most of them is obvious if the observer simply places himself or a member of his own family in the position of the victim."

At this point we should note that no one in the law-enforcement profession feels that corporal punishment is a sure and certain cure-all for every phase of delinquency, but many of us do not agree with the manner in which the conduct of repeated juvenile offenders is often condoned. There certainly must exist some rational middle course that can be followed.

Truancy and petty theft committed by underprivileged youths can to some extent be understood, but the wanton and malicious damage to public and private property is hard to explain. Yet, there is no evidence that there is any wave of malicious damage by youthful vandals wantonly smashing the property of their own parents and guardians. This would rather indicate that these delinquents do recognize some line of demarcation, otherwise such acts would be committed in their own homes, but we know how long that would be permitted.

Mr. J. Edgar Hoover further says: "Juvenile crime is partially a police problem, and one of the finest law enforcement developments of this century is the preventive work sponsored by city police departments and sheriffs' offices all over the country. The problem is not one for police officers alone, however. My personal belief is that the forces which compound this problem spring from sources deep within the social, political and economic structure of our society. They are to be found in the general state of public morals, the relative respect or lack of respect for person and property in an age convulsed by war and revolution, the overcrowding of schools and playgrounds in congested urban areas, the inadequacy—for whatever the cause—of parental supervision, and numerous other factors. If this is true, responsible action against the problem must be taken not only by the police but by the courts, schools, parents, newspapers, radio and television and every other segment of our society which bears either a private or a general responsibility to the children of this complex age in which we live."

We realize that juvenile delinquency is universal, and, in one sense, it is the most important problem confronting police, since over half of the inmates in penal institutions have been juvenile delinquents. This means that if we are to control crime we must begin our efforts in the field of juvenile delinquency. As stated before, it is not only a police problem but a responsibility of every community. Anything that affects the community affects the juvenile problem. Parents and community must expect behavior disorders in children, for misbehavior is a natural result of growing up and learning.

It is not to be wondered in these troubled times, with its attendant insecurity, that juveniles should react to these tensions with an increase of anti-social behavior. This increase presents a challenge to the home, school, church, and the community, and when these fail to function, the unadjusted child comes to the attention of the police. The most significant single influence on the character and personality of a child is his family life. Training a child to become a useful member of society is one of the greatest responsibilities of parenthood. The child is expected to acquire such values as respect for the rights of others, respect for property, neighborliness, good sportsmanship, self-control, truthfulness, and consideration of others. This must be done early in life. For the child to learn these values, they must be exemplified and taught in the family circle. When parental protection is either lacking or inadequate, the social resources of the community must be extended to the child in need.

Allowing for exceptions, we do, however, recognize that delinquents are generally the product of bad homes where contributory factors are:

(a) Broken homes—parents separated or divorced.

(b) Bad family atmosphere with lack of cooperation between parents.

(c) No church or Sunday school association.

(d) Absence of guidance in methods of general behavior and sense of responsibility and respect for rights of others.

(e) Failure to teach children how to become socially normal and acceptable to community life.

(f) Bad example in living. Poor house management often resultant from alcoholism.

Here are some of the conclusions arrived at as the causes of juvenile delinquency and I think they further point out to us that this problem must be a matter for the entire community, not for any one group or agency:

1. Bad companionship: This means in most cases being forced into companionship with older children who have known tendencies toward delinquency.

2. Declining respect for all authority: In the majority of these cases the child is but aping adult persons with whom he lives or associates.

3. Lack of home supervision: This is due to death, separation, desertion, or divorce of either or both parents.

4. Lack of religious training and education: This has been greatly alleviated lately by reason of a resurgence of religious faith brought on by world conditions.

5. Lack of adequate punishment: There is often a lack of cooperation between the police and juvenile court authorities to see that the punishment for the juvenile offender is commensurate with the act committed. The results are a decline in respect by juveniles for both the court and the police.

6. Employment of mother and father: This leaves the child to its own devices during the day and in a number of cases also nightly.

7. Newspaper publicity of crime news: Through no intention on the part of the newspapers the juvenile is made aware of various crimes that have been committed by adults and other juveniles and the resultant court adjudications that stimulate desires.

8. Radio, television, and movie programs: A number of these programs tend to educate the young minds in criminal techniques. To these could be added the so-called crime comic books.

9. Money madness: This is called vividly to mind upon the full realization that all activities of our modern civilization have a dollar sign as the motivating factor.

10. Court procedure: The cooperation of police and prosecutors in preventing unnecessary delays in court procedures will do much toward bolstering the public's con-

fidence in our court system and in law enforcement.

11. Hangouts: Those questionable places of rendezvous frequented by youths and teen-aged girls in each community.

12. Responsibilities of youth: The sad lack of any real responsibilities or duties that are usually associated with family life.

13. Recreational facilities: The urgent need of more and better recreational facilities for the growing children of the community to allow for the expending of youthful energy in proper channels.

14. Housing-project problem: These modern urban housing units tend to place hundreds of families into a tight area wherein a serious problem has arisen as to schooling, shopping, and, most important of all, recreational facilities for the young. These are nonexistent in many cases, and the young are forced to seek their companions and recreation under undesirable conditions.

Now there are several of these points that should be forcibly brought to your attention because they have become a matter of national concern. One is the steady diet of violent crime in the form of television and radio programs, motion pictures, novels, magazines, and so-called comic books which is fed to our young people today.

The glorification of gangsters, gunmen, and hoodlums has amounted to, not hero worship, but hoodlum worship in recent years. A reporter kept a tally on television shows in the early evening when young children ordinarily watch television, and there were 18 assorted violent crimes portrayed against the person, including murders by shooting, stabbing, strangling, and poisoning, several assaults on the person, and other miscellaneous crimes. This in one evening.

Maj. Gen. William F. Dean, after his release from a Communist prison camp and over 3 years away from this country, stated in a press interview that he was disturbed upon his return to the United States by the crime programs on radio and television, by the comic strips and comic books at every newsstand, and by the emphasis on sex—suggestive pictures and stories. He felt that it wasn't good for the coming generations, and I am sure we all agree that it is bound to have a bad effect on the young people of this country by making crime commonplace and lowering the moral standards of our youth.

With reference to the sale and distribution of immoral literature, there has been much agitation in this field and the publishers who are profiting from the sale of this literature exert power to influence again censorship. There has been developed the attitude that what should be suppressed is merely a matter of personal opinion. However, in nearly every instance where groups of young outlaws or delinquents have been apprehended, quantities of such salacious literature have been found in their possession. Certainly the reading of this filth tends to deteriorate character and morals. A letter received by one police department on this subject is quoted:

"DEAR SIR: I am a boy attending high school. I am sending you this letter asking you to do something about the sale of filthy magazines and comics. These books aren't doing us young folk any good. Suppose you were the father of a boy or girl who reads these books. What would you do? In 10 or 15 years this country will be in the hands of us youngsters. If we are all 'sex crazy,' what good can we do for our country? If you will please read the article I have attached to this letter, I am sure you will be inspired as I. You have the right contacts. Couldn't you set up a bill prohibiting the sale of this filthy literature? Remember the future of our city and our country depends upon us young boys and girls and maybe on your decision."

This is very thought-provoking coming from one of our own youngsters. Surely some restriction or censorship can be instituted in this matter, possibly by the publishers themselves, in order to make better reading material for our youth. There are more than 120 million "comic books" published each month; think of the vast amount of good that could be realized if this form of reading material were dedicated to educational topics rather than the trashy subjects the majority of it now embraces.

The radio and television shows, many of which are a blueprint for the commission of crime, should bear closer study. Who can estimate the damage that may result from millions of youngsters listening to the dramatization of a revolting crime by radio or by the medium of television? The release of facts attending a crime and its solution necessitates revealing methods employed in police practice—matters decidedly helpful to the criminal but which should not be of particular interest to the average law-abiding citizen. For the most part, youths are by nature adventurous and daring, and many of them are quick-witted and analytical. These points are made to stress the possibility of an irresistible urge by juveniles to execute a "perfect crime"—the plot and objectives having been acquired by listening to a crime broadcast or the portrayal of a crime by television. Nationwide broadcasting of such stories glorifies the gangster and undoubtedly gives the impression to the inexperienced that crime is rampant throughout the country.

Why couldn't all the various forms of entertainment be utilized so as to exercise a constructive influence rather than the destructive pattern they are now following? It is certain that publishers and producers through their various media of entertainment and by reaching millions daily, can do so much more to mold the youth of our Nation into better future citizens than we in the law enforcement profession could hope to accomplish.

In conclusion, the committee, although touching only on certain phases of the juvenile delinquency problem, agrees on the following:

First, there is a definite question as to just how far police departments should engage in crime prevention activities which usurp the functions of such other agencies as recreation, social, and welfare, to mention a few. This problem must be decided by the individual departments on a local basis depending upon whether such facilities are lacking and whether responsible agencies are fulfilling the demands made upon them.

Second, that juvenile delinquency is partially a police problem but mainly a problem for the entire community including home, school, church, welfare agencies, recreation agencies, and a multitude of others.

Third, the character and morals of our youth are being deteriorated by the immoral and pornographic literature being published for their consumption and by violent crime being made commonplace through the mediums of television, radio, motion pictures, novels, magazines, and so-called comic books.

Fourth, the hardened, habitual juvenile offender must be dealt with in a manner so that he realizes his punishment will be commensurate with the act he commits.

I wish to again thank all of the police executives who contributed to the preparation of this report.

The Natural Gas Field Price Issue

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from the Denver Chamber of Commerce, Denver, Colo., and a report by the subcommittee for considering Federal Power Commission control of the field price of natural gas. This subcommittee is a part of the chamber's oil and gas committee. The subject of its report is Control by the Federal Power Commission of the Price of Natural Gas at the Well.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

DENVER CHAMBER OF COMMERCE,
Denver, Colo., April 20, 1955.

Senator GORDON ALLOTT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR ALLOTT: The purpose of this letter is respectfully to inform you and the other Members of the United States Congress from Colorado of the position of the Denver Chamber of Commerce on the natural-gas field price issue. Enclosed herein is set forth the chamber's position, taken by action of the board of directors. The vote was unanimous.

It should be pointed out that the board of directors is composed of 27 members, elected from the general membership, and an approximately equal number named from the governing boards of commercial organizations, trade associations, and service groups who serve on the board as citizens and vote individually on all questions that come before the board.

With kind personal regards, we are,

Most respectfully,

DENVER CHAMBER OF COMMERCE,
GEORGE E. COLLISSON, *Secretary.*

REPORT BY THE SUBCOMMITTEE FOR CONSIDERING FEDERAL POWER COMMISSION CONTROL OF THE FIELD PRICE OF NATURAL GAS, OIL AND GAS COMMITTEE, DENVER CHAMBER OF COMMERCE

Subject: Control by the Federal Power Commission of the Price of Natural Gas at the well.

A state of confusion in the natural-gas industry has resulted from the recent Supreme Court decision supporting Federal regulations of natural-gas producers who sell their gas to regulated interstate pipeline companies. This Supreme Court decision was rendered in the Phillips Petroleum case under date of June 7, 1954. This is the first peacetime attempt to control the production and fix the prices of a basic commodity at the point of production, and to treat its competing producers as public utilities. It is an unwarranted attempt to impose price control on a business operated on a basis of high risk and intense competition.

Under the provisions of the Natural Gas Act of 1938, the Federal Power Commission ruled that they had no control of the field price of natural gas when sold to a pipeline company, and upon 11 different occasions this opinion was substantiated. Earlier Supreme Court decisions held that this law

was actually intended to regulate the interstate pipelines which carry gas from producing areas into consuming areas. Congress did not intend the law to include independent producers, and for 16 years, the law was so interpreted. Now, this law has been reinterpreted to mean that competing producers were also subject to Federal control and the Federal Power Commission has the authority to set the field price of gas sold by the producers at the well, because the gas was shipped interstate through pipelines. This means that the Federal Power Commission according to their own records is now faced with the Herculean task of endeavoring to figure out a fair field price of gas being produced by over 5,000 producers throughout the Nation. It is our sincere opinion that it is impossible for any Government department to figure out a fair field price for gas at the wellhead because of the many complications involved in the production of gas. Natural gas is a commodity which is produced in many cases with the production of oil, and the cost of drilling various wells fluctuates to such an extent that it is difficult for anyone to determine the net returns from the investment of drilling a well and producing natural gas and oil. As a matter of fact, only 1 wildcat well in 9 wildcat wells drilled is a producer, and in many cases, both oil and gas are produced from the well. We feel that it is impractical to control the price of gas alone and it logically follows that the control of the price of oil will be the next commodity with Federal regulation.

We feel that this Government control is the first step in Federal regulation of all free enterprise and if this is allowed to continue, other commodities which are shipped interstate will soon be under Government control, such as coal, lumber, grain, livestock, etc.

There are 31 States in which natural gas is produced, but only 15 of them produce any appreciable quantity. The 6 largest producing States are Texas, Louisiana, Oklahoma, California, Kansas and New Mexico. Most of the gas, in fact about 90 percent, comes from the Southwest. Colorado is rapidly becoming one of the States producing natural gas in large volume. Natural gas is piped from the producing fields to consumers in 43 States, mostly for home heating, hot water heating, cooking, and industrial and commercial uses. The 5 other States (Washington, Oregon, Idaho, Maine, and Vermont), are scheduled to receive it, but we believe that this Federal control of natural gas will discourage gas producers to such an extent that the other States may never receive it in the future, although there are on file hundreds of thousands of new consumer applications for natural gas. Two natural gas pipeline projects under construction have been halted because of this Federal regulation of the price of natural gas. These pipelines are multimillion dollar projects and it is conceivable that these and other projects would be halted because the independent natural gas producer would prefer to sell his gas for local consumption and avoid Federal Power Commission regulation. This could conceivably stop the possibility of Colorado becoming an important natural gas producing State. It could also prevent natural gas reaching the other hundreds of thousands of people who have applied for it and it may even cut down the supply of natural gas available to the consumers in the 43 States who are now using natural gas and who have invested considerable money in furnaces, stoves, and equipment using natural gas.

The President's Advisory Committee on Energy Supplies and Resources Policy has considered the desirability of legislation to eliminate the effect of the Phillips decision of June 7, 1954, and to remove the FPC control, as to prices and otherwise, the production and gathering of natural gas. In that connection this committee had the following to say:

"1. Natural gas regulation: We believe the problem of natural gas regulation should be approached from the viewpoint of assuring adequate supplies and the discovery and development of additional reserves to support such supplies, in the interests of national defense, an expanding domestic economy, and reasonable prices to consumers.

"To secure these objectives, it is essential to give due consideration to (1) the operations known as the production of natural gas, (2) the transportation of gas in interstate transmission lines, and (3) the distribution of gas in municipalities. Individual companies may engage in more than one of these activities. Each operation of such companies should be treated by like criteria according to its appropriate industry function.

"In the production of natural gas it is important that sound conservation practices be continued. This area of conservation management is under the jurisdiction of State conservation commissions. In the interest of a sound fuels policy and the protection of the national defense and consumer interests by assuring such a continued exploration for and development of adequate reserves as to provide an adequate supply of natural gas, we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line.

"The interstate transmission of natural gas by the interstate transmission lines and the subsequent sale of such gas for resale is a public-utility function and should be under the regulation of the Federal Power Commission. In considering the certification of new lines and applications for increased rates based on new or renegotiated purchase contracts, the Commission should consider, in order to provide protection for the consumer, not only the assurance of supply but also whether the contract prices of the natural gas which the applicant has contracted to buy are competitively arrived at and represent the reasonable market field price, giving due consideration, in the interest of competition, to the reasonableness and appropriateness of contract provisions as they relate to existing or future market field prices.

"The several States or their political subdivisions should continue to provide the public utility regulation of distributing companies in accordance with usual utility practices.

"Thus the complete cycle of natural-gas production, transmission, and utilization will be appropriately regulated: the production and conservation of natural gas by the State conservation commissions; the interstate transmission of natural gas by the Federal Power Commission; and the distribution by the local public utility commissions."

Your committee concurs in this view and also in the views of the United States Chamber of Commerce which considered the report of the President's committee and adopted a policy as follows:

"The national chamber opposes Federal regulation of independent gas producers and gathers and supports legislative efforts to remove that regulation. The chamber opposes all proposals for control by a Federal bureau of production, end use, or price of natural gas."

Various bills to accomplish this purpose have and will be introduced in Congress. What the exact form of the bill ultimately to be voted on will be is uncertain, and rather than recommending a resolution directed to the particular bill at this time, this committee recommends that the board of the Denver Chamber of Commerce go on record in favor of legislation which will in effect repeal the Phillips decision and removes control of prices and other matters affecting the production and gathering of natural gas from the Federal Power Commission, and that our Senators and Representatives be advised of this action and urged to make all appropriate efforts to support such legislation.

The committee believes that it is entirely proper and appropriate for the Denver Chamber of Commerce to take this action because:

(a) Such legislation tends to encourage the exploration and development of natural gas resources and tends to assure to Denver a supply of natural gas needed for its future growth.

(b) Natural gas producers contribute substantially to the prosperity of Denver through business generated here, and it is only proper that the Denver Chamber encourage legitimate development of that business.

(c) Although much has been said in the newspapers as to the possibility of increased cost to the consumer of gas if such legislation is adopted, the Committee is sceptical that any such increase substantially affecting the consumer will come about. It is estimated that on a national average only about 10 percent of the household gas bill goes to cover the cost of exploration and production; 90 percent of the gas bill goes to the pipeline company and the local public utility to cover the cost of the transmission and distribution. If the producer gave his gas away absolutely free the average household consumer would save only about 50 cents per month. Furthermore, we understand that the legislation proposed will contain provisions assuring the portion of the price to the consumer reflecting the cost of the gas purchased by the pipe line company will be a price which results from the highest competitive conditions at the production level. The remainder of the price to the consumer resulting from transportation and marketing services furnished by the pipe line company and local distributing utilities, which are regulated monopolies and public utilites, will, of course, continue to be regulated by the FPC and local regulatory bodies and legislation does not attempt to interfere with that situation.

(d) Lastly, your committee feels strongly that the Denver Chamber of Commerce as always should remain alert to see that any effort to extend governmental control over business activities not subject to regulation by reason of their monopolistic characters is opposed vigorously in the interests of preserving and protecting free competitive economy in this country as well as in this community.

Hawaii and Alaska Statehood Bill

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, here again I want to point out to my colleagues that the permanent membership of the House of Representatives need not be changed because Alaska

comes in as a new State. I say this for the benefit of those of you who have been apprehensive that you might lose your seats through a change in apportionment. It provides that those changes will not be made so as to change the permanent membership as prescribed in the act of August 8, 1911.

Economic Health of Small Business Vital to United States Farmers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. HUMPHREY. Mr. President, there is a growing awareness among the independent business proprietors of the importance of a sound and prosperous agricultural economy. The prosperity of Main Street is intimately related to the prosperity of the farm producers. Fair prices for agricultural commodities that yield a return on investment, modern marketing facilities, reasonable credit, and the care and conservation of the land are now the concern of everyone. The direct relationship of farm income to retail sales, and of farm income to factory employment, is openly recognized by business, labor, and agriculture.

I found a very interesting article in the Minnesota Pharmacist's March 1955 issue entitled "Economic Health of Small Business Vital to United States Farmers." The title could easily have been reversed. The economic health to United States farmers is vital to small business. Price stability and fair competition for the independent businessman are essential to his success. Price stability and fair market practices are equally essential to the farmer. Yes, price supports are to the farmer what fair trade is to the merchant. These are all independent producers. Honorable and fair regulations that prevent discrimination and price juggling are basic standards for a stable free-enterprise system.

I ask unanimous consent to have the article referred to printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMIC HEALTH OF SMALL BUSINESS VITAL TO UNITED STATES FARMERS, BUREAU ANALYSIS FINDS

The economic health of small business is intimately bound up with the well-being of the United States farmer in his triple role of producer, consumer, and citizen, and the farmer stands to lose if the small-business man is eliminated from the American scene, according to an analysis by the Bureau of Education on Fair Trade.

"In the interdependent economy of 20th century America, what happens to any vital segment of the economy, agriculture, labor, small business, big business, retailer, wholesaler and manufacturer, has a chain reaction on all the other segments," it is noted by Dr. John W. Dargavel, bureau chairman.

"When farmers cannot sell their products for a fair price, they cannot buy mass-produced goods, and this grim fact takes its toll in jobs and profits at the factory and the retail store. When retailers and manufacturers cannot sell their goods at a fair price, they retrench and let employees go. Unemployed workers and businesses in the red do not make good customers for the farmer," the Bureau analysis points out.

"United States farmers know, from bitter experience, the grave danger of having the distribution of agricultural products concentrated in a relatively few hands. The farmer is then at the mercy of the large distributor who can name the price which the farmer must accept if he is to sell his products. Parity, by which the United States Government establishes a price floor for various agricultural products, has been developed as a safeguard, not only against ruinously low prices but against the growth of monopoly in the distribution of farm products."

Monopoly in the distribution of manufactured products presents equally grave dangers to all segments of the economy, including agriculture, according to the analysis. It notes that "one of the most effective devices used to raise prices to the consumer is to achieve monopoly in distribution by destroying retail competitors and with them, the mass distribution needed to sustain mass production. Unrestrained price cutting on well-known trade-marked brands is the mechanism that triggers this device."

SMALL BUSINESS NOT EXPENDABLE

The unfair competition of price cutting on trade-marked brands can destroy small business, with serious consequences to the United States economy, the analysis points out. "The innumerable retail outlets provided by small business are indispensable to our free enterprise system in securing the mass distribution of national brands which makes possible the economies and low prices of large-scale production.

"Politically, a strong small business community constitutes a vital bulwark against the growth of collectivism so alien to the American tradition.

"From a social standpoint, the retailer contributes a very substantial share to the well-being of his community and State. He provides employment. He pays taxes which, in his absence, would have to be made up by other segments of the community and State, including the farmer. He provides support, participation, and leadership for community and State projects such as health, recreation, and education.

"The price juggler cannot and will not fill the economic, political, and social vacuum which would be left by the liquidation of a substantial number of retailers."

SMALL BUSINESS AND FAIR TRADE

The United States farmer, therefore, like all other citizens, has a vital stake in the preservation of small business. Continuation of the fair trade laws is regarded by the majority of American small-business men as essential to their survival. As one form of legally acceptable resale price maintenance, the fair trade laws simply give the efficient small-business man a fighting chance to compete with the giants, the analysis notes. It concludes:

"As a consumer, the United States farmer's long-term interest is dependent upon the existence of many competing retailers selling a wide array of goods competing with one another in price and quality. These conditions are satisfied under fair trade. It is unlikely that they will be satisfied in its absence since unrestrained price cutting breeds monopoly.

"As an income receiver, the farmer is dependent upon the prosperity and purchasing power of other segments of the economy. Prices were never so low as in the depression but they offered small solace to the farmer who could not sell his products and who had no income to buy other goods even at bankruptcy prices.

"The issue of fair trade must be weighed in these broad perspectives rather than in terms of today's bargains for the few who are determined enough to buy only today's bargains at the expense of the majority. How high a price is the American public prepared to pay for such bargains?"

Commission on Renewable Natural Resources

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HOPE. Mr. Speaker, I am today introducing a bill defining governmental policy in the field of renewable natural resources and providing for the appointment of a commission by the President to be known as the Commission on Renewable Natural Resources.

The bill declares it to be the policy of Congress that the conservation, orderly development, and sustained use of the renewable natural resources of the United States, such as land, water, forests and related resources, is the joint responsibility of the Federal Government, the States, the various subdivisions of government within the States, and the people thereof.

Senator FRANK CARLSON is introducing a companion bill in the Senate today.

The principal purpose of the Commission is to study and to recommend means for carrying out the declared policy of the bill. In addition, it is directed to study and investigate the present condition of the renewable natural resources of the United States as well as probable future demands upon such resources.

The Commission will consist of 12 members appointed by the President of which there shall be 1 member each from the Departments of Agriculture, Interior, and Army; 3 members representing the States; 3 members representing local subdivisions of Government; and 3 members representing the public at large. The bill provides that all members of the Commission must have expert knowledge of or experience with problems and management of the land, water, forests, and related renewable natural resources of the United States.

The Commission is directed to submit a report to the President on or before March 1, 1956, and a final report not later than June 30, 1956. It is also authorized to submit interim reports as it deems desirable or as the President may request.

The Commission is given the usual powers of such commissions with respect to the hiring and compensation of employees, the holding of hearings, and the securing of information from agencies of the executive branch of the Government.

The policy set out in the bill is based on the idea that our renewable natural resources are indivisible. We cannot separate land and water or the things

that grow on land or in water—all of them bear a close relationship to each other. All of them and their relationship must be taken into consideration in determining natural resources policy. Likewise there are some phases of resource policy which come clearly within the scope of local and State government. Other phases by reason of their effect upon the Nation as a whole must be handled as problems of the Federal Government. But all of them should and must be considered in determining national policy.

Pearl Harbor: Admiral Kimmel's Story

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, one of the supreme incidents of World War II was the Battle of Pearl Harbor. Obscured by official secrecy and confused by misleading propaganda, the full background of this great tragedy for a long time was denied to the American people.

Though many illuminating books on Pearl Harbor have been published since the war, it was not until 1955 that our people could read the story of Adm. Husband E. Kimmel, who was the commander in chief, United States Pacific Fleet, at the battle. Published in a volume by Henry Regnery Co., of Chicago, his story has attracted national attention as a major contribution to history.

Among the latest comments on Admiral Kimmel's Story is a book review in the May 1955 issue of Shipmate, the monthly magazine of the United States Naval Academy Alumni Association, which was written by Adm. H. E. Yarnell, United States Navy, retired.

An officer of distinction, who in 1933–36 was commandant of the Pearl Harbor Naval Station, and during the critical years, 1936–39, was Commander in Chief of the United States Asiatic Fleet, Admiral Yarnell is well-informed on the essential events leading to the Japanese attack. Hence views expressed by him have historical value and form an important part of the record on Pearl Harbor.

To make Admiral Yarnell's magnificent review of Admiral Kimmel's Story more accessible to historians, statesmen, and the public at large, under leave accorded, I quote its text:

ADMIRAL KIMMEL'S STORY

Reviewed by Adm. H. E. Yarnell, U. S. N., retired)

In this brief book Admiral Kimmel has condensed the salient facts and correspondence leading up to and subsequent to the tragedy of Pearl Harbor.

It is a convincing story, and to the future historian who is concerned with facts, rather than propaganda, it will be invaluable as source material.

As commander in chief of the Pacific Fleet, Kimmel's main responsibility in case of war was to carry out offensive operations against the Japanese islands to the westward. Also his vessels served as a training squadron to supply trained men for newly commissioned vessels, on the east coast.

The defense of Pearl Harbor was a responsibility of the Army, which was charged with the protection of naval bases against enemy attack.

There were never enough planes assigned to either Army or Navy to carry out continuous scouting. The antiaircraft defense on the ships was woefully weak.

Kimmel struggled manfully to remedy the deficiencies and to prevent detachment of his ships to reinforce the Atlantic. He was assured by Washington that he would be kept in close touch with the political situation.

The key to an understanding of pre-Pearl Harbor events is contained in the "intercepted dispatches"—the Japanese messages to their representatives in Washington as to their intentions and plans.

The vital information contained in these dispatches was not given to Kimmel. Yet one dispatch in October 1941 asked the Japanese consul in Honolulu for continuous report as to the location of United States vessels at the wharves in Pearl Harbor. No clearer indication of a planned attack on these vessels could have been desired. The significance of this dispatch was not even recognized in Washington.

The several investigations and their results are outlined in the book. The first one, the Roberts Commission, although headed by a retired Justice of the Supreme Court, was a travesty of justice. It succeeded in casting the blame on Admiral Kimmel and General Short.

The Naval Court of Inquiry, composed of three retired admirals of distinguished record, held in 1944, completely exonerated Kimmel of all blame. The findings of this court were disapproved by the Navy Department and held secret.

The congressional investigation produced a vast amount of testimony, but its findings were vitiated by political interests.

It is to be hoped that out of the great mass of evidence, pertinent and otherwise, and especially through such books as the one under review, certain obvious lessons can be drawn as guides for the future.

The first one is the necessity of the commander in the field being supplied with all pertinent information regarding the military and political situation.

The second one is that political leaders should not attempt to direct military operations, as a corollary to the accepted principle that military leaders should not direct national policy.

The third is that in any activity, political or military, there must be loyalty downward as well as loyalty upward. The subordinate in the field should feel that he has the support of his superiors in GHQ or Washington. If he is not worthy of this support, he should be relieved.

When the *Repulse* and the *Prince of Wales* were sunk off Malaya a few days after the attack on Pearl Harbor an outcry arose in England for a parliamentary investigation. Mr. Churchill replied that he as Prime Minister would assume the blame until circumstances permitted of all the facts being known.

Had some of Mr. Churchill's moral courage prevailed in Washington, two innocent men would not have been crucified as they were to save the reputations of those directly responsible.

The finest review of Admiral Kimmel's Story is contained in its foreword. This was written by Mr. Charles B. Rugg and Mr. Edward B. Hanafy, two distinguished lawyers who devoted several years of untiring effort to secure for Kimmel a fair and impartial consideration of the events leading up to the Pearl Harbor tragedy.

Hawaii and Alaska Statehood Bill

SPEECH

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, I think this is the most important point in our admitting Alaska as a State. The question of where we should draw a line, as to whether we should set aside 10 percent, 20 percent, or 40 percent or more of Alaska as a military reservation, was one discussed pro and con in the Committee.

I received a letter from President Eisenhower in which he indicated that while he was somewhat concerned about any conditions of admitting Alaska to the family of States, he does say in his letter addressed to me, and in a similar one addressed to Senator JACKSON, that Secretary McKay had made certain proposals as to the line, and that if Congress approved this particular line he would give it his earnest consideration. I think that is as near as he could come to saying he would support the bill.

This new McKay line we had hoped to put into the bill, if the Rules Committee had not seen fit to report out a rule which would prevent such action, would have taken out about 287,000 square miles, I think about 44 percent of the Territory of Alaska, and set it aside in a military reservation. That is asked for by the military and by the President of the United States.

It is my hope that we can pass this bill, that we do not recommit it, but send it on to the other body, and we can hope that the other body will see fit to put in the line as suggested, and that the legislation may move forward.

Mr. BARTLETT. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Nebraska. I yield to the gentleman from Alaska.

Mr. BARTLETT. Would the gentleman agree with my understanding that this is not a partition line, that this is merely a line north and west of which the President can make national defense withdrawals?

Mr. MILLER of Nebraska. That is right. The people in the area are citizens of the United States and can vote just as citizens in the other area do.

Mr. BARTLETT. On both sides of the line they are citizens of the United States?

Mr. MILLER of Nebraska. That is right. It merely makes it possible for the President to declare a military reservation. The line has been drawn. We had hoped in the committee it would have been possible to present it to the House.

But I beg the House not to recommit this bill but send it over to the other

body, and we will get this line in somewhere, and then we can proceed to have a vote on the two States.

Mr. LECOMPTE. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Nebraska. I yield.

Mr. LECOMPTE. Did I understand the gentleman to say that the representation in this House would not be changed by the adoption of this bill; that the 435 Members would be exactly the same, and yet Hawaii would have 2 seats and Alaska 1, and that that would not upset anybody's seat at all?

Mr. MILLER of Nebraska. No; we adopted an amendment here that would not make a permanent change. Some future Congress could, of course, make changes.

Mr. LECOMPTE. I agree to all that, but 435 seats have to be differently distributed.

Mr. MILLER of Nebraska. Congress will decide that.

Mr. LECOMPTE. Yes; but some States will certainly lose a seat by this arrangement.

Mr. MILLER of Nebraska. We may have 437 Members in the House.

Mr. LECOMPTE. You said it did not add to the 435 seats by the terms of the bill.

Mr. MILLER of Nebraska. It does not affect anyone's seat, that is what I said—it will not necessarily affect any seat in Congress.

Mr. LECOMPTE. What does it do?

Mr. MILLER of Nebraska. It might add 2 or 3 more that Congress could accept. That decision rests with Congress.

Mr. LECOMPTE. I thank the gentleman.

Miss Barbara J. Bradfield Winner of Essay Contest

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the fact that Miss Barbara J. Bradfield, a senior at the New Trier Township High School, Winnetka, Ill., recently won first prize for Illinois in a national high school essay contest held in connection with the conference of the American Association of the United Nations on March 15 in Chicago, in which over 100 Illinois schools participated. Miss Bradfield was warmly acclaimed at the time that the prize was awarded and her many friends, as well as the faculty members of her school, had hoped that her words, herein quoted, could be placed in the CONGRESSIONAL RECORD:

We, the young people of today, shall be the leaders of tomorrow. Will we be a generation tormented by the fears and hates of the world? Or will we be a generation united by peace and hope? We can live in a world where peace reigns if we begin now to face world problems with a positive attitude.

The United Nations signifies high, but attainable, ideals. It strives for peace and security, economic and social advancement, respect for human rights and freedoms. These goals are the keys to harmonious living.

We are a part of a wonderful and frightening age. We have the power to build, destroy, or be destroyed. Let us work for construction rather than destruction. Let us work for peace rather than war.

Excerpts From Address by J. Peter Grace, Jr., on Latin-American Relations

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. BUTLER. Mr. President, an editorial, entitled "Rules for Good Neighbors," which I included in the CONGRESSIONAL RECORD on April 21, 1955, has engendered such favorable reaction, that I now ask unanimous consent to have printed in the Appendix of the RECORD, excerpts from the speech which formed the basis of those editorial comments. This comprehensive address, devoted to Latin-American relations, was delivered by Mr. J. Peter Grace, Jr., president, W. R. Grace & Co., before the Central States group, Investment Bankers Association of America, in Chicago, Ill., on March 16, 1955.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

This afternoon I would like to present to you a prospectus of Latin America and submit it to your skilled analysis.

First, let me take a moment to get into focus the magnitude of our economic stake in Latin America, which, since at least 1897, has been the most important area for United States direct private foreign investment. At the end of 1953, such investment abroad stood at $16.3 billion, of which $6 billion was located in Latin America.

When people think of United States companies operating in Latin America, they usually think first of mining companies in Chile and Peru, or oil companies in Venezuela, fruit companies in Central America, or sugar companies in Cuba.

This picture of Latin America is certainly understandable. Traditionally, Latin America has been our leading supplier of raw materials and foodstuffs. The importance of this fact is clearly brought out when you consider that during World War II, Latin America supplied 75 percent of the crude foodstuffs, and 40 percent of the raw materials and semimanufactured goods which our country imported. In addition, approximately 30 of the 77 items on our stockpile list of strategic materials are imported from this area.

However, the Latin American people will not be satisfied with a raw material economy, nor with its corollary, a one-crop economy. They want to produce goods which will raise their standards of living. More and more of them want better homes to live in, better clothes to wear, better food to eat, better medicine for their children and families.

It is this great and powerful drive, it is these aspirations, on the part of the Latin American people for a better life which gives their countries the very dynamic quality which they have today.

I believe almost every visitor who goes down to Latin America comes back with a vivid awareness of this drive.

On the business front, a year ago we took 35 leading United States finapciers on a visit to 4 Latin American nations. These men represented United States institutions with total assets of over $40 billion. They came back with exactly the same impression and some of them have put their thoughts into investment action.

Of course, a major indicator of an area's vitality is its birthrate. I believe you all know that Latin America's population increase of about 2½ percent a year is greater than that of any other major area of the world. In the United States the increase is only about 1½ percent. It has been estimated that, should present rates continue, the population of Latin America may be twice that of the United States and Canada together by the turn of the century—more than 500 million people.

The combination of this tremendous demand for self-improvement and an exploding population provides a ready-made market. It is this condition that prompted a leading United States businessman to state the other day that one thing an investor in a new business in Latin America did not have to worry about was a constantly growing market for his goods. The market is there—ready for him and growing continuously.

Per capita consumption in Latin America increased 26 percent from 1945 to 1953. It has been projected to increase by almost 50 percent from the present level by the mid-1970's.

The major markets in Latin America are in the cities and the cities are growing almost twice as rapidly as the total population. For example, between 1940 and 1950 the population of 23 of the largest cities in Latin America rose 45 percent compared to 25 percent for the entire area.

This increasing urbanization coupled with rising living standards is leading toward the emergence of a middle class in the cities of Latin America.

Apartment houses and suburban developments, heretofore unknown, are now the coming thing in Latin American cities. A greater market is developing for washing machines, radios, television sets, refrigerators, and dishwashers. In addition—and this is a very important point to bear in mind—the development of a middle class is bound to produce greater economic and political stability which in turn strengthens the basis for investments.

I feel, of course, somewhat inhibited in this talk in mentioning our own company. However, I do feel that, I might be permitted to quote briefly on one phase of our operations from the National Planning Association's report, published just last fall, on "Casa Grace in Peru."

"Casa Grace's contribution to expanded Peruvian markets for textiles has been a long series of 'firsts' through the introduction of new textures, finishes, designs, and colors. It was the first in Peru to make bleached and finished cotton goods before World War I; pure indigo-dyed denim in 1927; printed cottons in 1936; mercerized cloth in 1942; combed cottons in 1947; spun rayon and other synthetic textiles and their printing by the silk screen process in 1948; and Everglaze cottons and its own roller engraving plant in early 1954."

For those of you interested in an objective analysis of our policies, our philosophy, and the growth of our business in Peru, all of which are typical of our affairs in other Latin American countries, I refer you to this NPA report.

Our company is evidence of the fact that the Latin American market is growing continuously. One example is our own paint business. Just before the war, we had only

one paint plant in operation in South America. Since the war, however, we have found th market for quality paint so greatly expanded that today we are in the paint business in an important way in Chile, Peru, Colombia, and Argentina.

The Latin Americans essentially are very much like ourselves. Once one man paints his house, his neighbor's wife wants her husband to paint his. In business, if one storekeeper paints his store and makes it more attractive looking, his competitor down the street will soon do likewise.

In Peru, we have had a similar experience in our paper business. In the late 1930's, we developed what has become known as the Grace process for making paper out of bagasse, or waste sugar cane fiber. Prior to this, Peru had to import all its paper requirements but the starting of a local paper industry, capable of making all types of paper from wrapping paper, kraft paper, and cardboard to specialty papers, has changed the retailing, merchandising, and packaging habits of the country. We developed the initial use in the country of corrupated boxes which previously had been unknown. We replaced cotton bags with multiwall bags in the bagging of cement, sugar, and many other products. We made the country paper and package conscious with the result that, from an initial capacity of 3,000 tons, we have expanded the capacity of our paper plant to over 20,000 tons and before the year is out it will reach 30,000 tons.

Getting back to our general topic, an interesting comparison showing the dynamic nature of the Latin American scene is between the recent growth of Sao Paulo and Chicago—two leading industrial and transportation centers.

Between 1940 and 1953 the population of Sao Paulo increased 97 percent, Chicago's population increased 12 percent.

In the same period, the number of airplane passengers passing through Sao Paulo increased 22 times compared to 11 times for Chicago.

Also, the number of telephones in use in Sao Paulo increased by 270 percent compared to 56 percent in Chicago.

This amazing growth is not limited to Sao Paulo.

Telephones in use for Latin America as a whole more than doubled from 1940 to 1954 as did automobiles.

Truck and bus registrations tripled and the number of tractors on farms rose five times.

In the postwar period, Latin America's gross product—measured in constant prices—has increased from $27.3 billion to $41.6 billion, or by 52 percent. In this same period, the United States' gross product increased from $263 billion to $307 billion, also measured in constant prices, or by 17 percent. Thus, it may be seen that Latin America's productivity in the postwar period is growing at a faster rate than that of the United States.

Whereas today Latin America's gross product amounts to a little over $40 billion, by 1975 it is estimated to increase to $100 billion—almost 2½ times the present level.

The Paley report estimates that the United States gross product will only double in this same period.

This progress can be grasped more readily by the following examples:

United States cement production went from 24 million tons in 1939 to 47 million tons in 1952—an increase of 96 percent.

In the same period, cement production in Venezuela increased from 43,000 tons to 941,000 tons; in Colombia, from 180,000 tons to 784,000 tons, increases of 2088 percent and 336 percent, respectively.

Crude steel production in the United States between 1939 and 1952 increased from 54 million tons to 95 million tons, or by 76 percent.

At the same time, crude steel production in Brazil rose from 128,000 tons to 1 million tons, or by 681 percent.

Electrical energy production in the United States during this same period increased from 146 billion kilowatt hours to 464 billion kilowatt hours, or by 218 percent.

In Colombia, electrical energy production increased 353 percent from 186 million kilowatt hours to 842 million kilowatt hours.

I hesitate to talk again about our own company but it is hard for me to discuss Latin America without mentioning our own experience. With the end of World War II, we naturally were anxious to push the development of our industrial businesses in this area. At that time we produced textiles, paper, paint, cement, flour, vegetable oil, and other basic items.

However, it was clear then that the highest rates of return were going to be made in the more specialized and complex manufacturing operations, just as is the case in the United States.

Thus, if our company was going to continue its role of leadership, we saw that we would have to develop research and engineering know-how comparable to that required in this country.

Moreover, in many of our Latin American industries we have important local partners. They have looked to us—as their North American associates—for continuing contributions of highly specialized know-how.

We decided, therefore, to obtain an important stake in a highly technical field in the United States. We chose the chemical industry as this field was closest to our own industries—textiles, paper, paint, sugar, food products—which, in turn, are chemical process industries.

As a result of this decision, in the last few years we have placed $130 million in the United States chemical industry and our annual research expenditures amount to over $3 million a year.

With the new research and specialized knowledge acquired, we have greatly strengthened our position for future progress in our Latin American industries. Not only can we now accelerate the development of our already established activities, but we are also in a better position to broaden our participation in the expanding chemical industry in Latin America. An example of this is our new chemical project in Brazil, a joint venture with the leading German chemical company, Farbwerke Hoechst, which will manufacture DDT, monochlorobenzene, caustic soda, chlorine, solvents, and textile auxiliaries. The total investment of this project is in excess of $6 million.

I bring this out because it has occurred to me that some of you may be wondering if there is any inconsistency between my enthusiasm for investment in Latin America and the heavy investment W. R. Grace & Co. has recently been making in the United States chemical industry.

I think you will see from what I have told you that we have the greatest faith in Latin America. Since the end of World War II we have invested between $25 and $30 million there, including commitments and investments in two countries in which we have not previously been identified industrially. These are Brazil and Argentina, in both of which countries we have tremendous faith.

In addition, we have now on the drawing board industrial projects in Latin America which will add another $15 to $20 million to our stake in that area within the next 3 years.

Thus we have actually stepped up our pace of investment in Latin America while moving into the field of United States chemicals in a manner which we frankly hope will develop into a hemispheric chemical operation.

Of course, in any discussion of foreign investments, the question of what rate of return the United States investor can expect inevitably arises. There is no pat answer to this question as it depends to large extent upon the type of investment and the wisdom with which it is made.

However, we all know that a United States investor is not going to place his capital in a foreign country unless he can reasonably expect a higher rate of return than that obtainable at home. Such a situation is not new. Capital has always sought the areas of highest return. This reflects the age-old economic law that those countries with a large demand for new capital—but a limited supply of their own—offer a higher return than countries rich in capital such as the United States today.

That this condition exists clearly shows up in the price one has to pay for commercial bank credit in Latin America.

Compared to the present prime commercial bank rate of 3 percent in the United States, credit is from about 3 to 4 times as expensive in Latin America.

The businessman in Latin America is able to pay such high interest charges on bank borrowings for the simple reason that business is much more profitable in Latin America than in the United States. High profit margins are the natural outcome of a growing demand for goods, reflecting the rising standard of living. Only in highly developed industrial nations, where capital has been accumulated over a considerable period of time, and where well organized capital markets exist, are profit margins low and still decreasing.

The average return for all industries on net worth has already declined in the United States from 13.4 percent to 10.5 percent between 1950 and 1953, and in Canada from 14 percent to 9.8 percent in the same period. Preliminary figures which I have seen indicate that the rate of return in the United States in 1954 might drop to below 10 percent. As you know, many of the older and more mature industries have even lower profit margins than these averages would indicate.

These same conditions do not exist in Latin America, as many industries there are still in their infancy. Although the Western World has the ability to produce increasing amounts of goods, keener competitive conditions are developing in the world markets. In view of this situation, I expect profit margins in the more industrialized countries to shrink still further, while profit margins in Latin America should be well maintained in view of its rapidly expanding markets. Herein gentleman, lies the future of investing in Latin America.

Today in Latin America there are many signs of an improving investment climate. Our Government is taking an increasing interest in the economic well-being of this area—and for good practical reasons.

Just recently, Peru and Costa Rica have joined our country's investment-guaranty program. Cuba is negotiating a tax treaty with the United States. Brazil and Argentina are easing their laws with regard to foreign investment.

I have enlarged, many of you perhaps will say with undue enthusiasm, on the opportunities for investment in Latin American countries. I am enthusiastic about them, but I am not at all unmindful of the arguments against investing in those countries. The usual objections which one hears are:

1. Risk of inconvertibility of currency.

2. The danger of expropriation of foreign assets.

3. Disturbed political conditions over which the investor has no control.

Now in the first place, I believe that any prospective investor in Latin America should carefully analyze conditions in the country or countries in which he proposes to invest.

In the second place, he should become associated with expert managers with experience in that field.

In the third place, he should consider his investment as a permanent one, which he would build up with plowed-back profits and to which he would apply long-range management and development policies, just as he would in the case of a domestic enterprise.

Bearing these precepts in mind, I don't think he has much to fear. There are countries in Latin America which have no exchange controls and which are operating under a full and free economy. There will be periods, as there are now and as there have been in the past, when earnings and reserves in some countries cannot be remitted.

There is no reason to consider that such conditions are permanent, or even more than transitory, and the return on investment can and should more than offset the transitory inability to remit earnings. In the meantime the accumulated currency earnings can be plowed back into the business.

With respect to expropriation, I feel that this bugaboo is a ghost that should be laid and all I shall say on the subject is this—our firm has been doing business in South America for more than 100 years and over all that period we have never lost a dollar of our money nor a square foot of our land through expropriation.

With respect to the third objection to Latin American investment, that is, disturbed political conditions, it would be foolish for me to say that the political history of all the Latin American countries reflects political stability in any degree comparable with that which we have known in this country. Again, however, I must call on the experience of our firm as authority for the statement that changing political conditions in any of the Latin American countries—unless they go completely Red—can be lived with by unswerving loyalty to a few simple principles:

(a) Stay out of local politics—this doesn't mean stay partially out—it means stay out. If you do this, you will be able to get along with whatever government is in power.

(b) Employ as the managers of your business able and outstanding nationals wherever this is practical and feasible, and keep them out of politics, too.

(c) Have your management, and particularly the Americans in your management, closely identify themselves with local community life and become part of the countries in which they live.

You know, during most Latin American revolutions, the traffic cop still directs traffic, the postman still delivers mail and life goes on pretty much as usual as far the foreigner and the foreign investor is concerned.

By rigid observation of these principles, our company's experience in Latin America has been highly successful and we have been able to grow with the expanding economy of this area.

Since 1940, we have doubled our production of textiles, compared to only a 47-percent increase in textile production in the United States.

We have increased our paper production 8½ times, compared to only 1.8 times for the United States.

Our paint production has increased 11½ times compared to only a 64 percent increase for the United States.

In a century of operation we have built enterprises which have brought great benefits not only to our stockholders but we like to believe to the Latin American countries in which we operate as well.

We hope to see many other enterprises created in Latin America with local and United States capital working in friendly cooperation. The philosophy o fthis cooperation was brilliantly summed up by President Eisenhower in his opening message to the New Orleans Investment Conference when he said:

"Behind all private plans and projects, behind Government help, behind a New Orleans conference or a Rio Conference, behind the words, the dollars, and the blueprints—there must exist the essential ingredient of faith—North American faith in Latin America, and Latin American faith in North America.

"And if today I had to choose only one thought to leave with you, it is the thought of our North American faith in the future of Latin America—economically, culturally, politically, and spiritually."

If the company which I represent stands for anything in the field of Latin American investment, it is that word "faith." Our growth has been built on faith in Latin America.

Hawaii and Alaska Statehood Bill

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2535) to enable the people of Hawaii and Alaska each to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

Mr. MILLER of Nebraska. Mr. Chairman, I desire to be recognized.

Mr. Chairman, I do this not to stall this amendment but to give some reassurance to those who were worried about the number that might be in the House of Representatives from Hawaii. The committee wisely provided that if Hawaii comes in as a new State it shall not operate to either increase or decrease the permanent membership of the House of Representatives. Now, several Members were concerned about losing their seats in the House of Representatives, and it is quite plain, I think, with the adoption of this amendment, that the condition as to the membership in the House remains with the House. Any change can be made by Congress. I have no objection to the amendment. I wanted at this time to sort of reassure some of those folks who felt that, if we bring in two more Members, they will lose their seats. This is not necessarily so. I will also say that if a rule had been reported so that we could have amended this bill— and I hope it will be amended over in the other body—that I had intended to offer an amendment to provide for one Representative, and I believe it would have been adopted. I hope it is done in the other body. Again, the rule does not permit amendments.

Mr. ASPINALL. Mr. Chairman, will the gentleman from Nebraska yield for a question?

Mr. MILLER of Nebraska. I yield.

Mr. ASPINALL. What the gentleman is telling the House is that the Membership Act of 1911 and the Apportionment Act of 1941 will still remain in force?

Mr. MILLER of Nebraska. That is right. Only Congress can change that act.

Tribute to Aldo Leopold by Hon. Clinton P. Anderson, of New Mexico

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. ANDERSON. Mr. President, several months ago it was my pleasure to speak at the dedication of a memorial to Aldo Leopold. The memorial was in recognition of work Mr. Leopold did which led to the creation of a system of wilderness areas in the United States.

Mr. Leopold led an active life in the outdoors, and held a number of important posts in government and as a private citizen. He was a man whose friendship I considered a privilege, a man who recognized the degrees and kinds of solitude to be found in a wilderness. More than that, he recognized the need for the preservation of such areas for those who will follow us.

Quite recently some people questioned whether one could be a friend of conservation, or of the wilderness area, and still support the huge irrigation and power project on the Colorado River.

For this reason, and in view of my long interest in preserving primitive areas, I ask unanimous consent to have my remarks at the dedication of the Aldo Leopold memorial printed in the Appendix of the RECORD.

The text of the address has been printed in the winter issue of the Living Wilderness, a publication of the Wilderness Society, 2144 P Street NW., Washington, D. C. The address was delivered in New Mexico overlooking the Gila wilderness area on September 14, 1954.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WILDERNESS OF ALDO LEOPOLD

(Address by Hon. CLINTON P. ANDERSON)

Some years ago there came from the presses a rather thin volume entitled "A Sand County Almanac." It was written by Aldo Leopold and in it there are these words: "There are degrees and kinds of solitude." Today it is our privilege to pay tribute to Aldo Leopold and to realize that there are as well degrees and kinds of wilderness.

This Gila Wilderness is the type which he liked and which he sought to protect and preserve—a wilderness not crossed and recrossed by oiled roads and excellent means of transportation, but a great tract that was almost pathless forest where a man travelled best if he travelled on foot or in the saddle. Two years ago when the proposal of the Forest Service to modify the boundaries of the Gila Primitive Area was under consideration I spoke of my remembrance of many Forest Service officials who were on duty in New Mexico when I first arrived in this State to make it my home. This day is set aside for the erection of a plaque to the memory of Aldo Leopold and I, therefore, will disassociate him from the others and speak only of my great joy to have shared his friendship and his comradeship 35 years ago.

Aldo Leopold recognized the degrees and kinds of solitude that men can find to match their needs and moods. He became secretary of the Albuquerque Chamber of Com-

merce, but he could not divorce himself from his love of nature and his desire to see set aside, even in a municipality, an area where people could breathe and could feel released from the restraints of society.

Back more than 30 years ago he sought the development of a Rio Grande Park in what had been a water-logged stretch of empty acres, and out of it with the passing of time there has emerged the Albuquerque Zoo, the Tingley baseball field, and a substantial area which will become more and more prized as Albuquerque continues to expand.

But it was the true wilderness which attracted him—the places where he could go and be alone, the spots in the White Mountains of Arizona or in the forests of New Mexico where a man could lose himself in his surroundings and be dropped back into complete comradeship with nature.

I talked to Aldo Leopold many times about the development of a wilderness area. There it would be possible to preserve scenic beauty and the natural accompaniments of the restricted country, the fish and the wildlife which had once owned these areas for themselves and now had become the hunted as man moved into these protected retreats.

It was such a place here in southwestern New Mexico, a hundred or more miles north of the Mexico border, where hazy blue silhouettes of the Mogollon Range mark the Gila wilderness, that Aldo studied the area, and in his report of October 1922 suggested this vast wilderness be named the Gila Wilderness Area or Gila National Hunting Ground.

Although most widely known for his eminence in technology of wildlife management, Aldo Leopold was a dominant influence in the movement not only to preserve the Gila wilderness, but also wilderness areas throughout the country.

Thirty years ago he enlisted me in the cause for preservation of wilderness areas in general. I shall never forget how he poured out his heart on the subject of primitive tracts which seemed likely to be destroyed with the development of the auto, the truck, and speedier methods of transportation.

What was his background?

Aldo Leopold was born at Burlington, Iowa, on January 11, 1886. There he developed an interest in ornithology and hunting. He attended Yale University where he received the bachelor of science degree from Scheffield Scientific School in 1908 and the master of forestry degree from the School of Forestry the following year.

From 1909 until he rose to chief of operations in the regional office at Albuquerque, he served with the United States Forest Service in Arizona and New Mexico. While there his interest in wildlife management developed and he became secretary of the Albuquerque and the New Mexico Game Protective Associations. His effort within these organizations to produce a rational system of game management and a nonpolitical administration of refuges attracted wide attention.

"It seems to me," wrote Theodore Roosevelt to Aldo in 1917, "that your association in New Mexico is setting an example to the whole country." It was in that year that Aldo was awarded the gold medal of the Permanent Wildlife Protective Fund of America.

In 1925 he left New Mexico and went to Madison, Wis., where he served for 2 years as associate director of the Forest Products Laboratory. Then he resigned from the Forest Service to conduct game surveys for the Sporting Arms and Ammunition Manufacturers' Institute.

He was awarded the Outdoor Life medal for his first book, Report on a Game Survey of the North Central States, published in 1931.

A member of some 30 clubs, associations, and societies, Aldo served as president of the Ecological Society of America and of the Wildlife Society. He was a director of the National Audubon Society, and was vice president of the American Forestry Association, The Wilderness Society, and Friends of the Land. He also was an active member in the American Ornithologists Union. He served as associate editor of the Journal of Forestry and was also a member of the SAF Council.

He served on the Committee on Wildlife Restoration appointed by President Franklin D. Roosevelt in 1934, as well as on many other conservation committees, and at the time of his death had been asked by Secretary of the Interior Krug to serve at the Inter-American Conference of Renewable Natural Resources.

Elected a Fellow of the Society of American Foresters in 1946, he had been professor of wildlife management at the University of Wisconsin since 1933.

Author of nearly 300 technical and popular articles, reviews, and his classic book, Game Management, Aldo Leopold was an internationally recognized authority on wildlife management as evidenced by his voluminous advisory and committee work and his membership in numerous conservation and scientific organizations.

But to us today as we meet here in his honor we can look at the great expanse of the Gila Wilderness, one of the few such areas in the United States virtually untouched by human hands, and honestly say this might not have been except for the initiative of Aldo Leopold. It was chiefly through his efforts that the Forest Service in 1924 established the first of its wilderness reservations, the Gila Wilderness Area or Primitive Area in New Mexico.

To what goals his love of nature would have carried him we have no way of knowing. Across the country his prestige had steadily grown. He was at the peak of his usefulness to the wildlife and the wilderness movements when those who had come to know and love him were shocked by news of his death. On April 21, 1948, he suffered a fatal heart attack after fighting a grass fire on a neighbor's property near his home at Baraboo, Wis.

There are other chapters in the history of the Gila Wilderness that had not been completed at his passing. After public hearings in August 1952, the area was permanently designated the "Gila Wilderness Area" and placed under a new and stricter regulation known as U-1.

Under the new regulation U-1, and upon recommendation of the Chief of the Forest Service, such areas may be designated by the Secretary of Agriculture as "Wilderness Areas" within which there shall be no roads or other provisions for motorized transportation, no commercial timber cutting, and no occupancy under special use permits for hotels, stores, resorts, summer homes, organization camps, hunting and fishing lodges, or similar uses. The only roads allowed will be roads of ingress and egress to any private property that might be in the area.

The work of Aldo Leopold has been done. We now become trustees of his inheritance. Those of us who may visit within the wilderness and who are able to rest and be restored in our peace of mind and body by the quiet that it will always possess have none the less an obligation to see that the work of one generation shall not be sacrificed by those that come after. We have an obligation to make sure that this area may remain untouched for generations and perhaps centuries to come. We cannot take our burdens as trustees lightly if we are to keep faith with those who struggled so mightily to achieve these precious spots within the confines of a busy continent.

The erection of this memorial not only says to Aldo Leopold, "Well done, thou good and faithful servant;" it reminds each of us that our lives as well can contribute to the things that mean beauty for the eye and rest for the spirit. We, too, can preserve the wilderness. We, too, can find in it "degrees and kinds of solitude" that will mean for all who live in the southwest and for all who come to it to visit a communion with nature that will bring to each of us peace and joy and enduring pleasure.

Bricker Amendment Should Be Adopted—Congress No Longer Bound by Constitutional System of Delegated Powers

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a statement made by Mr. Carl B. Rix, of Milwaukee, former president of the American Bar Association, before a Senate subcommittee which is hearing testimony on the proposed Bricker amendment.

Mr. Rix points out clearly that articles 55 and 56 of the Charter of the United Nations, which is an approved treaty, that Congress is no longer bound by its constitutional system of delegated powers. Under these articles Congress is in a position today to pass legislation which cuts across civil, political, economic, social, and cultural lines. Too few people in this country, much less too few Members of Congress, realize this fact.

Mr. Speaker, I am including Mr. Rix's statement and commend it to the attention of every Member of the House:

STATEMENT OF CARL B. RIX, MILWAUKEE, WIS.

I appear in favor of the amendments.

Congress is no longer bound by its constitutional system of delegated powers. Its only test is under the obligatory (the word is that of the Attorney General) power to promote human rights in these fields of endeavor: Civil, political, economic, social, and cultural. These are found in articles 55 and 56 of the charter of the United Nations, a ratified and approved treaty. They are being promoted in all parts of the world by the United Nations.

Congress may now legislate as an uninhibited body with no shackles of delegated powers under the Constitution. Our entire system of a government of delegated powers of Congress has been changed to a system of undelegated powers without amendment by the people of the United States.

The authority for these statements is found in a volume entitled "Constitution of the United States of America, Annotated," issued in 1953, prepared under the direction of the Judiciary Committee of the Senate of the United States and under the chairmanship of Prof. Edward S. Corwin, of Princeton, aided by the legal staff of the Library of Congress. This is the conclusion at page 427 of the Annotations: "In a word, the treaty power cannot purport to amend the Constitution by adding to the list of Congress' enumerated powers, but having acted, the consequence will often be that it has provided Congress with an opportunity to

enact measures which, independently of a treaty, Congress could not pass, and the only question that can be raised as to such measures will be whether they are 'necessary and proper' measures for the carrying of the treaty in question into operation."

It will be noted that one of the principal cases cited is that of the Migratory Bird case.

These conclusions are those also of a committee of the New York State Bar Association, of which former Attorney General Mitchell and Mr. John W. Davis were prominent members.

Now, for some practical illustration of the new-found powers under treaties of what Congress may do:

1. It may enact a comprehensive education bill, providing for education in any State which does not provide it. In fact, it may take over all public education now provided by States and municipalities.

2. It may enact a prohibition act without an amendment of the Constitution.

3. It may enact a uniform divorce act.

4. It may take over all social and welfare services rendered by or through the States, or their agencies.

5. It may take over all commerce, all utility rates and service, all labor. The list may be multiplied extensively at your will.

The new test of constitutionality will apply to all legislation by Congress since 1945, which deals with any of the five fields of endeavor. Any judge deciding on the validity of legislation must have two books before him—one the Constitution of the United States and the other the Charter of the United Nations. If he does not find authority for the act in the Constitution, he will find it in the charter. That is the exact situation in which Justice Holmes found himself and the other members of the Supreme Court, when they decided the Migratory Bird case. The authority was not found in the Constitution—it was found in the treaty with Great Britain.

The question to be answered is this: Under which form of government do the people of the United States prefer to live? Manifestly, we cannot operate under both.

Senators, the people of the United States have given up their sons, they have given up billions of their substance—they should not be the only Nation in the world to give up their form of government—the wonder of the world—to discharge their obligations to the people of the world.

Atlantic Union and World Government

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Atlantic Union and World Government," published in the March 1955 Bulletin of the For America Study Club.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATLANTIC UNION AND WORLD GOVERNMENT FOR AMERICA—WEEKLY STUDY PLAN NO. 1

(Read this study plan for the answer to "What Can I Do To Help Save My Country?")

Today there exists in the Pentagon a certain document marked "Secret." It was written soon after the Hiroshima and Nagasaki bombings. These disasters strengthened the dreams of those who believe in internationalism. Here, the authors of the document wrote, was a proven weapon so deadly that its use would have to be controlled. Among the family of sovereign states no nationalist power could be entrusted with it. Only a world state, acting in accordance with internatoinal law, should control such a deadly weapon. Nationalist states—their sovereignty yielded—must be permitted armed forces for internal security only. In the interest of peace all nuclear weapons must be in the hands of the world state.

The American people have never been especially interested in foreign policy. Our interest lies in things closer home. But if foreign policy is expressed in terms of taxes, conscription, overseas garrisons, nuclear weapons, foreign wars, acres of white crosses, and loss of sovereignty—we become deeply concerned. And now this prospect of yielding our sovereignty is, indeed, alarming.

Despite the fact that our international relations do reflect these grim realities, for nearly two decades the American people have been denied the opportunity to express themselves in foreign policy. Only in the vaguest terms has this momentous issue been mentioned by the candidates of either major party. Propaganda agencies have blared the virtues of bipartisanship while a few key officials have stealthily guided foreign affairs. And without realizing precisely how it came about, America has become inextricably enmeshed in tough international intrigue.

Meanwhile, foreign influences—together with internationalist-minded Americans acting under the guise of diplomacy—have quietly plotted their plot. They would have the Atlantic Union absorb the United States.

In keeping with this concept the creation of an Atlantic Union is well underway. A startling news dispatch from Ottawa, Canade, published in the Kansas City Star, Monday, December 13, 1954, disclosed:

"Creation of a super Atlantic community agency to merge the economic, defense, and foreign policies of the United States with other countries will be recommended to members of the North Atlantic Treaty Council in Paris this week."

The release continued:

"Signed by Harry Truman, Adlai Stevenson, Gen. George C. Marshall, and 70 other Americans, as well as Canadians, British, French, Belgians, Norwegians, Danes, and Dutch, the recommendation, in the form of an appeal for Atlantic unity, will be given Thursday to Lord Ismay of Britain, the Secretary General of NATO."

The signed statement itself declares:

"This is no time for halfhearted measures, while welcoming the progress made toward European union, we believe that nothing less than an effectively integrated Atlantic community * * * will in the end adequately meet the challenge of the times. Defense in today's terms extends beyond military requirements and into the political, economic, and cultural aspects of our lives."

And the signed statement calls for "the development of NATO as a central agency to coordinate the political, trade, and defense policies of the member nations."

According to the news dispatch, prominent American signers of the proposal are: Harry Truman; Adlai Stevenson; Gen. George C. Marshall; Norman Cousins, president of the United World Federalists; Owen J. Roberts, president of the Atlantic Union Committee; Will L. Clayton, vice president of the Atlantic Union Committee; Clarence K. Streit; Chester Bowles; Senator Humphrey, Democrat, Minnesota; Senator Kefauver, Democrat, Tennessee; Senator Lehman, Democrat, New York; William V. Griffin, president of the English Speaking Union; Edward Murrow, commentator; and Elmer Davis, commentator.

The news dispatch concluded with this amazing observation:

"NATO already has authority to adopt the proposed program, it is pointed out in the petition, under article II, commonly called the Canadian clause, which provides for economic development of the member countries."

From the above, every American must realize that the machinery already exists to take us into Atlantic Union. Meanwhile, prosperous and complacent, the American people continue to sleep. And we sleep at a time when only a great awakening can prevent our being slipped into a world state.

LOSS OF LIBERTY

What happens when the United States enters the Atlantic Union? The super state, Atlantic Union, with authority to enforce world law would take out of our hands the means to defend ourselves. The Atlantic Union would then dictate the terms under which Americans would be forced to live. Depending on circumstances beyond our control, the United States, stripped of sovereignty, might be sending our youth to fight under the Atlantic Union banner anywhere on the globe.

Some preach that the spiritual acceptance of the brotherhood of man can be achieved only through world government. Certainly our Bible teaches brotherly love but the Tower of Babel illustrates man's differences and limitations. No home is large enough for two families; likewise, no super state could control all members without resort to force. The super state cannot be a guarantor of world peace.

What happens to our patriotism when we join the Atlantic Union?

Suppose the Arabs of North Africa revolted against France. Americans have a natural sympathy for those who seek freedom. But expression of this sympathy would be treason against the Atlantic Union.

With our national military strength gone, what would happen to our liberty? What would become of our Bill of Rights?

Several hundred servicemen already lie in foreign prisons, sentenced by foreign judges under the Status of Forces Treaty without the protection of our Constitution and its Bill of Rights.

What would happen to our property when our Atlantic neighbors move in for the take? For some time it has been apparent that some foreign peoples were jealous of our standard of living and eager to reduce it to the level of their own.

Will not our Atlantic Union neighbors take advantage of our military weakness and demand that the wealth among the members be more equitably distributed? Will not the flow of wealth be from this country to our European neighbors? While it is more blessed to give than to receive, the Bible also warns against covetousness.

In the Atlantic Union we would inherit an obligation to support the European colonial system—an institution repugnant to Americans. We would inherit also the racial and social and national hates and the jealousies and sores of age-old Europe. None of these antipathies is our business. Such heritage would involve us in hopeless, endless quarrels.

If we join the Atlantic Union, we will have everything to lose and nothing to gain. Such a union would mean common citizenship, common foreign policy, common currency, mutual defense and economic measures, free and unlimited immigration. Our standard of living would be lowered, our security undermined, and our liberty lost. Yet, there is no reason to believe that our sacrifice would extend lasting benefit to the other nations. In fact, experience proves the contrary.

THE DEPARTMENT OF STATE

Where does the Department of State stand on this toying with America's destiny?

In its brochure No. 23, summer 1950, Building the Peace, the Department of State disclosed a strong and unmistakable affinity for world government.

"When and if the world's people set out in an earnest effort to form a world government, they will find in the U. N. a logical starting point * * * it is ready to take on new responsibility at any time.

"The creation of a world government * * * depends * * * upon the willingness of key countries to surrender certain sovereign rights."

Two years later, in April 1952, John Foster Dulles before he became Secretary of State, warned:

"* * * Congressional laws are invalid if they do not conform to the Constitution, whereas treaty law can override the Constitution. Treaties, for example, can take powers away from the Congress and give them to the President; they can take powers from the States and give them to the Federal Government or to some international body, and they can cut across the rights given the people by the constitutional Bill of Rights."

But after he became Secretary of State, Dulles obviously changed. He now holds that there should be integration of all NATO Forces "to the maximum extent possible and that this decision does not require the advice and consent of the Senate."

To Senator KEFAUVER in November 1954, Dulles wrote:

"I believe that what was accomplished there (London) has brought us closer to real Atlantic Union than ever before."

Can we longer doubt that we are moving toward Atlantic Union?

If there is doubt, pending congressional resolutions will clarify the misgiving. In the Congress are some 10 or 12 resolutions calling for an exploratory convention to determine a practical plan for the creation of a firm Atlantic Union, superstate.

CONSTITUTIONAL BARRIER

As early as 1930, the Kremlin, as well as other Internationalist plotters, had made their analysis of how the United States could be drawn into one world. Their penetrating study disclosed the difficulty. The barrier was our Constitution.

It reserved too much power for each of the 48 sovereign States and to the people. Consequently, the one worlders and the Kremlin decided to circumvent this great barrier. They would promote big government. They would shrink the power of the States and the people. The emergency powers granted the Federal Government during World War II fell like manna from heaven on these global plotters.

Today, as we look back the picture clarifies. The necessity for a superstate had to be created by discrediting our own free system.

The Constitution was branded old-fashioned.

The Supreme Court must embrace liberals.

Our economy must be enfeebled by debt, taxes, debasement of currency, class conflict, violent attacks on profit, and the capitalist system, and over-extension of our military commitments.

Slogans have had their place in this nefarious program. "Interdependence," "We can't stand alone," and "Coexistence."

After the Washington government had absorbed the powers which the Constitution reserves for the States and for the people, then would be the time to take the United States into world government via the treaty route. That tragic time has now arrived. The plan is on schedule. It is the intent of the plotters to take us into Atlantic union now; world government will come next.

WHAT YOU CAN DO

Although victims of slick propaganda, the American people are still overwhelmingly opposed to Atlantic Union and World Government. Proponents of the superstate can achieve their aims only by resorting to the Trojan-horse technique.

Recently, speaking in New York, the minority leader of the Senate, the Honorable WILLIAM F. KNOWLAND, warned us of this danger:

"Lest we be gradually edged into such a world state before we learn too late where we have been taken, I believe every candidate for public office—executive, legislative, or judicial—should be asked to give a forthright view upon this great public issue."

Here, then, Senator KNOWLAND has given us the answer to the $64 question: "What can I do now to save our country."

Our Constitution put the power in the people. If we exercise this power, we can have the kind of government we want.

There is something which each of us can do:

Where does your candidate stand on Atlantic Union and World Government?

Write for our booklet, How You Can Start a For-America Study Club, For America, 208 South La Salle Street, Chicago 4, Ill.

MARCH 1955.

Long Beach State College

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. HOSMER. Mr. Speaker, it is an honor for me to report to our colleagues the outstanding development and progress of one of the Nation's newest centers of learning, the Long Beach State College.

This institution is shouldering its full responsibility for the preparation of our more youthful Americans for lives of service to their fellow men and to their country.

Dr. P. Victor Peterson, president of the college, has earned a national reputation as an educator for his vision, foresight, and ability in developing the college and in recruiting its top-quality teaching staff. This is his story of the development of Long Beach State College:

CREATED IN 1949, COLLEGE OPENED 7 MONTHS LATER

(By Dr. P. Victor Peterson, president, Long Beach State College)

Almost everyone in the United States has marveled at the rapid growth of the southern California area since World War II. Typical of the regions experiencing such growth is that of southern Los Angeles County and adjacent Orange County. This region extends from the industrial city of South Gate to the shipping center of Wilmington and San Pedro, to the dairying area of Paramount and Bellflower, and to the citrus-growing sections of Fullerton and Orange; it includes resort towns from Redondo Beach to San Clemente, and the long-settled area of Santa Ana.

Almost in the middle of this coastal strip is Long Beach, fifth largest city in California and probably the most wealthy oil city in the United States.

Although the cities of this region vary in their economic base from industry and shipping to farming and to beach recreation, the one characteristic common to all has been a constantly increasing population.

Recognition of the growth of this region was indicated in the survey of higher education made under the joint auspices of the State department of education and the regents of the University of California in 1947–48, which recommended that a State college be established to serve the needs of Orange County and the southeast portion of Los Angeles County.

On January 27, 1949, Earl Warren, then Governor of California, signed assembly bill 8 (ch. 4, Statutes of 1949), which was "An act to provide for the establishment of a State college in the area of Orange County and the southeastern part of Los Angeles County." This signature brought into existence on paper the youngest of the 11 colleges of California's State college system.

In order to provide educational facilities for the region as soon as possible, temporary quarters were established in Long Beach and the college opened its doors to students for the first time in September 1949.

Meanwhile, the State public works board had undertaken a survey to select the best of several possible permanent sites for the new State college.

Because every educational institution needs a name, even though it be only a temporary one, the college began operation as the Los Angeles-Orange County State College. This stimulated sports editors in many of the nearby communities to propose several interesting versions of fight yells and songs based upon that tongue-twisting title.

FACILITIES SMALL

Although regularly established as a State college with authority to offer 4-year undergraduate and 1-year graduate programs, the college was forced by the extreme limitations in plant facilities to restrict its offerings during the first 4 years of operation to upper-division and professional curriculums.

To fulfill the normal functions of the State college system and to meet the demands for integrated programs of teacher training, and for occupational and professional curriculums, the State department of education directed the college administration to provide for limited enrollment of freshman and sophomore students beginning with the 1953–54 academic year. The college thus altered the historical pattern of development of this type of institution—from normal school, to teachers college, to State college—by moving instead, in a short 4 years, from senior college, to senior college-with-a-1-year-graduate program, to a regular 4-year-undergraduate institution with a graduate program.

In spite of its youth, Long Beach State College has received unrestricted accreditation by the Northwest Association of Secondary and Higher Schools as a degree-granting college; and the California State Department of Education has authorized Long Beach State College to offer training leading to various credentials for public school service and to the master of arts degree in certain fields.

LOCATION OF COLLEGE

The temporary site for the new State college in 1949 consisted of two of several almost identical apartment houses then under construction near the eastern border of the city of Long Beach.

Lloyd S. Whaley, owner of the buildings, arranged for hurried alterations which provided the college with usable quarters, although visitors were often surprised to find the president in an office which had been originally planned for a bedroom, and the switchboard installed where a dining table should have been placed.

Among the traditions of the college today are the stories about students who, confused by the similarity of the apartment houses, dashed into someone's front room in the wrong building expecting to find a class in California history or nature study.

The faculty and students at the college, while it was operating in the apartment houses, considered themselves educational pioneers and soon adopted the symbolic name of "Forty-niners." The gold rush boom of 1849 made California famous, and doubled the population many times over in a few short years. In 1949 there was another "rush," this time for education in Long Beach. The population of the State college zoomed 700 percent in 2 short years.

During the first year of operation, Los Angeles-Orange County State College was a much sought after institution. Not only did many persons desire to attend classes at the college, but many cities of the area were eager to have the college located permanently within their boundaries. Numerous delegations made pilgrimages to Sacramento to appear before the Public Works Board, and representatives from the local legislative districts were advised by their constituents to "bring the college home."

After considerable investigation the sites under consideration were narrowed to 4—2 in Orange County, and 2 in Los Angeles County, 1 of which was near the unincorporated area of Downey in Los Angeles County and the other just outside the eastern boundary of Long Beach.

PROPOSED GIFT

A group of Long Beach citizens proposed to their fellow townsmen that the city purchase and give to the State this latter site as the permanent location of the college.

On April 15, 1950, the State Public Works Board agreed to locate the State college in Long Beach if the proposed site were annexed to the city and donated to the State.

On June 6, 1950, the citizens of Long Beach by overwhelming vote at a city election authorized the city council to acquire the property and donate it to the State as the permanent campus of the State college. On June 7, 1950, the State Director of Education officially gave the institution the name of Long Beach State College.

Although the permanent site is located within the city of Long Beach and the county of Los Angeles, it is within one-half mile of the Orange County border. The campus for which the city of Long Beach paid approximately $1 million comprises 320 acres fronting on Seventh Street. Its elevation is such that there is both an "upper" and a "lower" campus. At one time the land was a key part of Rancho Los Alamitos, an historic California land grant. At the present time the campus is enclosed on three sides by homes, all of which have been constructed within the last 5 or 6 years. Transportation between the campus and the area it serves is rapidly improving as the construction of major freeways moves forward.

Adequate emergency facilities were erected on the new site during the summer of 1951 and the college moved there for the opening of the fall semester. Additional emergency facilities were constructed during the summer and fall of 1952 in order to meet the demands of a rising enrollment. As in the case of the pioneers at the apartment house site, faculty and students alike approached the emergency buildings with the enthusiasm of eternal optimism. During the first few months of occupation the weather competed with the bell system of the college, for whenever rain started to fall students dashed out of the classrooms to move their cars from the fields to the street. Students using a nearby steep, adobe hillside for parking saw their cars sliding and bumping together during one particularly heavy storm. Construction of the emergendcy buildings was not completely finished by the opening of the 1951 fall semester, and many professors shared their classrooms with electricians and painters. One English instructor taught his class on the edge of the college trash dump in order to escape constant interruption. To this day those students have a special title and description for that particular semester of English.

Long Beach State College will experience another big change as five of the new permanent buildings on the upper campus will be available for use. As a result, the college will find itself with a third set of pioneers who, undoubtedly, will consider their experiences comparable to those of the pioneers in the apartment houses and in the emergency buildings. A few persons even suggest that a hierarchy of pioneers will develop at Long Beach State, for those who pioneered at the apartment houses will consider themselves superior to those who pioneered only at the emergency building site, and both of these will outrank those newcomers who arrived only in time to occupy the permanent buildings.

Treaty Law—Need for Clarification

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very interesting editorial which appeared in the Milwaukee Sentinel on the subject of treaty law. This editorial points out that for nearly 132 years the supremacy of the Constitution in treatymaking was not questioned. However, since 1920 the Supreme Court has followed a line of decisions which permits the President and two-thirds of the Senate to nullify the Bill of Rights, including states rights under the 10th amendment.

The editorial follows:

TREATY LAW

President Eisenhower has said, and Secretary of State Dulles has testified, that they would accept section 1 of the Bricker amendment.

The section declares that no treaty or other international agreement conflicting with the Federal Constitution shall have "any force or effect."

But section 1 is a lesser part of the amendment and is of little value in itself; for section 1, standing alone, has already been nullified by Federal court decisions under which the executive branch may disregard the Constitution without appearing to violate the Constitution.

Section 2 completes section 1 by stipulating that a treaty or other international agreement may be made domestic law for the United States only by "valid" legislation.

Every important foreign country except France, the Netherlands and Mexico retains this self-protection against excessive executive action. As to executive action in foreign affairs, the Bricker amendment only asserts that such actions must be constitutional.

"Legislation by treaty" can be, and has been, imposed on the United States outside the Constitution both by formal treaties and by informal executive agreements.

The Constitution does not even mention executive agreements.

It provides that treaties "made under the authority of the United States" are "the supreme law of the land," along with the Constitution itself, and it empowers the President to negotiate treaties.

For 132 years, the supremacy of the Constitution in treatymaking was hardly questioned.

Then came, in the following order, corrosive court decisions which have shunted the Constitution aside:

1920—The Migratory Bird case: The Supreme Court held that treaties may authorize Congress to pass legislation which the Constitution forbids Congress to pass. Under this decision, the President and two-thirds of the Senate may nullify the bill of rights, including the 10th amendment (States rights).

1936—The Curtiss-Wright case: The Supreme Court ruled that the treatymaking power does not derive from the Constitution, but is "an inherent power vested in the Federal Government as an attribute of sovereignty." This decision is tantamount to the obsolete Bourbon doctrine of the "divine right of kings." By its terms, the Federal Government is not restricted by the Constitution in making laws for the American people in the guise of treaties.

1942—The Ping case: This decision concerned an executive agreement—not a formal treaty—with Soviet Russia. The Supreme Court noted that a treaty is a "law of the land" under the Constitution and asserted that "such international compacts and agreements" as the one then in litigation "have a similar dignity."

This reasoning does violence to the Constitution.

According to the Constitution, a treaty becomes a "law of the land" only if approved by two-thirds of the Senate. But an executive agreement is not required to go before the Senate for scrutiny.

The Supreme Court decision therefore permits the executive branch to evade Congress and the Constitution, and to dictate laws to the Nation, by merely substituting executive agreements for treaties.

The danger to our institutions from treaty legislation is relatively recent, but it has become very great.

At a bar association meeting in Louisville in 1952, Mr. Dulles, speaking as a private citizen, warned that treaties can abrogate "the rights given our people by the constitutional Bill of Rights."

Now, as Secretary of State, Mr. Dulles opposes the Bricker amendment. He pleads that the Eisenhower administration would not make a bad executive agreement or an unconstitutional treaty. But there will be other administrations after this one.

On this point, the Sentinel prefers the admonition of Thomas Jefferson, who said:

"In questions of power, let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution."

Peanut Politics

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HIESTAND. Mr. Speaker, because my current news release, somewhat whimsical in nature, regarding the farm price-supports debate, was entitled "Peanut Politics," I naturally was

attracted to the editorial in the Evening Star the next night, May 6.

This editorial sums up the matter in a very effective way and stresses several points I omitted. As the writer says, the taxpayers, year after year, have had to foot the bill for this economic folly—the folly of being taxed to keep our food prices up.

The editorial follows:

PEANUT POLITICS

The lowly peanut should be emblazoned on the banners of the Democrats who led and won the fight in the House to annul the flexible farm price-support program. For this was a demonstration of peanut politics in the smallest sense of the term.

Price supports are supposed to apply to basic crops—cotton, rice, wheat, corn, and peanuts. But the peanut crop amounts to less than one-half of 1 percent of the Nation's agricultural production. It is not a basic crop and it is in the support program only because of some potent politicking by Representative PACE, of Georgia, a few years ago. On Wednesday an amendment to remove peanuts from the program was adopted. This panicked a number of southern Democrats, who felt they could not vote for a support program, even a 90-percent support, if peanuts were excluded. So the Democrats, led by Speaker RAYBURN, got busy, and by Herculean efforts mustered enough votes to restore peanuts to the support program. Thereupon the bill to abandon flexible supports and revert to the rigid high supports was squeezed through by a vote of 206 to 201.

The voters should understand just what this means. Farm income has slumped—there is no doubt about that. But all of the slump has occurred under the rigid 90 percent support program. The flexible system will not go into effect until this year's crops are harvested. Meanwhile, enormous and unmanageable surpluses have piled up in the warehouses from one end of the country to the other. And the taxpayers, year after year, have had to foot the bill for this economic folly.

The flexible program may or may not be an answer to the problem. But it is important to note that what the Democrats have done is to vote for a return to the discredited program without giving the new program any chance to prove itself. They know, of course, that they will not succeed in this endeavor. The bill has virtually no chance this year in the Senate, and even if it should be passed there, the President certainly would veto it. So all of this to-do in the House boils down to a small-time political sideshow—a rather shabby attempt to embarrass the President in his politically courageous effort to find some solution to our desperate farm problem.

Fishers Island Sound

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. DODD. Mr. Speaker, I have introduced a bill calling for a full investigation of the problem of protecting the shores of Fishers Island Sound from storm and hurricane tidal floods.

I believe that this proposal can do much to alleviate the great damage, particularly to the eastern Connecticut shoreline, by hurricanes and severe Atlantic storms.

This proposal has already been discussed with the Corps of Army Engineers.

It appears to me to be a practical, efficient, and low-cost method of doing something soon about a grave problem.

This proposal originated with Mr. Henry R. Palmer, Jr., who knows the area in question.

Unless the measures suggested in this bill, or something like them, are undertaken the Government is wasting money on the continual repair and maintenance on breakwaters along this part of our coastline.

I am hopeful that the appropriate committees will give this proposal the most serious consideration.

Home-Aid Measure Should Be Approved

EXTENSION OF REMARKS

OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an editorial from the Bristol Herald-Courier of Thursday, May 5, 1955.

The Members' attention is called to this editorial which notes that the House Agriculture Committee has approved a bill to make it possible for our needy people to receive flour and meal to be used in making bread. This bill will provide for the processing of a portion of our surplus grains into flour and meal for distribution to the needy.

We should provide food to our deserving people; and my bill, which I hope will soon be taken up in the House, will make possible the addition of bread to the diet of many needy persons.

The editorial follows:

HOME-AID MEASURE SHOULD BE APPROVED

Representative PAT JENNINGS has scored a victory in the first round of his battle to provide meal and flour for thousands of unemployed persons in the Nation.

The House Agriculture Committee has approved a bill, introduced by Representative JENNINGS, which would authorize the Commodity Credit Corporation to process surplus wheat and corn and make it available to State welfare departments. These departments, in turn, would distribute the flour and meal to labor-surplus areas, such as Virginia's Ninth District.

Inasmuch as the CCC soon will be paying more than a million dollars a day for storage of surplus products, including grain, and since staples such as flour and meal are desperately needed in some areas, it would seem that Representative JENNINGS would have no trouble finding support for his bill. But, on the contrary, he has found opposition. It comes from within the administration.

Ironically, while opposing a program which will provide aid at home, that same administration announces plans to pour a billion dollars into the aid-funnel held out by Asia.

We are not necessarily opposed to a program of military and economic aid to Asia, but we fail to see how such a program can be justified by men who oppose a tremendously less expensive program which would provide food for deserving persons in the United States.

Representative JENNINGS has cleared the first hurdle. We hope he wins the race.

Why Not Admit Spain to the U. N.?

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 11, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Why Not Admit Spain to the U. N.?" written by David Lawrence and published in the Washington Evening Star of May 3, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY NOT ADMIT SPAIN TO THE U. N.?—MEMBERSHIP REQUIREMENTS EMBODY DOUBLE STANDARD AND INCONSISTENCY

MADRID, May 3.—This is a place where they can enjoy a big laugh at the expense of the various statesmen of the world who lately have been proclaiming that it doesn't matter what kind of government they have in Peiping—admission to the United Nations should be granted, anyhow. Yet the record shows that a resolution by the United Nations Assembly adopted December 12, 1946, did assert that the form of government in a given country is a matter for approval or disapproval by the United Nations.

The present government here is, of course, in complete control of every inch of Spanish territory, including all offshore islands. If international law and custom alone is the basis, Spain is entitled to admission into the United Nations. But there is another point, and that is whether an applicant government is or is not "peace loving" or whether its behavior constitutes a threat to peace. Spain has not manifested any threats against any other nation and is "peace loving" in every sense of the word.

Then why isn't the government of Spain admitted to the United Nations? The words of the 1946 resolution set forth the qualifications for Spain's admission. The resolution read in part as follows:

"The General Assembly, • • • further desiring to secure the participation of all peace-loving peoples, including the people of Spain, in the community of nations.

"Recommends that if, within a reasonable time, there is not established a government which derives its authority from the consent of the governed, committed to respect freedom of speech, religion, and assembly, and to the prompt holding of an election in which the Spanish people, free from force and intimidation and regardless of party, may express their will, the Security Council consider the adequate measures to be taken in order to remedy the situation;

"Recommends that all members of the United Nations immediately recall from Madrid their Ambassadors and Ministers plenipotentiary accredited there.

"The General Assembly further recommends that the states members of the organization report to the Secretary-General and to the next session of the Assembly what action they have taken in accordance with this recommendation."

The foregoing sounds strangely unlike the speeches which British spokesmen, for example, have been making in the United States lately telling audiences that it isn't a matter of approval or disapproval of a particular government when admission to the United Nations or even diplomatic recognition is involved. Indeed, between November 1936 and May 1939 53 governments of the world, including Great Britain, the United States, and France, extended diplomatic recognition to the present government of Spain, and not one expressed any reservation or allegation that the government here was not independent or free.

Today, however, if the resolution of 1946 by the United Nations means anything, it means that recognition must be withdrawn from the Soviet Union and the government at Peiping, or at least that Ambassadors must be recalled. Certainly the resolution means also that the United Nations considers itself responsible for the establishment of free governments through free elections.

But everybody knows today that the United Nations does not practice what it has preached. In fact, probably most of the members who voted for the 1946 resolution would like to see it expunged from the records because it contains a very troublesome precedent. Yet, if the principle is to be buried and governments like those at Moscow and Peiping are to be accepted as worthy members hereafter, then what possible excuse is there any longer for refusing to admit the government of Spain?

It so happens that the Spaniards are not knocking at the door of the United Nations. They still remember the unkind action of 1946, and they do not care to apply for admission to a club from which they have been blackballed.

Spain can get along without membership in the United Nations, but the big question is, how long can the members of the United Nations remain guilty of hypocrisy and inconsistency by arguing so fervently nowadays for admission of Red China, whose government just recently was declared to be an "aggressor"? The Spanish folks hereabouts smile at the discomfiture of their onetime critics.

Postal Salary Legislation

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. CANFIELD. Mr. Speaker, may I take this opportunity to express my hope that the conference report on the postal salary bill will soon become law. In urging early approval of this legislation by the Senate and the President, I speak on behalf of minimum economic relief for one of the few major employee groups in the Nation having had no basic salary increase since 1951. I speak for local postal inspectors having less in purchasing power now than they did 15 years ago. I speak for local letter carriers forced to borrow money in order to feed, clothe, and house their families. I speak for mail sorters whose wives or children must go to work to help meet minimum family needs.

The proposed average increase of 8.8 percent for postal employees will do more than adjust postal salaries to take account of increased costs of living; it will help to raise the standards of post-office service. It will assist the Post Office Department in recruiting able employees hitherto receiving higher pay in other types of work. It will aid in reducing costly turnover among postal employees, by offering more opportunities for advancement within the postal service. It will improve the general morale and efficiency of persons having previously decided to devote their working lives to the collection and distribution of mail.

The conference report on the postal pay bill meets most of the major objections raised to last year's postal salary legislation which I also supported. The American people as well as the postal employees suffer from delay in the increase of postal pay. I hope that neither the people nor the employees will have to wait much longer.

The Postal Pay Bill

EXTENSION OF REMARKS
OF
HON. E. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, in my opinion the postal pay bill has presented one of the most perplexing problems to this session of Congress thus far.

Knowing the administration's position, it seems to me that if I were to vote for a higher pay increase than the 7.6-percent contained in the House committee's bill, then logically I must be prepared to vote to override a veto. The logical test, then, seems to me to be whether or not the administration proposal was fair to postal employees by providing a rate of pay at least equal to that offered for similar work in private industry. This is particularly true in light of the fact that the post office is not self-sustaining, and that people in private industry, doing similar work, must pay the taxes to make possible the postal wages provided, at whatever rate.

As nearly as I can determine, from listening to all of the debate and giving it all the personal research that my time permitted, and from my recent personal experience with private industry in Wyoming, the administration proposal was not only fair but generous, in comparison with pay scales in private industry.

The most deliable comparative figures I was able to obtain covering Wyoming are for the Denver area, where the regional office of the Post Office Department serving Wyoming is located. From my personal knowledge, the Denver wage scale in private industry appears to be equal to or a bit better than that paid in the larger Wyoming communities; they are substantially higher than those prevailing in the smaller communities of my State.

As of December 1954 the average rate of pay for a janitor in the Denver area was approximately $222 per month. Under the administration proposal the minimum pay for a janitor would be $239 per month; and after 8 years automatic wage increases would bring this to $289 per month. Under the administration proposal an elevator operator would start at $256.66 per month, and with automatic wage increases after 8 years' service would be receiving $309.16 per month.

A material handler in the Denver area received an average of $269 per month; under the administration proposal a mail handler would receive a minimum of $277.50 per month, with increases to $332.50 per month after 8 years' service. A typist likewise would start at $277.50 and go up automatically to $332.50 per month. A truckdriver in the Denver area received an average of $295 per month. Under the administration proposal a truckdriver for the Post Office Department would start at $303 and go up automatically to $363 per month. An accounting clerk in the Denver area averaged $317, while under the administration proposal a Post Office Department accounting clerk would start at $323 and advance automatically to $385 per month at the end of 8 years.

City carriers similarly would start at $303 and advance to $363 per month, plus graduated rates of longevity pay to a maximum of $300 per year after 25 years' service. In addition, they would receive $100 per year for uniform allowance. This would represent an increase of 114 percent on the starting wage over what they received prior to 1945, and an increase of 108 percent on the maximum rate.

All of the Post Office pay figures cited above are guaranteed annual wages. Post Office Department employees have other benefits not ordinarily found in private industry. They have civil-service status, and retirement benefits. They have vacations of a minimum of 2 weeks and 3 days for beginners, up to 5 weeks and 1 day for employees with 15 years or more of service. Thirteen days of paid sick leave are granted each year, cumulative if not taken. Eight paid holidays are enjoyed each year, and nine in election years.

The rate of pay for post office carriers and clerks, provided in the administration bill, is from $1.75 to $2.24 per hour. A Congressman from a highly industrialized area in Michigan, where some of the highest wages prevail, stated that the maximum paid for similar work in his home community is $1.96 per hour. These people in private industry, he further pointed out, are subject to layoffs and do not enjoy the high degree of fringe benefits I have described.

In view of these facts and recommendations of other members of the committee, who have studied the problem seriously and sincerely over a long period of time, I could not justify voting to override a veto, and, therefore, could not justify voting for a higher rate of increase than the average of 7.6 percent, with reclassification as provided in the administration bill.

How Kansas Combats Mental Illness

EXTENSION OF REMARKS
OF

HON. ERRETT P. SCRIVNER
OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. SCRIVNER. Mr. Speaker, every community, every State, and the Federal Government, especially the Veterans' Administration, is plagued by the problem of mental illness.

Kansas has found and met that problem with great success, and has set an example that might well be followed by the other 47 States, and the Veterans' Administration.

Alvin McCoy, an outstanding news reporter, has done an exceptionally fine job on reporting the developments at Osawatomie, Kans., State Hospital. His feature story, appearing in the Kansas City Star of Sunday, May 8, 1955, is worthy of your time. It is a story of years of wasted time saved, of dollars saved, and above all the saving and rehabilitation of human beings, for which the State of Kansas and the public officials who have devoted their time and talent are to be highly commended.

This thrilling story of restoration to society follows:

NEW DRUGS AID IN TREATMENT OF MENTAL ILLS AT OSAWATOMIE—THE KANSAS HOSPITAL WITH IMPROVED METHODS DEMONSTRATES THAT EVEN PSYCHOTIC DISTURBANCES CAN BE CALMED—STATE'S PSYCHIATRIC PROGRAMS RESULT IN GROWING MAJORITY OF PATIENTS BEING RESTORED TO HEALTH

(By Alvin S. McCoy)

OSAWATOMIE, KANS., May 7.—Doctors agreed that the most potentially dangerous patient in the Osawatomie State Hospital is a 36-year-old woman with an oversize homicidal complex.

Mae (which is not her name) during periodic outbursts would attempt to kill someone. She had a fiendish cleverness in obtaining knives, broken glass, or other carving weapons. She wrote notes. Murder was the prevailing theme.

Attendants and patients, too, in the female ward for what the psychiatrists term "the most violently disturbed" frankly admitted they were terrified to be near her. She suffers with schizophrenia.

Mae's emotional binges might occur only once or twice a year. When they did, and the emotional regulator went haywire, they were something to behold.

Some time ago, related Dr. Wilbur G. Jenkins, superintendent, Mae went berserk. She obtained a piece of glass. The nurses asked for help. Two male aids rushed in, in an attempt to bring her under control. The woman ripped the face of one man, and would have killed him if others hadn't been able to subdue her.

BUT MAE HAS FREEDOM NOW

Once in leather handcuffs, she quieted down. She was given electric shock and sodium amytal and soon was able to mingle with the other patients again.

Today Mae is relaxed, calm, and has the same privileges and freedoms of other patients in her ward. She goes to the snack bar with others. No one fears her. On a recent visit, she chatted freely, if a little disconnectedly, with a reporter about Kansas City, Kans., where she once lived. She is under no physical restraint. Neither is any other patient among the 1,540 in the Osawatomie State Hospital.

Mae is an example of the miracle wrought by new drugs in the treatment of the mentally ill.

The drugs are thorazine and serpasil, in whose complex chemical names a layman would not be interested. They have received a great deal of attention in medical publications. At Osawatomie, where they now are in general use, they have left a marked imprint on the institution.

"These drugs," Dr. John E. C. Morton, clinical director and a psychiatrist, said, "are used in almost any form of mental illness where the picture is fear and anxiety, usually indicated by great excitement.

"The point is that an excited patient isn't what he appears to be. He is a frightened child, and in order to assuage his own fears, he challenges his environment. There is great evidence of hostility."

The drugs appear to work on a different section of the brain from that affected by sedatives, such as sodium amytal. The latter makes a patient sleepy. The new ones cause a patient to be tranquil, relaxed, and sometimes voluble.

"We can now reach them and talk to them," Dr. Morton said. "That is the first step in therapy, to induce a patient to talk."

Mae's treatment began in February. She was given electric shock and sedatives. Gradually these were tapered off, and thorazine was administered. It is given daily, either as an injection or as a tablet. There have been no outbursts since.

Doctors emphasize that the new drugs are not cures. Only in the earliest stages of mental illness have they apparently brought about sufficient improvement to permit a patient to be discharged. They are considered "valuable additional tools" in treating disordered minds.

NEW DRUGS IN ALL THREE HOSPITALS

"We were doing a pretty good job before we got them," Dr. George W. Jackson, director of institutions, reported. "They simply help that much more. We are using them generally at all three of the State's hospitals."

Osawatomie has used drugs valued at approximately $10,000 in the last 3 months, much of which represented gifts from manufacturers interested in research reports on results. The first use was last November. It was extended considerably during January, February, and March. Today 325 "disturbed" patients are receiving 1 of the 2 drugs daily.

The reporter asked to see the "worst" wards. He was taken to K building and an attendant unlocked a barred door. Here about 100 men were sitting on chairs or at tables, visiting, silent, or watching a wild west performance on television.

It was difficult to believe the most seriously affected patients in a 22-county area served by Osawatomie were here. The room was quiet. There was no screaming, usually associated with such wards.

"It's the new drugs," the doctor said.

There was cautious use of the drugs at first. Thorazine, the doctors report, has definite toxic effects on some 1 to 2 percent of the patients, causing agranulocytosis (destruction of white corpuscles) or liver damage. With such reactions it is stopped immediately. There have been no reactions to serpasil.

The new control measures also have had a marked effect on the use of insulin-shock and electric-shock treatments, which are rigorous measures. Before Christmas 80 patients in K building were being given electric-shock treatment twice a week. Since that time, the number has dropped to 12. Insulin shock was being used on 20 patients. It now is given to 10.

The drugs, and the State's improved mental-health program together, have changed the appearance of Osawatomie, where it was once a crowded, custodial institution with overworked doctors unable to see or classify the patients in their care.

"It doesn't even look like a mental hospital," Dr. Morton asserted. "Visitors constantly tell us they can't believe they are seeing one. It's so quiet."

THE NEW LOOK AT OSAWATOMIE

Externally the appearance is the same, excepting for a new geriatrics building. There is the same collection of red brick buildings on a hill a few miles north of the city. Inside, it is different.

Gone is the rocking-chair brigade, the rows of patients staring into space, withdrawn into their own confused inner world. Missing are the crowded wards, the silent people sitting, the occasional screams from the more violently disturbed that are the trade-mark of an asylum.

There is bustling activity. Supervisors, nurses, attendants, and doctors are beaming with that indefinable spark of pride in the job they are doing. The patients appear devoted to them, a factor in the treatment. The hospital has been cleaned up, painted up, and gleams like a well-run private institution. Good food is served cafeteria style to most, and patients sit at modernistic chrome tables for four.

It was time for occupational therapy, a word that may throw you, but which is highly important in treatment. Spectators were shown into several rooms, formerly occupied by hospital beds, where some 50 men patients were seated at tables. Each was sandpapering a piece of wood. Some were smoothing the surfaces efficiently, others were working in slow motion. Now and then a patient was sanding across the grain. With many, it was one of the first physical jobs the patients could be persuaded to do to start bridging the gap toward normality.

More advanced patients were sketching Christmas cards, working a rug-weaving machine, or making furniture. In a women's room, many were unraveling string, weaving rag rugs, or doing needlework. Later in the day they would watch television or possibly see a movie. There is a television set in every building on the grounds, and on every floor.

A group of 14 men walked into K building. The supervisor explained they had been fishing. A party is made up each day by employees who take requests from patients to join the fishing party. Attendants dig worms and give poles to the patients so they can sit on the banks of the reservoir and try for catfish.

THE STAGES OF RECOVERY

How good a job is Osawatomie doing?

Statistics are deceptive. Many patients are home on trial visits. They may come back. They do not always make it the first time. During the next visit home they stay longer. Ultimately a vast majority is discharged.

Here is the best picture of the Osawatomie operation:

A year ago the institution had a population of 1,650. Today it has 1,540. In the 12-month period some 600 patients were admitted, which would indicate some 710 patients improved and released, in this time.

Encouragement comes with the fact that Osawatomie, and the 2 other State hospitals at Topeka and Larned, are receiving many times more patients than ever before, but the hospital populations are declining. Elsewhere in the Nation, with more than 50 percent of the total hospital beds being occupied by mental patients, the emphasis is on building buildings and expanding the institutions. Kansas officials believe they may never need additional beds.

Two years ago there was a time when Osawatomie had no psychiatrists. Today it has 5, including 2 on the State's experience program for training residents. There are 4 psychologists and 5 social workers.

NO HORROR IN STATE'S HOSPITAL NOW

The team found most effective is composed of a psychiatrist, psychologist to give tests, psychiatric social worker to check the patient's background, psychiatric nurses, aides, occupational therapists, recreational supervisors, chaplains and dietitians.

The reporter visited the administration building. On several floors were semiprivate rooms, smaller than a hotel room, but containg, bed, dresser, and chair which the patients well advanced in treatment could call their own. Doors had been removed.

Not many years ago the public had a horror of mental hospitals. Popular conception was of a lunatic asylum, with padded cells, straitjackets, and other accoutrements of snakepit fame. There are no padded cells at Osawatomie, no straitjackets, no handcuffs. Only doors of some wards are locked to keep patients from wandering off.

Officials of the Osawatomie hospital are encouraging conducted tours by high school and college students. About 6 college groups have made the tour recently, and Paola, Kans., High School students are scheduled soon.

"We want young people to see what mental hospitals are like," Dr. Morton said. "We don't spend too much time encouraging older persons to visit. They have preconceived prejudices."

Staff conferences are held frequently to discuss a patient's treatment. Each patient sees a doctor at least once a day. There are still about 150 elderly persons at Oasawatomie, who could be transferred to nuring homes, since they require only physical care.

An outpatient clinic was opened last September, and receives 40 or 50 patients a month. These are referred by doctors, friends, or visit voluntarily. Each meets a psychiatrist, is given a preliminary interview, takes tests, and the social worker explores the family background.

Hospital officials decide whether the patient should be admitted to the hospital, or can be treated on an outpatient basis of visits several time a week. About 20 to 30 percent are treated on the latter program.

"We are rapidly approaching the point where we are doing most of the things we know how to do," Dr. Jackson, the institutional director, said. "We are approaching the minimum standards of the American Psychiatric Association and are reaching the approved standing pattern."

Dr. Jackson receives $25,000 a year, or $10,000 more than the governor.

Dr. Jackson believes if a Kansan is committed to a mental hospital, his chances are about 4 out of 5 that he will be discharged in a year. No longer is commitment to a hospital a lifetime sentence to vegetate in a chair. About half of those who can be discharged will be out in three months, Jackson estimates. He believes that the next step in the treatment of mental illness is more research on cause and cure, plus closer attention in the home communities.

What is the Kansas secret weapon? Probably a lot of things taken collectively. At the start, the State program had the guidance of Dr. Karl Menninger, one of the top-ranking psychiatrists in the country. He counseled setting up a training hospital for psychiatrists.

Psychiatrists are scarce. It is almost impossible, even if a State has unlimited funds, to employ them. A few came to Kansas from other States. But Kansas decided to train its own. In 1952 it began a training program at the Topeka State hospital. After receiving a degree of doctor of medicine, a physician spends 5 years more to become a psychiatrist.

In the Kansas training program, the doctors spend 2 of the 5 years working in other hospitals in the State.

Eight doctors are now in the experience-training phase, assigned to Larned, Topeka, Osawatomie, the boys' training school at Parsons, and other institutions. Soon there will be 15. The State has whipped the psychiatrist shortage by producing its own.

Another asset is the spirit that animates the institutions. Because of the remarkable results, the staffs have been inspired with pride in their work. Another advantage is the integration of the county welfare programs with the State program, all under the State Board of Social Welfare.

In 1947 Kansas discharged 340 persons from its State hospitals, average stay had been 3 years and 106 days. In 1954 the State discharged an even 1,000, whose average stay had been 1 year and 363 days. But 55 of these had been in the hospitals 10 years or longer. Eliminating these, the average stay of the other 945 was only 256 days.

Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. O'HARA of Illinois. Mr. Speaker, within recent days I called attention to an editorial in the Chicago Daily News commending the senior Senator from Illinois for his stand in opposition to the Colorado River storage project. I am extending my remarks at this point to include an editorial from a leading down-State newspaper in Illinois. The editorial in the Peoria Journal of April 22, 1955, reads:

DOUGLAS FIGHTS FOR ECONOMY

Frederick Othman's column carried on this page yesterday told of Senator DOUGLAS' opposition to plans for construction of five large storage dams to be constructed along the Colorado River.

The Illinois Senator questioned the advisability and the economy of such construction, regardless of the fact that his colleagues from the Western States, including several Democrats, are avid in support of the dam construction.

Mr. Othman ended his piece with this statement:

"I do not believe the gentleman from Illinois made many friends from the West this day. He didn't seem to care."

It is at times like these and when he tears into issues like these that you can unreservedly admire the senior Senator from Illinois, Mr. DOUGLAS. His complete disregard for political consequences when he assails an issue on which he is convinced he is right and where he believes the public's best interests are not being considered is something which is exhibited only rarely in the Halls of Congress.

Conservation and dam building have been a big issue in the West. It is a highly popular one. The West continually is wanting more dams and more irrigation projects and more conservation in a time when we have so many surpluses we don't know what to do with them.

Support of the dam projects is good politics. It is good politics even for Senators and Representatives who don't come from the West because votes can be traded with the conservationist Senators of the West on projects which the eastern Senators might want.

The result is that the dam projects go through and we spend billions more putting up dams to water country that never has grown anything. As Senator DOUGLAS pointed out, the Mountain State Senators always are willing to vote for southern flood control so long as the southerners vote for western dams.

This sort of dealing doesn't seem to mean anything to Mr. DOUGLAS and he stands up and defies it. Political courage such as he exhibited isn't seen very often in Washington, or in any other legislative body either.

As we said before, when he does a thing like this, we can admire him without the faintest tinge of reservation. He's a rare bird as political officeholders go.

A Dog in the Manger Act

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was published in the May 4, 1955, issue of the Idaho Daily Statesman published at Boise, Idaho:

A DOG IN THE MANGER ACT

A plan for early development of hydroelectric power and for flood control by building of the Green Peter and Cougar Dams in the Santiam and McKenzie River valleys of western Oregon has encountered the same snag that is holding up or threatens to delay interminably development of other and larger dams like Hells Canyon on the Snake River and John Day Dam on the Columbia.

The pattern of the opposition is monotonous. It stubbornly resists any program for development except the one that would load the whole expense upon the Federal Government—as if the Federal Government had any resources at all of its own, and as if the Federal Treasury were inexhaustible.

A bill by Representative HARRIS ELLSWORTH, Republican of Oregon, to permit local interests to join the Federal Government in the construction of the Green Peter and Cougar Dams is presently the subject for the hearing before a House subcommittee. It would permit the Pacific Power & Light Co., a private enterprise, and the Eugene Water and Electric Board, a municipal operation, to pay all of the costs alloted to power, with the Federal Government footing costs attributable to flood control, irrigation, recreation and other uses. It's a partnership proposal.

And, because of its aprtnership provisions, it is opposed by Representative EDITH GREEN, Democrat, of Oregon, and Representative FRANK SMITH, Democrat, of Mississippi. They referred pointedly to the controversial angles of the partnership proposal, and told the subcommittee it would be "faster to obtain direct Federal appropriations."

The same objections, of course, will be urged against the bill lately introduced by Representative SAM COON, Republican of Oregon, to permit local interests to advance a major portion of the cost of building the John Day Dam on the Columbia. Oregon's irrepressible Senator NEUBERGER already, and before even reading Representative Coon's bill, has announced his opposition to it.

There is a broad field of agreement on the need for more dams in the Pacific Northwest. Congressman COON has quoted estimates by both public and private agencies that more than 600,000 kilowatts of new power capacity must be developed every single year to keep pace with the region's anticipated growth. And the estimates are not disputed.

Only the way in which this development is to be accomplished is involved in controversy. But development may, and perhaps will, be postponed indefinitely if opposition such as has been manifested again against the Green Peter and Cougar proposals continues obstinant and obdurate.

With its head in the clouds, the opposition proceeds heedlessly on its assumption that the Federal Treasury is inexhaustible. It's a course that runs counter to common sense conviction that economy in government is a desirable objective, and that the rising burden of the public debt is a cause of concern.

In testimony Tuesday before the Senate Interior Committee which now is involved in another delaying action to forestall development at Hells Canyon, Interior Secretary Douglas McKay indicated strongly that Federal commitments may be already a bit overextended. The Government, he said, "already has an authorized program on the Columbia and lower Snake Rivers that probably would require more than one and one-half billion dollars to complete," aside from the cost of Hells Canyon which is conservatively estimated at another half-billion dollars.

There is always the probability that other sections of the country, which would have to share in the expense, are not as intensely interested in Pacific Northwest development as are the people of this region, and that a rising economy movement might seriously pinch the flow of Federal appropriations. So that, to mix a metaphor, a dog in the manger may some day wake up to find he has fouled his own nest.

There is to be considered, too, the impact of rising impatience hereabouts with "those who would obstruct our progress by making power a political issue." It is undoubtedly true that "most of our people feel that they have been getting more verbosity than voltage, and they want to get on with the job."

Treaty Law—The Power To Abuse

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, the Wall Street Journal has pointed out the power to abuse the Constitution under recent decisions of the Supreme Court. The flip-flop by Secretary Dulles, who at one time said that treaty laws can override the Constitution and that they can cut across the rights given the people by the Constitution and the Bill of Rights, prior to his induction into office, and who now takes the position that the present administration would not abuse these rights. All of this hardly makes sense.

I shall insert the editorial at this point in the Appendix:

THE POWER TO ABUSE

At his latest press conference Mr. Eisenhower had this to say of the Bricker amendment:

"If it would reassure the people of the United States to have an amendment saying that any treaty or executive agreement in conflict with this Constitution shall have no force or effect, I am perfectly willing to say it. But I will go no further."

Thus the conflict between the executive department and backers of a curb on international agreements is now a mater of agreement on language more than anything else. There seems to be no major disagreement on the purpose of the proposal. The President need go no further now than to tell his administration leaders to work for an agreement on wording.

The Bricker amendment represents much more a philosophy of government than a precise choice of words. There have been at least four versions by Senator BRICKER before the Senate. Another by Senator GEORGE, which had the same purpose, was supported by 60 Senators and was defeated by a single vote last year.

The purpose behind each of these attempts to write safeguards into the Constitution is the same. That purpose is to say that international agreements will not be permitted to override or to alter the Constitution.

It seems to us that the purpose is a simple one and a clear one. It can be said in many other ways and the exact language does not really matter as long as the amendment follows that purpose and neither falls short of nor exceeds it.

And it seems to us that reasonable men who are in basic agreement on a problem ought to be able to come to agreement on how best to solve it. When there is agreement on the general proposition that no treaty or executive pact ought to be allowed to conflict with the Constitution—and the rights and privileges it assures the people—it seems to us also that there is a responsibility to come to agreement.

During his discussion of Senator BRICKER'S amendment Mr. Eisenhower said that there is great fear among the people that treaties can be written that would violate the Constitution; we think the fear is warranted.

Secretary Dulles expressed those fears forthrightly and ably 3 years ago when he said that "treaty laws can override the Constitution," and that they can "cut across the rights given the people by the constitutional Bill of Rights." What he said of treaties is also true of executive agreements for the Supreme Court has held such pacts to be of equal stature with treaties.

Mr. Dulles' estimate of these dangers had two results; it gave great impetus to proposals such as Senator BRICKER'S and Senator GEORGE'S, and it made many other people fearful of the dangers in abuse of the treaty power.

Those fears were not at all allayed last year when Mr. Dulles said no safeguard was necessary because the Eisenhower administration would not abuse those powers.

Mr. Eisenhower will not always be President. But unless the power to abuse is ended the dangers will always be there.

Agricultural Commodities Agreement Between United States and Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. MULTER. Mr. Speaker, the following news release issued by the Department of State on April 29, 1955, is deserving of our attention.

I believe this is the way to reduce surpluses. If similar agreements were made with the Arab States, they might turn their minds from militaristic action against Israel to the peaceful pursuit of improving the standards of living of the Arabs.

AGRICULTURAL COMMODITIES AGREEMENT BETWEEN THE UNITED STATES OF AMERICA AND ISRAEL UNDER TITLE I OF THE AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT

Deputy Assistant Secretary of State John D. Jernegan, representing the United States Government, and Ambassador Abba Eban, representing the Government of Israel, today signed an agreement providing for the sale of $8.3 million worth of United States surplus commodities.

Effective immediately, the United States Government will, under the provisions of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480, title I, 83d Cong.), begin furnishing Israel with approximately 50,000 metric tons of wheat, 33,000 hundredweight of rice, 6,000 bales of cotton, 250,000 pounds of tobacco, 1,000 metric tons of butter, 40,000 metric tons of feed grains, and 2,228 metric tons of cottonseed oil.

The Israeli pounds derived from the purchase of these commodities will be used for various purposes including United States expenditures in Israel and some will be loaned for the promotion of Israeli economic development.

Tribute to the Solicitor General

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Our Extraordinary Solicitor General," written by Anthony Lewis, and published in the May 5, 1955, issue of the Reporter. I commend the article to the attention of the Senate, together with my best wishes to the Solicitor General and my appreciation for his splendid services to the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR EXTRAORDINARY SOLICITOR GENERAL
(By Anthony Lewis)

When the late Robert H. Jackson was Solicitor General of the United States, he told of receiving a letter addressed simply "Celestial General, Washington, D. C." The post office, he said modestly, had no trouble deciding it was meant for him.

The office of Solicitor General carries with it no heavenly powers, but it does exert a broad influence on American law and command an extraordinary respect among lawyers. "The aristocrat of legal jobs," one authority has called it. The men who have held the position since it was created in 1870 include William Howard Taft (in the Benjamin Harrison Administration), the late John W. Davis (under Wilson), and Stanley Reed (under Franklin D. Roosevelt), who like Mr. Jackson became a Supreme Court Justice.

Despite its great history and high standing in the profession, the office is neither widely known nor understood by the public. Many generally well-informed people thought about it for the first time recently when the present Solicitor General, Simon E. Sobeloff, refused to endorse his administration's views on a major constitutional question—whether the Government can properly conceal the identity of accusers in loyalty and security cases.

Mr. Sobeloff's action, in the pending Supreme Court case of *Peters* v. *Hobby*, raised sharp questions: How could so fundamental a difference of opinion arise among the high legal officers of a government? Why was the dissent tolerated without animosity? The answers lie in the unusual nature of the job and the somewhat remarkable character of Simon Sobeloff.

MORE THAN WINNING CASES

The Solicitor General is appeal attorney for the United States Government. Whenever the Government loses a case in a Federal District Court, the Solicitor General decides whether it is to be appealed. When a case is lost in a Court of Appeals, he decides whether to take it to the Supreme Court. He has general charge of preparing the Government's briefs and arguments in the Supreme Court.

These are vast discretionary powers to be wielded by one man in a government that has been described as one of laws, not men. Legal cases assume broad significance only as they are decided on appeal. The Solicitor General, determining what should be appealed and how the Government should argue in the highest court, thus has a major influence in the shaping of the law.

The job, it follows, requires something more than the ability to plead brilliantly for a cause; it requires something nearer judicial qualities. Mr. Sobeloff has put it this way:

"When a lawyer in private practice advances an argument, he feels free to drive as far as he can. He is out to win that case * * * The Solicitor General, though an advocate, must not forget that his client is the United States Government * * * He must proceed with greater moderation and circumspection, realizing that what he says today will have to be faced tomorrow. He must be constantly aware that the rule declared in one case may be cited in the next."

In addition to this special concern for the consequences of his acts, a Solicitor General must have moral courage. He must withstand the pressures of agency heads and prosecutors who have in mind only victory for themselves in a particular case. He must take the larger view of what is best for the Government as a whole, remembering that it is an embodiment of all its citizens. These words written by one of Mr. Sobeloff's predecessors, Frederick William Lehmann, are inscribed outside the Attorney General's door: "The United States wins its point whenever justice is done its citizens in the courts."

Simon Sobeloff likes to quote that statement, and his action in the Peters case makes plain that he does not quote it idly. Judges and lawyers in somewhat cynical Washington regarded his refusal to move from his beliefs as an act of extraordinary moral courage—one that will have great significance for bench and bar and should not be lost on the public.

That neither his courage nor his morality was recently acquired is indicated by an editorial in the Baltimore Sun of February 8, 1934. Mr. Sobeloff had just completed 3 years as United States attorney for the State of Maryland. The Sun, praising his record, wrote: "He didn't forget that the district attorney is an officer of the court, whose duty is to see that justice is done, rather than to secure convictions, just or unjust."

Mr. Sobeloff was United States attorney in the last years of prohibition, and the Sun paid him the tribute of saying that he had enforced the Volstead Act for 3 years and emerged with the respect of both wets and drys. He prosecuted bootleggers, but he clamped down on overaggressive investigators.

In one notable case a private citizen telephoned a tip to dry agents that a man and wife had some whisky in their apartment. The agents found a bottle with what they called alcoholic "dregs" in it and charged the couple. United States Attorney Sobeloff investigated and learned that the tip had come from the couple's landlord, who was in a lawsuit with them. He ordered the case dropped and issued a statement beginning: "If the paid informer was a nuisance, the self-serving volunteer is an abomination."

During this stage of his career Baltimore customs officers seized as immoral copies of Aristrophanes's Lysistrata and Marie Stopes's Wise Parenthood. Mr. Sobeloff said he could not find anything "obscene, shocking, or offensive" in the books and ordered them released. The post office was still interfering with Lysistrata as recently as this year, but until some test case comes up, the Solicitor General will not be able to bring his views to bear this time.

Mr. Sobeloff has not spent all his life in an austere consideration of high principles. As a lawyer in Baltimore he had a general practice, one of the largest in the city. He represented such diverse clients as a race track and Rosa Ponselle, when she sued for divorce.

He was also in politics for a number of years, though of a different kind than usually practiced and with different results. A Republican in a Democratic city, he avoided extreme partisanship and was both respected and liked by many Democrats. A Sun political writer observed with awe several years ago that he "seems to have escaped most of the obloquy that is the normal lot of persons in public life. A review of voluminous newspaper articles and editorials reveals almost nothing of a censorious nature."

LIFELONG REPUBLICAN

Mr. Sobeloff was born in Baltimore on December 3, 1894. He made political speeches at 12, and a GOP congressional candidate who heard young Simon appointed him a House page. Herbert Hoover made him United States attorney; a framed letter from President Hoover hangs in the Sobeloff library.

But with all the Republican background, Mr. Sobeloff has never had regular Republican views on political, economic, and social questions. As early as 1929 he campaigned for unemployment insurance in Maryland; businessmen objected bitterly, and the State law was not passed until after the Wagner Act. As a public official and as a private attorney he fought for public housing. "When we try to take a family out of a rathole, they cry socialism," he said in one debate.

From his start in politics, Mr. Sobeloff has been associated with Theodore R. McKeldin, former mayor of Baltimore and now Governor of Maryland. Mr. McKeldin is a Republican with advanced views on civil liberties and social-economic questions—frequently more advanced than those of Maryland Democrats.

In 1943 Mr. McKeldin was elected mayor; he chose Mr. Sobeloff as city solicitor (1 of 5 top cabinet positions) and his chief adviser and speech writer. Mr. McKeldin was elected Governor in 1950 and reelected last fall—the first Republican ever to win the job twice. In his first administration, he made Mr. Sobeloff chairman of a Maryland "Little Hoover Commission" and later chief judge of the State's highest bench, the court of appeals. (His friends still address Mr. Sobeloff as "judge.") In 1952 Mr. and Mrs. McKeldin visited Israel with Mr. and Mrs. Sobeloff. Mr. Sobeloff, a member of a reform Jewish congregation, is a Hebrew scholar and a lifelong leader of Jewish organizations.

HE CAN TALK

It was Governor McKeldin who put Mr. Sobeloff's name before President Eisenhower for the office of Solicitor General. But politics has traditionally stopped at the door of the office, and the tradition has not been broken. The staff, just nine young lawyers, is recruited on a nonpartisan basis.

Staff members who have served under several Solicitors General consider Mr. Sobeloff unique in, among other things, his literary knowledge and his ability to express himself clearly and colorfully. (They note, of course, that other Solicitors have excelled in other respects.) Mr. Sobeloff has always had a way with words. He may well be the only lawyer to cite Disraeli in defense of the need for public housing. He is certainly the only lawyer whose report on a bankruptcy was praised by H. L. Mencken as having "all the racy charm of 'the gilded age.'"

Mr. Sobeloff is what psychologists call an oral thinker, a man who picks things up quickly by ear and prefers talking problems through to reading memos. To prepare his brief in the school-segregation case, for example, he met many times with two lawyers on his staff before anyone put a word on paper. Finally they prepared a draft which he corrected into final form.

Of all the Government briefs presented before the Supreme Court in an average year the Solicitor General and his staff prepare about half, turning over the rest to that division of the Justice Department which is particularly concerned. Arguments before the Court are also parceled out. So far Mr. Sobeloff has appeared in seven cases. His first oral argument, in an abstract-sounding bank case, exemplifies his ability to cut through to the heart of the matter with an apt illustration.

The dispute was over a New York State law that reserved to a certain few banks the right to advertise savings accounts. Other banks could accept savings but had to use a euphemism such as thrift accounts in advertising. Mr. Sobeloff told the Court the law made as much sense as one saying you could not call an apple an apple but could say that it was red, round, a fruit, and had a history going back to Adam and Ave. The Justices discussed apples briefly. Their decision struck down the law.

Aside from his ability to articulate, the quality especially praised by Mr. Sobeloff's acquaintances is warmth. "He enjoys people," one associate said. Another mentioned "sympathy for human beings, humaneness"—qualities that are especially important as he carries out the Solicitor's important job of deciding which cases shall be appealed.

Mr. Sobeloff contrasts as a person with what is usually expected in official Washington. To a newspaper reporter, one of his most striking qualities is a complete lack of cant. He talks freely—too freely, some associates think—giving blunt, often humorous appraisals of persons and policies. He means what he says.

In an average year more than 1,000 cases lost in district courts (or, occasionally, State courts) cross the Solicitor General's desk for consideration of an appeal. Almost 500 more are considered for appeal to the Supreme Court. In each case the United States attorney and the chief of the appropriate division in the Justice Department (Antitrust, for example, or Criminal) send along the record and their recommendation for or against appeal. A lawyer on Mr. Sobeloff's staff looks over the record and notes on it in ink whether he thinks the recommendation is correct. The Solicitor General makes the final decision in each case: "Appeal authorized" or "No appeal."

In the nature of the job the Solicitor General has to become familiar with far corners of the law not usually dealt with by any one person. "A lawyer could spend a lifetime

in active practice in Baltimore," Mr. Sobeloff said in a speech recently, "and never have occasion to think about the so-called aboriginal land rights of the Alaska Indians. * * * He might never be called upon to decide whether the marriage of a 14-year-old girl in Arkansas is void or only voidable * * * or whether giving away calves involves realization of taxable income."

The Solicitor General authorizes appeals in less than a quarter of the cases lost in District Courts, and in only one-eighth of those referred to him for possible Supreme Court action. He may say "No" because there is simply no appealable point of law—on a jury's award of $1,000 to a woman hit by a postal truck, for example. He may say "No" because he thinks a particular case is a weak one on which to risk establishing a broad rule of law. "Every experienced lawyer knows that in many instances it is wiser to leave a point obscure than to press for clarification," Mr. Sobeloff has said.

THE PETERS CASE

Many times, as the Government's advocate, the Solicitor General has the duty of presenting a viewpoint that is not his personal preference—because the Government's side is important and must be heard. Sometimes an agency such as the Internal Revenue Service may feel it essential to seek higher court clarification, despite the Solicitor General's warnings, and he may decide not to stand in the way.

But it is also his special duty to restrain the Government's lawyers, to counsel moderation. With agency attorneys, Justice Brandeis once said, "The Solicitor General should be a general."

"The office of Solicitor General is of great importance to the Supreme Court," Chief Justice Warren said once in introducing Mr. Sobeloff, "and when occupied by a man of great understanding and ameliorating influence greatly facilitates the work of the Court. Solicitor General Sobeloff is such a man."

His relationship with the Supreme Court is one of the major concerns of a Solicitor General. He is regarded as an officer of the Court, with an obligation not to bring before it unworthy cases or petty or harsh points of view. The Court can, of course, refuse to consider any case; it took on only 40 percent of those the Government sought to have reviewed last year, and only 8 percent of the private petitions. But an atmosphere of disapproval may develop if the Government presses too many appeals.

"The Solicitor General should guard the gate," one gentleman representing the Court's view has said. "The Court views with natural trust and confidence a Solicitor General who submits overwhelmingly meritorious cases," another authority has added. "We're in a realm of judgment. There is no machine to make decisions. It's a perfectly human thing to read a brief in one frame of mind or another, depending on who wrote it—to feel of a Solicitor, 'Out of that mint can come only true coin.' He must be a man who would rather lose a case here than present it on an unfair basis."

The greatest test of a Solicitor General comes when his study of a case leads him to decide that justice will best be served if the Government loses. If the Government has lost in a lower court, he can simply decline to appeal. But if the Government has won and the other side appeals, he faces a moral dilemma: Must he, as the Government's advocate, defend a course that he believes unjust?

From time to time a Solicitor General answers "No" and makes what the courts call a confession of error. In such a brief he concedes that the Government's views have been wrong in one or more aspects of the case. The Solicitor General does not necessarily have to come to any conclusion about the case as a whole to file such a brief. He may feel, for example, that a criminal defendant has simply not had a fair trial in some respect.

Richard Willard Kay, convicted of robbery in a Tennessee Federal court, asked the Supreme Court this term to reverse his conviction because he did not have effective legal counsel. His claim had been turned down by the district court and the court of appeals, the Government opposing it both times, but Mr. Sobeloff filed a brief saying that the contention had enough merit to justify a full hearing. He asked the Supreme Court to vacate the court of appeals judgment and order a district court hearing on Kay's complaint. The Court, citing the Solicitor's brief, did exactly as he asked.

Mr. Sobeloff had proposed that the Government make a similar "confession of error" in the Peters case. The case concerns a professor at the Yale Medical School, Dr. John P. Peters, who was fired under the old Truman loyalty program from his job as a Federal health consultant. The Loyalty Review Board reached the decision against him after a hearing in which Dr. Peters was not told the identity of his accusers, and not allowed to cross-examine them. He sued to get his job back, claiming that it was unconstitutional for the Government to label a man disloyal without letting him face all his accusers.

Exactly the same constitutional issue was presented in the 1951 case of Dorothy Bailey. There the Government maintained that it had no constitutional obligation to let a loyalty suspect confront his accusers. It narrowly won the case, the Supreme Court splitting 4 to 4, thus upholding a lower court ruling for the Government. Dr. Peters' suit was fought with equal vigor by the Justice Department, which won in the district court and court of appeals.

Nevertheless, Mr. Sobeloff proposed that the Government agree to let Dr. Peters have his job back. His brief said that there may be cases when concealment of secret accusers is necessary and desirable, but that the Government should have to prove the necessity of concealment in each case before some impartial board. The Government should not be allowed to declare something secret in the interest of national security on its own say-so, he argued, as it had done in the case of Dr. Peters.

That view did not prevail in the Justice Department. The brief eventually filed was signed by Attorney General Herbert Brownell, Jr., and not by Mr. Sobeloff. It defended as both constitutional and wise public policy the present practice of concealing the names of accusers in loyalty-security cases, even from hearing boards, whenever the Government desires.

There are precedents for Mr. Sobeloff's action in not signing the brief. Thomas Thacher, Solicitor General in the Hoover administration, frequently noted for the Court: "Though he signed the brief, the Solicitor General did not agree with it." The Supreme Court will accept a Government brief with either the Solicitor's or the Attorney General's name on it, though the Solicitor's almost always appears.

But this was the first public break by a Solicitor General on a major policy question in at least 20 years, and it was on an issue in which the heaviest political pressures were involved. Mr. Sobeloff has sought to make little of his dissent. He has told his friends that the case presents difficult legal issues on which thinking men disagree and that there was genuine, reasonable discussion in the Justice Department, not monolithic command, before the decision was reached. Department sources say warm mutual regard continues between Mr. Sobeloff and Attorney General Brownell, who fully understands the traditional independence of the Solicitor General's Office and respects Mr. Sobeloff's position in the Peters' case.

The Peters' dissent has not stopped the administration from using Mr. Sobeloff for special jobs outside his office. Notably, he has given several officially approved speeches taking a strong liberal view on immigration law. He certainly gives the impression of being entirely happy in his work and in the social relationships he has formed with the Justices, his departmental colleagues, and others.

The Solicitor used to be second man in the Justice Department, acting for the Attorney General in his absence. He was stripped of this role in a 1953 reorganization that was applauded by some as removing him further from politics, deplored by others as lowering his prestige.

NO HIGHER PRAISE

Mr. Sobeloff is mentioned, inevitably, as a choice for the next vacancy on the Supreme Court. But for the moment he is satisfied working toward a goal that he set out last year in a speech to lawyers.

"If the possibilities of this office are to be realized," he said, "the incumbent must strive to learn the meaning of the process he seeks to guide. He must try to discover the social tensions, the reverberations of strife and passion, the political issues, the clashes of interest that are dressed up in technical legal forms. * * * His constant endeavor must be, without falling prey to his own fetishes but obedient to the legislative policy laid down by others, to channel this mighty stream of cases so as to strengthen the foundations of our society, to make freedom more secure and to promote justice between man and man and between the Government and its citizens."

In Washington today many persons believe Simon Sobeloff is meeting his own standard. There is no higher praise.

Sarnoff Demands a Full Cold War

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. ROOSEVELT. Mr. Speaker, David Sarnoff has urged the Nation to wage all-out cold war against communism and be willing to accept the same costs and casualties as a hot war would involve.

The chairman of the board of the Radio Corporation of America charged that the Nation's political offensive against communism was inadequate. He warned that the cold war is not a preliminary bout but the decisive contest in which the loser may not have a second chance.

In a memorandum submitted to President Eisenhower last April 5 and made public on May 9, Mr. Sarnoff said the surest way to prevent a hot war was to win the cold war. The memorandum grew out of his discussion of the subject with the President on March 15.

Mr. Sarnoff urged the expenditure of up to $3 billion a year, or 7½ percent of the military defense budget, for political warfare.

I quote from just a part of General Sarnoff's inspiring statement:

It is well known that communism is challenging the freedom, initiative, and the individual dignity of all freedom-loving people. It is a threat to our very existence. We are attempting to combat this menace by means

of a strong military. Until a satisfactory peace is evolved, we must continue to be militarily strong. But the battle for peace cannot be won by preparedness alone. We need a more flexible and imaginative program for competitive coexistence with the Communists in every field and on every front.

Mr. Speaker, I have previously drawn attention to the brilliant speech of William Randolph Hearst, Jr., on February 26, before the National Press Club, along the same lines. The gentleman from New Jersey [Mr. THOMPSON] and I have introduced bills to carry out these general purposes. Today, one of the Hearst newspapers, the New York Journal-American, published an editorial which I quote below and which I heartily endorse. The quality of Mr. Sarnoff's leadership would be invaluable as chairman of the strategy board he proposes. Once again, the President has been given an opportunity to inaugurate a program that will lead to peace by forceful deeds, instead of conflicting threats and empty gestures.

Mr. Sarnoff's statement:

Logically, we have no alternative but to acknowledge the reality of the cold war and proceed to turn Moscow's favorite weapons against world communism. Our political counterstrategy has to be as massive, as intensive, as flexible as the enemy's.

The question, in truth, is no longer whether we should engage in the cold war. The Soviet drive is forcing us to take countermeasures in any case. The question, rather, is whether we should undertake it with a clear-headed determination to use all means deemed essential, by governments and by private groups, to win the contest.

* * * * *

Short of a blunder that ignites the third world war which nobody wants, the immediate danger is the debilitating, costly, tense war of nerves that is part of the cold war. The primary threat today is political and psychological.

If we allow ourselves to be defeated in the cold struggle, we will have bypassed a nuclear war—but at the price of our freedom and independence. We can freeze to death as well as burn to death.

Existing organization for fighting and winning the cold war must be adjusted and strengthened in line with the expanded scale and intensity of operations. I propose a Strategy Board for Political Defense, the cold-war equivalent of the Joint Chiefs of Staff on the military side, functioning directly under the President, with Cabinet status for its head.

* * * * *

The specific activities cited as examples in the memorandum would be carried out not only by official agencies but by private groups, such as labor unions, veterans' organizations, churches, youth and women's groups. The Soviet-controlled countries, it showed, are extremely vulnerable to precisely the kind of psychological pressures the Communists are using against free nations.

[From the New York Journal American of May 11, 1955]

WE MUST WIN

Brig. Gen. David Sarnoff, board chairman of the Radio Corporation of America, has done this country a vigorous good service in proposing creation of a Government strategy board to coordinate efforts to win the cold war.

He has summed up his feeling on how vital it is to win in the following concentrated capsule of thought linking defeat in a cold war or a hot atomic war as twin disasters: "We can freeze to death as well as burn to death." The capsule could be the medicine for avoiding both.

The Hearst newspapers go all the way with General Sarnoff in his approach to the problem. In fact, his views are strikingly and happily similar to those advanced by William Randolph Hearst, Jr., editor-in-chief of our papers, in his speech last January 28 to the National Press Club in Washington.

Mr. Hearst emphasized the enormous importance of winning the battle of competitive coexistence, and urged the establishment of a national planning board to direct such efforts.

We have since come to think of such a board by the name of competitive coexistence council. We like the name because it is simple, it tells the story, and it can be condensed into the alphabetical symbol CCC.

There are some differences of detail and emphasis between General Sarnoff's proposal and Mr. Hearst's.

General Sarnoff suggests the head of the Board should have Cabinet status and should include representatives of the State and Defense Departments, the Central Intelligence Agency, and the United States Information Service. The Hearst proposal also would give high authority to the head of the Board but would include, besides Government representatives, the highest skilled and experienced civilian personnel that could be found.

Also, if we read General Sarnoff's views correctly, a great deal of stress is placed on massive psychological bombardment of ideas. To our thinking, the battle for competitive coexistence has entered a new phase that calls for quietly aggressive presentation of all the good things America has to offer and stands for.

By this we mean by word, by picture, by exhibit, by traveling delegations (Porgy and Bess, the New York Philharmonic, sports teams, for instance) to spread the story that this is indeed a land of plenty in industry, culture, sports—for are not these, after all, products of freedom?

But to General Sarnoff's objective, and the patriotic vigor of his interest, we offer a loud bravo.

And now we would like to make our latest contribution to this battle.

We propose General Sarnoff as Chairman of the Strategy Board.

Federal Pension Views

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. CURTIS of Missouri. Mr. Speaker, under leave granted to extend my remarks, I desire to insert in the CONGRESSIONAL RECORD the following editorial appearing in the St. Louis Globe-Democrat of May 5, 1955, entitled "Federal Pension Views":

FEDERAL PENSION VIEWS

The charge of Powell B. McHaney, president of the General American Life Insurance Co., that social security is a Federal subsidy paid for by taxpayers without relation to benefits obtained, illustrates the different points of view possible concerning the program.

From an actuarial and contributory standpoint, the setup is both unfair and unsound. Under certain circumstances, a man can work in covered employment a mere year and a half, contribute less than $100, then receive $100 per month pension for the rest of his life. At the other extreme is the youngster beginning his work career now, who may contribute a substantial part of his pension before he retires, say 45 years hence—if indeed the program has not collapsed of its own weight by then.

On the other hand, the program at its start in 1937 was given only a thin pretense of being a contributory insurance system. Actually it was intended as an old-age dole, the employe contributions being designed merely to disguise the truth. It was another share-the-wealth project, pure and simple; which theoretically would save the states and Federal Government making outright old-age gifts. At that time too, Government was running to really substantial deficits, and the money coming in as social security "reserves" would make the books look better.

From either view the system is open to attack—just as it is open to commendation for the generally good old-age assistance it has rendered so far. But, as Mr. McHaney added, there can be no doubt it is also a "ready-made political football" for both parties. Therein lies perhaps its worst peril to current workers—that its benefits and coverage will be so relentlessly enlarged for vote-getting purposes that tomorrow's generation cannot or will not pay the taxes required to pension today's contributors.

Termination of Federal Administration on Indian Affairs

EXTENSION OF REMARKS
OF
HON. E. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, under leave to extend my remarks, I include a statement which I commend to my colleagues' attention on a subject of great importance to a large segment of our Nation's people.

This statement was submitted to me by Mr. F. H. Sinclair, of Sheridan, Wyo., a member and committee chairman of the Continental Confederation of Adopted Indians. This organization is composed of outstanding Americans who have been adopted by Indian tribes of North America. Membership extends even into this body and is represented on both sides of the political aisle.

I am most happy to submit the statement of this fine organization for the consideration of my colleagues and urge that it be studied fully.

At this point, Mr. Speaker, it would be neglectful of me if I did not say a word about the distinguished Wyoming citizen who sent the statement to me. Mr. F. H. Sinclair of Sheridan is one of my State's best-known and best-loved men among Indians all over the Nation. He is completely sincere in his effort to aid Indians in their struggle for survival as a race and in their uphill fight against discrimination.

Howard Sinclair recently was named by Wyoming's Gov. Milward L. Simpson as chairman of a newly formed Indian Affairs Committee in my State. Mr. Sinclair's work among American Indians

dates back many years, but his outstanding achievement in this field in recent years has culminated in an annual All American Indian Days spectacle at Sheridan. This year's will be the third annual event, during which authentic ceremonies and contests in dances, crafts, talents, and sports will be presented by members of more than 25 tribes.

All American Indian Days is an outgrowth of a program of human relations in which Mr. Sinclair took a leading part 4 or 5 years ago. This program which mushroomed spontaneously was aimed toward elimination of discriminatory practices, and was immensely successful. The net result—a practical demonstration of betterment of racial relations—brought international recognition to the Sheridan area in northern Wyoming and southern Montana.

I relate these facts, Mr. Speaker, to illustrate the sincere approach to a very complex problem which has been adopted—successfully—by Mr. Sinclair. I believe this lends substance to the statement which follows:

STATEMENT OF TERMINATION OF FEDERAL ADMINISTRATION OF INDIAN AFFAIRS BY THE CONTINENTAL CONFEDERATION OF ADOPTED INDIANS

This national organization, the Continental Confederation of Adopted Indians, consisting of regular members adopted into tribes of American Indians, and associate members concerned with Indian rights, has for its principal objective the promotion of the welfare and progress of American Indian citizens, and assistance to them in obtaining their full civil rights, is deeply concerned in the matter of the proposed termination of Federal administration of Indian affairs.

There is no need here to attempt to outline prevailing conditions now obtaining on the many Indian reservations in the United States, as these conditions have been made known by the testimony given before congressional committees and are known to the Department of the Interior and the Bureau of Indian Affairs.

After considerable study and consideration of these existing conditions, and apparent intent of the Federal Government to proceed with the termination of Federal trusteeship over Indian people, this confederation respectfully submits the following statements of its position and recommendations in this connection:

1. We favor ultimate termination of the administration of Indian affairs by the Federal Government, but suggest the transition period be over a period of not less than from 10 to 20 years.

2. We oppose the transfer of Federal responsibilities and services to Indians to the several States, until and unless said States agree to the transfer, and have set up qualified agencies to assume these responsibilities and supply these services as adequately as they are now supplied by the Federal Government; and further, that sufficient funds be appropriated by the Federal Government to be paid to the States to enable the States to undertake these responsibilities and provide these services until such termination program becomes a full reality.

3. We oppose termination of Federal administration over the affairs of any Indian tribe, without full consent of the members of said tribe, honestly obtained by ballot.

4. As exemption of Indian lands from taxation was part of the purchase price of lands ceded to the United States by Indian tribes, we opposed turning these lands over for taxation by the several States, without full consent of the tribes affected, and then not until the said State in which Indian lands lie, can provide the same services, in every respect, which are provided for other citizens of such State.

5. We oppose attempts to abrogate existing treaties between Indian tribes and the United States, by the use of persuasion, coercion, or by any other means, by any Federal department or agency.

6. We oppose any arbitrary law which attempts to define an Indian. We suggest a registration system be set up, whereby any person with any degree of Indian blood may register and declare himself to be an Indian if he chooses. Such registration need not constitute enrollment in a particular tribe.

7. We oppose the relocation policy which would transplant Indians in industrial areas, far from their homes, while at the same time large parts of the lands or resources within the reservations from which these Indian people are taken to be relocated, are leased to non-Indians. Land resources on reservations should be developed for Indian people. Indian tribes should have priority over non-Indians to purchase trust lands. Indian reservation lands should be maintained at present levels, if not increased, to be developed for Indians. Long term loans, at low interest rates, should be provided for the purchase of tribal herds of cattle, or the development of natural revenue producing resources for the benefit of Indians. Indian lands provide the last of the natural heritage of Indian people—their only homeland—and they should be retained for their benefit.

8. We suggest an educational financing plan such as the GI bill of rights for young Indian people, to finance them in schools and colleges where they may obtain professional educations. We also suggest more vocational training institutions and on the reservation schools, where practicable.

9. We suggest exploration of plans to inaugurate small industries on Indian reservations to provide employment, such as the small factory on the Turtle Mountain Reservation in North Dakota.

10. We suggest a thorough appraisal of all resources on every Indian reservation, preferably made by some independent and trained agency, rather than a government bureau, so the true potential of each reservation be ascertained.

11. We recommend additional funds for law enforcement be appropriated, until this function is turned over to the States, and that the jurisdictional authority between State and Federal Governments be more clearly defined.

12. We recommend that appropriations for reimbursing State schools for the education of Indian students, under the Johnson-O'Malley Act, be increased and that more flexible means of processing these funds be devised.

13. We favor more authority and responsibility be given to superintendents of Indian reservations so that decisions can be made on the local level in accordance with local existing conditions, with a consequent reduction of personel in area offices and in Washington.

14. As Indians are American citizens, we oppose any ruling by a Government department preventing any tribe of Indians from employing legal counsel of their own choosing, without necessitating the sanction or approval of any governmental agency.

15. We oppose the enactment of any further legislation which would terminate Federal administration over the affairs of Indians, until claims by Indian tribes against the United States shall have been settled in full, or finally determined by the court of last resort.

16. It is our contention that more than economic factors are to be considered, and that the ethnic values should be considered and the efforts to break up tribal unity are not in keeping with the theory of the self-determination rights of minority peoples—and that the strong feeling of racial ties existing with Indians should be recognized; that understanding and sympathy toward Indian background, way of life, culture, and philosophy are essential; and the assimilation is a matter of evolution. Integration by practical progression should be the goal.

Committee on Termination: F. H. Sinclair, Chairman, Sheridan, Wyo.; John Batdorff, Manistee, Mich.; Joseph L. Boyle, Jim Thorpe, Pa.; Dr. Stanley Dougan, Palm Springs, Calif.; Theodore H. Haas, Washington, D. C.; Clyde H. Hendrix, Des Moines, Iowa; B. W. Jolly, Carnegie, Okla.; Mrs. Nicholas Merhab, Ada, Ohio; H. O. Waltmeyer, Cedar Rapids, Iowa.

Approved:

DANIEL FRANCIS CLANCY,
Continental Chief, the Continental Confederation of Adopted Indians.

For a Deeper Delaware

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the deepening of the Delaware River Channel is a matter of vital concern to the State of New Jersey and should have the serious consideration of the Congress. An immediate appropriation of $25 million to commence the program is needed.

I do not think that it is necessary for me to point out that the demand that local interests contribute to the deepening of a navigable river, as proposed by the administration, is unique in our history. The navigable waters of the United States, as the Saturday Evening Post pointed out editorially recently, always have been, and still are, the responsibility of the Federal Government. It would seem frivolous of me to suggest that local interests share in the moneys collected in customs duties from rivers deepened partly at their expense, but the suggestion is no more illogical than the demand that the same local interests pay for a share of the improvements of our navigable streams.

If local interests must pay for an improvement in the Delaware River then must they pay for improvements all over the Nation? Must local interests pay a share of the numerous projects which have already been approved by the Congress and which are awaiting funds at this moment? If so, then each of us had better look into his own situation, for if my district must depart from tradition, then so must all other congressional districts at a future date. I am for a meritorious project and, at the same time, against an attempt of our Federal Government to abandon its responsibilities, a unique and dangerous precedent. May I say that we in New Jersey are not asking for anything new. We are asking only that the Federal Government perform its functions as it should, without departing from 175 years of tradition and history for the sake of a pennyweight on

the scales upon which the political budget must be balanced.

I include as part of my remarks the statements by Gov. Robert B. Meyner, of the State of New Jersey, and myself which we presented to the Public Works Subcommittee of the Appropriations Committee of the House of Representatives on Thursday, May 5, 1955.

The Saturday Evening Post editorial of April 30, 1955, entitled "Harbor Improvement Is One Federal Job That Has Paid Off" is included also.

The statements and editorial follow:

STATEMENT BY GOV. ROBERT B. MEYNER ON THE DEEPENING OF THE DELAWARE CHANNEL

Congress has sanctioned the deepening of the Delaware Channel project. We in the Delaware Valley consider it essential to the expanding economy of the area. The industrial development of the Delaware Valley is just beginning, and a channel capable of accommodating ocean-traveling ships fits naturally and indispensably into that development.

The plan for a channel 40 feet deep from Philadelphia Naval Base to the upstream end of Newbold Island and 35 feet from there to the Trenton Marine Terminal has been studied for years by the Army Corps of Engineers and other responsible agencies.

General Sturgis himself has said that the deeper channel would "unquestionably contribute to the general welfare of the region."

It is true that U. S. Steel would make good use of the deepened channel to bring ore-carriers to its docks. But it is illogical to say that only 1 company and no other would benefit from a 40-foot channel depth in the Delaware River.

The subsidy plan was probably devised as an economy measure, but its main effect is to slow down the pace of plans for a long-sought public improvement.

It should be remembered also that a concern like U. S. Steel already makes large payments to the Federal Government in terms of corporation and personal income taxes. Should such a firm—or any private enterprise, for that matter—be asked to meet even a part of the cost of benefits that might reasonably be regarded as a governmental responsibility?

To require private contributions for projects that have always been a Federal Government matter would establish dangerous precedents.

The benefits to be derived from opening the navigable section of the Delaware to deep-draft vessels, leads to the conclusion that the existing national policy of improving navigable waterways at the cost of the Federal Government should be adhered to and that it should bear the entire cost of the proposed project.

If a 40-foot Delaware channel is in the public interest, as it appears to be, it should be treated as a public improvement, built with public funds—not as part of a corporate investment.

STATEMENT OF REPRESENTATIVE FRANK THOMPSON, JR., DEMOCRAT, OF NEW JERSEY, ON THE DEEPENING OF THE DELAWARE, BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS OF THE HOUSE COMMITTEE ON APPROPRIATIONS, THURSDAY, MAY 5, 1955, 2 P. M., ROOM F 16, CAPITOL

Mr. Chairman, I come here today to support an adequate appropriation for the deepening of the Delaware River channel to Trenton, N. J. To one who represents the 4th congressional district, the shores of which are washed by the Delaware, the need for the deepening of this great estuary to the head of tidal influence at Trenton is crystal clear. A harbinger of the growth of the greater Trenton industrial area is to be seen in the choice by the United States Steel Corp. of its site for a tremendous operation. I refer to the great Fairless Steel Works near Morrisville, Pa., directly across the river from Trenton. Our area must accept the challenge that this growth presents, by providing a channel of sufficient depth to accommodate 40,000-ton-ore boats. Otherwise, a promise of progress may be rejected, and a threat of economic disruption and eventual stagnation result.

The choice of this area by United States Steel was acknowledged by numerous industries and business interests as an inducement to move into the Delaware Valley. The fact is that the enthusiasm of industries which considered the banks of the river as a location has noticeably cooled since doubts have been cast on the fulfillment of the deepening project.

It might be well to note here the fact that the decision of United States Steel to locate in the area resulted, for one thing, in a tremendous Levittown housing development in Pennsylvania. Indications that plans are underway for a great Levittown on the New Jersey side of the river, in the district I represent, are encouraging. Such plans are, to no little extent, due to the expectation of additional industries locating along the banks of the Delaware. Discouragement of such plans by the failure of the area to provide accommodations for these industries would be unfortunate indeed.

In the district I represent there is more unanimity on this issue than on any other matter directly affecting the district. There is nothing I remember that even remotely resembles the kind of unanimity that has been demonstrated. The resolutions in favor of the Federal Government's fulfilling its responsibility for the deepening are too numerous to mention here. My offices have been virtually flooded with representations in behalf of the project. They include practically every governing body of the communities in the district. Public endorsement by both business and labor organizations have been very numerous. The newspapers of the district have editorialized and given press coverage which have served to educate and arouse the people of the area to the importance of the project. The degree of response to a questionnaire, recently distributed among my constituents, has been considerable. I was elated by the responses given to two questions dealing with the deepening issue.

One question read: "Do you favor the deepening of the Delaware River Channel to Trenton?"

The answers: Yes, 630; no, 39.

Another question read: "Do you favor the administration's policy of requiring local contributions toward the cost of the channel, or do you believe the national economy and defense make the deepening project the sole responsibility of the Federal Government?"

The answers: Local contributions, 170; Federal responsibility, 434.

Clearly, the people of my district consider that in justice to them, this project should be undertaken as the sole responsibility of the Government as soon as possible. I would like, as their Representative in Congress, to impress upon you the urgency of this project if the well-being of my district is to be continued. It is, of course, most regrettable that some must suffer disadvantage and inconvenience. Every means of adjustment and compensation in individual cases must be considered. But progress requires that the greatest good for the greatest number be the prevailing criterion. Ours is an area where unemployment is a problem today, and where sustained full employment is a constant aim. Should this area not be given the opportunity this project affords, many jobs will never materialize. What a loss it would be for my district to be refused this golden opportunity to grow healthy economically. What a loss to the Nation that such new wealth should fail to be created.

Fortunately, the Congress has always recognize the impact that river and harbor improvements have had, not only on the economy of the areas immediately affected, but on the expansion and development of the entire Nation. The 83d Congress, consistent with this broad view in formulating policy on river dredging, authorized a 40-foot channel in the Delaware upstream from the Philadelphia Navy Yard. At that time the matter of cost-sharing was carefully reviewed, and the idea was rejected. It remained for the Bureau of the Budget to arrogate to itself the power to frustrate the will of the Congress. It is the right of the Congress to make clear that the violation of a well-established precedent shall not be undertaken in so cavalier a fashion. It is the duty of the Congress to see to it that the Delaware Valley is not thwarted in its pursuit of simple justice. It is an opportunity for the Congress to assist an area which can contribute immeasurably to the welfare of the entire Nation.

I do not think that it is necessary for me to point out to you that the demand that local interests contribute to the deepening of a navigable river is unique in our history. The navigable waters of the United States always have been, and still are, the responsibility of the Federal Government. It would seem frivolous of me to suggest that local interests share in the moneys collected in customs duties from rivers deepened partly at their expense, but the suggestion is no more illogical than the demand that the same local interests pay for a share of the improvements.

If local interests must pay for an improvement in the Delaware River, then must they pay for improvements all over the Nation? Must local interests pay a share of the numerous projects which have already been approved by the Congress and which are awaiting funds at this moment? If so, gentlemen, then each of us had better look into his own situation, for if my district must depart from tradition, then so must yours, at a future date. We are for a meritorious project and, at the same time, we are against an attempt of our Federal Government to abandon its responsibilities—a unique and dangerous precedent.

In conclusion, gentlemen, may I emphasize that we are not asking for anything new. We are asking that you insist that the Government perform its functions as it should—without departing from 175 years of tradition and history for the sake of a penny-weight on the scales upon which the political budget must be balanced.

[From the Saturday Evening Post of April 30, 1955]

HARBOR IMPROVEMENT IS ONE FEDERAL JOB THAT HAS PAID OFF

The administration has declined to include in this year's budget an appropriation for a deep-water channel in the Delaware River above Philadelphia as far as Trenton, N. J., unless the project includes a stipulation that local interests must assume part of the cost.

The total sum involved in dredging the channel to 40 feet as far as Morrisville, Pa., and 35 feet from there to Trenton, is about $91 million. It is estimated that $18 million of this amount represents half the difference between a 35-foot channel and one that would permit large ocean-going ships to unload ore at dockside. Therefore, the Army engineers argue, this is a "local benefit" and should not be a charge on the Federal budget. Although the local interests are not specifically mentioned, various statements by administration spokesmen indicate that United States Steel Corp., whose huge new Fairless plant is located on the river just below Trenton, is meant.

In his press conference of January 19, the President supported this position, adding, if it was a new policy, he thought it should have been considered long ago.

Although the principle of local participation in large public improvements involving Federal expenditures is a sound one, harbor maintenance and improvement of navigable rivers and harbors have been an exclusively Federal concern since the foundation of the Republic.

It was precisely the question of foreign commerce and navigation—over which the original Confederation had no control—that led to the movement for the Constitutional Convention of 1787. In the end, the States renounced the right to collect import duties, ceding that source of revenue to the new Federal Government, which in turn was forbidden (art. I, sec. 9, par. 6) to discriminate among the ports of the several States.

Maintenance and improvement of harbors, under control of the War Department, have normally been carried out at Federal expense, insofar as deep-water channels are concerned. That would be no reason for continuing the policy, if it were wrong or financially burdensome, but the reverse is true. Adequate ports and channels are not a liability but a gilt-edged investment. In the case of harbors along the Delaware, the Federal Government, during the last 50 years, has collected over $14 for every dollar spent on development.

It is true that, for the moment, a 40-foot channel may be represented as a benefit to United States Steel, although other plants along the river would benefit too. But that argument could have been advanced at any time in the past 168 years against any of the industries that line the shores of our great ports. The record of American enterprise indicates that opportunities to locate on an improved waterway are seldom neglected. It is hardly fair to impose the cost of creating them on the first user.

The responsibility of the Federal Government, in any case, does not go beyond the cost of deepening and clearing channels. A productive harbor, obviously, is much more than just a waterway. Local interests provide and always have provided piers, rail connections, loading and unloading facilities, truck highways, police and all the other necessities that go into the complex of services that makes a port. Without them the huge Federal revenues from customs could never have been available.

Sympathy is due residents of the upper Delaware who view with alarm the inevitable transformation of riverbanks from charming residence and recreation areas into grim industrial and commercial areas. We are not debating the issue of whether this particular project is necessary. But, if the channel or any similar one is to be deepened, there would seem to be no valid reason to change the policy, buttressed by specific constitutional mention, which makes channel costs a Federal concern.

Mormons and Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following interesting article which appeared in the April 25, 1955, issue of Congress Weekly:

MORMONS AND ISRAEL

The 125th anniversary of the Mormon Church in America must stir in many Americans of all faiths renewed admiration for the profound sense of religious and civic dedication which has charaterized the founders and disciples of the Mormon Church. For American Jews, and especially Zionists, this occasion has added significance. It presents an opportunity to recall with deep appreciation and gratitude the encouragement given by the Mormon Church from its inception to the ideal of Zion's restoration.

Since 1830, the Mormon Church in the United States has included among its articles of faith the belief in the literal restoration of Israel to the Holy Land, though, to be sure, it regarded this as a necessary prelude to the second coming of Christ. Indeed, the commitment to this article of faith was so strong as to lead Joseph Smith, the founder of the church, to regard the restoration of Israel as imminent. He exhorted his disciple, Orson Hyde, to undertake a trip to Jerusalem to facilitate the consummation of this event.

In 1840, a conference of the Mormon Church authorized Hyde to proceed to Jerusalem and while en route, to consult with Christian and Jewish leaders, here and abroad, about this ideal. Bearing letters of recommendation from distinguished Americans, among them the United States Secretary of State and the Governor of Illinois, he zealously pursued conversations with a wide variety of people throughout the world. He spoke with fervor and displayed a serene confidence in the inevitable realization of this vision of Zion's restoration. In Jerusalem he told a missionary: "It was by political power and influence that the Jewish nation was broken down and her subjects dispersed abroad; and I will hazard the opinion that by political power and influence, they will be gathered and built up." With remarkable foresight, he predicted that England was destined for the leading role in the realization of this aim.

Orson Hyde devoutly prayed for the attainment of this ideal. With touching piety this American Mormon erected an altar of stones in Jerusalem, in the manner of the ancient patriarchs, and prayed for the return of the Jewish dispersion to the land of their faith, the restoration of the Kingdom of Israel, and the establishment of Jerusalem as its capital.

A little more than a century after Orson Hyde uttered this prayer the Biblical prophecy of the reestablishment of the State of Israel came to fulfillment. The Jewish people will remain profoundly grateful for the great part played by the American Government, and people in this moving chapter of Jewish history, and particularly to the Mormon Church for its unflagging faith and efforts in behalf of the cause of Israel.

On the 125 anniversary of the Mormon Church, American Jews are proud to join Americans of all faiths in wishing the Mormon Church continued progress and growth.

The Nature and Mission of Our Surplus Farm Production

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an excellent statement on the subject of surpluses by Dr. J. T. Sanders, consultant for CARE:

THE NATURE AND MISSION OF OUR SURPLUS FARM PRODUCTION

(By J. T. Sanders, consultant for Care, Inc.)

The farm-surplus production problem is, I am convinced, not a temporary problem but one that will last for many years to come. The present capacity of our farms to produce, the inherent full-output nature of the farm business and several other factors make these surpluses almost inevitable for several years at least. Regardless of Government policies of restriction of farm production, regardless of good prices or low prices of farm products, of depressions or prosperous times, and of peace or war, I believe, for years to come, we can be reasonably certain that we shall be confronted with this problem of surpluses for which a satisfactory market cannot easily be found. We shall have to seek diligently for a solution to this problem that will enable us to use these surpluses and that will not allow them to be wasted and become a national and international disgrace.

On the other hand, our surplus products must not be disposed of under conditions and terms that would bankrupt our farmers, bring chaos to the markets of the world, and cause friendly nations to lose faith in the democratic way of life. Whether or not our inevitable surpluses shall become a great problem and curse to us; or whether we shall use them for the great blessing that they can and should be to us and a hungry world, depends on our ability to understand their causes and nature, and our ability to plan their use to our own advantage and for the most benefit to a hungry world. This is the heart of my message to you today.

No sound solution of our current and prospective farm surplus problem can be planned until we understand clearly the difference between the causes and correction of an overall surplus of farm products in general and the causes and correction of a surplus of a single farm product. This discussion will deal with overall surpluses, their probable inevitability for years to come and how our Nation can use them to our best advantage.

FARMERS CAN, AND DO, CORRECT SURPLUSES OF SINGLE FARM PRODUCTS

Correction of a surplus of a given or single product is easy and is almost invariably made by farmers shifting, in the years following the surpluses, away from the production of the surplus and relatively low price product to a product not in surplus supply and not so low priced. These corrective shifts are constantly being made by farmers; and it does not take a high order of competency on the part of a farmer to induce him to make them. Such shifts as a rule require no overall reduction in size of the operations of a farm, and of all farms, and no idleness of labor, of machines or of land. These changes are constantly being made by farmers, because the individual farmer can make them, and can see a financial advantage from making them. They are made at times regardless of Government price support policies or at other times as a result of such policies.

On the other hand when a farmer is confronted with a general or overall surplus of all his products or most of them, there is nowhere that he can turn to meet his problem. If he reduces his total output of all products in suprlus supply he wastes his idle labor, land, and machinery, and loses more by such reduction than he would if he did not make it. Presumably if he knows how, and is able to reduce his costs, he will have done so before he is confronted with overall surpluses and low prices. It is almost literally true that any farmer can meet

and deal with a single product surplus, but any and all farmers are practically helpless to correct the woes of a general farm surplus, such as we are now confronted with.

Since single product surpluses are corrected by shifts without reducing the total output capacity of a farm, or of all farms, these shifts have little, or no, effect on the aggregate output of a given farmer nor of the output of all farms in the land. Overall surpluses, therefore, cannot and will not be corrected by the aggregate of the action of individual farmers. Indeed I seriously doubt if any Governmen policy, any possible organized effort of farmers, or effort of farmers acting individually, can do much by way of reducing the overall farm surpluses confronting us now, and that will confront us in the next several years. It seems to me that the Secretary of Agriculture, the Congress, farmers, and the Nation must face the fact that these surpluses are inevitable and persistent.

RESPONSE OF FARM PRODUCTION TO LOW PRICES OF FARM PRODUCT

As stated previously, farmers invariably reduce the production of a given product following years of heavy surplus production and relatively low prices of the product. But one can find no valid evidence that farmers can or do reduce overall output following years of general drop in farm prices, or that farmers move to reduce surpluses with lowering prices. Let us briefly examine some facts showing that a marked rise or fall of all farm prices has little or no influence on farm output.

For the 24 years from 1930 to 1954 farm prices declined 5 points or more for 6 years, and rose 5 points or more in 15 of the 24 years. There were 3 years during the 24 when price changes were less than 5 points. Price index decreases averaged 28 points per year for the 6 years of decline; and price rises averaged 20 points per year for the 15 years of price increases. On the years following the 6 years of price declines farmers increased total planted acres for 3 years and decreased it for 3 years; with a net balance of reduction in planted acreage amounting to less than 1 percent. On the other hand, during the 15 years of significant price increases farmers increased total planted acres during 11 years with the total of these increases exactly equaling the decreases of acreage on the 4 years when acreage was decreased. In other words, decreases cancelled out increases during this 15 years of rising farm prices. After 1936 when adjustment in total planted acres had recovered from the drought of the early 1930's, the net change in planted acres, as a result of all the wartime stimulus, was less than 1 percent by the current year 1954. Evidently significant price changes were a minor factor in changes in farm crop acres. This is in marked contract to the response industry reflects when industrial product prices change.

FARMERS SUBSTITUTE MINOR CROPS FOR REDUCED ACREAGE OF BASIC CROPS

Another phase of this stability of total planted acreage is the response of farmers by substituting minor crops for basic crops when the Government restricts acreage of the latter—e. g., minor feed crops substituted for wheat when wheat acreage is reduced by the Government or for other reasons. History reveals overall surplus is actually increased by reduced wheat acreage.

Wheat acreage was decreased during 8 of the 23 years from 1929 to 1953, not counting the extraordinary reduction of 34 million acres during the severe drought year of 1934. This reduction of wheat acreage actually did not reduce the available supply of food and feed however. During these years reduction of wheat acreage aggregated 32.6 million acres and the corn equivalent for feed, thus lost, was 32.3 billion pounds. During these 8 years, however, increased acreage of minor feed crops amounted to 38.5 million acres and increase of output of corn equivalent from these minor crops amounted to 39.7 billion pounds or 23 percent more than the loss of corn equivalent from the reduced wheat acreage.

In this situation since much of our wheat production is fed, a cut in wheat acreage actually increased by 23 percent surplus feed. This is true of nearly all our reduction of major crops and a substitution of minor crops. The former are "extensive" crops that yield relatively low amounts of food and feed per acre; while the minor substituted crops in most cases are high producers per acre. Thus the shifts from major crops to minor crops due to Government restriction in most cases actually has the effects of increasing our aggregate overall surpluses of farm products.

OUR SURPLUSES ARE MORE IMPORTANT THAN THEY SEEM

Cold statistics on our farm surpluses are misleading in forming a judgment of the importance of surpluses to our farm and national prosperity, and in forming a judgment relative to the good will of other nations. Our export farm surpluses rarely equal one-tenth of total farm output; and as a rule are less than one percent of our gross national product. This may indicate to a casual observer that farm surpluses are not important. But the near bankruptcy of a major export crop can and will drag down to depression, domestic market crops, that compete with the depressed crop for use of land. All major crops and livestock production are sensitively tied together through ability of the farmers to shift land from one crop to another.

Outside of agriculture, surpluses of farm products can be a powerful instrument of good or harm in our international relations depending on whether we use them to feed hungry people or let them go to waste and bring about national dispute.

If our surpluses were a passing problem, were temporary and not persistent, their outright gift to hungry peoples of the world who have been set back by the ravages of war and who truly desire to work out a sound democratic economy, would probably be justified, and would possibly be a wise policy for us to pursue. But such a giver-begger relationship as a long-time policy is not good for either men or nations. The durable nature of our surpluses calls for a more self-respecting and sounder method of handling these surpluses than that of continuously giving them to needy people, and repeating this so long as our long suffering tax payers would stand for it.

Good neighbor relations between both men and nations, over the long pull, must rest on exchanges, with the objectives between buyers and sellers built on a desire to help those in need to help themselves to a status of greater purchasing power. Where calamity or misfortune strikes and causes starvation anywhere in the world we should always stand ready and able to give of our abundance to help. But our policy should not be a continuous giving that encourages indolence or causes others to loose their desire to meet all their own needs by their own efforts. This, without doubt, is not the route we should take as a nation in meeting our present and prospective future surplus problems.

WHY SURPLUS FARM PRODUCTION IS NOT A TEMPORARY PROBLEM

The previous statements relative to the necessary and sound method of dealing with our surplus problem are valid only if my contention, that surpluses are to be with us for many years, is valid. Let us examine together briefly the facts backing up this claim of persistency of future farm surplus output.

In discussing this problem, I wish to emphasize that I am trying to avoid all semblance of discussing views of any particular farm organization, or those of any political party. If I seem to single out the views of particular farm organizations, political parties, or farm leaders, it is solely to present facts as I see them and not to act in a biased or partisan role. If, therefore, I sin in this respect I assure you it is my desire that it be the result of weakness and not of the heart.

Some of our national agricultural policies of the past and present have not been conducive to a clear understanding of our surplus problem. To talk of solving surplus farm problems by control of farm output does not contribute to an accurate understanding of the surplus problem; nor to its solution. Also to contend that high fixed price support with its accompanying efforts at restricting farm production and its failure to do so, have created our current surplus problem is an assertion that cannot be substantiated by careful analysis. Also current claims and implications that flexible price supports, if in operation, would cause farmers to adjust production so as to eliminate overall surpluses are claims that would prove entirely visionary if they were tried to their proponents' heart's desire. These statements are made with a deep conviction that they are statements of facts, and with a belief that if you will bear with me patiently, as I present the following on the true nature of farm surpluses, you will more likely agree with the above statements relative to current views being in error.

STABILITY OF PLANTED ACRES AS A CAUSE OF SURPLUSES

One sobering set of facts usually known by Agricultural Senators, Congressmen and leaders are those showing a remarkable stability in planted-crop acres in the Nation during the last 25 or 30 years and even longer. Through periods of good and low prices, through efforts at restriction of acreage and production, through periods of no such efforts, through depression and periods of prosperity, through price-control efforts and freedom from such efforts, and through peace and war periods, total crop acreage has changed but little. If this is true, given good growing weather, it is evidently one of the most basic causes of stability of farm output and surpluses.

For example, during the 5-year period from 1935 to 1939 American farmers planted 357 million acres of cropland on an average; from 1940 to 1944 they planted 355 million acres during the years 1945 to 1949, 358 million; and during the last 5-year period, 1950 to 1954, average cropland planted was 357 million acres. For the year 1954 farmers planted 354 million. These figures show nothing short of an astounding stability in the basis of farm output. Barring catastrophic drouths and plagues these facts almost insure great stability in agricultural production and continued surpluses.

If we look closer into the extraordinary team of man and land that we call a farm we shall see in an overwhelmingly convincing way why they perform with an unfailing full output.

HIGH FIXED COSTS IN AGRICULTURE AS A CAUSE OF CONTINUED SURPLUSES

Take for example farm costs. Taxes, land investment, upkeep, the operators' labor and many other costs of operation are in the nature of fixed rigid costs. These cannot be avoided or reduced materially by closing down part of the farm operations.

On our 5½ million farms there are today 39 million units of field horsepower, in the form of tractor and animal power, compared with an average of 26 million units 20 years ago; or 50 percent more horsepower to till, plant, cultivate, and harvest the same amount of land, 360 million acres. This

power cannot be carted to town during bad years and used by farmers in urban work. There is no conceivable use that it can be put to except to work this same 360 million acres of land, year in and year out. You and I know that that is the use, the full use, that will be made of it as long as it lasts and as long as farmers live on our 360 million acres of cropland. Its use for this purpose is almost as stable and as certain as the existence of the tractors and the land. In this sense it is a fixed factor and a powerful one for continued full output and surpluses from our farms.

Even if there is no other practical use of the farm power other than to tend the 360 million acres of cropland, "Surely," you say, "farmers will not continue to use their labor to produce crops at a loss." This item of labor too requires close examination. American farmers now furnish around 80 percent of all labor needed to operate the 360 million acres; and hire 20 percent of the labor needed. This 20 percent is not just added labor but it fits into the whole farm organization and operation. To completely dispense with the 20 percent of hired labor would in many cases render much of the farmer's 80 percent of labor nonproductive. If the 80 percent of unpaid labor which farmers and their family contribute to the operation of farms is not used it becomes a complete loss. Farmers cannot let their labor remain idle; and for farmers as a whole, this labor has no other use and market except its use in operating the farm power, and tending the 360 million acres of cropland, and the livestock on American farms. In all effects, therefore, this labor becomes a fixed cost on farms in the same sense taxes are a fixed cost. Despite low prices, and surpluses, the farmer loses more when he fails to use his labor than when he uses it to its full capacity.

WE SHALL NOT WANT FOR ENOUGH FARMERS TO OPERATE ALL OUR FARMS

This fixed land costs and supply, and these fixed power and labor supplies and costs, are almost unfailing insurance of full output efforts by the farmer, but they are not the complete set of forces insuring full output from our farms. For we are insured of a full supply of farmers in years to come. We need from 150,000 to 200,000 new farmers each year to replace dying and retiring farmers. For the past 30 years we have reared enough farm boys to supply this replacement, and in addition have sent annually a net of around 250,000 boys from our farms to cities. In other words, we have had more than twice as many farm-reared boys to supply replacement farmers as we needed. There's no probabilities that we'll have a shortage of new farmers to man our farms in the near future. This insurance factor for full output and surplus production is ample and certain.

INCREASE USE OF ELECTRICITY AND CONTINUED SURPLUSES

The great change in the increased productive power and surplus producing capacity of our farms compared with those of two decades ago is revealed by another remarkable change during these two decades—the great expansion in the use of electricity on farms.

During the past two decades we have changed from an agricultural economy where electricity was rarely known on our farms to an economy where it is rare to find a farm of any proportions not served by electric power. To say nothing of this great boon as a means of adding to the comfort and attractiveness of farm life (probably the greatest single blessing brought to our farm families during the past 20 years) its productive effects cannot be adequately measured.

The miscellaneous or "nonfield" work on farms such as feeding, grinding, lifting, cleaning, transporting, sawing, cutting, watering, painting, etc., constitute slightly over half of all work required to operate an average farm. Yet this work, as a rule, is subject to far greater laborsaving by use of electric machines, power, light, and heat than the laborsaving of power and machines used in the field. For example, a man or a woman operating a pump handle to lift water is worth less than 1½ cents per hour of electricity and motor costs doing the same job. Yet we have (due to the late arrival of electric power on our farms prior to world war) just began to scratch the surface of the added productive power of electricity on our farms. It has already been the basic factor in revolutionizing the broiler industry. In the years ahead greatly increased use of electricity will bring new productive power to farmers. A large part of our increased farm output in the years ahead will doubtless result from increased use of electricity.

RESEARCH AND CONTINUED SURPLUS PRODUCTION

A final factor for full output and continued surpluses is available in our great reservoir of agricultural research and education. A recent study of the Department of Agriculture concluded that if farmers used their presently available know-how, they could increase the volume of our output by from 50 to 75 percent from the same acres of crops and pastures, and from the same number of livestock, as we are now using.

Secretary Benson in a recent speech stated that a preliminary study of market waste indicates that around one-third of all food and feed value produced on our 360 million crop acres is wasted, that much of this waste can be prevented, and that its prevention roughly represented a possible increase of one-third of our potential food and feed supply.

POPULATION IS NOT LIKELY TO OUTSTRIP OUR SURPLUS PRODUCTION

If these factors insured only a stable full output our rapidly expanding population would soon catch up with output and we could expect surpluses to disappear. But these factors of full output have in the past insured expanding full output, not stationary full output.

The average volume of output in 1940–44 was 21 percent greater than it was for the previous 5-year period of 1935–39. In 1945–50 it was 35 percent larger; and in the last 5 years, 1950–54, it was 40 percent larger than in 1935–39. Despite the fact that this year has seen one of the worst droughts in history in many sections of the country, our volume of output has been maintained. Crop production is down 4 percent from the average for the 3 preceding years but livestock production is up 6 percent, making the overall output exactly the same as the 3 prior years' average.

THE GREAT NATIONAL VALUE OF OUR SURPLUSES

This stability of output from farms is uncanny in its dependability and its value to our democracy is beyond measure. It has doubtless been the preserver of our democratic way of life through more than one economic crisis. For example, had farm output been cut in 1933 to 57 percent of production in 1929, as was the case with industrial production, millions of people in our great cities would have starved; and under such a calamity our vaunted democracy would have probably ceased to exist. The stability of our production of food regardless of peace, war, depression, prosperity, and other changes, is of profound significance to the continuity of our liberties as a people, and to our leadership among the free nations. So, although our surpluses may present great difficulties to us, they are not unmixed curses, but essentially are great blessings if we use them as blessings.

Even a small surplus of most foods can have a profoundly depressing influence on market prices of the surplus foods. This is due to the well-known and everyday fact that the supply and price of most foods have a highly sensitive relation, or foods have an "inelastic demand," as the economist calls it. Consumers are willing to pay good prices for as much food as they need, but beyond this supply their paying price drops to prices that can, and often do, bankrupt producers. This is why surplus food supplies, if freely put on the market, often prove financially disastrous to farmers. This is also the reason why, since American farmers, in the years ahead, face inevitable surpluses in excess of our domestic needs, we must devise sensible means of disposal of these surpluses.

Although we have confronted surpluses in this sense for years, we, as a Nation, have not planned seriously for marketing these export surpluses to the best advantage of our farm producers and of people abroad who need them.

The current markets of the world for our export surpluses are in great disorganization and chaos. Many nations need these surpluses badly, but are unable since World War II to obtain dollar purchasing power to buy our surplus farm products, even at prices far below our domestic support prices. During the past few years we have used numerous makeshift arrangements to sell our Government surpluses at prices much below the price the Government paid farmers for these surpluses. As long as farmers receive the benefit of domestic price support above the price their surpluses will bring on the fully competitive world market, this dual price structure, this sale of our surpluses abroad at lower than domestic support prices, is inevitable.

WE HAVE MADE A CONSTRUCTIVE START AT SURPLUS DISPOSAL

During the 2d session of the recent, 83d Congress, the first serious, systematic, effort was made to deal with this farm surplus market problem. The Agricultural Trade Development and Assistance Act of 1954 made it possible for our Government agencies, for private corporations and companies, and for organized relief agencies to dispose of Government-owned surpluses in countries that do not have dollar exchange; and for purchasing countries to settle for these surpluses in their own currencies. These local currencies can then be used for many purposes mutually agreeable to the buying country and representatives of the United States. Some of these authorized uses are: To buy strategic and stockpile minerals for the United States Government; for investment in productive enterprises in the country; for grants for charitable and educational purposes in the country by the United States Government or by charitable and nonprofit organizations such as CARE; and for loans for self-liquidating self-help projects of all kinds.

As an example of how this law will enable us to open up or tap new markets, I can cite a recent experience I had in Bolivia. A modern cotton mill in La Paz, the capital city, is able to buy in the normal cotton markets enough cotton to keep one shift per day working only part of the day; yet Bolivian citizens could use and buy in local currencies cotton goods in amounts that would keep this mill running 3 shifts, 24 hours in the day. But Bolivia does not have, and cannot get under present world commercial markets, enough dollar exchange to buy this cotton that it and its people sorely need.

If this cotton can be sold for local currency and this currency used to help resettle Indians, now living on cold bleak unproductive mountain lands, on lands in the valleys on the eastern slopes of the Andes, the investment in such resettlement, by any reasonable calculation, will in time pay back the loans and a 20-percent return in addition.

In Bolivia around 2 million or more Indian farmers that are direct descendants of the highly civilized Inca Empire of pre-Spanish days now eke out a miserable existence on bleak treeless plains that are 13,000 feet above sea level; because, heretofore,

these people could not protect their health in the moist subtropical but productive lands east of the Andes. Yet today there are many settlements east of the Andes that are protected by relatively inexpensive health measures that are relatively prosperous healthy communities. These resettlement projects alone could yield profitable returns on enormous new investments if they are soundly conceived and managed. At the same time such extensive resettlements would do much good toward leading the Bolivian nation to a sound stable democratic nation.

CARE, which is a cooperative nonprofit organization, was originally established to ship food and clothing packages to war-hungry and war-ravaged people in Europe and elsewhere. Its functions have gradually shifted to services of helping people help themselves by supplying such things as a kit of carpenter or shoemaking tools to a war refugee in the refugee camps; by supplying plows to peasants in India, who heretofore plowed with wooden plows; and to supplying glass jars to Grecian women to enable them to can vegetables and fruit which they have until now been unable to save from spoilage.

To enable CARE to supply more flexible but nonprofit yielding assistance to small productive enterprises in backward countries, CARE has recently organized the CARE Development Corporation to promote self-help projects in these countries. These enterprises will be supplied needed capital by the corporation as well as technical guidance. Capital will be loaned at 4 percent, and when repaid from earnings of the self-help project, will be placed in a revolving fund for reinvestment in other self-help projects. In the meantime CARE proposes to employ competent technicians and managers to operate self-help projects, until local competent talent is developed; at which time full control and management of self-help projects will be released to the local people.

Under the Agricultural Trade Development and Assistance Act of 1954, surpluses can be sold to a country and local currencies used as investment in such self-help projects as those I have described. Under this law private concerns or nonprofit organizations, such as CARE, could be used under United States Government supervision to use funds raised by surplus sales for investing in self-help enterprises.

CONCLUSIONS

From the basic factors making for continued expanded full output, which I have enumerated and discussed, the conclusion seems adequately justified, that we shall be confronted with surplus production for years to come. On the disposal side of the surplus problem, world conditions and abnormal world market situations, do not give bright prospects of selling these surpluses for dollars, without dragging world prices—prices of our own farmer and other farmers—to disasterously low levels. We cannot afford to have this predicament happen—both because of our domestic economy and our international relations.

On the other hand, if this problem can be constructively met by a well conceived national policy of using these surpluses to feed and clothe people abroad the problem can be turned into a great service to us and them. This can be done in a way which I feel certain will return us a maximum of tangible and intangible value from our surpluses; and permit needy people abroad to contribute as much as possible in payment for these surpluses, and incidentally enable them to undertake self-help programs in their countries. The Agricultural Trade Development and Assistance Act of 1954 is a constructive beginning in the use of these surpluses. The probability of continued surpluses makes it necessary to perfect this act and our plan of using these surpluses in a sound, satisfactory way.

Hail to the REA on Its 20th Birthday

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. LONG. Mr. Speaker, it is a source of real pleasure and personal satisfaction for me to arise on the floor of the House and pay tribute to the marvelous Rural Eelectrification Administration on its 20th anniversary. Truly, the program of this Federal agency is such a remarkable one that we should not let this day pass without recalling the origin and development of this outstanding Administration, together with the leaders and members of the local REA cooperatives who really did the job.

As we look back at the origin of the Rural Electrification Administration program, it is amazing to see how it ever survived. For it began in the dark days of the depression as a work-relief program, and ended up as one of the finest technical accomplishments in the Federal Government.

In the State of Louisiana the REA program is a great local institution. I know about it first hand and can tell you that this is one program that is really popular with our people.

It is easy to see why the REA program is so well-liked in Louisiana. All you have to do is to look at the record of accomplishment. It is hard to believe that back in 1934 when the REA was born only 1.7 percent of our 170,216 farmers, or 2,826, had central station high-line service. In other words, less than 2 percent of our farms had central station electric service. I believe that is about as close as you can get to the bottom and still have some rural electrification. Yet Louisiana was exactly in that status in 1934.

Mr. Speaker, it is a source of great pride for me to give you the rural electrification picture in my State of Louisiana today. The puny percentage of 1.7 percent has grown to 92.5 percent today. In other words, Mr. Speaker, at the present time, 114,917 Louisiana farms now receive central station electric service. This is an increase of 112,091 farms that have been electrified since 1934. Use any standards you desire and I believe you will agree this is truly a remarkable accomplishment.

This tremendous increase in rural electrification did not come about accidentally. The road was long, the disappointments were many, and the battle was continuous. A whole generation of pioneers was needed to carry on this valiant struggle. The private utilities had attempted to do the job at a price the farmers could afford to pay, but had not succeeded. So the rural folks themselves undertook the arduous task of banding together and forming their own local REA cooperatives in order to perform this essential task.

At the same time, their efforts would have been futile if we did not have in Congress men with vision and leadership like our present distinguished Speaker, the Honorable SAMUEL RAYBURN, and his late colleague in the Senate, Senator George W. Norris, of Nebraska. Let us pay the highest tribute to these distinguished citizens who worked so hard and continuously to make a successful REA program possible.

In conclusion, Mr. Speaker, I believe I speak for very public-minded Member of this body when I state the REA program is a tribute to America and is the kind of local program that is settling a pattern nationally and locally for the democracies of the world to follow. I am glad to have played a part in that program and will continue to support the REA as long as it serves these vital needs of our people.

With the Development of International Travel Comes International Understanding and Prosperity

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. DODD. Mr. Speaker, this year a million Americans will travel abroad and spend an estimated $1.5 billion. Half of this number are expected to visit Europe alone, with the rest visiting all parts of the world. The United States Government has recognized the importance of world travel both as an instrument for bolstering foreign economies without burdening the American taxpayer and as an excellent means for cultural interchange in the battle for men's minds in which we are presently engaged with the totalitarian powers.

On March 31, Mr. Preston Hotchkis, United States representative on the United Nations Economic and Social Council made a key speech on behalf of the United Nations resolution to encourage international travel.

The text of that address is appended hereto:

DEVELOPMENT OF INTERNATIONAL TRAVEL

Peace—a continued effort to develop and enhance its prospects—prosperity, and improving standards of living.

These are crops which are harvested by increased international travel. And these are the major objectives of the United Nations as set forth in the charter.

Therefore the United States Government is gratified that international travel has been given its proper recognition by being placed upon the agenda of this session of the Economic and Social Council.

Travel from one country to another is not only an indication of peace and good will among nations, but it produces a chain reaction—the greater the volume of travel, the more people know about other countries and their peoples, the less become the prejudices, and the greater the prospects of lasting peace.

It is not too much to say that every traveler is a potential student and teacher and emissary of good will. But our primary emphasis at the moment is on the economic benefits

of international travel rather than on the social and cultural benefits that are also present.

My Government has submitted a paper (E/2688, dated February 15, 1955) which sets forth the large part which travel plays in international trade, its potential for growth, and certain constructive measures which can be exerted toward its further encouragement. My remarks today will highlight some of the points covered in the paper.

During World War II international travel was almost nonexistent. Since then, however, it is showing a healthy growth, but the opportunity for still greater development is tremendous.

In saying this I realize that there still remain some obstacles and barriers for free travel from one country to another. In fact, if it were not for the tensions that have developed in some parts of the world, we might not now be troubled by the remaining border crossing formalities which harass the international traveler in many countries, including our own; but the realities of the existing situation remain and must be dealt with in the interests of national security.

During the past few years many unnecessary restrictions to travel have been removed. A number of countries have embarked on tourist development programs with outstanding success. International travel has become one of the major factors in world trade. For example, the spending by United States residents in foreign travel is now equivalent to approximately 10 percent of total United States exports. In other words, our travelers have provided foreign countries with sufficient dollars to enable them to pay for approximately one-tenth of their total commercial purchases from this country.

Striking examples may be cited of the rapidity with which a substantial tourist industry can be built up by effective promotional efforts.

Puerto Rico in 1948 earned approximately $5.6 million from 58,000 visitors. This was increased by 1953 to $23 million and 110,000 visitors.

Nassau in 1947 had about 30,000 visitors; by 1950 the number had increased to 84,000.

Similar success stories are provided by Canada, Mexico, Hawaii, Bermuda, Jamaica, and other popular tourist areas.

Under its own energetic travel promotion program, Great Britain increased its dollar earnings from tourism from $56 million in 1948 to $110 million in 1954.

In 1949 the European Travel Commission launched a cooperative regional travel promotion campaign in the United States for Western Europe as a whole. These activities have helped to increase United States citizens' travel to Europe from 183,000 in 1948 to an estimated 456,000 in 1954. During the same period Europe's direct earnings from tourist expenditures climbed from $128 million to an estimated $330 million—and if United States tourist expenditures on Europe's ships and planes are included, total earnings passed the half-billion mark. All current indications point to the fact that both the volume of United States visitors to Europe and the amounts expended there during 1955 will be considerably higher.

UNITED STATES ACTIVITIES

Recognizing the importance of international travel, President Eisenhower in two recent messages to Congress cited its cultural, social, and economic significance, and called attention to the substantial source of dollars which foreign travel by United States citizens provides for many foreign countries. The President also instructed the appropriate agencies and departments of the Government to consider means to facilitate international travel.

Specifically what is the volume of United States travel to foreign countries? Latest estimates show that United States residents in 1954 spent $972 million for actual expenditures in foreign countries and $183 million in payments to foreign carriers; a total of $1,155,000,000 paid to foreign countries. In addition $211 million were spent in payments to United States carriers. The grand total of $1,366,000,000 was about 7 percent more than that for 1953, and it is expected that 1955 will show a further healthy increase.

In the United States the travel industry is well organized. There are the carriers—air, steamship, railroads, buses, and all the facilities which transport passengers including private automobiles. A large part of the efforts of these enterprises, both individually and through active associations, concern travel beyond the boundaries of the United States. There are several thousand travel agents engaged in the business of arranging trips and accommodations for their clients and energetically working to increase their numbers. There are national associations such as the American Society of Travel Agents, the National Association of Travel Organizations, and the American Automobile Association. The hotel and motel industry with its national trade organizations contributes much to this dynamic industry. Newspapers, magazines, and trade journals carry large volumes of editorial material, advertising, and travel news.

INTERNATIONAL ACTIVITIES

International activities by governmental and private organizations are impressive in their scope. In the United Nations the Transport and Communications Commission has performed much useful work, and is continuing to give attention to the problem of international travel. A recommendation by the Commission that a new inquiry be made among governments as to the progress that has been made in implementing the recommendations of the 1947 conference of experts on border crossing and frontier formalities will be before the Council in May. Favorable action upon this meritorious proposal will provide helpful data on the continuing activities of many governments to simplify procedures for tourists. A convention on road traffic was prepared in 1949, simplifying and standardizing formalities for international motoring, and has been ratified to date by 18 nations. Further ratifications are desirable to bring this agreement fully into effect among all nations which desire to encourage the growth and safety of international travel by automobile. More recently, in 1954, two new international agreements were drawn up at a United Nations conference, looking toward the simplification and standardization of customs formalities for automobiles, and for personal effects of tourists in general. Through reports submitted to its periodic meetings the Transport and Communications Commission is keeping abreast of developments in the field of international travel.

There are numerous other examples of useful operations. The International Civil Aviation Organization is steadily carrying forward its program of facilitation for air passengers and cargo, and the beneficial results of this activity are felt in other fields than that of air transport alone. UNESCO is also doing helpful work in promoting the development of travel. The Organization for European Economic Cooperation has made outstanding contributions to facilitating travel through obtaining wide reduction or elimination of visa requirements among its member countries, and these benefits have also been extended to United States citizens. The European Travel Commission has an extensive promotional program, financed by OEEC, including advertising and publicity in the United States. Among other energetic organizations are the International Union of Official Travel Organizations, the International Air Transport Association, the International Chamber of Commerce, the World Touring and Automobile Organization, the Pacific Area Travel Association, and the Caribbean Tourist Association. The Inter-American Travel Congresses have stimulated interest in travel in the Western Hemisphere. It should be noted with appreciation that the International Union of Official Travel Organizations and the World Touring and Automobile Organization have submitted useful papers which are included in the documentation for the present session (E/C.2/412 and 413).

At a meeting of Ministers of Finance and Economy in Rio de Janeiro in November 1954 a resolution was unanimously adopted calling for constructive action by all of the American Republics on promotion of international travel and tourism. The resolution recommended that helpful consideration be given to the problems of travel development, with special attention to the strengthening and supporting of official and private agencies engaged in the development of tourism. It also recommended the preparation of sound technical assistance projects in such fields as hotel construction and operation, and promotional aspects of travel development including publicity and advertising. Further, it encouraged the improvement of tourist attractions such as health resorts, parks, historical, and archeological sites. Thus at Rio de Janeiro, in an atmosphere similar to that of our session today, high government officials joined in declaring the importance of international travel and in indicating initial steps for action.

Even the most remote corners of the world are becoming aware of the advantages of tourism. American newspapers this month carried an account of the arrival at Katmandu, Nepal, of a first party of 12 visitors. The report epitomized the way in which organized travel develops, by recounting how Nepalese officials suggested some months ago to an international travel agency that a tour be arranged, and how the agency promptly included a visit to Nepal in a round-the-world voyage it was conducting. Now in Katmandu, Government officials are talking of the new revenues to come from tourists, hotel facilities have been organized, and young men are planning careers as tourist guides.

OTHER CONSIDERATIONS

Now what exactly do we mean by the word "tourist"? It is well to give a clear definition of the word because in some areas of the world it is used in too restricted a sense as only a sightseeing traveler. We use the term in its broadest sense—that is, the bona fide nonimmigrant who desires to make a temporary visit to a foreign country for any legitimate purpose.

Programs to attract tourists should have a particularly strong appeal to countries which now depend on 1 or 2 major items for most of their foreign exchange. Tourism brings a relatively stable source of income, less subject to sudden shifts in world prices, and yet requires only limited investment, primarily for hotels and advertising or publicity.

In facing the problem of lowering costs of travel and making it more available to a wider segment of the world's population, consideration should be given to development of off-season travel—more aptly termed "thrift-season" travel. When hotels, planes, ships or other facilities are provided to cater to a short season of a few peak months, prices tend to be high. Those tourist areas which have, through strong promotional efforts, together with the help of the carriers, developed a year-round tourist industry, have found it possible to provide low-cost travel packages of interest to a broad market. Continued efforts to extend the tourist season is highly desirable. In a number of areas great strides in this direction are already in evidence.

RECOMMENDATIONS

In the paper which my Government submitted to the United Nations in February, a number of specific proposals were offered for consideration by the council in the encouragement of international travel. These are also embodied in a resolution which is now before the council. Upon them I would like to comment as follows:

1. Granted that there is general recognition of the place of travel in the field of international trade and friendly relationships, effective development depends upon the individual countries. In each nation, increased attention to travel is needed as an important phase of its economic growth. This entails study of the current and potential travel market, tourist attractions and facilities, border-crossing formalities, promotional efforts—and the preparation of an efficient development program.

2. Because of distance and cost factors, regional travel presents advantages in attracting large numbers of visitors. Within any region, and particularly between neighboring countries, special measures for facilitating travel are possible, and indeed have been well developed in certain areas.

3. There is already a wealth of experience and talent available in the numerous official and private agencies engaged in the development of tourism. These resources should be strengthened and supported. Successful tourist development programs, in countries where a rapid growth of inbound tourists has been desired, have demonstrated the importance of strong governmental financial support of tourist promotional activities. The sale of a country's tourist attractions to people of other countries requires government funds for the establishment of foreign promotional offices, and for paid advertising, publicity and other sales development activities. Local tourist service industries receiving tourist income are usually too small to carry out effective foreign sales programs of their own.

4. In some areas, adequate hotel and other facilities are lacking, and this acts as a basic deterrent to travel. Now that means of transportation are readily available to almost any point on the globe, a dearth of living accommodations may be the sole obstacle to a flow of visitors. Here would seem to be a fruitful field for the provision of governmental incentives for the encouragement of private investment.

5. Countries possessing well-developed tourist programs and facilities have an opportunity and an obligation to assist those with less experience, if the goal of an expanded world travel market is to be attained. Technical coperation projects may be an answer to this problem, and are worthy of prompt consideration.

6. International conventions, drawn up at United Nations conferences and representing the best judgment of governmental authorities and other competent experts, provide a means of unified action by the nations. The United Nations conventions on road traffic (1949), on temporary importation of road vehicles (1954) and on customs facilities for touring (1954) are examples. Wide ratification of these agreements will provide a solid foundation for expansion and encouragement of international travel.

7. Statistics relating to travel are a fundamental requirement for intelligent planning. Improvement in their accuracy, comprehensiveness, and timeliness is desirable. Each country can well give attention to this problem. Means also should be found for establishing greater uniformity and comparability in travel statistics, and the services of the United Nations should be made available in arriving at uniform methods of compilation.

8. The problem of reducing border-crossing formalities to the fullest extent practicable requires constant study. These formalities include passports, visas, health and police certificates, travel taxes, exchange controls and other restrictive factors. In this area, the desirable freedom of movement of the traveler must be viewed in the light of the national security and welfare, but any improvement in world conditions should be reflected in an easing of current restrictions.

Land Reform in the Philippines

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 11, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an article from the Manila Bulletin of Monday, March 28, entitled "The 'Quiet Ambassador' Interviewed," setting forth the views of Adm. Raymond A. Spruance, upon his retirement as Ambassador to the Philippines.

Admiral Spruance showed a keen insight into the problems of the Philippines, and offered some sound advice about the importance of sensible land reform as essential to progress and development. His statement echoes statements I have repeatedly made about the need for our Government to take greater recognition of this problem in its international relations, and to give more of the kind of encouragement Ambassador Spruance was willing to give as his parting advice.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE QUIET AMBASSADOR INTERVIEWED—SPRUANCE GIVES HIS PARTING ADVICE ON PHILIPPINE ISLANDS LAND REFORM—UNITED STATES ENVOY RETIRING FOR SECOND TIME, LEAVES SOON FOR HOME IN CALIFORNIA

Ambassador Raymond A. Spruance's parting advice to the Philippines rests upon his deep conviction that sensible land reform is essential to the progress and orderly development of the nation.

The Ambassador is leaving very soon for good. With Mrs. Spruance he will fly to Hong Kong and there board a steamer for a leisurely voyage to the United States, where he will retire from public life and government service for the second time. They will resume residence at their comfortable home near the sea in Monterey, Calif., interrupted 3 years ago at the request of the President of the United States.

A few days past, at the Bulletin's request, he granted one of his rare interviews for this annual edition. It could be called a distillation of his thoughts and experiences of the last 37 months as Ambassador and chief of one of the largest Government missions the United States maintains abroad.

"You have in this country," he said, "a lot of unproductive land whose owners are content to let it remain idle while the pressures of increasing population boost its value. This is not a wholesome situation. It is a cause of unrest which can turn into rebellion, as it did in central Luzon after the war."

By land reform Ambassador Spruance means not just tenancy reform, giving the tenant farmer a better share of the crop he plants and harvests and getting him out of debt. He means an additional reform of the whole social structure built upon land ownership. He believes it can be accomplished partly through revision of assessment and tax application on land all over the islands.

He believes President Magsaysay, with his great strength and popularity among the people, could accomplish it by securing passage of the necessary tax laws.

"Remember," he said, "that in the Philippines the assessed value of landed property is sometimes as low as 10 percent of its selling value. Land taxes are rarely more than 1½ to 2 percent of the assessed value. And on top of that the percentage of people who do not pay any taxes at all is large."

The Ambassador believes that sensible assessment and taxation would induce landowners to sell their relatively unproductive property to people who would work it more productively. When a man knows it is going to cost him money in the form of Government taxes every year to retain ownership of property that produces little or no income to offset the taxes, he is going to do something about it. He will sell it rather than see its increasing value more than eaten up by the taxes he has to pay. The Government would benefit from increased taxes and the nation would benefit from increased production and greater employment.

The Ambassador fully realizes that strong opposition would be encountered to effective land-reform measures. He knows the present system is an inheritance from Spanish practices. Nobles and favorites acquired lands from the Spanish Crown, upon which they paid no taxes. They allowed peasants to till the soil under the old feudal system and gathered the profits of production. When the feudal system went out, portions of its structure remained. Basic changes are slow to come.

But he believes that President Magsaysay could get a land-reform program in the form of a bill passed by the Congress in spite of the opposition.

"Let the Congress vote openly on such a bill," said Ambassador Spruance. "Let the people know who opposes land reform. It takes a lot of political courage for a congressman to stand up and oppose the will of the people."

The position of the landowner who actively opposes reform is not basically sound, the Ambassador believes. He is perpetuating conditions of unrest which can lead to serious consequences and the loss of his own property and position through uncontrolled disorder. In the long run he is hurting himself.

It is the same with the wealthy person who appeases and contributes secretly to communism and Communist causes, in order to hedge against what he believes to be a possible victory for Russia and China after the dust has settled. A man has only to look at what has happened in every Communist-controlled nation. The help of the rich is welcomed so long as it is useful. When the Communists are in control then the landowners are the first to be put to death, as in China.

The landowner's only sensible course of thought and action is to resist communism with all his strength and to help create conditions under which communism cannot thrive. Promotion of land reform is one way to help create such conditions.

On questions of land reform Ambassador Spruance is not speaking merely from experience gained in the Philippines. Strange as it may seem for a man with a distinguished naval career behind him, he has been a student of land reform for many years. While climbing the promotion ladder in the United States Navy his hobby was reading on the economics of land tenure. The knowledge gained was useful to him as an Ambassador and statesman.

Admiral Spruance—the title comes more naturally to him than Ambassador

Spruance—has become known as the quiet Ambassador. He simply does not do any unnecessary talking, in public or in private, but when he does speak he always has something worth saying. In consequence he has established and retained the deep and often affectionate respect of both Filipinos and Americans. The parting tributes paid to him would be much more numerous and elaborate if he would permit himself to be lionized. He does not permit it. He shuns expressions of gratitude as he does publicity.

Admiral Spruance is 68. He was born July 3, 1886 in Baltimore, Md. and was graduated from the United States Naval Academy in 1906. His naval career was steadily brilliant but never spectacular until his responsibilities in the war of the Pacific brought him into the limelight in spite of himself. He has been credited with turning defeat into victory for the democratic powers at the Battle of Midway on June 4, 1942. A noted naval historian, Adm. Samuel Eliot Morison, has written that Admiral Spruance's wise command decisions "made it possible to change the course of history in 2 minutes." Spruance shared honors with a colleague, Adm. Frank Jack Fletcher, each having a task force under command at the time.

Spruance and Fletcher were badly outnumbered. Adm. Chester Nimitz's Pacific Fleet, crippled at Pearl Harbor, could muster only 3 large carriers against Japan's 4 to 6. Japan had 11 battleships against none for the Americans, 14 heavy cruisers against 8, and 45 destroyers against 15. Thanks to knowledge of Japan's top secret naval codes the American Navy was able to deploy its outnumbered ships to the right places at the right time. The Japanese won the first rounds, destroying or driving off all American planes sent against them without damage to themselves. Then Admiral Nagumo's luck ran out—or rather, as Morison says, Spruance and Fletcher had been making some better command decisions than Nagumo.

While Nagumo was ordering his carriers to switch from bombs and torpedoes for hitting the American warships to incendiary and fragmentation missiles for a second attack on Midway, air groups from the three American carriers were on their way to attack the Japanese.

Within a few minutes the dive bombers found and hit the Japanese carriers *Akagi* and *Kaga* and a few minutes later the *Soryu*. The fourth, the *Hiryu*, remained undamaged, to deal a mortal blow to the American carrier *Yorktown* but was knocked out later in the day. Japan's finest pilots and planes went to the bottom of the Pacific. The slow march back to liberation could now begin. Said Morison:

"It was a victory of brave and skillful aviators of intelligence intelligently applied, and of wise command decisions. Fletcher did well, and Spruance's performance was superb."

For his services at Midway, Admiral Spruance won the Distinguished Service Medal and a Presidential Unit Citation. In August of 1943 he became commander of the Central Pacific Force, which designation was changed the following April to commander of the 5th Fleet. He had already received two gold stars in recognition of the second and third Distinguished Service Medals in engagements ranging all over the central and western Pacific. For his accomplishments with the 5th Fleet he was given the Navy Cross. The citation read: "For extraordinary heroism * * * during the invasion and capture of Iwo Jima, Volcano Islands, and Okinawa. * * * Responsible for the operation of a vast and complicated organization which included more than 500,000 men, 318 combat vessels, 1,139 auxiliary vessels, Admiral Spruance directed the forces under his command with daring, courage, and aggressiveness."

He was awarded another Distinguished Service Medal by the Army, many of whose men he had under his command during the Pacific operations. In 1945 he relieved Admiral Nimitz at Pearl Harbor as commander in chief, Pacific Fleet and Pacific Ocean areas. Later he was ordered to duty as President of the Naval War College and was retired in 1948.

Admiral Spruance could wear a chestful of medals beside the ones mentioned, but he almost never does. As Ambassador he dresses like any civilian in the tropics. He has been decorated by Greece, Great Britain, and Belgium.

In June of 1954 the Spruances went to the United States for a brief visit, during which the admiral received an honorary degree of doctor of laws from Yale University. The tribute paid to him at that time was as follows:

"Twelve years and three days ago the dawn of a day broke in mid-Pacific which was to make the names of *Midway*, *Enterprise*, and *Hornet* forever glorious in our history. It has been said of that day that 'you emerged from battle one of the greatest fighting and thinking admirals in American history.'

"At the end of the war, after serving as president of the Naval War College, you answered the call of duty to serve in a new and even more exacting role as Ambassador of your country. As such you have become a strong friend and wise counselor to a young nation struggling with almost overpowering problems; rarely has it fallen to a man to nourish in peace a country whose freedom he did so much to save in war.

"Tireless in preparation, never deflected from your mission, considerate of your subordinates, loyal to your superiors, you are the very ideal of the captain's admiral. In only one effort have you failed—to conceal the genuine and generous warmth of heart which powers your nature. Honoring you as one of the most useful and trusted citizens of our time, Yale confers upon you the degree of doctor of laws."

That was the kind of man that took over the exacting and trying duties of Ambassador to the Philippines in 1952. Rarely in the public eye, never in the limelight, his successful discharge of duties as Ambassador is reflected in the present state of cordial relations between the two countries. They were never better.

There have been disappointments, the Ambassador admits. He wishes that pending questions concerning American military bases in the Philippines and American Government ownership of property in the Philippines had been settled, as they should have been, long ago. But Philippine officialdom has never seen fit to settle down and talk out the problems clearly presented to them.

The political pressures confronting President Magsaysay are a source of regret to the Ambassador, and, one suspects, strong sympathy for a harassed chief executive. It is his expressed hope that President Magsaysay will more fully realize and make use of the powers that are his, conferred by an admiring and loyal political following throughout the nation. He feels that assertion of authority would melt a large part of the opposition and make the nation's multitudinous economic and social problems easier of solution.

The Spruance brand of diplomacy is an iron hand in a velvet glove. It has worked well here in all his relationships.

Everybody's Against Sin, But Not Subsidies

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the RECORD an interesting article on subsidies prepared by Mr. Clay Cochran, staff economist of the National Rural Electric Cooperative Association. The article which follows appeared in the May issue of Rural Electrification magazine. Here is Mr. Cochran's article, which I recommend to my colleagues:

Subsidies are an ancient practice and problem. Technically, I guess, the oldest subsidy of which there is any record was the gift to Adam and Eve of the Garden of Eden.

As I recall the story, the Lord gave Adam and his spouse quite a nice setup and forbade them only one thing—the fruit from one of the trees. This was a fine, generous subsidy and should have satisfied anyone, but Eve, apparently a monopolist at heart, couldn't bear the thought of being denied anything so she connived to violate the subsidy agreement.

To achieve this end, she began to feed Adam propaganda about the matter, and attributed the propaganda to a forerunner of the modern Wall Street lobbyist. Adam, a simple and honest consumer at heart, ended up helping Eve achieve her monopolistic design, not because he was evil, but just because he didn't keep his wits about him. The result was that greed led to the cancellation of the whole subsidy arrangement, and Adam and Eve both had to go to work.

Since that first subsidy, we have had subsidies of numerous and varied types. Some subsidies are nice straightforward deals, out on the table, in the open. In the old days in England, the Parliament would tax the people and turn the money over to the king who used much of it up in high living but used part of it for public purposes. This money was openly referred to as a subsidy. But open subsidies are very rare in modern society. We have become very subtle. We find devious ways of giving subsidies, and the ways are so devious that many of the people never realize that a subsidy is being given.

The dictionary says that a subsidy is "a government grant to assist a private enterprise deemed advantageous to the public." The history of this country is full of instances of subsidy. Early organizers of colonies on this continent were paid subsidies in money for each settler they brought in; others were paid subsidies in land for establishing colonies and building forts. The gifts in land, in some instances as in New York, enabled the colonizer to levy rents and taxes upon his colonists—a kind of continuing subsidy to him with the free land as a base on which to collect it.

Less than a century ago the Congress voted millions of acres of land as a gift to the railroad promoters for building railroads across the country. This is one of the greatest single subsidies in our history.

JUMBO-SIZED SUBSIDY

But the greatest subsidy in this Nation was and is the tariff system, which has been in effect 125 years. It is also one of the more subtle subsidies. It was not a cash grant nor a grant in land, nor any other visible form. It was simply a Chinese wall built around the United States to keep goods out and which, in effect, levied a tax upon the American consumer. The immediate benefits of the tariff went to the investors and managers of manufacturing establishments, and the job protection for workers in tariff-protected industries is only a secondary and temporary benefit. And the tariff was and remains a clear subsidy designed to promote domestic manufacturing and other lines of activity at the expense of the community at large.

Subsidies in our society are common as sin, but subsidies, unlike sin, are not necessarily bad. Remember the definition of a subsidy: "It is a payment by government, direct or indirect, to assist a private enterprise deemed advantageous to the public."

THE SUBSIDY BLUES

Most people who get subsidies don't like to admit they are subsidized. This is partly because most people don't understand that subsidies are an ancient and honorable way of getting something done which the community desires to have done. But that is not all. Most people object to being called subsidized because they are always afraid that somebody will try to take the subsidy away or reduce it. It is frequently as painful to have part of your subsidy removed as it is to have part of your stomach removed. Another reason that some line of business enterprise objects to the public knowing it is subsidized is because this same business is busy denouncing subsidy to some other group.

People who live in subsidized glasshouses should not throw propaganda rocks. All of you have listened to or read the propaganda of the so-called investor-owned, business-managed, taxpaying private electric companies. In their propaganda, these poor, downtrodden electric sharecroppers—worth only about $26 billion—have wailed about their sad problems, about the unfair subsidies which they claim the Government gives to rural-electric cooperatives and the Federal power program.

All the while their profits have risen, dividends have increased, and the prices of their securities have passed or are passing the giddy peaks of 1929.

PUTTING UP A FRONT

The private electric companies operate through more fronts than you can poke a stick at, and each front peddles a different line of propaganda. But whether you are getting propaganda from the National Association of Electric Companies, the Edison Electric Institute, the Public Information Program, Ebasco Services, N. W. Ayres Co., Bozell & Jacobs (the public relations firm), Electric World, Industrial News Review, the Association of State Chambers of Commerce, the United States Chamber of Commerce, the National Tax Equality Association, or Dixon and Yates—they all echo the charge that rural-electric cooperatives and the Federal power program are subsidized, whereas the investor-owned, business-managed, taxpaying private electric companies pay their own way; that is they receive no subsidies.

By comparison, the co-ops are charged with receiving a variety of subsidies. According to the propaganda, the co-ops pay no taxes, get their money at a subsidized interest rate, and get services from REA which they do not pay for. Then there is the Federal power program which, according to the propaganda, doesn't pay its own way. The Federal power agencies, so the utilities say, do not pay off their capital costs, do not pay enough interest, do not pay taxes, and so on and on. And the cooperatives, over 300 of them, purchase part or all of their power from Federal agencies—so they are tarred with two subsidy brushes—one marked anticooperative propaganda and the other marked anti-Federal power propaganda.

So here we have the power company mural—electric co-ops rolling in subsidy—private utilities efficiently managed, pure and sweet, thrifty, clean, and unsubsidized, generously digging into their bank accounts to pay taxes co-ops evade.

TURNABOUT UNFAIR PLAY?

Now, what about these subsidies? First, on our side: Electric co-ops in most states pay all the taxes any private electric company pays except Federal income taxes because co-ops make no profit and corporation income taxes are levied on profits. Any private electric company can reduce its income taxes by reducing its profits and it can stop paying income taxes altogether by stopping profit making, in other words, by becoming a cooperative. Can you imagine what screams we would hear if the rural electric cooperatives began to demand that all electric companies become nonprofit, either public or cooperative? But the same, poor, thrifty, hard-working, barefoot boys, by demanding that we make profits and pay taxes on them, are in essence demanding that all cooperatives change themselves into profitmaking corporations.

Moreover, all of us know that the owners of private electric companies do not pay the Federal income taxes. Those taxes are paid by the electric ratepayer, by the electric consumer, and the owners go ahead tucking away their 6 to 20 percent in profit over and above Federal income taxes, not counting what they can hide from the tax collector.

So much for this "you don't pay taxes" propaganda. It is in actuality an attempt to destroy all cooperatives. Fairness has nothing to do with the matter.

Now on interest rates: REA borrowers pay 2 percent per year on their loans. Utility companies say they have to make at least 6 percent after taxes to stay in business and they typically end up making more than 6 percent even on the basis of their own bookkeeping. But the measure of a subsidy is not 2 percent or 6 percent; the measure is whether all of the people are having to subsidize our 2 percent interest.

THE 2 PERCENT QUESTION

The question to us then is this: Does or can the Federal Government borrow money for 2 percent or less? If so, then we can borrow that money at 2 percent without enjoying a subsidy. The facts are that for many years the Federal Government has borrowed billions for 2 percent or less. According to the latest Treasury report on September 30, the Federal Government had borrowed $60 billion on which the interest rate was 2 percent or less. The REA interest rate is not and never has been subsidized. According to REA Administrator Ancher Nelsen's 1953 annual report, REA had netted over $45 million in its lending operations down to that time, and his figures are on the conservative side.

If the private utilities think the 2 percent REA money is subsidized, why don't they—why did they not in earlier years—borrow a few billion and do the job of rural electrification? You know why. One basic reason was that they did not want 2 percent money which had to be repaid. Private utilities do not pay off their indebtedness—it just climbs and climbs—and on top of that, the owners of private utilities are not interested in borrowing money from the Federal Government at 2 percent because those owners happen to be the very same people who are lending money to the private companies and getting a return of from 2½ percent to 20 percent.

I think the rural electrics should make this standing offer to the private electric companies; we will help them at any time to get the Congress to lend them money at 2 percent, repayable in 35 years, provided that the savings are passed down to the electric consumer. You don't need to worry about their taking you up on the offer. They don't want to do business at 2 percent and pay off their debts and provide cheap power.

Now for a word on the Federal power program. The Federal power agencies are required by law to reimburse the Treasury for the costs of power facilities over a period of 40 to 50 years, depending on the agency. Note that carefully: They are required to pay for the total costs of power facilities to become debt-free. No private utility is required to become debt-free. But they have influenced the Congress to force the Federal power agencies to pay off in 40 or 50 years.

Moreover, the Congress requires Federal power agencies to pay 3 or 4 percent interest on the unamortized balance of the cost of Federal power facilities. This 3 or 4 percent rate is about the same as the rate paid by private companies on their bonded indebtedness. What is missing is the profits. Even profits tend to be balanced by the law forcing Federal agencies to pay off debts.

Thus when the propaganda fronts of the private electric companies cry subsidy on Federal power, what they are really crying for is this: (1) They want the competitive influence of the Federal yardstick destroyed, and (2) they want control of the Federal power facilities so they can squeeze a subsidy for their investor-owners of the electric consumer for selling the people the people's own power.

Of course, if they cannot get actual ownership of the Federal power facilities, they will settle for less: (1) They will agree to buy all the Federal power so that it can be blessed with profit before it comes to your farms, or (2) they will settle for a deal which will raise the price of Federal power so high that consumers of it will, in effect, be paying an extra tax to Uncle Sam.

Rural electric co-ops get 5.9 percent of Federal power. The private companies get over 20.7 percent, or nearly 4 times as much. If they believe their own prapaganda, their conscience must ache under the weight of the subsidy they receive.

OTHER SIDE OF THE COIN

But now let us turn the coin over: How about the subsidies to the investor-owned, taxpaying, business-managed companies controlled by the barefoot boys from Wall Street? Well, of course, everybody knows that they get no subsidies. Well, almost everybody knows they get no subsidies. Anyway, their subsidies are so big, maybe they ought to be called by some other name.

"Boss, there ain't nobody here but us chickens."

I have the figures on one subsidy to the private power companies since June 9, 1951, when the new section 124–A of the Internal Revenue Act was put into effect. And, sad to relate, even these figures would be a dark secret or a confused story if your own National Association and the Electric Consumers Information Committee hadn't done the job.

Section 124–A is a real innocent-sounding section. It provides that upon certification by the appropriate agency a corporation can indulge in accelerated tax amortization or rapid tax writeoffs.

Section 124–A gave ODM (Office of Defense Mobilization) the right to issue certificates to permit a corporation to speed up the write-off, to speed up the depreciation of private power facilities.

With this certificate, the power company could deduct one-fifth or 20 percent of the cost of the certified facilities each year for 5 years from its gross revenues. In other words, the company could subtract 20 percent of the cost of certified facilities each year for 5 years instead of deducting 3 or 3½ percent before taxes.

At the very best, this means that the power company gets to withhold Federal income

taxes for many, many years and these withheld or deferred taxes are actually an interest-free loan.

Just try it on yourself. If the Federal Government passes a law saying that for the next 5 years you could figure up your Federal income tax, and then keep half of it yourself with the understanding that you would repay it, beginning 5 years later at about 3 percent a year and no interest—wouldn't you consider that an interest-free loan?

The Federal Power Commission says the tax write-off subsidy is an "interest-free loan" to the private power companies. I estimate the value of the interest-free loan to be the total of what it would cost the company to float the loan plus compound interest for the period the interest-free loan is outstanding.

From June 9, 1951, until certification was suspended December 1953, the private utilities were granted rapid write-off certificates of nearly $2 billion. This means that between 1951 and about 1984, these companies will have the use of all or part of $860-odd-million—interest free.

Now, since the unwilling electric consumer, or Federal taxpayer—take your choice of victims—has been forced to make these interest-free loans to the power companies, we obviously should figure in a reasonable interest charge. Not that the companies will pay any interest; we are just trying to measure the size of the subsidy.

What is a reasonable interest change? I can't say precisely because I've always liked low interest rates, but since we are figuring this for the power companies, let us take their figures. They say they can't do business on less than 6 percent, rain or shine, war or peace.

So be it. I took the total interest-free loans, assumed they would repay it over 33 years, and charged them their own 6 percent interest rate, compounded annually. Computed this way, the total subsidy is $2.9 billion. I want to remind you that this is not the arithmetic of a New Deal bureaucrat, or a giveaway politician, because Ebasco computed them the same way. And Ebasco is as pure as pure can be.

Although the figures may sound fantastically large, as they are, the formula used in the same one recommended by Ebasco, the engineering, construction, accounting, propaganda outfit that took over where the old Electric Bond & Share Co. left off. In this case, the private utilities and I are in agreement on the estimated size of the subsidy.

Now almost $3 billion in subsidy is more than most people can picture. It is a large number of dimes or even quarters.

It is in fact about $500 million more than the total of all REA loans made from 1935 through 1954. In other words, Congress has given the private utilities more than the total of all REA loans—and they accuse us of getting a subsidy although we are required to repay our loans plus 2 percent interest.

Who's subsidized?

Col. Commandant Michael de Kovats

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. DODD. Mr. Speaker, 176 years ago today a great liberty-loving and heroic Hungarian soldier gave his life for the United States of America. This man was Michael de Kovats, of Hungary.

Wars for freedom generally rekindle dormant and slumbering emotions in many hearts. If the cause is a just and righteous cause, a popular and sacred cause, then it is bound to attract numerous adherents, even from the ranks of those who are not directly involved in the struggle.

The American Revolution was a popular and sacred cause, and the men who flocked to the defense of the colonists from many parts of the world and gladly gave their lives may be counted in the thousands. Among the most distinguished of such valiant and brave men was Michael de Kovats of Hungary.

Not enough is known of this remarkable man. It is generally believed that he was born in the year 1724. He had military service in his early life, and won his spurs in the service of Frederick the Great of Prussia. Then, early in our Revolutionary War, he arrived in this country. Here he met Pulaski. Later, upon Pulaski's recommendation, he was authorized by Washington to be the Colonel Commandant of the Pulaski Legion. In that capacity he led the charge against General Prevost at Charleston in May, 1779. There on May 11 he was mortally wounded and gave his life that our country might be born.

This very brief outline cannot do full justice to the memory of that brave and devoted servant of democracy and freedom. But we who are always grateful to those who gave their lives in our war of independence sincerely honor today the memory of that great soldier of freedom, Michael de Kovats.

All Americans are grateful to this great Hungarian and all Americans of Hungarian descent must take great pride in his heroism and patriotism.

Help by United States Called Vital for Bolivia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MULTER. Mr. Speaker, the following article, written by A. T. Steele, which appeared in the May 1, 1955, issue of the New York Herald Tribune is deserving of our attention:

HELP BY UNITED STATES CALLED VITAL FOR BOLIVIA—CHAOS IS FEARED IF IT SHOULD END

(By A. T. Steele)

LA PAZ, BOLIVIA, April 30.—The Foreign Minister of Bolivia, Walter Guevara Arce, was quite definite about it. "United States economic aid," he said, "is absolutely essential to continued stability in Bolivia. The alternative is chaos and possibly communism."

Many foreign observers will agree that this is a realistic estimate of the situation in this country.

It was 2 years ago, with some qualms, that the United States embarked on a program of economic assistance to Bolivia's leftish revolutionary regime. It was a tough decision that involved a calculated risk. So far, the policy has paid off, though some risk remains. But for the stabilizing influence of the American aid program it is possible, even probable, that Bolivia would today have a government similar in orientation to that of the old Arbenz regime in Guatemala.

STILL FACES STRUGGLE

Instead, the moderate wing of the ruling party, led by Dr. Victor Paz Estenssoro, has managed to remain in power. And not only has the regime evidenced increasing friendship for the United States; it has also shown increasing distaste for the Bolivian Communists and their tactics.

But the regime is still a revolutionary one and is still struggling, with great difficulty, to make effective its revolutionary program. When the revolutionary party, the Movemiento Nacional Revolucionario (MNR), came into power in 1952, it cut virtually all ties with the past.

It nationalized the three major tin mines, which were the main prop of the country's economy. It adopted a program of agrarian reform. It proclaimed universal suffrage for all adults, regardless of educational or property qualifications. It dissolved the conservatively minded army as it then existed and passed out tens of thousands of firearms to miners, Indian farmers, and "peoples" organizations.

Though the army has since been rebuilt on a reduced scale, the bulk of the armed strength is still in the hands of the miners and campesinos. This is the most important political fact in Bolivia today. No government that does not satisfy these people can long survive.

TIN PRICES A FACTOR

The path of the Paz Estenssoro regime would have been much easier had it not been for the fall in the price of tin, which hit basement soon after the revolution. Since Bolivia had to sell tin at a good price in order to buy enough food to keep its population from starving, the collapse of the tin market created a desperate situation. United States aid—mostly in the form of foodstuffs—has helped the regime weather the storm.

There is no doubt but that the ex-economics professor who heads the Government in Bolivia is a popular leader. That must have been evident to anybody who witnessed the huge demonstration here recently on the third anniversary of the revolution and studied the faces of the paraders as they marched by the presidential balcony for nearly 6 hours.

Besides Paz Estenssoro, however, and a small group of able persons around him, there are few persons of outstanding administrative talent in the Bolivian Government. This is one of the weaknesses of the revolution, and it accounts for much of the inefficiency and confusion that is to be found in the Government departments.

The ruling regime is up to its ears in problems, most of them economic. Inflation is giving the most trouble, with the dollar quoted (at this writing) at around 2,800 bolivianos. The inflationary poison is fed by the necessity of subsidizing the production of tin at a cost far in excess of the price received. Agrarian reform has gone slowly and haltingly, except in the Cochabamba area, and in some cases the authorities have had difficulty restraining peasants from taking the law into their own hands.

ELECTIONS PROMISED

The Government of Bolivia is still essentially a one-party government, but President Paz Estenssora has promised general elections next year. In this balloting (probably in March), the people will elect not only a president but also a legislative body. Meanwhile, the Government rules by decree. The ruling party—the M. N. R.—is made of widely disparate elements, ranging from middle-

of-the-road to far left, with Paz serving as the balance wheel.

Opposition to the Government comes from extreme right and extreme left. The right-wing underground, called the Falange, is capable of stirring up occasional incidents, as shown by the abortive Cochabamba uprising in November 1953.

However, the organization appears to have little popular following. The greater danger is from the extreme left, where the Bolivian Communist Party and the Revolutionary Workers Party (Trotskyist) are working constantly to infiltrate labor and peasant unions and to undermine the Government's position.

Military Law

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1955

Mr. FOGARTY. Mr. Speaker, recently, John V. Thornton, adjunct associate professor of law at New York University School of Law, wrote an interesting article on military law. Mr. Thornton's article illumines the court's problems, compares it with civilian tribunals, both as to volume of work handled and similarity of legal concepts, and evaluates its decisions.

The judges on the court's bench are commended; at one point being portrayed in the superlative. The difficult status of the Court of Military Appeals as a court is referred to and the seriousness of its indeterminate status reflected upon. Scattered antipathy to the code is noted which gives vent to our prospective approval of any and all measures to achieve for the court the complete respect of the military hierarchy.

The scope of work confronting the court in its treatment of the appeals of American prisoners of war who collaborated in varying degrees with the Communists in Korea is not magnified by the article as the problem bespeaks great importance to all of us.

I insert this article herewith as a part of my remarks to urge life tenure for the judges of this commended court as an important step toward obtaining for it the dignity it has so earnestly merited and richly deserves:

MILITARY LAW

(By John V. Thornton)

Few civilian lawyers are aware of the huge volume of court-martial litigation. Approximately 450,000 courts-martial were held during the first 19 months after the new Uniform Code of Military Justice went into effect on May 31, 1951.[1] This is an average of over 1,000 trials every working day. During the first 2½ years of the code almost 50,000 cases were reviewed by boards of review (the intermediate appellate courts in the revised military justice system), and over 4,000 reached the Court of Military Appeals, the newly established civilian "supreme court" for military cases.[2] During 1953 alone that 3-judge bench passed upon some 2,400 appeals and petitions for leave to appeal,[3] compared with about 700 appeals and contested motions decided during the latest year for which data is available by one of the busiest State courts of last resort, the seven-judge New York Court of Appeals.[4] Since it is directed mainly to a civilian audience, the present article does not discuss the numerous decisions of the Court of Military Appeals dealing with the substantive law of military crimes or with other technical matters peculiar to the military system. The effort is rather to throw light on more basic problems, such as the fairness of military procedure and the rights of servicemen under the new code.[5] Civilian lawyers may find decisions in these areas not only of general interest but also of practical value as precedents in constitutional and criminal law. Since the concepts of military and civilian law have now coalesced to a considerable degree, it is likely that the excellent opinions of the Court of Military Appeals will be cited more and more before civilian tribunals.

I

Military jurisdiction

With the many new safeguards afforded accused persons within the military law system under the Uniform Code, it might be supposed that the number of habeas corpus applications to the civil courts would drop off sharply. So far as the reported decisions indicate, however, this has not happened. Indeed, it may be that the number of such applications is actually on the increase. A possible explanation is that the Court of Military Appeals has defined certain minimum standards or "military due process" which must be accorded servicemen under the new code, and some offenders sentenced in precode days are bringing habeas corpus proceedings in an effort to establish that they too were entitled to the protection of these standards. Another factor in stimulating such applications may be the recent decision in *Burns* v. *Wilson*,[6] wherein the Supreme Court for the first time ruled that the fifth amendment's guaranty of due process has some application to military trials, though it refused to equate the scope of review in military cases with that in civilian cases.

Thus far the precode offenders have not fared too well. It seems evident that the civil courts are not going to set themselves up as a super review board over these old convictions. Typical of their attitude is *White* v. *Humphrey*,[7] involving a serviceman convicted of murder under the old Articles of War. He demonstrated very convincingly that the law member (judge) of his court-martial had failed to instruct in open court on the elements of the crime and showed that such a failure is reversible error under the decisions of the Court of Military Appeals construing the new code. The third circuit pointed out, however, that the former Articles of War, in contrast to the code, did not require instructions in open court, and, since the absence of such instructions did not result in the denial of a basically fair trial * * * in violation of the constitutional concept of due process," [8] a civil court could not interfere.

Somewhat along the same lines is a case wherein petitioner claimed a denial of the constitutional rights of due process and confrontation in his trial for violation of the articles of war.[9] While recognizing that *Burns* v. *Wilson* expands somewhat the jurisdiction of the civil courts in military cases, the 10th circuit found that it was limited under that decision to inquiring whether the military authorities had fully and fairly considered the questions sought to be raised in the habeas corpus action. Since such consideration had been given, civilian inquiry was at an end.[10]

It would seem that these cases were correctly decided. It is unfortunate that military law prior to the code lacked some of the safeguards which have for years been commonplace in civilian trials. But clearly, convictions under the old law were not for that reason alone rendered constitutionally defective, and absent some fundamental unfairness, they should not now be laid open to collateral attack.

A newcomer to military law, article 3 (a) of the uniform code, provides in substance that one who, while under military jurisdiction, commits an offense punishable by confinement of 5 years or more, remains subject to that jurisdiction despite termination of this military status, if he cannot be tried in the civilian courts of the United States.[11] A discharged serviceman was seized in Pittsburgh by Air Force police under the authority of this article and immediately flown to Korea to answer a charge of having committed murder while in the service there. In short order a United States district court, perhaps incensed at what it regarded as high-handed action by the military, released the veteran in a habeas corpus proceeding.[12] As last year's Survey noted, there was great doubt as to the correctness of the district court's ruling,[13] and the case has now been reversed by the Court of Appeals for the District of Columbia.[14] The higher tribunal took the view that article 3 (a) was constitutional, that the proceedings against the accused were court-martial proceedings, and that he was not entitled to a presentment or indictment since the fifth amendment's guarantee in this regard specifically excepts "cases arising in the land or naval forces." Moreover, due process did not require that the accused receive a preliminary civil hearing before being removed to the jurisdiction of the military courts.

The Supreme Court has granted certiorari,[15] and it will be interesting to see the reaction of the high bench to the case. A number of law review writers have taken the position that Article 3 (a) is unconstitutional,[16] and the question is certainly not free from doubt. My own view is that the article is a necessity to avoid miscarriages of justice, and, in the light of a long line of authorities dealing with a related statute,[17] is probably not subject to constitutional challenge. Nonetheless, as a matter of policy, and as a means of preventing friction in military-civilian relations, Congress might well consider the desirability of granting jurisdiction to the Federal district courts to try such cases.[18] At the least some kind of preliminary civil hearing could be provided before a veteran is transported halfway around the world for a military trial.[19]

The foregoing cases sought civil review of the judgments of military courts by the traditional route of habeas corpus. A novel method of attack was pursued in one of the most significant decisions of the year. There the Court of Appeals for the District of Columbia ruled in a case of first impression that it could not directly review decisions of the Court of Military Appeals, which is, as before stated, the highest "court" in the military system.[20] The petitioning servicemen urged that jurisdiction derived from a court of appeals rule permitting review of orders of administrative agencies. It was held, however, that the Court of Military Appeals "appears to be a cout in every significant aspect, rather than an administrative agency," and further that, even if it was "for some purposes" an administrative agency, the court rule in question was ineffective to grant jurisdiction. The rule merely prescribed the procedure for exercising jurisdiction over those cases which Congress had specially authorized civil courts to review.

The decision seems thoroughly correct. In view of the equivocal nature of the opinion, however, the difficult question of the precise

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

status of the Court of Military Appeals as a "court" cannot be regarded as settled. As a former commissioner of the court has pointed out, this status problem is no mere academic one.[21] Upon its answer may turn the court's power to decide constitutional questions and issue writs and orders in aid of its jurisdiction as well as the binding effect in habeas corpus proceedings of its pronouncements on the law.[22] Clarifying legislation in this area would be welcome.

II

Composition and conduct of courts-martial

Impartial tribunal.—In general: After the findings of guilty had been returned in one case, there was introduced in evidence, for consideration on sentencing, a certified copy of an entry from accused's service record showing a previous conviction. The certification was signed by an officer who sat as a member of the court-martial throughout the trial. The Court of Military Appeals took the position that the officer was disqualified because he was "a witness for the prosecution" within the meaning of the Code and Manual,[23] and reversed the conviction.[24] It decided also that the principle of general projudice required reversal when the trial counsel (prosecutor) of a special court-martial thereafter acted as staff judge advocate (legal adviser) to the commanding officer on the latter's review of the case.[25] The decisions are to be commended.[26] Confidence in the actions of military courts can only be maintained when their integrity is kept free of any question.

Impartial tribunal.—Command influence: One of the important objectives of the Uniform Code was to elevate the court-martial to a more independent status, free of domination by the commanding officer.[27] Though Congress retained the old practice under which the commanding officer appoints the law officer (judge), the members of the court (jury), the trial counsel (prosecutor), and the defense counsel, and reviews the court's findings and sentence, it provided in article 37 of the Code:

"No authority convening a general, special, or summary court-martial, nor any other commanding officer, shall censure, reprimand, or admonish such court or any member, law officer, or counsel thereof, with respect to the findings or sentence adjudged by the court, or with respect to any other exercise of its or his functions in the conduct of the proceeding. No person * * * shall attempt to coerce or, by any unauthorized means, influence the action of a court-martial." [28]

The Court of Military Appeals is ever on the alert to detect instances of command influence, and, with the possible exception of one case,[29] has struck them down with vigor. Several particularly shocking instances of conduct violative of article 37 have manifested themselves this year. In one case an Army commander at a conference immediately prior to the trial of a theft case informed the members of the court-martial that court-martial cases received a thorough review and that they should not usurp the clemency prerogative of the reviewing authority. He also read excerpts from a letter from a higher command which pointed out the undesirability of light sentences in larcency cases and the impropriety of retaining thieves in the service and instructed commanders to recognize the performance of superior members of courts-martial by appropriate notations on their efficiency reports. It is perhaps superfluous to say that the court-martial promptly convicted the accused and sentenced him to a dishonorable discharge. As would be expected, the Court of Military Appeals unanimously reversed,[30] noting that the court-martial had been virtually coerced into adjudging the punitive discharge.

In another case a Navy commanding officer at a pretrial conference discussed the previous derelictions of the accused with at least three of the members of the court, informed them that a prior court-martial had adjudged a much too meager punishment, and suggested what the verdict should be. Again the Court of Military Appeals unanimously reversed.[31] In yet a third decision, the law officer (judge) granted a continuance in order to await action by the Secretary of the Navy to whom the accused (who had already been acquitted by a civilian court of the crime in question) had addressed a request, through regular channels, for termination of the proceedings against him. It was the claim of the accused that Navy policy forbade a military trial subsequent to a civilian acquittal. Two days after the law officer's ruling the commanding officer curtly informed that functionary that he did "not consider the desire of a man not to be tried a reasonable cause for delay" and condemned the law officer's ruling as an "abuse of discretion." The commanding officer was a rear admiral and the law officer, a lieutenant commander, so, needless to say, the trial resumed immediately. A conviction resulted, perhaps, as Judge Brosman noted in a concurring opinion, because the court realized that the admiral was actively interested in the outcome of the trial. The Court of Military Appeals again reversed,[32] but this time Judge Latimer dissented.[33]

It is depressing indeed to see these unfortunate instances of command influence creeping into the reformed system of military justice. The actions of the few officers who, deliberately or carelessly, engage in such practices can only operate to discredit the vast majority of their fellows who sincerely want the new code to succeed. Happily, cases of command influence seem to be relatively few and far between thus far, and, as the Court of Military Appeals cracks down on them, they are likely to diminish still further. On the other hand, there is no hiding the fact that a hard core of opposition to the code still exists, particularly among a small segment of the pre-World War II officers of the line. As one recently discharged Air Force legal officer puts it, "The reaction of these officers to the Uniform Code frequently ranged from mild antipathy to livid, and sometimes lurid, denunciation of the entire code and any person or group connected with it. * * * [I]f these can in any way disprove the desirability or effectiveness of the code—or hinder its operation without being too obvious about it—they will do so." [34] Such officers, well-intentioned but misguided, would do well to reflect that it was the occasional abuses of over-enthusiastic disciplinarians which gave the impetus to military justice reform after World War II. Had these abuses not occurred, the old system—which, whatever its theoretical deficiencies, was a reasonably good one in actual practice—would not have been displaced. If—and this is most unlikely—the few diehards succeed in sabotaging the reforms of the code, they are going to get from an aroused Congress and public just what they want least—another reform movement, but this time culminating in a military justice system entirely divorced from command and unresponsive to the needs of discipline.[35] It is my own judgment that the influence of these few officers is continually on the wane, and that military law is moving forward steadily towards that delicate balance of justice and discipline which is so essential and yet so difficult to achieve.

III

Personal liberties of servicemen

Right of free speech: The Court of Military Appeals has been concerned this year with a considerable number of what might be termed "civil rights" cases—that is, cases involving the personal liberties of servicemen. One of the most important of these was *United States* v. *Voorhees*,[36] in which each judge found it necessary to write a lengthy opinion agreeing in part and disagreeing in part with his brethren. (Parenthetically I might add that, though the Court of Military Appeals is one of the most brilliant benches in the Nation, its long suit is not conciseness of expression.[37])

In Voorhees the charges grew out of writings by the accused colonel concerning his experiences in Korea, some of which were highly critical of General MacArthur. He was alleged to have violated an Army regulation requiring clearance of writings through the appropriate security review authority for "deletion of classified matter and review for accuracy, propriety, and conformance to policy" before submission to a publisher. An applicable memorandum from former Secretary of Defense Johnson limited censorship to "deletion of matter which is classified for security reasons." All the judges agreed that review of the writings of military personnel for security reasons was not an unconstitutional abridgment of free speech. Two of them (Brosman and Latimer, JJ.) thought that the Army regulation, insofar as it required propriety and policy review, was illegal as in conflict with the Johnson memorandum, while the chief judge found it to be consistent therewith by construing the words propriety and policy as referable only to security matters. In Judge Brosman's view the Army regulation's "prior restraint" on the basis of propriety or policy was also unconstitutional under the first amendment. Judge Latimer, stressing the special needs of the military system, disagreed on this point, and Chief Judge Quinn, because of his construction of the regulation, found it unnecessary to pass upon the constitutional question. While the net result of these varying approaches was a ruling that prior restraint based on policy or propriety was unlawful in this particular case, the decision does not settle the issue from the constitutional standpoint.

Privilege against self-incrimination: Some time ago the Court of Military Appeals decided that an accused could not be required to furnish exemplars of his handwriting.[38] Now it has similarly held that he may not be forced to utter words for the purpose of voice identification.[39] The court, per Chief Judge Quinn, noted in a unanimous opinion that accused persons are "protected against this by both the Constitution [i. e., the fifth amendment] and the code.[40]

The judges also all agreed that the self-incrimination privilege was not violated when a sample of urine was taken from an accused, with his consent, by the use of a catheter.[41] But sharp disagreement arose when such a specimen was extracted while an accused was unconscious.[42] Judges Latimer and Brosman felt that self-incrimination was not involved since there was no "testimonial compulsion," or, as in the handwriting and voice cases, no active participation and affirmative conduct by the accused. Moreover, as there was no brutality or indecency in the process—unlike the famous stomach pump case [43]—those two judges opined that due process was not violated. Judge Brosman made it clear, however, that had the catherization been over the accused's protest, he would have regarded it as violative of military due process, though—apparently—Judge Latimer would not.[44] The chief judge on the other hand vigorously denounced the action of the authorities in the unconscious-man case as "shocking," "reprehensible," and "an invasion of the inherent right of privacy * * * prohibited not only by the fifth amendment to the Constitution * * * and * * * the Uniform Code

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

• • • but by natural and divine law as well." [45]

Also significant was a case wherein a soldier, suspected of housebreaking and larceny, was apprehended, and another prisoner assigned to watch him.[46] This prisoner, aptly characterized as a "good reliable rat," asked the soldier what he was in for, and in reply obtained most of the details of the larcenies. Article 31 (b) of the Code [47] provides that "no person" subject to it "shall interrogate, or request any statement from, an accused or a person suspected of an offense" without giving him the self-incrimination warning. Despite this broad language it was decided that the article is applicable only where the element of officiality attaches to the interrogation and hence was not intended to cover this kind of situation. The result seems thoroughly sustainable in the light of the statute's legislative history.[48]

Right to Speedy Trial: By virtue of the McNabb doctrine the Federal courts deny admissibility to a confession secured during the illegal detention of an accused.[49] This doctrine is not based on the self-incrimination privilege, but is simply a rule of evidence designed to insure that a person under arrest will be brought before a judicial officer without unnecessary delay. In *United States* v. *Moore* [50] an accused was taken into custody and questioned on a number of occasions over a 4-day period without charges being preferred, and the defense argued for the exclusion of incriminatory statements made during that time. The Court of Military Appeals pointed out, however, that article 33 of the Code requires only that charges be forwarded to the officer exercising general court-martial jurisdiction within 8 days after the accused is arrested,[51] and that the civilian requirement of very prompt arraignment has no counterpart in the military system. Aside from the special problems posed by a failure to warn under article 31, said the court, the basic criterion of admissibility of confessions in military law is simply voluntariness.[52]

The Moore case appears to be correctly decided. This is not to say that unreasonably long detention of military prisoners is not a serious problem. It most certainly is, and, according to one observer, occurs in a substantial number of cases, mainly because of carelessness in making investigative reports promptly and correctly.[53] But the remedy for such difficulties would seem to lie in improving the efficiency of the administrative machinery rather than in trying to fashion some sort of McNabb rule for the military.

Protection against search and seizure: The Court of Military Appeals has sometimes been criticized for the wide powers it has granted the military authorities in making searches of their personnel.[54] The court, however, does not seem disposed to abandon its approach to this problem. Thus, in *United States* v. *Swanson* [55] a unanimous bench held that a field first sergeant of a gun battery in bivouac could, when the battery officers were absent and not expected to return for an appreciable time, order a search to recover money stolen from a member of the unit. The court found this action to be lawful, as within the manual's description of "a search under circumstances demanding immediate action to prevent the removal or disposal of property believed on reasonable grounds to be criminal goods." [56] The search being lawful, the fruits thereof were admissible in evidence under the doctrine of *Weeks* v. *United States*.[57] Swanson represents, in Judge Brosman's opinion, "as far as [the court] should ever go," and he dissented in another case wherein his brethren found a search by a first sergeant lawful when the necessity was considerably less compelling.[58]

Judge Brosman may well have a point when he complains that the court in the search area is riding "a good horse to death." [59] Possibly the court is not overly impressed with the general wisdom of the Weeks doctrine which excludes evidence obtained through illegal search,[60] and thus allows one criminal to escape because of the actions of another wrongdoer. But, since it is committed to that principle, it should not subvert the rule by the indirect device of expanding unduly the definition of a legal search.

IV

Status of forces agreements

It was noted last year that agreements had been reached with certain of our allies under which they were granted the primary right to exercise criminal jurisdiction over members of United States Armed Forces abroad except for offenses committed against United States property, security, or personnel.[61] In an effort to insure the maximum protection for servicemen arrested under these agreements, the Department of Defense has issued instructions requiring commanding officers to examine the laws of the foreign countries involved, with particular reference to procedural safeguards afforded an accused, and to request the foreign country to waive jurisdiction where such safeguards are not available.[62] In the majority of instances, the Defense Department states, the sentences imposed in the foreign courts have been extremely light.[63]

V

Prisoners of war

The American POW's who collaborated in varying degrees with the Communists in Korea have presented a difficult problem. Doubtless many of them were subjected to physical torture and "brainwashing" of a kind never before experienced by Americans, yet condoning their actions might well have a dangerous impact on morale and discipline. The services seem to be taking a middle road, trying only the most aggravated cases, and handling the others through administrative channels.

By the early spring of 1954 the Army had more than 200 case histories of men still in uniform who, on the basis of repeated accusations, were possible flagrant cases. This number represented about 6 percent of the total of Army prisoners in Korean camps. The original list of 200 was pruned to less than 50 by teams of legal and intelligence experts, and as of October 1954, two corporals and a colonel had been convicted,[64] and some 35 more trials were expected.[65] The Air Force originally had about 80 cases of suspected misconduct, and has reduced that list to about 10.[66] A Marine Corps court of inquiry determined in that service's leading case that a colonel who, under severe pressure, confessed to germ warfare should not be court-martialed, but the comandant of the Corps ruled that his future assignments should be such as to make only minimum demands upon leadership capacity.[67]

VI

Improvements in the code

The second Annual Report of the Court of Military Appeals and the Judge Advocates General (the top legal officers of the services) has now appeared.[68] Unlike the first report,[69] the second details numerous changes in the code which are recommended by both the court and the Judge Advocates General. Some of the more important of these recommendations, with my comments thereon, are as follows:

1. To authorize, where the accused so requests, a one-officer court (consisting of a qualified law officer) to accept a plea of guilty and adjudge a sentence in all general court-martial cases, except capital ones, in lieu of the present practice of convening a full court-martial. This appears desirable. It assimilates military to civilian procedure and saves cost and the time of officers in the guilty plea cases.

2. To authorize, where the accused so requests, a one-officer court (consisting of an officer certified as competent by the Judge Advocate General) to try special court-martial cases, in lieu of the present three-officer court without legal qualifications. This appears desirable. One qualified lawyer would seem to be able to handle these cases, and savings in cost and time of officers will result.

3. To make final the ruling of the law officer (judge) on a motion for a finding of not guilty, in lieu of the present procedure which permits the members of the court-martial (jury) to overturn the ruling. This appears desirable. It assimilates military to civilian procedure. Furthermore, the question is predominantly a legal one suitable for final disposition by the law officer.

4. To limit review by a board of review, in cases involving pleas of guilty, to those where the accused files a notice of appeal within 5 days, in lieu of the present practice of automatic review. This appears desirable. Automatic review in these cases is largely a waste of money and effort.

5. To enlarge the prohibition against censure of courts-martial by commanding officers to include their staff officers. The desirability of this is obvious.

6. To reduce from 30 to 15 days the period for filing a petition for review to the Court of Military Appeals. This appears desirable. The 30-day period has caused considerable difficulty in prisoner processing and seems unnecessary to protect the accused.

7. To extend from 1 year to 2 years the period for filing a petition for a new trial. This appears desirable. It assimilates military to (Federal) civilian procedure.

8. To increase authorized maximums for nonjudicial punishment so as to allow punishment not to exceed forfeiture of one-half of one's months pay per month for 2 months in the case of officers, and not to exceed the loss of one-half month's pay for a period of 1 month, or confinement up to 7 days, in the case of enlisted personnel. This appears desirable. The code as presently written does not give commanding officers adequate authority to deal with minor offenses without the stigma of court-martial convictions.[70]

The Judge Advocates Association, an affiliated organization of the American Bar Association composed of present and former lawyers of the Armed Forces, has gone on record in support of these and other recommendations contained in the report.[71] It has also added proposals of its own, namely, that the power to review sentences now vested in the boards of review (the intermediate appellate courts of the military system) should be transferred to the Judge Advocates General, and the Court of Military Appeals should be given power to review questions of fact and sentences.[72] Another observer has recommended that the law officer, by analogy to the civilian judge, be given authority to administer the sentence at the trial level rather than have that power, as at present, lodged in the members of the court.[73] While I personally have some reservations as to the merit of these latter suggestions, they do at the very least warrant the careful consideration of Congress.[74] The Court of Military Appeals and the Judge Advocates General have also put forth certain other recommendations on behalf of their individual organizations. Space considerations preclude their analysis here.[75]

Despite a few setbacks here and there, it may be said that the new military justice system is on the whole continuing to function well. Improvements have been noted

Footnotes at end of speech.

Footnotes at end of speech.

at the trial level which was originally one of the weak links in the chain.[76] The law officer is gradually becoming an honest-to-goodness judge rather than a mere figurehead. Important strides have been made by the services in expanding their legal educational facilities. The evil of command influence is being stamped out. The absence of adequate legal talent at the special (inferior) court-martial level remains a serious problem as does the vast burden of paperwork which the code has cast upon the services. Some of the reformative suggestions already discussed bid fair to help solve these and other difficulties, however.

[8] Id. at 508.

[9] *Easley* v. *Hunter*, 209 F. 2d 483 (10th Cir. 1953).

[10] Another habeas corpus proceeding of some consequence is *Rubenstein* v. *Wilson* (212 F. 2d 631 (D. C. Cir. 1954)) (whether petitioner was a person "accompanying" the armed forces and therefore subject to court-martial jurisdiction only determinable upon a full record; case remanded to the district court for further hearings). See also the comedy of errors in *Neary* v. *Greenough* (120 F. Supp. 833 (D. Me. 1954)).

[11] 64 Stat. 109 (1950), 50 U. S. C. sec. 553 (a) (1952). The provision was designed to overcome the obvious injustices of cases like *In re Lo Dolce* (106 F. Supp. 455 (W. D. N. Y. 1952)), and *United States ex rel. Hirshberg* v. *Cooke* (336 U. S. 210 (1949)).

[12] *Toth* v. *Talbott* (113 F. Supp. 330, granting of writ of habeas corpus sustained, 114 F. Supp. 468 (D. D. C. 1953)), 67 Harv. L. Rev. 479 (1954), 25 Miss. L. J. 277 (1954), 33 Neb. L. Rev. 516 (1954), 30 N. D. L. Rev. 155 (1954), 7 Vand. L. Rev. 144 (1953).

[13] 1953 Annual Surv. Am. L. 127–28, 29 N. Y. U. L. Rev. 127–28 (1954).

[14] 215 F. 2d 22 (D. C. Cir. 1954), 28 St. John's L. Rev. 301. An interesting sidelight on the case is that the airman who, with Toth, allegedly killed a Korean civilian under orders of a lieutenant has now been restored to duty. His original sentence was life imprisonment. New York Times, May 15, 1954, p. 3, col. 1.

[15] 348 U. S. 809 (1954).

[16] Note, 67 Harv. L. Rev. 479 (1954); Decisions, 30 N. D. L. Rev. 155 (1954), 28 St. John's L. Rev. 301 (1954).

[17] Former Article of War 94, which provided for the retention of military jurisdiction over discharged servicemen accused of certain frauds against the Government, was pretty uniformly upheld. *Kronberg* v. *Hale* (180 F. 2d 128 (9th Cir.), cert. denied, 339 U. S. 969 (1950)); *Terry* v. *United States* (2 F. Supp. 962 (D. Wash. 1933)); *Ex parte Joly* (290 Fed. 858 (S. D. N. Y. 1922)); *In re Bogart* (3 Fed. Cas. 796, No. 1,596 (C. C. D. Cal. 1873)). Cf. *United States ex rel. Flannery* v. *Commanding General* (69 F. Supp. 661 (S. D. N. Y. 1946)).

[18] This proposal is discussed further in 1953 Annual Surv. Am. L. 128, 29 N. Y. U. L. Rev. 128 (1954).

[19] In the Toth case the court of appeals commented: "It may very well be that Congress should add to the Uniform Code a provision that a civilian apprehended under Article 3 (a) pursuant to court-martial charges should not be removed from continental United States for trial until he has had a preliminary hearing before either a civil magistrate or a military tribunal. * * * But such questions are for Congress, not for the courts." (215 F. 2d 22, 30–31 (D. C. Cir. 1954).)

[20] *Shaw* v. *United States* (209 F. 2d 811 (D. C. Cir. 1954)), 22 Geo. Wash. L. Rev. 773. The court recognized that collateral attack by habeas corpus is permissible under the Uniform Code, a principle which is established law since the decision in *Burns* v. *Wilson* (346 U. S. 137 (1953)), and suggested the further possibility of a Court of Claims suit, as in *Shapiro* v. *United States* (69 F. Supp. 205 (Ct. Cl. 1947)). For a different view as to the availability of an action in the Court of Claims see 1951 Annual Surv. Am. L. 160 n.20.

[21] Walker, An Evaluation of the United States Court of Military Appeals, 48 Nw. U. L. Rev. 714, 715–19 (1954).

[22] Since the tenure of its judges is less than during good behavior the Court of Military Appeals is not a "constitutional court" created by virtue of article III of the Constitution. *Williams* v. *United States* (289 U. S. 553 (1933)). The problem is whether it is a "legislative court" like the Court of Claims or the Court of Customs and Patent Appeals, or an administrative agency like the Tax Court. See *Old Colony Trust Co.* v. *Commissioner of Internal Revenue* (279 U. S. 716 (1929)).

[23] Article 25 (d) (2), Uniform Code of Military Justice (64 Stat. 116 1950), 50 U. S. C. sec. 589 (1952):; Manual for Courts-Martial, United States, paragraph 63 (1951).

[24] *United States* v. *Moore* (4 U. S. C. M. A. 675, 16 C. M. R. 249 (1954)).

[25] *United States* v. *Coulter* (3 U. S. M. A. 657, 14 C. M. R. 75 (1954)). Such conduct is proscribed by article 6 (c), Uniform Code of Military Justice (64 Stat. 111 (1950), 50 U. S. C. sec. 556 (1952)). Judge Latimer dissented upon the basis that the trial counsel did not actually "review" the case but merely gave information on matters relating to clemency.

[26] Somewhat questionable, however, is *United States* v. *Thomas* (3 U. S. M. A. 798, 14 C. M. R. 216 (1954)), dealing with the impartiality of a board of review.

[27] It was frequently said, and there was at least some truth in the charge, that courts-martial in pre-Code days were often mere disciplinary tools of command. See the authorities collected in 1951 Annual Surv. Am. L. 158 n. 15.

[28] 64 Stat. 120 (1950), 50 U. S. C. section 612 (1952). A violator of article 37 is subject to prosecution but, as of April 30, 1954, no such offender had ever been tried. Note, 63 Yale L. J. 880, 881 n. 10 (1954).

[29] *United States* v. *Isbell* (3 U. S. C. M. A. 782, 14 C. M. R. 200 (1954)).

[30] *United States* v. *Littrice* (3 U. S. C. M. A. 487, 13 C. M. R. 43 (1953)).

[31] *United States* v. *Hunter* (3 U. S. C. M. A. 497, 13 C. M. R. 53 (1953)).

[32] *United States* v. *Knudson* (4 U. S. C. M. A. 587, 16 C. M. R. 161 (1954)).

[33] *Id.* at 598, 16 C. M. R. at 172. Two additional cases of some importance involved claims of command influence. In one, error was found but no prejudice (*United States* v. *Self* (3 U. S. C. M. A. 568, 13 C. M. R. 124 (1953))), and in the other, no error (*United States* v. *Isbell* (3 U. S. C. M. A. 782, 14 C. M. R. 200 (1954))). In the last-mentioned case Judge Brosman filed a dissent with which I am in accord. *Id.* at 788, 14 C. M. R. at 206. A note in 63 Yale L. J. 880, 888 (1954), also agrees with the dissent and comments that under the court's present tests, "all but the most unwary commanders may influence courts-martial with reasonable impunity." Though I do think the Isbell case is wrong, I cannot subscribe to such a sweeping generalization.

[34] Barnard, The Uniform Code of Military Justice—A Recommendation, 26 Rocky Mt. L. Rev. 48, 51 n. 15 (1953).

[35] "Only a scrupulous adherence to the Code's mandate can avoid drastic proposals to cut down the jurisdiction of courts-martial. * * * Vigilant watchfulness against the abuses of 'Command Control' can alone preserve sound 'Command Control,' which must always be the core of efficient military operation." White, Has the Uniform Code of Military Justice Improved the Courts-Martial System?, 28 St. John's L. Rev. 19, 20 (1953).

[36] 4 U. S. C. M. A. 500, 16 C. M. R. 83 (1954).

[37] I sometimes cannot help but feel that the court might avoid future difficulties for itself by confining its discussions more rigidly to points directly involved in a case, and avoiding, where possible, promulgation of broad principles and involvement in side issues. Deciding—or seeming to decide—questions not squarely raised is a dangerous practice. Had a concept like military due process, for example, been allowed to develop in more of a case-by-case fashion its meaning might today be somewhat clearer.

[38] *United States* v. *Rosato* (3 U. S. C. M. A. 143, 11 C. M. R. 143 (1953)), 22 Geo. Wash. L. Rev. 371 (1954) (unfavorable comment); *United States* v. *Eggers* (3 U. S. C. M. A. 191, 11 C. M. R. 191 (1953)), 7 Vand. L. Rev. 147 (favorable). See also, *United States* v. *Morris* (4 U. S. C. M. A. 209, 15 C. M. R. 209 (1954)).

[39] *United States* v. *Greer* (3 U. S. C. M. A 576, 13 C. M. R. 132 (1953)).

[40] Id. at 578, 13 C. M. R. at 134.

[41] *United States* v. *Booker* (4 U. S. C. M. A. 335, 15 C. M. R. 335 (1954)).

[42] *United States* v *Williamson* (5 U. S. C. M. A. 320, 15 C. M. R. 320 (1954)).

[43] *Rochin* v. *California* (342 U. S. 165 (1952)).

[44] See *United States* v. *Booker* (4 U. S. C. M. A. 335, 337, 15 C. M. R. 335, 337 (1954)).

[45] 4 U. S. C. M. A. 320, 334, 15 C. M. R. 320, 334 (1954).

[46] *United States* v. *Gibson* (3 U. S. C. M. A. 746, 14 C. M. R. 164 (1954)). Cf. *United States* v. *Josey* (3 U. S. C. M. A. 767, 14 C. M. R. 185 (1954)).

[47] 64 Stat. 118 (1950), 50 U. S. C. 602 (1952).

[48] *United States* v. *Hernandez* (U. S. C. M. A. 465, 16 C. M. R. 39 (1954)) was also of some consequence. The court there held that an accused who is advised of his rights under article 31 must actually understand such rights, and hence a reading of the article in English to one who did not understand that language did not constitute compliance.

[49] *McNabb* v. *United States* (318 U. S. 332 (1943)); *Upshaw* v. *United States* (335 U. S. 410 (1948)).

[50] 4 U. S. C. M. A. 482, 16 C. M. R. 56 (1954).

[52] The Moore case held that accused had no right to be furnished with counsel during the interrogation. To similar effect is *United States* v. *Manuel* (3 U. S. C. M. A. 739, 14 C. M. R. 157 (1954)) (no right to consult with counsel prior to interrogation). The current attitude of the judges on waiver of rights under article 31 by failure to object to the introduction of the statement at the trial is illustrated by *United States* v. *Fisher* (4 U. S. C. M. A. 152, 15 C. M. R. 152 (1954))

and *United States* v. *Henry* (4 U. S. C. M. A. 158, 15 C. M. R. 158 (1954)).

[63] Ibid.

[64] For the corporals' trials see New York Times, July 14, 1954, p. 9, col. 1, and for the colonel's, New York Times, August 21, 1954, p. 7, col. 6, and id., September 24, 1954, p. 11, col. 1. One of the corporals was sentenced to 10 years and a dishonorable discharge on charges of having had communication with the enemy and informing of the escape plans of a fellow prisoner. The other corporal, accused of collaborating with the enemy, was to have headed a Red-inspired postwar organization of fellow prisoners. His sentence to life imprisonment may well be cut down on review. The colonel was charged with collaborating with the Communists by leading pro-Red discussion groups, making propaganda broadcasts and writing pamphlets. His punishment was dismissal from the service. None of the cases has yet completed its route through the military appellate process.

[65] New York World Telegram and Sun, September 24, 1954, p. 1, col. 1; New York Journal-American, September 25, 1954, p. 4, col. 4.

[66] New York Times, July 14, 1954, p. 9, col. 1. Many of the Air Force cases involved "confessions" to germ warfare. The general problem of the weak substandard individual in uniform is dealt with in a provocative book, Huie, the Execution of Private Slovik (1954), detailing the case of the only American soldier executed for desertion since 1865.

[67] New York Times, April 28, 1954, p. 1, col. 3. This case was the first of its type in the history of the Marine Corps. Id., February 17, 1954, p. 4, col. 3.

[68] See note 1 supra.

[69] The first report recommended that Congress take no action on changes in the Code pending further experience, except for the elimination of the power of special courts-martial to adjudge bad conduct discharges. This has not yet been accomplished.

[70] In Father White's recent cross section study of 253 Navy summary courts-martial, 160 gave punishments which could have been given under the old system at captain's mast. White, supra, note 35, at 25. It is interesting to note that a French commanding officer is given considerably more power than his American counterpart in administering non-judicial punishment. Gaynor, the French Code of Military Justice, 22 George Washington L. Rev. 318, 325 (1954). The Soviet Code also gives broad powers in that area. Gaynor, Soviet Military Law, the Judge Advocate Journal, Bull. No. 17, p. 19 (1954).

[71] Id. at 15–16.

[72] Ibid.

[73] Barnard, supra note 34, at 52–53.

[74] There is also a lot of good sense in Father White's recommendation that courts-martial be allowed to give more than 6 months of confinement without—as is presently required—also imposing a bad conduct discharge. Such a discharge is often the heart's desire of a "B. C. D. striker" who is, typically, guilty of an unauthorized absence offense. If the "striker" knew he was going to get a longer term and still stay in the service, he might think twice about going "over the hill." White, supra note 35, at 25.

We Pray or We Perish

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith remarks by Thomas E. Murray, Commissioner of the United States Atomic Energy Commission, entitled "We Pray or We Perish." Commissioner Murray delivered these inspiring words at the annual dinner of the American Irish Historical Society in New York City:

WE PRAY OR WE PERISH

It is always a pleasurable experience to receive recognition from one's fellowmen—one would have to be something less than human, or more than human, to deny it. Perhaps some of the pleasure derives from the thought, consciously or unconsciously realized, that such expressions of recognition are but the meager foretaste of that everlasting "Well done" to which all of us look forward.

When this recognition comes from as distinguished in association as the American Irish Historical Society, the feeling of pleasure is seasoned with an understandable pride. For it is evident that the honors of this society are not lightly given nor cheaply bestowed. But by the same token, a glance at the roster of distinguished persons whom you have selected to honor in the past tempers this feeling with a sense of deep humility. I wish that for a few moments I could be endowed with the gifted eloquence of the O'Connell himself at Tara or Mullaghmast. Then I might adequately express the sentiment that at present overrides all others—my deep and sincere appreciation for this expression of your kindness.

Nevertheless, I can assure you that I will treasure this gold medal as a token of the generous estimate you have placed on my endeavors. It will ever be a reminder of your friendship and confidence. It is my hope that when my race is run, and this golden symbol passes to my children and grandchildren, it will also serve to inspire each and everyone of them to carry on the traditions of their Irish ancestors.

These traditions have been part of my own life from earliest childhood. My first awareness of Ireland, and what the Irish stand for, came from my mother's father—Daniel Bradley. My deep affection and love for my ancestors is to be credited in great part to him. Daniel Bradley reached the shores of America in 1849, about 50 years before the founding of the American Irish Historical Society. He was 19 years old at the time. What a thrill it was for me as a young boy to hear his tales of that stormy 2 months passage across the Atlantic in a sailing vessel. No sooner was he ashore at Castle Harbor than he was ushered by some forward-looking friends over to Brooklyn. In those days the Borough across the river was a separate, independent city with its own mayor, its own municipal government.

It was there his first mail reached him, addressed in this unusual way: "Daniel Bradley, Fornenst the Catholic Church, Brooklyn, USA." Now there is no need to tell an Irish audience that "fornenst" means "nearby." But I tell this story to remind us all that the young men and young women who emigrated to this country from Ireland were first and foremost profoundly religious. The folks back home knew that wherever Daniel Bradley settled, a Catholic church would be nearby.

Men like Daniel Bradley, and there were thousands, would not dream of living very far from a priest and the sacraments. Up to the time of his death grandpa always lived not only "fornenst" the Catholic church, but even closer to it in a spiritual way. Scores of priests have told me that they remembered him best, not as the proprietor of a small tobacco shop within the very shadows of the Brooklyn Bridge, nor as a fearless and much respected political crusader. They rather knew him best as their Sunday School teacher—and a great one he must have been. The spread of Catholicism was made possible by the dedicated and devoted clergy of those early days. But that same clergy would be the first to pay tribute to the many Daniel Bradleys who helped so much in their apostolic mission.

Daniel Bradley had many of the noblest attributes of the Irish race, but none in more abundant measure than two which I believe are all important today: Profound faith in God and belief in the power of prayer. These represent sources of strength upon which we as a Nation can and must draw in the present world crisis.

Throughout our history men of Irish lineage have demonstrated a patriotism and love of country that have been characteristic of the race in every age and clime. Bravery and heroism seldom reached greater heights than that displayed by Meagher's Irish Brigade, nearly cut to pieces holding the center of the Union line at Antietam. Nor has such devotion been confined to the battlefield. Few individuals have made greater engineering contributions to the strength of this Nation than John Holland who came to this country in 1872 from County Clare. Beginning with experiments on the *Fenian Ram* he developed the basic principles that enabled him to build the first really successful submarine. These principles found ever widening application and even today are embodied in the now famous atom-powered *Nautilus*.

The times in which we live continue to demand the bravery of Meagher and the genius of Holland, but they require much more. They demand not only a sense of duty to country, but the same faith in God and trust in prayer which our forebears had in such abundance.

Today we stand on the edge of the abyss of atomic annihilation. Daily the threat of world destruction grows measure by measure. Who can foretell the day when disaster will strike and mankind shall be hurled into a hydrogen holocaust surpassing imagination?

Speaking from the vantage point of 5 years of intimate association with the world nuclear crisis, I can assure you that I do not overstate the danger. Man's power to destroy was multiplied tens of thousands of times over with the first atomic explosion at Alamogordo 10 years ago. Before any progress toward political control of that original awesome weapon of mass destruction could be made, events had overtaken us. When I first became a member of the Atomic Energy Commission early in 1950 we were stockpiling bombs of the Alamogordo type. At that time a practical hydrogen bomb was considered by some as bordering on the impossible, by many others as something in

the distant future. However, by the end of 1952 we had achieved a large scale thermonuclear reaction that literally dwarfed the bombs then in our atomic arsenal.

I witnessed that first hydrogen bomb test at Eniwetok in the far Pacific on November 1, 1952, and not many months thereafter publicly announced the broad potentialities of the titanic nuclear forces there unleashed. If there ever has been any doubt, then that Pacific detonation, which was given the code name "MIKE," made it clear that the discovery of the key to the release of nuclear and thermonuclear energy has completely changed man's relationship to the world in which he lives. "MIKE" put within man's grasp the power to destroy civilization.

Nothing in the history of the human race has prepared us to cope with this awesome situation. In this new era the destructive capabilities of man have taken on new dimensions, orders of magnitude greater than anything in man's experience. To all this, the world, not only has had no time to adjust, but no time even to comprehend.

The 10 years since the first nuclear explosion and the less than 3 years since "MIKE," have been all too short a time. In that brief interval the world has scarce begun to understand the forces that men could release to destroy in a matter of seconds what it took centuries to put together. It is not strange that man is overwhelmed by the problem of controlling these forces so capable of tragic misuse. Yet time is running out. Man must quickly recognize his atomic dilemma and make the superhuman effort to resolve it.

Hiroshima and Nagasaki were laid waste by atomic bombs equivalent in destructive power to 20,000 tons of conventional high explosive. Yet this cold technical fact cannot of itself convey a sense of the immense suffering involved, nor of the thousands of souls dispatched in a matter of seconds before the judgment seat of God. Neither can one adequately describe the terrible power of thermonuclear detonations like "MIKE" by describing them in terms of millions and millions of tons of high explosive. It is not sufficient alone to think of these engines of mass destruction in terms of blast and heat. We must think also of their ability to contaminate temporarily thousands of square miles of the earth's surface with life-destroying radioactive particles. Small wonder then that words are inadequate to convey a real appreciation of the horrendous nature of this threat to our existence.

Yet if we cannot adequately convey the real meaning of today's weapons, how can we hope to imagine what tomorrow's weapons will bring forth. Is there any basis for believing that the weapons developments of the past few years will not be matched and even overshadowed by those of the years just ahead? Each new series of weapons tests has opened new avenues of weapons development. With each test it becomes easier to reduce our present civilization to ashes.

In this slide toward the precipice whence can we be saved? There is little in the history of man's efforts to achieve disarmament that gives cause for hope. Yet never before have the wages of failure been so tragic. The need has never been so compelling.

I have repeatedly and publicly advocated that one and all should become acquainted with the realities of the nuclear arms race. In particular the leaders of all nations must become completely and fully aware of the present and evergrowing threat of world destruction. A well-informed leadership on a worldwide basis is absolutely essential to survival.

In this connection I have been urging for some time that, as a first step, world leaders be shown the full effects of large-scale thermonuclear explosions. Such demonstrations can be arranged without disclosing weapons technology. What a tragedy it would be if after a nuclear holocaust it was disclosed that those who struck the atomic spark had no real understanding of the extent to which the nuclear fire would spread. How can the world take any chance that each one in authority is not thoroughly familiar with what an all-out atomic war would really mean?

Under present world conditions we, as a nation, have no immediate alternative but to maintain our military strength unimpaired. Our weapons programs must continue to move forward in order to maintain our world atomic superiority. Of itself, however, this daily increase in nuclear strength can never resolve the dilemma in which we find ourselves. Military might must rather be subordinated to those God-given laws of spiritual and moral conduct on which true peace and justice depend. This right order will not be realized so long as men persist in the convenient fallacy that they can compartmentalize military might and moral principle.

The dilemma of our times was clearly defined by Pope Pius XII last January when he said: "Each of the two groups into which the human family is divided tolerates the existence of the other because it does not wish itself to perish. * * * Each of the two groups smarts under the fear of the other's military and economic power. In both of them there is a grave apprehension of the catastrophic effect of the latest weapon. * * *"

The Holy Father goes on to say: "The present coexistence in fear has * * * only two possible prospects before it: either it will raise itself to a coexistence in fear of God, and thence to a truly peaceful living together, inspired and protected by the divine moral order; or else it will shrivel more and more into a frozen paralysis of international life, the grave dangers of which are even now foreseeable."

If, then, man is to avoid world suicide, he must think in terms of rebuilding the arsenals of the spirit. Preoccupation with the power of thermonuclear weapons must yield to the infinitely greater power of prayer. Prayer is the one and only force by which man will ever receive the inspiration, the courage, and the strength to enable him to direct nuclear forces toward a better and more abundant life.

The providence of God Almighty has deigned to reveal to the minds of men some of the deeper secrets of His creation; He has subjected to the will of man immeasurable forces for good or for ill. To that same providence man must have recourse, instant and persevering, for the enlightenment of his understanding, and the direction of his will, for the wisdom to use the bountiful gift of God as He has willed it—for man's good. Human prudence is not enough to cope with this situation, even if we could count on the good will of every person on earth; much more do we need the help and the direction of divine guidance, when half a world is intent on the goal of our destruction.

This duty of prayer, though it falls most heavily on those in whose hands rest the fateful decisions of our critical times, is not confined to them alone. It is a duty which lies upon all who have a stake in the survival of our Nation. To state it baldly: we pray, or we perish. The greatest source of hope in our present trying and difficult times is that we are a Nation of God-fearing people, that we have not repudiated our dependence on God, nor blinded by our achievements, set all our confidence in the material and the technological.

Prayer, obvious as its necessity may be to any right-thinking person, will either be rejected, or what is equally tragic, never be seriously considered by large numbers of people. Among these are many who are convinced that all the afflictions of man can be overcome merely by dispelling ignorance and relying on human intelligence. Even more numerous are those who are preoccupied with the material considerations of an increasingly secular culture that has no time for God.

All the more important then become the prayers of those who do believe in Him. Yet, in a special way, I look to womanhood. Surely this will include legions of daughters of Irish descent the world over. Beyond them, however, I look to womanhood everywhere for the inspiration and example to turn us toward God and prayer. For wherever men are strong in faith, is not that faith nurtured from the cradle by their mothers and strengthened by the example of their wives? What more appropriate occasion than the eve of Mother's Day to recall all that we owe to their interior strength and gentle guidance.

It is to women like our own wives, and our mothers and grandmothers that we must look to lead us back to God. Had not my own wife emulated and carried on the principles of my dear mother, I surely would not be here tonight to receive your signal honor.

I am convinced that the strength of this as of all nations lies in its womanhood. Now more than ever the issue of survival requires that we call on that strength, so firmly founded on faith in God. Doing this, we shall be inspired to go forward in that faith with courage and optimism for the future. And so find good cause for recalling that old familiar toast with this slight modification:

"Here's to God and Ireland
To her glorious and virtuous womanhood
And death to tyrants everywhere."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, today is the 135th anniversary of the birth of Florence Nightingale, the founder of nursing methods as we know them today. During the Crimean War Miss Nightingale raised a band of nurses and took them to the Turkish military hospital at Scutari, on the Bosphorus. On November 4, 1854, she assumed control of the hospital and introduced system and order where indescribable chaos had reigned—and thereby laid the foundations of modern scientific nursing.

But Florence Nightingale is known for more than her heroic deeds in the Crimea. As Miss Margaret G. Arnstein, of the United States Public Health Service, says in the appended speech:

All nursing has been influenced by her. One might say modern nursing is Miss Nightingale.

To Florence Nightingale we owe both the high professional standards and the system of professional education which has given us 390,000 active professional nurses in America today. Other American nurses are giving their services throughout the world. Among them are such women as Mary Mills, of the United States Public Health Service, Chief Nurse, on a technical-assistance mission to Lebanon for the Foreign Operations Administration. I understand that Miss Mills has just been awarded the Lebanese Order of Merit by the Minister of Public Health for establishing the new Makafid School of Nursing in that Near Eastern nation. Miss Mills was previously decorated by the Liberian Government for a comparable feat.

NATIONAL HOSPITAL WEEK

This week we are observing another major influence on the good health of Americans through National Hospital Week. Just recently I delivered an address at the oldest hospital in the United States, the 200-year-old Pennsylvania Hospital in Philadelphia. The tradition of that fine institution reminded me of how far we have come since the days when hospitals were considered places to die.

Today hospitals are the centers of our community's health services, and our national and State hospital associations are working hard to provide the highest quality care for all Americans.

In the past several years there has been a great increase in hospital construction. This is due both to the stimulus offered by the Hill-Burton Act, and to the determination of the States and communities that their citizens should receive the full benefit of new advances in the medical sciences.

It has been estimated that the number of persons in the United States without access to acceptable general hospital services has been reduced from 10 million in 1947 to less than 4 million last year. New hospitals in rural areas are attracting physicians and other health personnel. Most new hospitals are using sound architectural practices. They are making provisions for consultation services in such fields as pathology, roentgenology, and other diagnostic services. All of these factors contribute to better care of the American people.

There is still ever so much to be done, with facilities for the chronically ill and for mental patients still in very scarce supply. But we are making progress, and that is what is important.

During National Hospital Week and the anniversary of Florence Nightingale, we should all offer our sincerest thanks to the men and women in the health professions who have dedicated their lives to fighting disease, to relieving human suffering, and to preventing needless death.

ARNSTEIN SPEECH

Under leave granted me by unanimous consent, I am inserting in the RECORD a speech by one of the leaders of the nursing profession, Miss Margaret G. Arnstein, Chief of the Division of Nursing Resources of the United States Public Health Service. Her address was made before the section on historical and cultural medicine of the New York Academy of Medicine in New York City, May 11, 1955:

THE INFLUENCE OF FLORENCE NIGHTINGALE ON NURSING

Modern nursing derives so completely from the example and teaching of Florence Nightingale that it is hard to pick out the particular practices that owe their existence to her influence. All nursing has been influenced by her. One might say modern nursing is Miss Nightingale—that her name is a synonym for nursing. She demonstrated in a dramatic fashion in the Crimea that nursing—and sanitation—could reduce mortality, as Dr. Berry will describe to you.

The medical profession has long recognized the essential role of nursing in care of patients and prevention of illness. The Academy of Medicine tonight in paying tribute to Florence Nightingale; is paying tribute to the contribution nursing makes to medical practice.

Nursing literally did not exist, except in a few religious orders, until Miss Nightingale showed what it could do, and more important, established a school to produce people who could do it. This first school at St. Thomas' Hospital in London was a model for all the later schools in England and the United States. Nightingale nurses became heads of all the early schools established in England. Bellevue Hospital School of Nursing in New York, the first in this country to introduce the Nightingale principles, was actually guided by letters from Miss Nightingale.

This evening I would like to detach Miss Nightingale's principles from their historical setting and discuss them in relation to modern nursing. To do this one must recognize that Miss Nightingale had both a good influence and a bad influence on nursing. Most of the bad influence is due to the fact that we have slavishly followed some practices she strongly advocated, long after the need for them has disappeared. Some of it is due to the fact that we have continued with practices she initiated, but have ignored the underlying principles which she set forth.

The influences that have outlived their social usefulness are almost entirely related to the conduct of student nurses. When Miss Nightingale started the first training school, the Nightingale nurse, in the words of one of her biographers, "had to establish her character in a profession proverbial for its immorality."

The probationers, as students were called, had their entire lives controlled by the school as though in a convent. They had 2 hours of outdoor exercise each day, outside the dormitory. They were never allowed to leave the dormitory alone. All other time was scheduled: meals, work and learning, and sleep. All this control probably was necessary at that time. The fact that some of it has lingered on into the middle of the 20th century shows we did not consider the reason for the practice but clung to the practice itself long after the respectability of nursing was established, and young women in our society had attained much more independence.

Miss Nightingale herself recognized the danger of sterotyping. In the paper, Sick Nursing and Health Nursing, that she read in Chicago in 1893, when she was in her seventies, she said, "No system can endure that does not march."

On the other hand, if we had followed as closely all else that she taught, we would not now be trying to undo so much of what we recently have been teaching and doing in this country in nursing.

This astonishing person had such vision and understanding that I sometimes think a school of nursing today could not do better than read from her writings each morning a lesson for the day. The lesson could then be expanded with the knowledge of human relations and with the scientific facts we have acquired since her day, but I doubt that many new lessons would be needed.

It is a little disconcerting to realize some of our most modern ideas—that are still opposed by some nurses and some of the related professions—that these dangerous new ideas were taught by Miss Nightingale 95 years ago. Our leaders in nursing today have come to these ideas quite independently and have contributed greatly to getting us back on the track and several miles ahead of the point where we went off.

We might consider these ideas under three main headings: care of the patient in the hospital and in the home; administration of of nursing services; and education of nurses.

About care of the patient, the most advanced members of the nursing profession are stressing the idea that we must nurse the whole patient and not just his disease. Miss Nightingale expressed the same principle. She said, "The art is that of nursing the sick." And she added, "Please mark—nursing the sick; not nursing sickness."

Her definition of nursing the sick included giving the medicines and stimulants prescribed, and the surgical appliances, proper use of fresh air, warmth, and cleanliness, proper choosing and giving the diet, and quiet. All this was to be done, she wrote, "at least expense of vital power of the sick."

Psychosomatic medicine is a relatively new concept, yet the great physicians and nurses of the past recognized the influence of emotions on disease conditions. In writing about the care of patients, Miss Nightingale gave attention to the ways a patient's illness is affected by his state of mind, his worries and fears, the attractiveness or drabness of his surroundings, and the noise around him. She summed it up as follows:

"The symptoms or the sufferings generally considered to be inevitable and incident to the disease are very often not symptoms of the disease at all, but of something quite different—of the want of fresh air * * * or of quiet or of cleanliness or of punctuality. * * * The reparative process * * * has been hindered * * * by some want in one or in all of these things."

We can almost hear the modern cardiologist saying, as she did, "Apprehension, uncertainly, waiting, expectation, fear of surprise, do a patient more harm than any exertion."

Psychiatrists today teach us that the type of reassurance which tells a patient not to worry, the operation will not amount to anything, he will be all right, and other such encouragements, often defeats its own end. Today we believe that listening to the patient, the process we call nondirective interviewing, is actually more helpful. Although we did not learn this principle from Florence Nightingale, we might have done so. Although no one had ever heard of "nondirective interviewing," Miss Nightingale admonished, "Do not cheer the sick by making light of their danger," and continued at length to discuss the understanding of patients' fears and their individual differences.

In recent years we have recognized that color affects the productivity of industrial workers, and are now experimenting with the effect of color on patients. Although Miss Nightingale made no controlled experiments, she observed keenly, and in this instance her observations have been proved correct by later scientific experiments. "Little as we know about the way in which we are affected by form, by color, and light," she wrote, "we do know this, they have actual physical effect." Another observation from her writing of the same period was: "No one who has watched the sick can doubt the fact that some feel stimulus from looking at scarlet flowers, exhaustion from looking at deep blue, etc."

On the other hand, Miss Nightingale recognized that the connection between mind and body is not a one-way street. She said she wished "a little more was thought of the effect of the body on the mind." Today we recognize this fact and no longer say, as we did some years ago, that a patient "is or is not cooperative." We try to understand why he complains, or why he is angry, or why he resists treatment. Miss Nightingale summed up the patient's difficulties so succinctly that we might repeat her words everyday: "Almost any sick person, who behaves decently well, exercises more self-control every moment of his day than you will ever know till your are sick yourself."

Until recently, the recognition given Florence Nightingale by the nursing profession has been primarily for her work in establishing decent standards of nursing care for patients and starting a system of training for those who give the care. Yet perhaps her real genius was in the management field. She may have been so far ahead of her time that we did not appreciate the principles she bequeathed us; we have had to discover them for ourselves. Nurses, like hospital administrators, have gone to industry and business for ideas on better management. So we cannot say that Miss Nightingale has influenced our profession greatly in this aspect of nursing service. Yet she knew the basic principles of good management and expressed them so well I would like to quote part of her statement on the first requirement of an administrator:

"To be 'in charge' is certainly not only to carry out the proper measures yourself but to see that everyone else does so too. * * * It is neither to do everything yourself nor to appoint a number of people to the (same) duty."

Miss Nightingale had much to say about applying this principle and other principles of good management. In 1858 she advocated conserving the nurse's time and energy in almost the exact same words that were used in 1955 in a recommendation growing out of a recent time study of nursing activities. I quote from the report by a Michigan hospital:

"Following the study made in our hospital we now have a messenger service that brings supplies and drugs to the patient units and transports patients from place to place in the hospital."

Miss Nightingale said that "nothing should be fetched by the nurses," and that "the nurse should never be obliged to quit her floor except for her own dinner and supper." She had a scheme to make this possible—more revolutionary in her day than pneumatic tubes in ours—a "windlass installation," or lift to bring up the patients' food. She also had a scheme for saving work by having hot water piped up to every floor. Without systems of this kind, she said, the nurse is converted into a pair of legs.

She was not only an administrator but an inventor of labor-saving devices. The intercommunicating system at which we marvel today seems only a natural descendant of her suggestion that "the bells of patients should all ring in the passage outside the nurse's door on that story and should have a valve which flies open when its bell rings and remains open in order that the nurse may see who has rung."

Perhaps some of Miss Nightingale's ideas have remained dormant in nurses' consciousness like recessive characteristics. Even today only the more progressive hospitals have written job descriptions for all nursing personnel. We rather timidly suggest that the good staff nurse should receive recognition through higher pay and more responsibility without necessarily having to become an administrator.

Miss Nightingale said in 1858, in her subsidiary notes as to the introduction of female nursing into military hospitals, that the duties of each nurse, senior and junior, and of the orderly should be clearly outlined. She also wrote: "Many women are valuable as nurses who are yet unfit for promotion to head nurses. It appears to me that it would be desirable to have intermediate recompense."

The recent studies to which I referred have analyzed the pattern of interruptions in the head nurse's activities and have shown that the head nurse seldom spends as much as 5 minutes on an activity without being interrupted. Miss Nightingale had a gloomy outlook for people who spent their days in this fashion. She said, "I have never known persons who exposed themselves for years to constant interruption who did not muddle away their intellects by it at last."

Examples of her astute understanding of administration and her inventiveness could be multiplied for the rest of the evening. I shall quote only one more, under the heading of administration: "Unless the matron's authority is supported by the principal medical officer, the patients always suffer." When we read Miss Nightingale's writings we are never in danger of forgetting the patient.

In the field of nursing education, we have been grappling with numerous perplexing problems and divergent ideas in recent years. Here again Miss Nightingale offered many ideas that today would be considered progressive, perhaps even radical. Many students of our system of nursing education maintain that the school of nursing should be independent of the hospital. It is interesting to note that the first school of nursing, the Nightingale School at St. Thomas' Hospital in London, had its own endowment fund and its own board of managers.

The first schools in this country, at Bellevue and Massachusetts General Hospitals, were not established primarily to insure better care of the sick, but to educate nurses. The impetus for these schools came not from the physicians or the hospitals, but from the New York State Charities, and from the Women's Education Association in Boston. Each was directed initially by its own board of managers.

Recent studies of costs of schools of nursing have wrestled with the question, "Should nursing service personnel, head nurses, and others contribute to the education of the students?" In the Nightingale school, the head nurses and the director of nurses were paid part of their salaries from the Nightingale fund for the training of students. So we at least have a precedent for this practice.

Some of us have believed that having the students work full time on the wards was "the good old way." Yet even in Miss Nightingale's era, when theory was a much smaller part of the preparation for any profession than it is now, Miss Nightingale stated as one of the essentials of a training school that "there shall be an organization which by giving proper help in the wards gives probationers time to do their work as pupils as well as give service to patients. Seventy years later we are proposing not a completely different philosophy of training, but rather more of the pupil and less of the service.

Nursing educators are convinced of the necessity of students understanding the reasons behind the things they do—of the value of the case-study method of teaching. Miss Nightingale must be nodding her head in approval. Her spirit perhaps is murmuring "at last." For in 1882 she wrote, "We require a special organization for the purpose of training." Then she explained:

"Training is to teach not only what is to done * * * not only how to do it, but why such and such a thing is done, and not such and such another; as also to teach symptoms, and what symptoms indicate what of a disease or change, and the 'reason why' of such symptoms.

"Without time for these things, average nurse-probationers degenerate into conceited ward drudges. Without a system for these things, they potter and cobble out their year about the patients, and make not much progress in real nursing—that is, in obeying the physicians' and surgeons' orders intelligently and perfectly."

In her forthright way, Miss Nightingale's predicted dire things for the students if we do not give them proper training.

So summarized so well all the attributes we want in a nurse today that I am going to end with this quotation:

"Training is to teach a nurse to know her business, that is, to observe exactly, to understand, to know exactly, to do, to tell exactly, in such stupendous issues as life and death, health, and disease.

"Training is to enable the nurse to act for the best in carrying out her orders, not as a machine but as a nurse; as an intelligent and responsible being. Training has to make her, not servile, but loyal to medical orders and authorities. True loyalty to orders cannot be without the independent sense of responsibility, which alone secures real trustworthiness."

Hoover Commission Report on Veterans' Medical Benefits

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. SHELLEY. Mr. Speaker, the report of the Commission on Organization of the Executive Branch of the Government dealing with veterans' hospitals and benefits makes me think that the Commission was far more aptly named by the public in calling it the Hoover Commission than in its own formal title. The consideration shown our veterans in the Commission report, it seems to me, is comparable to that shown veterans under the Hoover administration at the time of the famed veterans bonus march on Washington.

It is true that, given the composition of the present Hoover Commission, as appointed by President Eisenhower, and the Republican leadership of the 83d Congress, we might have predicted that social welfare matters would be treated on a cold cash-and-carry basis, without regard for the human principles involved. The fact that as the Commission reports come out they go right down the line in recommending elimination or reduction of many such programs is not too surprising—in spite of the fact that the previous Commission, appointed under a Democratic administration, had adopted a much more sympathetic attitude toward social-welfare programs in general. It might be well in passing also to mention that the present Commission seems to have gone a long way out on the limb in the way of recommending changes in basic and fundamental policy without confining themselves to considerations involving organization of the executive agencies or administration of policy.

However, despite the bias of the Commission implicit in its membership, we might have hoped that they would soften their strict dollars-and-cents thinking in view of the tremendous debt the country owes to the veterans of our Armed Forces. Analysis of the report on medical services as it applies to veterans' hospitals and benefits shows, however, that this was not the case.

The Commission seems to have used as their yardstick for operation of veterans' hospital, as an example, the sole question of whether or not such a hospital can be "operated effectively and economically," with callous disregard for all the human and humane factors involved. Certainly their recommendation "that all present outstanding authorizations and appropriations for construction of additional veterans' general hospitals be rescinded except for those now under construction or contract" shows a cynical attitude toward the situation in many areas of the country where hospital facilities are sadly lacking. The Commission calls attention to their claim that during the past 20 years all service-connected cases could have been taken care of in existing hospitals without any new construction as justification for their recommendation. Their other recommendations calling for a crackdown on hospitalization for treatment of non-service-connected disabilities, coupled with this statement, give a clear indication of the Commission's feeling that the Federal Government should get out from under its strong moral and legal obligation to provide medical treatment for needy veterans unable to provide such treatment for themselves.

I know from personal experiences with hundreds of cases how difficult it is for any veteran to establish service connection for any of the ailments, physical and mental, which may attack him following his service. The Commission's recommendations for cutting down on non-service-connected cases, together with their recommendation to tighten up on the already strict criteria for establishing service connection, would work untold additional hardship on the many deserving veterans now denied adequate treatment because of faulty medical records maintained by the services, or because of the Administration's unwillingness to accept medical evidence indicating service connection unless the medical records for the veteran's period of service give proof positive that the specific ailment had its onset during the period.

This situation is particularly bad in cases where mental illnesses have occurred as an aftermath of wartime service although at the time of discharge the condition may not have been evident. In northern California alone, as an example, the existing Veterans' Administration neuropsychiatric hospital at Palo Alto has a waiting list of over 1,000 cases of veterans classified as non-service-connected crying for admission and the treatment they so badly need. In the meantime our State institutions or the families of the veterans must bear the burden. Yet, for almost 10 years the construction of another such hospital in the San Francisco area has been authorized, only to have construction delayed year after year on one excuse or another. Money has now been appropriated, but the Veterans' Administration and the Bureau of the Budget have not yet given the final all clear which would permit signing of contracts and start of construction. Presumably, if the Hoover Commission has its way, the construction would never be started, since, technically, these are non-service-connected cases. Yet I would like to know who would dare to stand up and say that, medical records or no, most of these cases are not the direct result of the wartime strains and stresses to which the individual veterans were subjected.

Mr. Speaker, I certainly hope that the Congress does not abrogate its own responsibility to make policy determinations on how far care for veterans should be extended. If I am any judge the Congress will give the inhumane recommendations of the Commission the treatment they deserve. I, for one, will oppose any move to put them into effect with few exceptions and will support consigning them, for the most part, to the wastebasket.

Hon. David Crockett, Representative From Tennessee

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. DIES. Mr. Speaker, the following sketch was taken from a book published by Perkins & Marvin, Boston, containing speeches on the passage of the bill for the removal of the Indians, delivered in the Congress of the United States April and May 1830:

A SKETCH OF THE REMARKS OF THE HONORABLE DAVID CROCKETT, REPRESENTATIVE FROM TENNESSEE, ON THE BILL FOR THE REMOVAL OF THE INDIANS, MADE IN THE HOUSE OF REPRESENTATIVES, WEDNESDAY, MAY 19, 1830

Mr. Crockett said, that, considering his very humble abilities, it might be expected that he should content himself with a silent vote; but, situated as he was, in relation to his colleagues, he felt it to be a duty to himself to explain the motives which governed him in the vote he should give on this bill. Gentlemen had already discussed the treaty-making power; and had done it much more ably than he could pretend to do. He should not therefore enter on that subject, but would merely make an explanation as to the reasons of his vote. He did not know whether a man[1] within 500 miles of his residence would give a similar vote; but he knew, at the same time, that he should give that vote with a clear conscience. He had his constituents to settle with, he was aware; and should like to please them as well as other gentlemen; but he had also a settlement to make at the bar of his God; and what his conscience dictated to be just and right he would do, be the consequences what they might. He believed that the people who had been kind enough to give him their suffrages, supposed him to be an honest man, or they would not have chosen him. If so, they could not but expect that he should act in the way he thought honest and right. He had always viewed the native Indian tribes of this country as a sovereign people. He believed they had been recognized as such from the very foundation of this Government, and the United States were bound by treaty to protect them; it was their duty to do so. And as to giving the money of the American people for the purpose of removing them in the manner proposed, he would not do it. He would do that only for which he could answer to his God. Whether he could answer it before the people was comparatively nothing, though it was a great satisfaction to him to have the approbation of his constituents.

Mr. Crockett said he had served for 7 years in a legislative body. But from the first

[1] That is, a Member of Congress.

hour he had entered a legislative hall, he had never known what party was in legislation; and God forbid he ever should. He went for the good of the country, and for that only. What he did as a legislator, he did conscientiously. He should love to go with his colleagues, and with the West and the South generally, if he could; but he never would let party govern him in a question of this great consequence.

He had many objections to the bill—some of them of a very serious character. One was, that he did not like to put half a million of money into the hands of the Executive, to be used in a manner which nobody could foresee, and which Congress was not to control. Another objection was, he did not wish to depart from the rule which had been observed toward the Indian nations from the foundation of the Government. He considered the present application as the last alternative for these poor remnants of a once powerful people. Their only chance of aid was at the hands of Congress. Should its members turn a deaf ear to their cries, misery must be their fate. That was his candid opinion.

Mr. Crockett said he was often forcibly reminded of the remark made by the famous Red Jacket, in the rotunda of this building, when he was shown the panel which represented in sculpture the first landing of the Pilgrims, with an Indian chief presenting to them an ear of corn, in token of friendly welcome. The aged Indian said, "That was good." The Indian said, he knew that they came from the Great Spirit, and he was willing to share the soil with his brothers from over the great water. But when he turned around to another panel representing Penn's treaty, he said, "Ah, all's gone now." There was a great deal of truth in this short saying; and the present bill was a strong commentary upon it.

Mr. Crockett said that four counties of his district bordered on the Chickasaw country. He knew many of their tribe; and nothing should ever induce him to vote to drive them west of the Mississippi. He did not know what sort of a country it was in which they were to be settled. He would willingly appropriate money in order to send proper persons to examine the country. And when this had been done, and a fair and free treaty had been made with the tribes, if they were desirous of removing, he would vote an appropriation of any sum necessary; but till this had been done, he would not vote 1 cent. He could not clearly understand the extent of this bill. It seemed to go to the removal of all the Indians, in any State east of the Mississippi River, in which the United States owned any land. Now, there was a considerable number of them still neglected; there was a considerable number of them in Tennessee, and the United States Government owned no land in that State, north and east of the congressional reservation line. No man could be more willing to see them removed than he was, if it could be done in a manner agreeable to themselves; but not otherwise. He knew personally that a part of the tribe of the Cherokees were unwilling to go. When the proposal was made to them, they said, "No; we will take death here at our homes. Let them come and tomahawk us here at home; we are willing to die, but never to remove." He had heard them use this language. Many different constructions might be put upon this bill. One of the first things which had set him against the bill was the letter from the Secretary of War to Colonel Montgomery—from which it appeared that the Indians had been intruded upon. Orders had been issued to turn them all off except the heads of the Indian families, or such as possessed improvements. Government had taken measures to purchase land from the Indians who had gone to Arkansas. If this bill should pass, the same plan would be carried further; they would send and buy them out, and put white men upon their land. It had never been known that white men and Indians could live together; and, in this case, the Indians were to have no privileges allowed them, while the white men were to have all. Now, if this was not oppression with a vengeance, he did not know what it was. It was the language of the bill, and of its friends, that the Indians were not to be driven off against their will. He knew the Indians were unwilling to go; and therefore he could not consent to place them in a situation where they would be obliged to go. He could not stand that. He knew that he stood alone, having, perhaps, none of his colleagues from his State agreeing in sentiment. He could not help that. He knew that he should return to his home glad and light in heart, if he voted against the bill. He felt that it was his wish and purpose to serve his constituents honestly, according to the light of his conscience. The moment he should exchange his conscience for mere party views, he hoped his Maker would no longer suffer him to exist. He spoke the truth in saying so. If he should be the only Member of that House who voted against the bill, and the only man in the United States who disapproved, he would still vote against it; and it would be a matter of rejoicing to him till the day he died, that he had given the vote. He had been told that he should be prostrated; but, if so, he would have the consolation of conscience. He would obey that power, and glorified in the deed. He cared not for popularity, unless it could be obtained by upright means. He had seen much to disgust him here; and he did not wish to represent his fellow citizens, unless he could be permitted to act conscientiously. He had been told that he did not understand English grammar. That was very true. He had never been 6 months at school in his life; he had raised himself by the labor of his hands. But he did not, on that account, yield up his privilege as the Representative of free men on this floor.[2] Humble as he was, he meant to exercise his privilege. He had been charged with not representing his constituents. If the fact was so, the error (said Mr. Crockett) is here (touching his head), not here (laying his hand upon his heart). He never had possessed wealth or education but he had ever been animated by an independent spirit; and he trusted to prove it on the present occasion.

[2] Colonel Crockett represents more voters than any Member of Congress, except Mr. Duncan, of Illinois. The reason is the great influx of population since the State was formed into districts. There were 20,000 voters in Colonel Crockett's district more than a year ago. There are probably more than 22,000 now.

Townsend Convention Address

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following address I made before the National Townsend Convention at St. Petersburg, Fla., on May 2, 1955:

Mr. Chairman, Dr. Townsend, distinguished guests, delegates, ladies, and gentlemen, it is a source of personal inspiration to see so many of you here at this, your 15th convention, and to look back on your significant accomplishments under the leadership of your beloved Dr. Townsend.

It is fitting that you have chosen to meet in this beautiful city of St. Petersburg. It is known throughout the land as a haven for our retired senior citizens. I am sure that your visit here will be a most pleasant one.

I come to talk with you, briefly, on a matter in which you, and millions of other American citizens, are deeply interested. I come also to pay a tribute to the founder of your organization, Dr. Francis E. Townsend. In all our land, no other person has done more to improve the lot of the senior citizens of our country. His efforts have done much in lightening the burden of our old folks and in making possible for them a better opportunity for a decent livelihood in their retirement.

I know that the pages of history will duly record his tremendous contribution to the well-being of his fellowmen. His perseverance and courage against overwhelming obstacles serve as inspiration to all of us, and to those who will follow along the path toward social and economic justice which he has so clearly marked.

This 15th convention has been most aptly entitled the "Torchlight Convention." Truly, the purpose of this gathering is to light the torch of truth, showing the way to a better tomorrow for the senior citizens of the Nation and for our younger folks to look forward to.

I have always admired the Townsend organization because of its sincere concern with the problems of people. In this day of increasing mechanization and preoccupatio with such things as automation, A- and H-bombs, guided missiles, V-8 engines, television, and other mechanical and technical advancements, it is encouraging to find such a dedicated organization striving to obtain for our old folks an equitable share of the Nation's abundance which you have helped to create.

You have made outstanding progress in an area where any progress is difficult. The struggle for social reform is a constant uphill fight. Tremendous pressures for inertia must be overcome before any advances can be made.

Great gains have been won. And although you have not obtained your objective for adequate insurance or retirement benefits for elderly citizens, you have made great progress. You have been a tremendous force for good. You can rightfully claim much of the credit for improvements that have been made in State and Federal legislation pertaining to problems of the aged. You are a force for good because you put human values above everything else.

We need only to refer to history to find illustrations of successful campaigns which have been won against the forces of social inaction. Some of these fights have taken many decades, others hundreds or even thousands of years.

Consider the struggle over the ages for the realization of the inherent worth and dignity of the human spirit. From the days of Christ, man has been taught that human dignity and spiritual values transcend all other values. The basic elements of Christianity teach that we are all God's children and that we are important in His plan. This teaching survived the tyranny of the Roman Empire, the Dark Ages and was reborn in the renaissance. Down through the centuries man has struggled to break the chains of feudalism, political and religious persecution and to improve his status. Our own forefathers came to America to find a freedom which was denied them in their native lands.

Yes, the struggle for freedom and social progress for the individual has carried down into our own lifetime. We have achieved a measure of freedom and dignity unsurpassed in all of the history of the world. But we continue to fight for an even better life for ourselves and our children and our grandchildren because there still are inequities today which need remedying.

Some of the struggles for social progress have been of a shorter duration, but nonetheless intense. The fight against the inhuman institution of slavery in this country lasted almost a hundred years, and was won at the fearful cost of human lives and suffering in a great Civil War.

Woman suffrage was not achieved until the recent past, after decades and decades of agitation. No, my friends, real social progress is not easy to win. It is a continuing struggle against powerful forces who seek to maintain the status quo and who fear change.

Your program is one which should attract interest from young people as well as old folks. The young man or woman who has the foresight and vision to look ahead, will be interested in the kind of Federal insurance, or social-security program that will adequately provide for them in their twilight years. Young people are naturally concerned about the welfare of their parents and that, too, should interest them in a security program that is adequate in meeting the needs of their elders.

We are not much concerned about the name of a program so long as the objective is to adequately compensate retired citizens and to provide for them the opportunity to properly share in the abundance with which this Nation is blessed.

Any program of social reform which gives a break to the average citizen will always be denounced by those who traditionally have opposed social legislation and social progress.

The objective you seek will one day be realized. It would be unrealistic to expect it to come without great effort and sacrifice, for social reform unfortunately does not move as fast as we would like.

Progress has been slowed down by those who say that the Nation cannot afford a program such as yours or, even programs which are not as far advanced as yours. They ignore the facts that one of our Nation's great problems today is how to meet the challenge of abundance.

We are worried about the great surpluses of farm products. We are concerned because the storehouses are filled with all sorts of electrical gadgets, automobiles, and other items essential for good living. It seems to me that the question is whether we can afford to hold back on programs for adequate retirement benefits. Can we afford to block plans to raise the living level of millions of American workingmen and women and their families who now live on incomes that are not adequate to provide the kind of livelihood and opportunities they are entitled to?

There is something seriously wrong when millions of our fellow citizens are suffering because of the lack of goods which the Nation has in such great abundance. Some folks say we are living beyond our means. They suggest that because of this great abundance we should adjust ourselves downward and backward. Because there is so much of everything they believe people should live on less. That, to me, does not make good sense.

In this great land of ours there is no good reason why everyone should not have the opportunity for a full, happy, and productive life.

In order to build an expanding, full employment economy we must make it possible for our old folks to share in our economic progress. This is one of your aims and it is sound. Increased purchasing power is the key to a brighter tomorrow. Millions of citizens now barely able to exist on meager pensions, inadequate unemployment insurance, old-age benefits, or public assistance today constitute a great potential force for economic advancement if they are given the opportunity to share in the Nation's wealth.

Our Nation was founded by men who had a deep and abiding faith in human progress and a humble respect for the needs of our people. Democracy can be hurt only in times of chaos and in an atmosphere of fear, uncertainty, and hopelessness.

Your own organization was born in the grim days of depression. You remember well that panic which seized our people when our economy was in a state of collapse because of policies which ignored the welfare of the average American. We must remember well the lessons we learned 25 years ago and resist any attempts to again take us down the road to economic disaster.

I regret to say that already I see some of the same danger signals of the 1920's in certain policies of the present administration. The ill-fated "hard money" policy has already forced increases in the interest rates on Government securities and has worked a hardship on borrowers and small businesses. Preoccupation with the alleged needs for encouraging investments has taken precedence over the real needs of the average American for tax relief and resulting increases in purchasing power.

Some people in the administration believe that a float of unemployment is essential in a competitive society in order to keep production on a high level. They overlook human values and fail to see the suffering that comes to several million American families who are compelled to live on inadequate unemployment insurance, public assistance or private charity. They fail to see the tremendous waste in human and natural resources that comes with idle men, idle machines and idle factories.

The real waste in our Nation today is the loss in national output because of this backward adjustment and fear of abundance. This loss last year amounted to something like $30 billion. It does not make sense that several million workers who desperately seek work in our country today are unable to get jobs, particularly when there is so much work to do. There is a great need, all over the country, for more and better schools. There is a crying need for hospitals and increased medical care for our citizens. In all parts of our great country there is the need for the building of highways and expansion of water, sewer, sanitary systems and the like. There is a great new field for employment in serving the millions of people for whom new avenues have opened for longer vacations, travel, recreation and culture because of automation and increased productive power.

We need not fear abundance. We should not be frightened about a program which would permit all of our citizens, and particularly our deserving senior citizens to fully share in the necessities and luxuries of life which we, as a Nation, have in such great abundance.

If we have the vision, our productive capacity can provide more leisure. It need not be unemployment and suffering amid plenty. If we have the vision, abundance should be cause for rejoicing, not confusion, fear, and sorrow.

But, shortsighted economic thinking and philosophy which we had hoped was discredited, dead and buried in the great depression, is now making its reincarnation. I am seriously alarmed at some striking resemblances to the predepression administration which are now appearing on the present-day Washington scene.

In my opinion the present administration is not concerning itself with the problems of people but is focusing more and more attention on the health of the stock market, the banking interests, and the profit figures of our giant corporations.

The administration should realize that the needs of our aged are becoming more critical each year. The number of persons over 65 years of age is increasing at the rate of over 1,000 persons a day. Senior citizens now make up over 8 percent of our total population and the proportion is rising rapidly as medical science makes new discoveries which prolong our life expectancy.

The hard fact of the matter is that our social and economic advances have not nearly kept pace with our medical, scientific, and technical advances. Concern for human needs has been shoved aside in the mad race for profits and economic power. But how can we achieve real and lasting progress unless the needs of our aged are given the serious consideration they deserve? Today, even middle-aged workers are being discriminated against in employment opportunities. What happens to these citizens who can no longer find employment? A few have been able to accumulate savings in their lifetime, however meager. But how far will savings go when the cost of living remains at such a high level. Some aged persons are cared for by children or relatives, but we know of the natural desire for independence and freedom of action.

One of the most effective ways which the administration could begin to meet the problems of the aged would be in supporting a housing plan for the older citizens of this Nation.

An example of how this plan could be geared to the needs of our aged is to be found in Cleveland, where a public housing development has set aside 100 apartments, with special provisions such as elevators, nonslip floors, handrails and other fixtures which would make life easier for old people.

Rent in such a project would be low and independence would be assured without isolation, since the apartments are a part of a larger development which would have occupants of all ages. This is the type of program which the Federal Government should undertake on a nationwide scale to reassert its interest and concern for the needs of our growing aged population.

Of course, the Federal Government must begin to face up to the realties of the basic financial needs of the senior citizens. Present levels of benefits under the old-age insurance provisions of the Social Security Act are pitifully inadequate despite recent increases. Even $100 a month pension would be little enough to buy the bare necessities of life. Millions of Americans are trying to exist today on far less than that. Coverage, while extended recently, still does not provide for aged persons not eligible for benefits at the time of their retirement because of limited original coverage and other disqualifications. Permanently and totally disabled persons are discriminated against under the present law.

I share your views that our present social security law is far from adequate. But it can, and will be improved, as more citizens show an interest in their Government and in legislation that means so much to themselves and their families. We can make our social security law whatever we want it to to be when we arouse enough public support.

Dr. Townsend has displayed wisdom in looking toward his objective. He is realistic enough to know that it requires organization, work, and effort. He has called attention to the great need for unity and action on the part of elderly folks throughout the Nation. He has wisely suggested that you make common cause with organizations of working men and women who are your strongest allies. Labor organizations are made up of members, who like yourself, are deeply concerned about humane problems and about the security of our senior citizens.

Don't forget, there are some in this country who would like to destroy social security, not because they want something better, but because they don't like security at all for the average citizen. They don't like welfare programs. The security that comes regularly with an old-age insurance or pension check—something that is yours as a matter of right—gives to old folks a sense of dignity, self-respect, and independence.

Some folks don't want you to be independent. They don't want you to be in a position where you can't be pushed around or be told what to do. Old-age insurance or retirement pension legislation, or whatever you wish to call it, can be improved to the extent that people desire, if they have the initiative to exert themselves and to apply themselves to the task that must be done.

There is really no need to worry about the financial soundness of the social security system. Social security is just as good and strong as your Government.

The real test, as to whether the Nation can and will adequately provide for retired folks and for all of our people will finally depend upon whether or not we have the real wealth in human and natural resources and in food and other essential goods.

In closing I must say a good word about my friends, Mrs. Ford and Mr. ELLIOTT. They are doing a good job for you in Washington and have the respect of my colleagues in the Congress.

Dr. Townsend is also greatly admired by Members of the Congress for his outstanding leadership in your great cause.

Many Members of Congress have signed the Townsend petition requesting that consideration be given to your program in committees and on the floor of the Congress.

Although this objective has not been achieved, your work has been most fruitful in that it has had a powerful impact on bringing about improvements in social security.

In this beautiful Florida city are a number of people who have come here from my congressional district. I had the pleasure of meeting some dear friends only a few moments ago. I refer to Mr. and Mrs. Robert S. Birch, who are now residents of this city and are with us here in the convention hall. Mr. Birch was a prominent citizen of Reading, Pa., and for many years principal of the boys high school. I was one of his students.

I regret that I can't stay here a few days instead of rushing back to Washington. To all of you, my sincere best wishes. May you enjoy continued success in advancing a just cause to which you are so faithfully devoted.

Surplus Wheat and Corn Processed Into Flour and Meal Should Be Made Available to the Unemployed of the Nation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. VAN ZANDT. Mr. Speaker, this morning I appeared before a subcommittee of the Senate Agricultural Committee in support of Senate bill 661 which will authorize the Commodity Credit Corporation to process wheat into flour and corn into meal for distribution to the unemployed and their families. S. 661 is similar to a bill I introduced on the subject in the House of Representatives.

My statement before the Senate subcommittee follows:

Mr. Chairman, S. 661 is similar to H. R. 2851 with the exception of amendments adopted by the House Committee on Agriculture. I introduced similar legislation in the House because the subject of processing wheat into flour and corn into meal is of great interest to the unemployed people in my congressional district who can use surplus commodities to better advantage, if they are processed as provided for by this legislation.

Mr. Chairman, at the present time over 18 percent of the civilian labor force in my congressional district is unemployed and is principally composed of coal miners and railroaders who have exhausted their unemployment insurance benefits, liquidated their savings accounts, borrowed on or have taken the cash value of their insurance policies and today are living on public assistance and surplus commodities.

To give you some idea of the overall picture of unemployment in my congressional district, let me call your attention to the following chart that describes the number of families and persons receiving surplus commodities:

Surplus commodities

County	Number of families	Percentage of all families	Total number of persons	Percentage of county population
Blair	10,801	26.8	32,561	23.3
Centre	2,939	15.9	9,362	14.2
Clearfield	9,988	42.2	37,179	43.3
Total	23,728	28.8	79,402	27.1
Entire State of Pennsylvania			1,020,963	[1] 9.7

[1] Percent of State population of 10,498,012.

As you know, Mr. Chairman, before you receive coupons for surplus commodities you have to be certified as eligible by a local welfare agency.

Therefore, these figures are official and have been verified not only by the State of Pennsylvania but also by the county commissioners in each of the three counties in my congressional district.

Surplus commodities by carload lots to Mar. 1, 1955

County	Beans	Beef	Butter	Cheese	Dried milk	Rice	Shortening
Blair	2	16	21	19	18	1	16
Centre	½	4	3	5	5	½	4
Clearfield	4	5	16	14	16	1	13
Total number of carloads	6½	25	40	38	39	2½	33
Grand total			184				

Mr. Chairman, there is no denial of the fact that these figures are startling and are an answer to those who smugly insist that there is no acute unemployment problem in the labor-surplus areas of the Nation.

Think of it, Mr. Chairman, according to the Pennsylvania department of property and supplies, in this great industrial State of Pennsylvania, out of its 10⅛ million residents, nearly 10 percent, or 1,020,963 are living on surplus commodities.

In this congressional district comprising Blair, Centre, and Clearfield Counties, out of a population of 292,000, nearly 28 percent or 79,402 persons are receiving surplus commodities.

Mr. Chairman, these figures are startling for they truly portray the extent of unemployment in my congressional district as well as in the entire State of Pennsylvania.

As I said in the beginning of this statement, the processing of wheat into flour and corn into meal will enable the families of the unemployed to use these surplus commodities to good advantage since many housewives still bake their own bread and muffins and can put the flour and meal to good use in arranging the family diet.

Mr. Chairman, this idea of processing wheat into flour and corn into meal as provided for in S. 661 will not establish a precedent in the handling and distribution of surplus commodities, because over a period of years the United States Department of Agriculture has been distributing canned beef and gravy in processed form.

According to the report of the United States Department of Agriculture, during the period from March to December of 1953, they purchased nearly 172 million pounds of canned beef and gravy for distribution here in the United States, while nearly 12 million more pounds of canned beef and gravy were purchased for export, mainly to Greece and Germany. The cost of these purchases was in excess of $72 million.

Mr. Chairman, if it has been possible to put beef and gravy in a tin container for distribution, I can see no reason why wheat and corn should not be processed into flour and meal for the unemployed of the Nation. Therefore, I hope that S. 661 will receive the favorable consideration of this committee.

Public-Opinion Survey—11th Illinois Congressional District

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. SHEEHAN. Mr. Speaker, for the fifth consecutive year, I have conducted a public-opinion survey among the constituents of my congressional district, and this year mailed out 19,700 questionnaires, of which 250 were returned undelivered, showing a net mailing of 19,450.

To date, 3,520 questionnaires have been returned and tabulated, which represents 18.1 percent of the net mailing and which, according to professional sampling criteria, is a very good return.

Besides the 4,200 people on my semimonthly newsletter mailing list, the

questionnaire was sent into every precinct in the district to people picked at random without prior knowledge of their political affiliation, so that the distribution accomplished was as fair as was humanly possible and indicates that a typical cross-section of the constituency was sampled. The results of the survey are as follows:

	Yes	Percent	No	Percent	No answer	Percent
1. Are you in favor of the United States continuing as a member of the United Nations?	2,445	69.5	996	28.3	79	2.2
2. Do you favor further arms and military aid for foreign nations?	1,579	44.9	1,753	49.8	188	5.3
3. Do you favor continued economic aid (point 4 program) to foreign nations for the development of backward areas?	1,759	50.0	1,622	46.0	139	4.0
4. Do you approve of the Republican foreign policy in general?	2,004	56.9	1,066	30.3	450	12.8
5. Do you approve of the Eisenhower administration to date?	2,298	65.3	840	23.9	382	10.8
6. Do you approve of using United States military forces to defend the islands of Quemoy and Matsu, just off the Chinese mainland, if these islands are attacked by Chinese Communist forces?	1,221	34.7	2,069	58.8	230	6.5
7. Do you approve of using United States military forces to defend Formosa if it is attacked by Chinese Communists?	2,206	62.7	1,136	32.3	178	5.0
8. Do you favor continuation of the Federal Government's low-rent public housing program?	1,921	54.6	1,477	41.9	122	3.5
9. Do you favor the Federal Government reinsuring privately run voluntary hospitalization and surgical plans?	1,530	43.5	1,750	49.7	240	6.8
10. Do you approve of President Eisenhower's 10-year highway-construction program requiring the expenditure of $101 billion?	2,680	76.1	717	20.4	123	3.5
11. Do you favor the administration's education proposal in which the Federal Government share would be $1.1 billion, of which $200 million would be in grants, the rest in loans to support local and State school bonds?	2,539	72.1	842	23.9	139	4.0
12. Do you favor a program of universal military training requiring every man to spend some time in military training and then have to join the Reserves?	2,320	65.9	1,103	31.3	97	2.8
13. Do you approve of statehood for Hawaii with a population of 499,794 (1950 census)?	2,696	76.6	674	19.1	150	4.3
14. Do you approve of statehood for Alaska with a population of 108,543 (1950 census)?	2,664	75.7	697	19.8	159	4.5
15. Do you favor revealing to the American public more of our foreign agreements such as the recently disclosed Yalta documents?	2,852	81.0	567	16.1	101	2.9
16. Do you believe we are spending enough for military security? (The estimated budget expenditure for 1956 is $62.4 billion; 65 percent of this or $40.5 billion is for major national military security.)	2,768	78.7	487	13.8	265	7.5
17. Do you think the average American company can pay its employees a guaranteed annual wage?	1,202	34.1	2,067	58.7	251	7.2
18. Do you favor President Eisenhower's conducting personal talks with the heads of the Russian and British Governments?	2,311	65.7	1,045	29.7	164	4.6
19. Do you approve of a questionnaire of this type as a means of helping a Congressman to know the thinking of his constituents?	3,451	98.0	38	1.1	31	.9

Five of the questions asked in this year's survey were identical in content and similarly worded in 1954 and 1953, and a comparison of the results over these 3 years is as follows:

	Percentages							
	1955			1954			1953 [1]	
	Yes	No	No answer	Yes	No	No answer	Yes	No
1. Are you in favor of the United States continuing as a member of the United Nations?	69.5	28.3	2.2	67.0	29.9	3.1	64.1	35.9
2. Do you favor further arms and military aid for foreign nations?	44.9	49.8	5.3	45.7	46.4	7.9	44.7	55.3
3. Do you favor continued economic aid (point 4 program) to foreign nations for the development of backward areas?	50.0	46.0	4.0	54.4	38.8	6.8	43.3	56.7
4. Do you approve of the Republican foreign policy in general?	56.9	30.3	12.8	52.9	36.6	10.5	78.5	21.5
5. Do you approve of the Eisenhower administration to date?	65.3	23.9	10.8	58.0	25.9	16.1	84.2	15.8

[1] It is to be noted that in the percentage of "yes" and "no" answers tabulated in the 1953 questionnaire, the "no" answers were not included in the percentage breakdown.

Lawrence, Mass.

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. LANE. Mr. Speaker, the Greater Lawrence Chamber of Commerce, of Lawrence, Mass., conducted their annual dinner on Thursday evening, May 6, 1955, at the Central Catholic Memorial Auditorium at Lawrence, Mass. Although I did not have an opportunity to be present as one of the speakers due to the heavy legislative program in the House of Representatives, I am advised, however, that this event was one of the most successful held by that organization.

The capacity attendance, I am informed, enjoyed the extemporaneous and off-the-cuff remarks of the principal speaker, Harry A. Stuhedreher, former All-American Notre Dame quarterback and one of the so-called Four Horsemen and now an executive of the United States Steel Co.

The toastmaster for the evening was Charles J. McCabe, and he introduced the speakers consisting of Arthur M. Sullivan, general chairman of the banquet committee; Very Rev. Vincent A. McQuade, O. S. A., Ph. D., president of Merrimack College at North Andover, Mass.; Hon. John J. Buckley, mayor of the city of Lawrence; Joseph A. Torrisi, the president of the Greater Lawrence Chamber of Commerce; Rabbi Joseph Rudavsky of Temple Emmanuel; and Rev. Allan R. McAllaster, Ph. D., president of the Greater Lawrence Council of Churches.

The highlight of the evening, introduced by Toastmaster Charles J. McCabe, labeled, Spotlight on Optimism, in which James F. Hennessey, superintendent of schools of the city of Lawrence, was commentator and consisted of a group of attractive young women appearing on the stage carrying printed cards honoring each phase, as Superintendent Hennessey spoke. The well-prepared and enlightening remarks of Mr. Hennessey are as follows:

SPOTLIGHT ON OPTIMISM

The story you are about to hear is true. Even the names are the same, to identify the heroes. It is the story of one community's struggle to live and to keep growing—after its chief source of livelihood, to a large extent, had died. It is the straightforward account of what great achievements are possible for a people with a will and with willingness—with a determination and a determined goal—with an intense pride in their proud past and in their noble destiny.

The scene is Lawrence—Lawrence, Mass.—center of the happy Merrimack Valley, populated by 125,000 diversified people. Over 99,000 of these people native born, locally educated, with their income derived from local sources.

The theme of our story is a call to optimism.

The spotlight will fall on those aspects of our educational, religious, cultural and civil life that justify firm and reassuring confidence in our future. We shall see and hear things of which we are proud. Out of it all will be a realistic proof of our reason for optimism.

First, there is that remarkable asset which so completely makes the Greater Lawrence area strong: Our people. There is only one way to account for the historic development of Greater Lawrence and more particularly the tremendous industrial growth of the first few years. That is that Lawrence has a greater number of diligent, courageous, and industrious people than any other comparable community in America. So skillfully have our people adjusted to the techniques and demands of modern industry, that our labor force now provides the knowhow for the manufacture of over 100 different products—an adjustment they had to make within the brief space of less than a decade. Mature union leadership, responsible union members, understanding and enlightened management have developed a labor-management record that stands up well in the scrutiny of our spotlight. From the day when our country adopted a national labor-relations law, no city in America with a high percentage of union membership and its resultant high standards of living, has had a better record than we have had in Lawrence. Lawrence people are friendly, they

are sincere, they are proud, and they are generous. There are no masses, no classes. We are a spirited, independent, freedom-loving people. We like politics, because we like the democratic way of life. We enjoy a measure of controversy and debate, and we don't mind fighting for what we believe. That's the kind of people we are, and our spotlight shines on the people of Greater Lawrence as our first and greatest cause for optimism.

Few communities in America can boast of finer educational facilities than Greater Lawrence.

At the base we have splendid systems of public and parochial schools, elementary and secondary. Then there is Abbot Academy, the first incorporated school for girls in New England. Phillips Academy is one of the foremost boys' preparatory schools in the world. On its grounds is the Addison Gallery of American Art—one of the truly outstanding art museums in the United States. We have Brooks School, with an enrollment of boys from 22 States and the District of Columbia and Hawaii.

Merrimack College, the university of the future, already has a student body of over 1,000, and a tremendous expansion program already underway.

But the spotlight must also fall on the Methuen Memorial Music Hall, home of the internationally renowned Serlo organ, completed after 5 years of painstaking craftsmanship, standing 60 feet high, 40 feet wide, and supported largely by public subscription.

Yes; Greater Lawrencians believe in education—in culture—in the training of the mind as a way of developing the whole man and raising the dignity of the human person.

The spotlight falls on Abbott—on Phillips—on Brooks—on Merrimack—on all our educational and cultural achievements, and gives us cause for optimism.

Faith in ourselves is exceeded only by our faith in God. We are a people of deep religious conviction. From that early day in 1661, when our first house of prayer was built, until the present time, succeeding generations have desired, created, and supported the churches of their choice. Today there are 88 churches providing ample opportunity for the religious practice of all our people.

And still our people are planning and building for our future. Within the past few days we witnessed the groundbreaking for a new Jewish community center, and also the dedication of the Collegiate Chapel of Christ the Divine Teacher on the grounds of Merrimack College. Listen carefully to the words of Harry H. Koffman, president of the Jewish Community Center, on the occasion of the public groundbreaking ceremonies, which so accurately describe the significance of these facilities and justifies our optimism for the future. Mr. Koffman said: "Our faith in the growth of our city, the realization that Lawrence is our home, and a sincere desire to contribute to the social welfare of the city has made all this possible. The building we plan here will contribute to the welfare, not only of our own people, but of the city as a whole." And so our spotlight falls on the faith of our people, their faith in their God, their faith in themselves, their faith in our great future.

Traditionally, Lawrence has always been a natural shopping center for a substantial portion of the Merrimack Valley. To serve this population of over a quarter of a million people, with an annual purchasing power of almost a quarter of a billion dollars, Lawrence has approximately 1,700 retail outlets doing a gross annual sales volume of over $150 million. They provide employment for about 5,000 people. Lawrence has the most active, most successful downtown shopping area of any city between Boston, Mass., and Montreal. Among metropolitan communities, Greater Lawrence has the 23d largest sales volume of any area in the Nation, including the capitals and principal cities of every State in the Union.

The preservation of our shopping area is vitally important to the future of Lawrence. It represents almost one-third of the total tax base of the entire city. Any shrinkage in value here will be reflected in increased taxes to every homeowner. On the other hand, any programs that tend to bolster or to expand the downtown property valuation have the effect of lightening the tax burden for the people who own their own homes.

It is a pleasure, therefore, to spotlight our traffic and parking survey, our urban-renewal program, a revamped and more aggressive sales-promotion effort, as items in our future hope for a greater, more modern, more successful downtown shopping area for Lawrence.

From its earliest days, the hum of industrial activity spelled economic vitality for the thousands of Greater Lawrence workers. From our earliest days we were an industrial center, and manufacturing plants dotted the banks of our Merrimack River. The story of our growth to one of the dominant giants in the textile world is too well known to repeat here tonight. Our economic losses suffered as a result of the recent drastic changes in the textile industry are too vivid in our memory to require any review at the moment. But we fear that the spectacular and impressive achievements of innumerable community and civic leaders in rebuilding our industrial activity, in generating an economic rebirth, have escaped the attention and notice that they so richly deserve.

With a grateful salute to the many courageous individuals who have played heroes' roles in this drama, we put the spotlight now on the new industrial opportunities that surround us.

Consider for a moment, if you will, the achievements of Lawrence's famed and self-styled two-pronged attack, (1) the utilization of the existing properties and (2) the construction of new facilities, both with the single objective of creating jobs and job opportunities.

Listen to these examples: There were 1½ million feet of idle space in the Everett Mill properties—tonight there is only 25,000 feet on a 3d floor for rent.

There were 2 million feet to be filled in the Lawrence Print Works. This morning, a new prospect could find only approximately 100,000 feet for lease.

The Atlantic Enterprises acquired several industrial buildings with almost one-half million feet of space. Today not one single square foot is available.

The Greater Lawrence Industrial Associates acquired the Arlington Mill property last December 1. In less than 5 months, in addition to thousands of feet rented, they have sold 4 substantial buildings to firms who, by reason of their ownership are planting their roots deeply into our soil.

Last week we read with great joy the letting of a contract for the construction in Greater Lawrence of the new Western Electric plant. It is the largest single industrial development in the entire State in many a month. It will bring fine employment opportunity for thousands in our area.

Most certainly, ladies and gentlemen, our spotlight should shine brightly on these men in all of these enterprises who have accomplished so much for Lawrence. Their initiative, their faith, their confidence in our future, are the principal reasons why Lawrence is today hailed as the city of industrial opportunity.

Sometimes unappreciated is the fact that Lawrence is the principal wholesale and distribution center for lower Merrimack Valley. With 151 establishments providing employment for over 3,000 people, grossing sales in excess of $62 million, this business of distribution makes a very substantial contribution to the economy of the greater Lawrence area and justly deserves to take its place in the brightness of our spotlight.

Several factors are responsible for our prominence as a distribution center. First there is the network of highways that serves the area: Routes 28, 110, 113, 114, 125, and 133 all contribute to giving Lawrence ample and easy access to the rich New England markets.

Boston & Maine Railroad with its mesh of spur track running like arteries through the heart of our industrial areas, the Northeast Airlines providing a conveniently accessible daily air freight service, the healthy number of reliable and competent trucking and expressing firms, all these media guarantee the greater Lawrence area efficient and competitive and economical transportation. And so we turn our spotlight on these varied services that contribute so substantially in retaining for our community its prized reputation—distributing center of Merrimack Valley.

But great cities, like great men, advance only by doing more than resting on their laurels. Even when your're on the right track you can get run over if you just sit down. The great danger in looking back is that you'll fail to look ahead. The optimism that can be generated by a glance at past accomplishments will evaporate into empty hopes unless the future is tackled with equal vigor and vitality. The battle is never completely over, the contest is never ended, for as we travel along the highway of community development the look ahead is ever necessary, for danger may be lurking around the next corner.

The spotlight on the future shines brightly on several projects that give rise to a confident and enthusiastic optimism. We have urban renewal, new route 28, new North Andover and Lawrence bridge, long range off-street parking program, community hotel, industrial park, airport development, Northeast Airlines extension of service. All these hold a measure of promise for a better future. Some of these subjects are dreams in the minds of dreamers, some of them are hopes in the hearts of the hopeful, some of them are actual plans already blueprinted on the tables of doers. But all of them are part of the total challenge that spells opportunity for those who want to forge a dynamic future for greater Lawrence.

This is our story. This is the story of Lawrence, its past, its present, its future. It is a story that should stir hope and confidence in the hearts and minds of all of you who have a vital interest in this area. Your chamber of commerce believes in this story, it believes in the lesson it teaches.

While mindful of these reasons for optimism, let us not forget our future problems. There are days of struggle ahead. There are skirmishes that must be fought. The road to a prosperous future, with a high standard of living for all our people is still rough, hazardous, and full of pitfalls. But problems are challenges to those who want to lead. There can be no prize without a contest, there can be no victory without a battle.

Let us all take heart and draw encouragement from the treasure of good things we have stored up. Let us go forward with courage and enthusiasm to solve the problems that lie ahead obstructing our progress. Let the dead past bury its dead. We have seen the worst, so let us be done with pessimism. Let us eliminate the negative and accentuate the positive. Let us all, in unison and in unity, accept the challenge that the Greater Lawrence Chamber of Commerce issues here tonight; with convinced minds and stout hearts let us answer the call to optimism.

Long-Short Haul

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I include herewith a letter from Chairman Richard Mitchell, of the Interstate Commerce Commission, and a statement from the Commission giving its justification for a bill I have introduced today by request of the Commission:

INTERSTATE COMMERCE COMMISSION,
Washington, D. C., May 3, 1955.

The Honorable J. PERCY PRIEST,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

DEAR CHAIRMAN PRIEST: I am submitting herewith for your consideration 20 copies of a draft of a bill to amend section 4 of the Interstate Commerce Act, together with a statement of justification of the bill.

After an intensive review of the operation of the fourth section of the act, with particular reference to its impact on the work of the Commission and the ratemaking function of the rail carriers, the Commission has come to the definite conclusion that this section should be amended so as to eliminate therefrom all unnecessary refinements of the long-and-short-haul principle, but at the same time retain the central objective of the fourth section, i. e., departures from the long-and-short-haul principle over direct routes.

The Commission would be very grateful for your assistance in introducing the bill and giving it early consideration.

With kindest regards, I remain,

Sincerely,

RICHARD F. MITCHELL,
Chairman.

JUSTIFICATION

The attached draft of proposed bill is intended to amend section 4 (1) of the Interstate Commerce Act so as to remove therefrom all unnecessary and unduly burdensome refinements of the long-and-short-haul principle, which principle was originally designed to prevent the specific discriminatory practice of charging more for a shorter than for a longer haul. That principle is still valid today.

Section 4 (1) of the act now prohibits any common carrier subject to part I or part III thereof from charging or receiving any greater compensation for the transportation of passengers, or like kind of property, for a shorter than for a longer distance over the same line or route in the same direction, the shorter being included within the longer distance, or from charging any greater compensation as a through rate than the aggregate of the intermediate rates subject to the provisions of part I or III. It further provides that upon application the Commission may, in special cases, after investigation, authorize such carriers to charge less for the longer than for the shorter distances, and that the Commission may from time to time prescribe the extent to which such designated carrier may be relieved from the operation of the section, except that in exercising such authority the Commission shall not permit the establishment of any charge to or from the more distant point that is not reasonably compensatory for the service performed.

The proposed amendment is specifically designed to make the fourth section self-operating with respect to the right of a circuitous route to meet the rate or rates legally established between competitive points over the more direct routes. No further authorization from the Commission would be required other than the standards laid down by other sections of the act. As an incident of this suggested change we are proposing to remove from section 4 the so-called reasonably compensatory provision. This, in our opinion, would eliminate from section 4 all of the unnecessary refinements of the long-and-short-haul principle, would terminate our responsibility with respect to fourth-section departures over circuitous routes, and would limit our jurisdiction to authorizations of relief over direct routes, upon application and after investigation, where special justification for such relief is shown.

Experience has demonstrated that the public interest is not being served by the imposition of the restrictions in question. The history of their administration has proved them to be excessively burdensome to all concerned. Together they have resulted in disproportionate expenditures of time, labor, and funds by both the carriers and the Commission in comparison with the relatively small benefits derived. Moreover, almost all of the dissatisfaction with section 4, which is expressed periodically by carriers and shippers alike, appears to stem from the same burdensome provisions.

Section 4 has been highly controversial since its inception both as to its substantive provisions and as to the manner and extent of its administration. In implementing this section the Commission initially adopted a vigorous policy, but due to the early attitude of the courts, especially the narrow intepretation given the words "under substantially similar circumstances and conditions" (which were contained in the original act) in *I. C. C.* v. *Alabama Midland Ry. Co.* (168 U. S. 144 (1897)), the Commission was compelled to abandon, at least temporarily, its forceful approach.

The enactment of the Mann-Elkins Act, June 8, 1910, however, gave new life to the section by eliminating the phrase "under substantially similar circumstances and conditions"; and, as set forth in that act, section 4 appeared to contain all the essentials necessary for effective and efficient administration. The Transportation Act of 1920, however, added two refinements, viz, the "reasonably compensatory" provision and the so-called "equidistant" provision which proved to be troublesome. The latter provision was repealed by the Transportation Act of 1940, at which time the "reasonably compensatory" provision did not appear to be quite so objectionable by comparison. In retrospect, however, it is now equally clear that the carriers should not be required to secure our permission for the publication of rates over circuitous routes equivalent to the going rates over direct routes when in their managerial discretion such rates are necessary because of competitive factors.

The Commission is now firmly of the view that the "reasonably compensatory" provision no longer serves any useful purpose, and that it may well be eliminated from section 4 without jeopardizing the public interest. And, in this connection, we wish to point out that under other sections of the act the Commission is constantly seeking assurance that all rates subject to its jurisdiction, including those published under section 4, are not unjust or unreasonable, unjustly discriminatory, nor unduly prejudicial or preferential. For this reason we do not believe that the proposed amendment would detract substantially from our jurisdiction, but would, on the other hand, allow us greater discretion in the administration of this section, which should inure to the benefit of the carriers and the public as well.

It is our view that the central principle of the fourth section, i. e., control of departures from the long-and-short-haul principle over the direct routes—is sound and should be retained, and that enactment of the proposed amendment would serve to streamline section 4. It would likewise enhance our administrative effectiveness and relieve the carriers of an unnecessary burden.

Fifty Stars

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial by Mr. Henry H. Heimann, executive vice president and editor of Credit and Financial Management:

FIFTY STARS

In these days of world unrest many colonies are seeking their independence. This has given rise to the expression that the days of colonial empires are past. In many instances the people who desire their independence and wish to strike out on their own are ill prepared for acceptance of the responsibility that accompanies an independent status. The Kremlin is, of course, constantly agitating to create unrest among the colonials.

It is significant that in this world situation there are at least two outstanding exceptions, though they are by no means colonies or dependencies, but part of the United States. Hawaii and Alaska are seeking to make closer their ties to the Nation. They are asking for statehood. There are many reasons that it should be granted. They are an asset to the Nation, a part of it, loyal in the extreme, and should enjoy the full privileges of States. In former years, if they had enjoyed full statehood, the Government might have been restricted in giving them essential territorial aid and services. That reason no longer prevails. The Government now gives a large measure of assistance to the various 48 States in the Union.

Brushing aside all of the arguments political and economic for and against statehood, there is one undeniable advantage in having Alaska and Hawaii become States. The world public relations value of such a move, voluntarily requested by both Alaska and Hawaii, could not help but have an arresting and damaging effect upon the propaganda of the Communists.

Here are at least two cases where large groups of people want to be closer to their Nation. They are not seeking independence; on the contrary they want to be full-fledged partners in our ventures and to accept the responsibility that goes with this partnership. Granting Hawaii and Alaska full statehood would have a tremendous effect upon world thought regarding territories and colonies.

Aside from the fact that they are entitled to statehood, their acceptance into statehood would do much to offset the false and malicious doctrines of the Kremlin. The 48 States in this Union should be proud of the fact that these two areas of the United States want to become more intimately a part of the family. It should not be subject to further debate. There should be constructive and favorable action.

Federal Regulation of Natural Gas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Christian Science Monitor of Tuesday, May 10, 1955, citing arguments for spokesmen for Federal regulation of the price of natural gas:

HOLD THAT PRICE

WASHINGTON.—If a housewife in the city of Philadelphia doesn't like the price of eggs charged at the Giant store she can go across the street to the big glass-front window of the A. & P. and buy eggs there. She has freedom of choice.

But if a householder in Philadelphia using gas for cooking, water heating, and heating doesn't like the cost of gas, which is now enriched by natural gas brought in from a thousand miles away, he must scrap a $1,000 investment in order to burn coal, or oil, or electricity as a substitute.

The United States is now covered with an amazing network of pipelines bringing natural gas to the big cities. It is the sixth biggest industry in the Nation. Natural gas now supplies some 25 percent of domestic fuel. Raising the price of natural gas 1 cent a cubic foot would add $400,000, for example, to the annual gas bill of Philadelphia—the city taken for the purposes of illustration.

Today there are about 20 million homes, mostly in cities, which have natural gas mixed with the fuel they burn. The population affected is estimated at around 60 million. The natural gas comes in primarily from Texas, Louisiana, and other southwestern States.

That is the background of a big fight in Washington. Congress is asked to scrap a law which requires the Federal Power Commission to police the industry in the interest of consumers.

HOUSE COMMITTEE HEARS MAYORS

It is a complex question. The arguments for repeal as seen by oilmen and gasmen were presented in this space on December 30. The following article is an effort to present the counterarguments as they have been presented by various groups, including an organization representing the mayors of 50 American cities to the House committee hearing testimony on the matter.

Congress passed the Natural Gas Act of 1938, and the Supreme Court ruled last June that "the primary aim of this legislation was to protect consumers against exploitation at the hand of natural-gas companies."

The administrative agency under this act is the Federal Power Commission. The act requires the FPC to allow natural-gas companies a just and reasonable rate of return, and these companies may compel the granting of such a return by appeal to the courts.

This looks like a clear-cut case to the city mayors fighting to maintain full Federal regulation. But they have powerful opponents. President Truman vetoed the Kerr bill in 1950—another effort to free independent producers from governmental regulation. Now it is up again.

Here is the story of the battle as it is presented from the view of the city mayors fighting the repeal law.

The Wall Street Journal, January 12, 1955, noted that the gas producers next week "will kick off a king-sized publicity campaign to persuade consumers that their best interest lies in removing the Federal control decreed by the Supreme Court. • • • Newspapeprs, magazines, trade papers, and radio and TV stations will soon be bombarded with feature stories and even suggested editorials pleading the gas producers' case." The fund for this drive was estimated by the newspaper at around $1,500,000.

INDUSTRY ARGUMENT

The argument offered by the oil and gas industry against regulation is that it runs counter to the free competitive system and that private enterprise will protect the consumer better than Federal regulation. Federal regulation may be right and proper over gas distribution through pipelines, but it should not extend out into the fields to cover gas producers. If coal and oil aren't regulated in the field, why should natural gas be? That is the argument against regulation which the mayors and their allies try to answer.

Mayors of cities like New York, Philadelphia, Boston, Cleveland, Milwaukee, Kansas City, Mo., Nashville, Tenn., or their representatives, as well as the spokesmen of other groups, have been appearing before the House Committee on Interstate and Foreign Commerce.

The National Institute of Municipal Law Officers at their September meeting in San Francisco last year passed a resolution supporting Federal regulation, presented by John J. Mortimer, corporation counsel of Chicago and chairman of the institute's resolutions committee.

Again, Senator ALEXANDER WILEY (Republican), of Wisconsin, introduced to President Eisenhower at the White House a delegation of State and municipal law officers from over the country, strongly urging continuation of the Federal regulation, which they said is designed "to protect helpless little people under the free-enterprise system."

EDISON TESTIMONY CITED

This drive for continuing the law, the city mayors argue, is not a "left-wing" move, or even a drive of so-called "liberals." It is rather, they maintain, motivated by pocketbook considerations affecting some of the biggest and—presumably most hard-boiled—corporations.

For example, the mayors' committee points out, on April 14 Randall J. Leboeuf, Jr., testified in behalf of the billion-dollar Consolidated Edison Co. (the public utility serving New York City) and 13 other private utilities serving the area. Mr. Leboeuf said his company is thinking of giving up natural gas altogether to use oil and other fuels to manufacture gas because of present rate uncertainties. He blamed those uncertainties upon "escalator" and similar clauses in contracts that gas producers in the field hold with interstate pipelines. The cost of natural gas is set in the fields, he explained, and increases are passed on to the consumers by way of the interstate pipelines.

Representative OREN HARRIS (Democrat), of Arkansas, sponsor of the bill to kill the regulation, took issue with some of the Consolidated Edison argument. Mr. Leboeuf stuck to his guns.

The city mayors deny that the production of natural gas is a free enterprise in the way that production of coal is. They argue that it is largely in the hands of a few big oil companies. There are about 4,100 producers selling natural gas to pipelines, they say, but 7 of these supply a third of the total, and 100 producers supply more than 85 percent of the total.

ONE THOUSAND DOLLARS TIED UP IN EQUIPMENT

Nor is the situation comparable, they argue, to the big oil companies competing for the autoist's dollar in filling his gasoline tank. The driver can always go from one company to another. But it is different with the householder with $1,000 tied up in gas-burning equipment. The mayors argue that it is a monopoly industry because only 1 gas producer normally sends gas through 1 pipeline to supply a particular area.

It is no use, they maintain, for the FPC to regulate the pipelines if it is not able to regulate the natural gas company that really sets the price at the far end of the pipeline at the oil-gas well. In many cases the pipeline company has a monopoly contract—escalator clauses and all—with one particular supplier.

Would the natural gas companies go on a sit-down strike, and would the supply of gas dwindle if Federal regulations were continued?

"Nonesense," says Philadelphia Mayor Joseph S. Clark, Jr. The oil companies are protected by a juicy 27½ percent depletion allowance, he argues.

"That the oil companies will continue to drill for oil," he says, "I would think, is obvious.

"That a great deal of gas will be discovered in conjunction with newly discovered oil is certainly the history of the industry today."

Summing it up, here are the arguments for continuing Federal regulation as the advocates offer them:

This is a business affected with public interest.

It is in interstate commerce and hence affected with Federal responsibility.

Congress established the FPC to regulate the business.

The Supreme Court has upheld FPC's authority.

Yet now the gas industry, through the Harris bill, would tie the FPC's hands and prevent it from regulating adequately the fuel product whose price affects 60 million Americans.

It will take more than the $1,500,000 fund of the gas producers as reported by the Wall Street Journal, January 12, to persuade consumers that their interests lie in ending Federal regulation, the mayors of the big cities say.

Rigid Farm Price Support

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. POFF. Mr. Speaker, pursuant to permission to insert my remarks in the Appendix of the RECORD, I quote herewith an editorial which appeared in the Lynchburg Daily Advance on May 9, 1955. The Daily Advance was founded by Maj. Thomas Whitehead on May 5, 1880, and was later owned by the late distinguished United States Senator Carter Glass. The paper recently celebrated its 75th birthday as one of the oldest newspapers of continuous publication in western Virginia. The editorial follows:

RIGID FARM PRICE SUPPORT

One of the principal arguments of the Democrats in the House for changing the law back to establish the rigid high-level price supports for farm products was that farm prices are going down. But they did not make any reference to the fact that they are going down while price supports remain high and rigid. This is so because the new law providing for flexible supports in basic farm products does not take effect until the current farm production season is over. What they voted for was then a restoration,

which would mean a continuance, of the program under which prices are falling.

This is all very simple, even though it makes no economic sense. The Democrats who obtained a slim majority for their rigid high level supports are not interested in anything but the purely political aspects. They are after the farm vote and believe their method will get it. But the Senate will block this obviously dangerous move and insist on the flexible-price program going into effect for thorough trial.

The House Democrats may not be concerned about what the Senate will do. Their purpose is largely accomplished in putting themselves on record for the high, rigid price-support system. They consider that they have made their point with the farm vote.

That point will have to face a test. If, when the flexible program goes into operation, there is an improvement in farm prices and farm economics in general, opponents of rigid price supports will remind the voters of the action of the House Democrats. Those who voted for the rigid system will be on record and the voters will not be allowed to forget. The Democrats who so voted are, of course, gambling on no improvement under the flexible-support system. They are likely to lose on that gamble.

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. MILLER of Nebraska. Mr. Speaker, several of my colleagues have asked why I supported the bill for statehood for Hawaii and Alaska, and why I did not go along with my colleagues from Nebraska on the vote. The reasons are as follows:

First. For 12 years I have been a member of the committee that has had long hearings on the question of statehood for Hawaii and Alaska.

Second. We have heard more than 700 witnesses, and there has been more than 4,000 pages of testimony covering 57 subjects. Ninety percent of the testimony is favorable to statehood.

Third. The five Gallup polls conducted since 1941 all indicate a heavy percentage favoring statehood for Hawaii and Alaska.

Fourth. The poll I conducted in the Fourth Congressional District this last month indicated that 75 percent felt Hawaii and Alaska should have statehood. I doubt it differs much in the other three congressional districts in the State.

Fifth. There have been 35 bills introduced on the question of statehood.

Sixth. There have been five complete investigations by congressional committees on Hawaii, the last committee headed by the late Senator Hugh Butler. The Senator himself strongly recommended statehood.

Seventh. The governors of the 11 Western States at their 1953 convention unanimously approved statehood for Hawaii.

Eighth. Statehood for Hawaii and Alaska has been advocated in the campaign platform of both political parties for many years.

Ninth. The President has recommended statehood for Hawaii and for Alaska if the so-called McKay line would be adopted. The McKay line sets aside about 40 percent of Alaska as a military reservation.

Both Territories, being incorporated, are entitled to statehood. It has been promised to them.

I am certain the question of statehood will be up again and many who have been opposed, if they study all the evidence, will see the justice of admitting Hawaii and Alaska as new States.

Soroptomist of the Month: Congresswoman From the First Idaho District

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD at this time an article from the April 1955 issue of the American Soroptimist which pays tribute to the charming lady from Idaho, the able and conscientious Congresswoman from the First District, Mrs. GRACIE PFOST. Mrs. PFOST is the only soroptimist in the United States Congress, and this outstanding organization has recognized her devoted service to the good people of her district, State, and Nation by naming her as the soroptimist of the month.

Mrs. PFOST and I both came to Congress in 1953. Since the beginning of the 83d Congress I have had the privilege and pleasure of serving with Mrs. PFOST on the House Committee on Interior and Insular Affairs and on several of the subcommittees of that committee. Consequently I have had many opportunities to observe her effective work and her development into a very capable legislator. She has performed admirably for the good people of her district and is dedicated to their service. Her recognition as the soroptimist of the month is a reward she justly deserves.

Therefore I have asked permission to place in the RECORD this article so that our colleagues may know the honor that has been conferred upon our GRACIE.

The article follows:

SOROPTIMIST OF THE MONTH: CONGRESSWOMAN FROM THE FIRST IDAHO DISTRICT—GRACIE PFOST, CALDWELL (IDAHO) CLUB

Service—personal, intimate service to the people and the community has been the keynote in the rise of Mrs. GRACIE PFOST, personable Congresswoman from the First Idaho District and the only Soroptimist in Congress.

Twenty years ago she was a young deputy in the county clerk's office, where her more interesting work was the issuance of marriage licenses and the making out of the county warrants. These were depression days, and conditions in the agricultural area were rough.

The young and gracious county official made the problem of each person who came to her her own. In businesslike, personal style, she helped those caught in the complexity of filing legal papers work out their problem.

Friends saw in the dynamic, freckle-faced young redhead a person qualifying for higher responsibility—maybe county clerk—at a future date. For 9 years, she dispensed pleasant, personal service in this position, winning political opponents as well as political friends by the service she gave.

Then came the step-up. The position of county treasurer seemed to be available, and GRACIE declared herself a candidate.

"If there is a person in Canyon County Mrs. PFOST does not know by first name, it's because she hasn't visited the maternity ward in the hospital lately," a political opponent remarked in discussing the election prospects.

Five consecutive times the voters trooped to the polls to elect GRACIE PFOST—always by heavy majorities. And she smilingly continued to dispense the same service.

"She listens too well and doesn't talk enough," was the bitter comment of an opponent who could not trap Mrs. PFOST in public debate over issues beyond the jurisdiction of her office. She would discuss freely the problems of her office and the matters pertaining to its efficient operation, and confined herself to matters which were her business.

Her campaigning consisted largely of meeting people and listening. Everyone wanted to tell her how she should campaign. She listened to everyone—and they surprisingly found themselves campaigning for her.

In 1950 she announced her candidacy for the congressional position from the First District. "GRACIE is overreaching herself," her political opponents chortled, contending that she was not qualified for so high an office.

Her friends, knowing the First Idaho District, also feared she was overreaching—but for a different reason. The district extends from the Snake River in the southwest, northward and eastward, and includes the panhandle. Its interests include forestry, mining, grazing, cattle raising, as well as irrigation farming.

First District Congressmen have traditionally come from the area north of the Salmon River, which is the heart of the mining-timber area. And here was a woman, from the heart of the irrigated-farming area, seeking to represent the lumber and mining interests of a State which included such vast enterprises as the Bunker Hill and Sullivan mine, one of the greatest silver-lead producers in the Nation.

GRACIE PFOST calmly set out on her campaign, knowing that she would not be able to shake the hands of all the 100,000 eligible voters on the isolated farms along the Lemhi, in the forest camps of the Sawtooths, or the mining camps along the Lochsa, all in her district, but determined to give it a try. She concentrated her efforts in north Idaho, the region where all believed that she would be weak. She visited the lumber camps, conferred with union officials and others in the mining camps. Five and ten persons in isolated communities back in the mountain areas on a dirt road beside some mountain stream were apt to find themselves shaking hands with a candidate for Congress.

"Covering" the First District in a campaign was an undertaking which made strong men shudder at the prospect, and yet the smiling, friendly, redhead fought for votes where it counted—at the level of the voters themselves—and did a more thorough job than had ever before been done. In the general election, she was defeated by a

small margin. But her defeat came not in the northern counties where she had staged her battle, but in the counties closer to her home, where she believed her friends could carry the burden.

Characteristically, GRACIE took her defeat in good humor. "Guess I should have spent more time at home," she said, "but, good gosh, I couldn't be home and up there, too."

She settled down in the real-estate business in her home town of Nampa—a city of 16,000. There was little question that she would try again, although she says that she was needled by her husband, Jack, into seeking election in 1952.

Once defeated, the comely redhead was no longer considered invulnerable by her opponents in 1952, they threw all their weight against her along the entire line from Snake River to the Canadian border. Her opponent, Dr. John T. Wood, was the same man who had defeated her in 1950.

GRACIE just worked a little harder. Midway in the campaign she was talking in a husky voice a couple of octaves below her normally soft and quite deep speaking voice and certainly a number of degrees harsher. By election time, she was whispering hoarsely.

But her assurances were accepted. In a State which elected Republicans to all congressional positions but one, and which elected Republicans to all major State offices but one, GRACIE PFOST, a Democrat, went to Washington from the First District.

Mrs. PFOST was born in Boone County, Ark., and was reared in the Boise Valley in which she has since resided. Her community activities have been legion since the days in which as deputy county clerk with a half dozen other young kindred spirits, as well as a few older heads, she formed the nucleus of the Democratic Party in Canyon County.

She was active in forming the Caldwell, Idaho, Soroptimist Club when she was county treasurer and served as its first president in 1946. That year, under her leadership, the club laid the foundation for the expansion of the Girl Scout movement in the county seat. The work was no accomplished entirely by delegation of authority. During her lunch hour, GRACIE often was seen doing a job of selling the organization's principles to a businessman, a store clerk, a father—anyone who seemed to have a moment on his hands—with missionary-like zeal. She served also as regional treasurer for the Soroptimists.

The pioneers who settled in the small valleys that dot her district, or who prospected in the mountains had only the forces of nature to conquer. GRACIE, who spends an average of 16 hours a day on the job, would have found in pioneering a gentle, back-to-earth restfulness had she had an opportunity for a spell of it during the heights of her political campaigning last fall. It was a real uphill battle for reelection, but she won.

Her vivaciousness and enthusiasm left no doubt in the minds of her listeners that the Congresswoman from the Idaho First District was a public servant, and enjoying every moment of it.

New England Farmer Views 90-Percent Supports on Basic Crops

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter to the editor which appeared in the Boston Daily Globe, Wednesday, May 11, 1955:

A BAY STATE FARMER EXPLAINS WHY HE WANTS NO PART OF 90-PERCENT SUPPORTS

To the EDITOR:

One of your May 3 editorials dealt with a pending congressional battle very important to thousands of New England farmers. It seems that every time a newspaper refers to the farm bloc and the farmer, it categorically lumps them into that group which once again is pressuring for mandatory 90-percent supports on basic crops.

I am but one voice among the thousands of your own New England neighbors who are farmers and who are sick and tired of this misconstrued designation.

We farmers here in the northeast have long since called for an end to mandatory high-support prices, which are not only a fantastic load on the taxpayer, but a severe handicap to the dairy and poultry industry of the northeast.

The poultry industry has been in a price depression for the last 17 months; the dairy farmers' lot is little better because of the ability of the farmer to produce so much more per man than ever before.

Yet, while we have no control over the price of our products other than the natural law of supply and demand, we are saddled with feed grain prices that are fixed at very high levels which have driven hundreds of good farmers out of business.

We farmers in New England are certainly not in the farm bloc. We have nothing but losses to gain from a revived 90-percent bill, while a return to flexible 75-percent supports would give us an equal chance to make a living in competition, where at least the feed grain prices would be at levels that would enable us to make a decent living wage.

Supports have brought nothing but controls. A poultry farmer in Pennsylvania has been fined by the Government for exceeding the 15-acre allotment of wheat plantings, even though every bit of his home-grown grain was fed to his own livestock. Simply a case of an industrious man trying to control the costs of his production, but our asinine marketing quota system which follows supports has made this ridiculous situation possible.

I should also say here that this is not a political issue with the New England farmer; it transcends party lines, for I am a voting Democrat.

CHARLES PILIGIAN.

FRANKLIN.

Address by Charles H. Percy at Chicago World Trade Conference

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Charles H. Percy, president of the Bell & Howell Co., of Chicago, at the concluding luncheon of the 1955 Chicago World Trade Conference, held in the Morrison Hotel, Chicago, March 2, 1955, sponsored jointly by the Chicago Association of Commerce and Industry and the Export Managers Club of Chicago:

I feel today that I am facing a more sympathetic audience than was the case a month ago in Washington.

That was my first experience in testifying before a congressional committee, and it was unlike anything I had expected. The largest hearing room in the House of Representatives' new office building holds about 400 people. The committee of 25 members was seated like the Supreme Court in a great semicircle.

As I looked into the faces of NOAH M. MASON, of Illinois, DAN REED from Rochester, N. Y., Mr. SIMPSON of Pennsylvania, and several others, I was convinced that they were not exactly friendly to the President's program.

Mr. REED of New York was written up extensively in Time magazine, and was quoted as saying that he had decided that protectionism was the policy this country should adopt when he was 12 years old, and that he has never changed his opinion. I should guess that that was about in 1890. I wanted to ask him if he didn't feel that conditions in this country and in the world have changed since 1890. But although I thought it was a pertinent question, I feared he would find it impertinent.

Today I would like to talk to you off the cuff, because I feel that we are in sympathy. According to your poll, you are heartily in favor of H. R. 1, and you need no convincing. Therefore, all I will attempt to do is to give you a few facts about the photographic industry—an industry that is protected, that is strategic, that faces foreign competition—concrete examples that may help you meet the arguments of the protectionists.

The photographic industry has about 50,000 people. It is a relatively small industry, but during World War II it converted almost 100 percent to war work, as did our own company here in Chicago. The industry competes with manufacturers in Belgium, Germany, Italy, France—you can hardly name a country that doesn't make some kind of photographic product.

I have seen skilled Japanese workers paid 27 cents an hour, skilled Italian workers who receive 34 cents an hour, and German workers who earn 37 cents an hour. In contrast, at Bell & Howell the average wage is in excess of $2 an hour.

Germany alone exports to the United States over 150 different models and brands of still cameras. In 1949, the United States imported 16,000 lenses; last year imports rose to a quarter of a million lenses competing with the products of domestic manufacturers, including the lens division of our Lincolnwood plant.

Bell & Howell's position is this: We are a company employing 3,000 people here in Chicago. We have a very high labor content in our product, almost 50 percent of our total cost of sales being direct labor and indirect labor. We have a great deal of foreign competition.

We manufacture a total of about $40.5 million worth of products, only 6 percent of which goes abroad. So exports are not an important percentage of our business, though they are a strategic part from the standpoint of prestige and maintaining our name in some 68 countries. We also manufacture under license in England and we are covered completely in the sterling area.

Although our company has gone on record as supporting the President's program, our position is by no means the official position of the photographic industry. Of the 85 members of the National Association of Photographic Manufacturers, 84 are firm protectionists.

We have done a good deal of soul searching on this subject over the past several years. Our international vice president, Ernest Schimmel, has been a tremendous asset in interpreting the position of our company and country in the world economy. Over the past several years we have determined our position.

We believe that it is in the interest of the free world to trade. Many people abroad—2½ billion of them—want the prod-

ucts of the United States. If we don't trade with them we are going to limit our market to 160 million people in the United States, a market exceeded by our productive capacity. We need export markets and at the present time our exports exceed our imports. You have heard the details of that in the last 2 days.

But we cannot maintain our export market if we refuse to trade with the world. We were discussing at luncheon how we can gain public understanding of the concept that that only place the American dollar can ultimately be spent is in the United States. When we import products and pay dollars for them we do not lose those dollars. They always come back to us. The American eagle on the dollar is a homing pigeon.

To import products which foreign manufacturers can make better than we is as beneficial to us as to the free world. It simply means that we shift our domestic capital and labor to items which we can produce more efficiently.

Last year about this time as I stood on a street in Tokyo I asked our agent, who was kindly escorting us, what the loud speakers on the mobile trucks were saying. I think he was a little embarrassed, and I say that because he is here in the audience today. But he gave me a straight-forward answer. He said, "They are denouncing American imperialism and demanding that the United States troops go home."

We talked to our Ambassador, we talked to educators and to business people, both Japanese and American. They all told the same story—a story of the sagging Japanese economy. For example, 40 percent of the graduates of Japanese universities this year would not be able to find jobs.

The United States has said to Japan, "We cannot trade with you freely because of your cheap labor. We have imposed restrictions and barriers against you, and the free world has followed our example." But we have also said, "We will be very unhappy if you trade with the Communist bloc."

So, we have placed Japan in an untenable position by saying, in effect, you cannot trade. I say to you that no nation can long endure such a situation. More and more Japan becomes susceptible to the wooing of the Chinese Communists and Russians—the resignation of their last Premier was over this very question.

The same day that I testified in Washington, the President submitted a message to Congress on the Formosa question. The President asked authority to use ships, guns, and planes to defend the security of our country and its allies, and within a week Congress acted. The House of Representatives voted overwhelmingly, and the Senate voted almost unanimously (with the exception of Senator LEHMAN, from New York; Senator LANGER, from North Dakota; and the Independent Senator MORSE, from Oregon) to give him this authority.

This was an issue they could clearly understand; it was an issue they would have no trouble explaining to their constituents at home. But it was a complex problem. Yet for a year and a half the President has said, "It is in the national interest that we liberalize our trade abroad." And he has gone so far as to say, "If we fail in our foreign trade economic policy, we may fail in all."

If the President today sent a message to Congress and asked for $40 billion for a network of radar and guns to ring our coast line and for planes to patrol our shores, Congress would not hesitate to appropriate the money, and we know it. They couldn't defend their position if they didn't.

But he has said that in a nuclear era it is in the national interest to ring this country with a network of free nations, who will form an integral part of our national security. This is more difficult to explain to the constituents back home. It steps on a few toes. Despite the fact that the heads of labor, the AFL and CIO, the chamber of commerce, the head of the Farm Bureau, and many business people favor it, it was passed by only a slim majority and was almost sent back to committee on three different votes. It was and is a complicated problem and a difficult problem.

It is also fraught with emotion. It has become an emotional rather than a rational issue. I think, though, that there is little doubt about the interest of the consumer in freer trade. It is he who benefits when competition lowers prices, and he is entitled to the benefits of foreign competition.

What happens when an American manufacturer faces foreign competition? I can best demonstrate this by telling you what happened to us when we entered the high-priced 35-mm., still-camera market a few years ago. This is a camera that has many features. It winds like a movie camera, clicks off five pictures a second, taking wonderful action photographs. But it required a lot of handwork that necessitated a selling price of $700. In competing with foreign camera manufacturers we lost a million and a quarter dollars.

We had to decide what to do. We could say we were being hurt by foreign competition, and we could seek higher tariff protection. But from the moral standpoint, we would be prohibiting the American consumer, who likes German cameras, from buy-them unless he paid a subsidy in the form of a higher tariff. In other words, the consumer would be penalized because we had decided to enter a field in which we were not as efficient (from a cost standpoint) as the Germans. We decided to write off our million and a quarter dollar loss.

I have heard many protectionists say, "You can't compete with cheap foreign labor, if your product has a high-labor content." Manufacturers in our own industry have repeatedly testified that there is a high-labor content in photographic equipment, and I can show you how high it is on a photographic lens.

This is the aluminum we use to make a one-half inch b/1.9 movie camera lens. This is the chunk of optical glass we mold into four different elements and assemble into this lens. The raw material costs 43 cents and the finished lens has a retail value of $87. So the difference between 43 cents and $87 is cost of labor in manufacturing or merchandising.

Since our purchasing division is authorized to buy where they can get high quality at the lowest prices, our own lens division competes with foreign manufacturers for the business of our own purchasing division. I think this is the way it should be. For a while they continually lost orders on a very high volume lens. They lost an order for 10,000 lenses and it broke their hearts. They really started to dig in.

The factory superintendent, the vice president of manufacturing, and the optical division manufacturing superintendent held a meeting with 150 people on the tooling and engineering phases of our lens designing and manufacturing program.

Working together, they approached this particular lens in an entirely different way. As a result, the last order for some 20,000 lenses was awarded to our own lens division, on a strictly competitive basis. At Christmas, in the lens division, they had big signs on the bulletin board, "We beat foreign competition." I talked to the superintendent of manufacturing and the foreman about it a few weeks ago, and I said, "In all honesty, would you have done this without the spur of foreign competition?" and they said, "No."

An industry that is protected is in a dangerous position. Its shelter can be taken away at any time. But an industry that is strong because of competition is an industry based upon a firm foundation. The best weapon of management is its ability to meet competition. The ability to improve its manufacturing techniques cannot be sharpened and developed under the soft blanket of protection.

Again and again manufacturers have pointed out the disparity between American and foreign-labor rates. Never in any of those testimonies have I found reference to the unit cost of production. Yet this is the true and the important element of cost, the controlling factor and the answer to the problem of cheap foreign labor.

Here is an illustration. We had cheap domestic labor in this country a relatively few years ago. When I worked on the Bell & Howell assembly line, we were paid 40 cents an hour to assemble this particular 8-mm. movie camera. We sold this movie camera for less than $50—$49.95, to be exact. When the war ended and our labor had almost tripled, we asked ourselves whether we would ever again be able to sell a movie camera for less than $50.

We started to work on a design concept, a tooling concept. Whole groups of people worked on it as a team. We produced a camera at $49.95, a camera with 6 exclusive features that the other camera did not have. It is made with such precision that the parts resemble those of Swiss watches, yet it is assembled on a conveyorized line. We did it with $2-an-hour labor, because we designed the camera and developed manufacturing methods to use the mind of our workers more than their hands and their muscles. And our labor cost per unit was very low.

Recently in Des Moines, I spoke to the National Farm Institute. I'm not an expert on farm problems, but I have studied the impact of our export trade on the farm market. My wife and I own a farm in Iowa, and I told them I am ashamed to sell corn to the Government each year and then approve the plans of the farm manager to plant more corn the next season.

We know the country needs corn like it needs butter. Yet we do it because if we didn't, our farm manager would think we should be committed to a mental institution. Probably it is best to go along until this thing finally rights itself nationally and farm products are sold on the free market. But I will never stop talking about it.

How wrong it is to freeze unneeded capital and labor on the farm today. What if they had done this 80 years ago when the population distribution was 90-percent rural and 10-percent urban, instead of the reverse? It is little more sensible today to freeze the 10 percent and keep labor and capital employed where it is only relatively efficient.

Where does the farmer stand? On an average, about a thousand dollars of his cash receipts come from exports. We export 25 percent of our corn, 33 percent of our wheat, 25 percent of our tobacco and soybeans, and 33⅓ percent of our cotton and rice.

The dairy farmers in Wisconsin, who were successful in forcing the infamous cheese quota, export 42 percent of their dried, evaporated, and condensed milk. If it weren't for the export market they would be hard-pressed. Yet they, like every other economic group in the United States, including business, want a one-way street. Farmers favor a free-trade policy almost universally, until it comes to import quotas that interfere with the artificially high prices of their own products. They do not ask where the dollars for their exports are to come from if we refuse to trade with their foreign customers. Are we to give dollars away, or are they to be syphoned from some other part of our economy?

The farmer, depending tremendously now on the export market, must face the issue. On which side does he want his bread but-

tered? In the long run he cannot have it buttered on both sides.

It is often said that freer trade is all right in theory, but would not work in practice. And to the protectionists we are the theorists and they are the practical men who built America. They know that we have to keep out cheap foreign labor and keep our market to ourselves. The fact that almost every economist in the United States favors the President's program does put us in a category with college professors and economists. But I submit to you that the real theorist is the protectionist, because protectionism is fine in theory, but it has never really worked in practice.

Who is to decide what infant industry is to be protected? Who is to decide when an infant industry has grown to maturity? Many are protected, but few, if any, are ever weaned.

The argument that our national defense depends upon strategic industries that must be protected is essentially theory. In actual practice, most of our defense industries—the aircraft, automotive, electronics industries—have little, if any, tariff protection, and have never needed it.

I should like to mention that our own Bell & Howell executives have stood with me in my support of the President's foreign economic trade policy. Without their support, or with their veto, I could not have acted. Time after time in Washington a Congressman would say to me, "Yes, but you don't have any constituents back home." I, too, used to be naive enough to think that the president of a company is his own boss. But when I became president of Bell & Howell, I found that some 3,000 employees, 2,400 stockholders and directors and several thousand dealers were my bosses. Congressmen at least have tenure of office for 2 or 6 years. But corporate presidents have no such job security.

I have expected to hear from some Bell & Howell stockholders who might ask, "What are you trying to do to our company by lowering tariffs?" But I haven't received a single adverse letter, and I have received many favorable ones.

I am sure that the bylaws of our corporation are not very different from those of other corporations. And nowhere do I see that the officer of a company is required to subordinate the national interest to the immediate short-range interest of his own company.

I think we must always, in American industry, in farming, and in labor, determine what is in the national interest and then find a way to adjust our company programs to that interest. It is not always easy, but it is necessary.

The last thing I have to say is this: We who are Republicans worked awfully hard to put this administration in Washington. I would be very discouraged, as an officer of our company, if the board of directors who had elected me opposed the policies I thought best for the company.

President Eisenhower said in a letter to Congress, "I am not going to ruin any industries. This is a gradual, moderate program." He has said that our present situation is a perilous one, and I believe that all of us here agree. I hope that all of you will act—that you will talk to everyone you can, and write to your Senators. They are tremendously responsive to letters. MARGUERITE CHURCH, our own Congresswoman, told me she has been snowed under by emotional letters from small groups of protectionists, but seldom has she heard from the other side. She wonders if we are a small voice or if others believe as we do.

Support for our program is growing. Day by day people are telling their Congressmen to vote in the national interest and not in the special interests of particular groups.

The future security of our Nation will be imperiled if this program is not approved by the Senate. The bill must be passed, I believe, but it will be passed more quickly if everyone in this group will wholeheartedly support it. If each one of you were to go on record with your Senator, that alone would carry the issue.

I believe, and I am sure that you believe, that a liberalized trade policy in the national interest will make industry in this country more efficient. It will help lower our unit cost of production, lower our cost, and raise our standard of living, strangthen our allies, weaken our enemies, and provide a greater measure of strength and support to the defense of this Nation than $40 billion worth of guns ringing our shores.

George Kennan Displayed Great Foresight

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. QUIGLEY. Mr. Speaker, today many public figures are demonstrating great powers of hindsight in relation to diplomatic relations with Russia. An article by R. H. Shackford, which was published by the Washington Daily News on May 11, indicates that George F. Kennan, of Adams County, in the 19th Congressional District of Pennsylvania, is one of the very few who had the foresight to make the correct analysis well in advance of the events.

Mr. Kennan, it will be recalled, is the trained Russian expert, long in the diplomatic service, whose advice and counsel Secretary of State Dulles has indicated he can do without. This action on the part of Mr. Dulles may account in large measure for the aimless drifting of our foreign relations.

Under leave to revise and extend my remarks, I include the article by Mr. Shackford:

A WARNING ABOUT RED NEGOTIATIONS

(By R. H. Shackford)

Normal negotiations with the Soviet leaders are impossible.

When they want something from the West, according to George F. Kennan, former State Department Russian expert, they are willing to put on a show of negotiating and to soft pedal temporarily their basic duplicity.

"And when that happens there will always be Americans who will leap forward with gleeful announcements that 'the Russians have changed' and some who will even try to take credit for having brought about such changes."

So wrote Mr. Kennan in 1947.

As the United States rushes now toward another big power conference "at the summit," it seems wise to recall another Kennan warning.

THE WARNING

At the end of the war with Germany, 10 years ago, Mr. Kennan was stationed in Moscow. He wrote an appraisal of the Soviet position. The warning in this hitherto unpublished document was:

"Remember that the Russian views all currents of public sentiment as a sailor views the winds. If he cannot sail into the wind, he can at least use his power to tack in directions against the way they blow. * * *

"In the case of the United States, the Kremlin * * * knows the American public has been taught (this was in 1945) to believe:

"Collaboration with Russia as we envisage it is entirely possible.

"That it depends only on establishment of proper personal relationships of cordiality and confidence with Russian leaders.

"That if the United States doesn't find the means to assure this collaboration (again as we envisage it), then the past war was fought in vain and civilization is faced with a complete catastrophe.

"The Kremlin knows that none of these proposals are sound. It knows the Soviet Government is technically incapable of collaborating with other governments in a manner which Americans have in mind. It knows the Soviet secret police has no intention of permitting anything like the number of personal contacts that is required to lead to a broad basis of personal confidence and collaboration."

UNITED STATES TRIES

"It knows through 11 years (in 1945) of diplomatic relations it has been the United States in 99 cases out of 100 which has taken the initiative to try to establish relationships of cordiality and confidence; that these efforts met almost invariably with suspicion, discourtesy, and rebuff, and that this will not and cannot be otherwise in the future.

"Finally, it knows that the type of intimate collaboration for which Americans yearn is by no means necessary for future world peace. It knows, as a body thoroughly versed in the realities of power, that all that is really required to assure stability among the present great powers for decades to come is preservation of a reasonable balance of strength between them and a realistic understanding as to mutual zones of vital interest.

"But it is not the job of the Soviet Government to disabuse the American public of prejudices highly favorable to Soviet interests. It is entirely agreeable to Moscow that Americans should be indulged in a series of illusions which lead them to put pressure on their government to accomplish the impossible and to go always one step further in pursuit of illusive favor of the Soviet Government."

Mr. Kennan pointed out then that the Soviets never looked on international cooperation as anything except an instrument to support their own aggressive policies.

Amendment to Section 406 of the Federal Seed Act

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mrs. KNUTSON. Mr. Speaker, I have today introduced a bill to amend section 406 of the Federal Seed Act.

The purpose of this proposed amendment to one of the penalty provisions of the Federal Seed Act is intended to remove the stigma of having petty and unknowing violations of the Federal Seed Act by reputable businessmen in the seed industry being classified as criminal violations.

This amendment will enable the Government to hereafter have the option to bring civil proceedings for violations of the Federal Seed Act in addition to criminal actions. In civil proceedings the Government will not have to prove intent, but in criminal actions to knowingly violate the provisions of the act will be a factor in determining the violator's guilt.

Dentists and Their Families Can Profit Greatly by Inclusion in Social Security

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. KEAN. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter in the RECORD which I have written. A new group has been formed to undertake what I consider a very worthwhile cause. The cause is the inclusion of all self-employed dentists throughout the United States in social-security coverage starting in 1955. Being a member of the House Ways and Means Committee who has devoted many years of study and thought to the inclusion of self-employed professionals in the system, I am fully in accord with this effort. The group is the Congress of American Dentists for OASI. The following letter, addressed to the president of the group, I think fully expresses my views on the importance of the goal they are trying to achieve:

MAY 9, 1955.

J. GARRETT REILLY, D. D. S.,
President, Congress of American Dentists for OASI, Washington, D. C.

DEAR DR. REILLY: I am extremely pleased that the Congress of American Dentists for OASI has been founded and is prepared to work on a nationwide basis to help get social security for the self-employed members of your important profession.

Now that you have organized to accomplish this worthwhile objective, I would like to point out that your group has no time to lose if the dentists of this Nation—approximately 75,000 strong—expect to receive coverage under the old-age and survivors insurance system without being penalized.

Let me explain what I mean by this word "penalized."

Social Security benefits are calculated on the average wage received by a worker from January 1, 1951, until he reaches the age of retirement. However, the law provides that a worker, in making this calculation, may drop out his 4 years of lowest earnings.

Zero earnings under covered employment, of course, will pull down his average wage.

Other professional groups first brought into the system this year will not be penalized because they can drop out the 4 years, 1951, 1952, 1953, and 1954.

However, if dentists were not included until after April 15, 1956, they would have zero earnings for 1955 to pull their average wage down. For example, one whose wage computation is based on the maximum $4,200 for 4 years but must include a year of zero earnings has an average wage for the 5 years of $3,560, instead of having benefit entitlement figured on $4,200 for the period.

But, as the self-employed only pay their Social Security tax for 1955 when they pay their income tax on April 15, 1956, if dentists are brought into the system before that date and pay their 1955 Social Security tax then, they would have no years of zero earnings on their record and, as a result, would get the maximum Social Security benefits if they earn $4,200 a year.

Important too is the fact that, under the Social Security system, those nearing the age of 65 will be entitled to coverage if they are in the program half the time between 1951 and the date they reach the age of 65 (after using the drop out) with a minimum necessary coverage of 6 quarters (18 months). Therefore, the sooner those nearing retirement age can join the system the better for them.

In the past some associations have opposed dentists entering the Social Security System largely on the theory that many dentists never retire and, therefore, would not receive the old-age-retirement benefits themselves.

Of course, we know that a good many dentists, men whose work is very delicate and who almost always must stand on their feet, do retire at or about the age of 65. However, even if the old argument of some of the organizations was true, we must face the fact that, unfortunately, some dentists do die leaving widows and minor children and some dentists are forced to retire because of ill health.

If my bill, H. R. 6049, to include dentists becomes law what can social security mean to the self-employed dentist and his family? If self-employed dentists are given coverage, a dentist who has an average net income of $4,200 a year, or more, and who has a wife and two children, would have protection for them if he died in the amount of $200 a month tax free until the older child reached the age of 18. At that time, the monthly benefit would drop to $162.80 a month until the younger child reaches the age of 18. After that there would be no benefits until the widow reached that age of 65 when her benefits would be resumed at the rate of $81.40 a month unless she remarried.

If the children were age 6 and 4, these payments would amount to $32,000 assuming that the mother and children live until the younger child reaches the age of 18.

The widow, if she lives to age 65 would then have a life expectancy of 14 or more years and her benefits, in addition to the above mentioned $32,000, would be in excess of $13,000.

It should be mentioned in this connection that the social-security system would also provide a maximum lump-sum payment of $255 to cover funeral expenses.

An income of $81.40 a month is equivalent to $976 a year. It would take $32,500 of accumulated capital invested in Government bonds at 3 percent to produce an annual income of $975.

I will also mention the benefits available to dentists upon retirement. If a dentist should retire after the age of 65 and had earned an average of $4,200 a year, he would receive a monthly tax-free income of $108.50 which would be increased to $162.80 when his wife also reaches the age of 65. At the age of 72 old-age insurance benefits would be paid to him as an outright annuity.

In addition, the law provides for a waiver of premium for a person who becomes totally disabled before age 65. Because of this protection, a disabled individual can qualify for full benefits at 65 even though full contributions have not been paid.

For all of this protection the dentist with a net income of $4,200 or more a year would pay premiums of $126 annually. The premium would rise by a series of steps beginning in 1960 to a maximum premium—beginning with the year 1975—of $252 annually.

Many dentists have already received social-security credits. Among these are those who have served in the Armed Forces, dentists employed in medical departments of business and industry, those employed on hospital staffs, laboratories, and clinics operated for a profit, and many of those employed by educational institutions and other nonprofit groups. Under the present law, however, self-employed dentists have little opportunity to participate in the program and maintain an insured status.

With the present high income-tax rates, it is difficult for any individual to set aside substantial savings for his dependents. This, of course, is particularly true for those with moderate incomes. The young dentist starting his private practice usually has high expenses and heavy family obligations at a time when his income is relatively low. Death of the young dentist at this time is a real hardship on his widow and children and social-security payments might be the one thing which could keep the family together.

It is difficult to have a comprehensive and fair social-security system with some individuals covered and some individuals not covered. I believe that self-employed dentists, if fully informed, would generally favor coverage. However, knowing the deep respect Congress holds for dentists I realize that persuading that legislative body to include you will continue to be difficult unless representative groups of dentists favor inclusion. Possibly the Congress of American Dentists for OASI of which you are president will aid in starting the necessary movement.

I do feel that the plan that you outlined to me of urging all of the dentists in the United States to record their views, pro or con, about inclusion in the OASI system by mailing a postcard to you at the above address is excellent. This expression of opinion, if those dentists sign their names and addresses on the postcard could make a salesworthy exhibit to offer the Congress as sure proof that the great majority of dentists want social security.

Another thing to remember is that Members of Congress, when they go home for adjournment often visit their dentists for a checkup. Dentists interested in social security can greatly advance their cause by expressing their views on social security to their Congressmen at that time.

Cordially yours,

ROBERT W. KEAN,
Member of Congress, 12th District, New Jersey.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a resolution adopted at Detroit, Mich., on May 8, 1955, by Americans of Polish descent of the Detroit area, gathered to commemorate the enactment of the Polish Constitution of May 3, 1791.

The resolution follows:

Whereas World War II resulted from the invasion of Poland by Nazi Germany, and 10 years ago today a defeated Germany sued for an armistice. The Allied Powers cannot claim victor in that war since Poland is now occupied by an enemy power; and

Whereas after World War II while attempting to form a democratic government in Poland, 16 Polish political leaders were imprisoned by the Russian Soviets. Today, long after the expiration of their sentence, four of these leaders are still unaccounted for. Poles everywhere express their gratitude to the United States for its humanitarian action in demanding their release; and hopes that these demands will be fruitful; and

Whereas 2 years after the Korean rrmistice many American soldiers and civilians are still imprisoned by the Chinese Communists; and

Whereas it appears that the Communist forces of both Russia and China are attempt-

ing to enslave the free world: Now, therefore, be it

Resolved, That we on this solemn occasion pledge our loyalty to the United States of America; and be it further

Resolved, That the Congress of the United States and the executive department take steps to—

A. Demand through the United Nations that free elections under international control be held in East Central Europe accompanied by the withdrawl of Soviet troops and police forces behind the 1939 frontier.

B. The maintenance of the Oder and Niesse Rivers as Poland's western border to preserve peace and with economic and political stability in Europe.

C. Demand that Russia restore political freedom and independence to the countries she now occupies.

D. Abandon the rearmament of Germany, and use peaceful steps to solve European problems.

E. Repeal the McCarran-Walter Immigration Act with its policies of nationalism consistent with the solemn promises of General Eisenhower and the Republican platform of 1952.

F. Implement and carry out the spirit of the Refugee Act of 1953 and cease playing politics with human misery.

G. Abandon support of colonialism which denies freedom to millions of unfortunates.

McGregor Will Hold Conferences in District

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. McGREGOR. Mr. Speaker, since I have been in Congress I have always attempted to keep in close contact with the people of the 17th Ohio District, whom I represent.

While a Congressman is expected to have a broad grasp of national and international matters, and to give information on many troublesome subjects, I deem it most advisable to keep in touch with the people of our district so that I might have their views and endeavor to be of service to them in their personal problems.

Having been assured by the leadership that the Congress will not be in session, I will again, this year, follow the procedure of holding meetings in the courthouses of the 7 counties in my district.

I have established the following schedule:

Monday and Tuesday, August 22 and 23, Ashland, Ashland County.

Wednesday and Thursday, August 24 and 25, Mansfield, Richland County.

Friday and Saturday, August 26 and 27, Mount Vernon, Knox County.

Monday and Tuesday, August 29 and 30, Delaware, Delaware County.

Wednesday and Thursday, August 31 and September 1, Newark, Licking County.

Friday and Saturday, September 2 and 3, Millersburg, Holmes County.

Tuesday and Wednesday, September 6 and 7, Coshocton, Coshocton County.

Weekdays 9 a. m. to 5 p. m. Saturday conferences will last only until noon, when the courthouse closes.

It is surprising how much can be accomplished when a citizen and his Congressman can sit down and talk over national and personal problems.

No appointments are necessary for these conferences and I urge any or all of my constituents to meet with me on the date most convenient to them.

With the knowledge thus obtained, I know I will be better able to truly represent them in the Congress of the United States.

The Asian-African Conference

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. McCORMACK. Mr. Speaker, I wish to discuss briefly the Asian-African Conference that took place in Bandung, Indonesia, on April 18–24 last. It is important that its implications as they affect the United States and the free world be carefully studied by us. We belong to the legislative branch of our Government and many of our decisions have a direct bearing on what will result from the decisions made at Bandung.

It should be a matter of gratification for us that when 29 nations of Asia and Africa met, the world found out that democracy is strongly entrenched in that area; that despite the efforts of neutralists and Communists to slant the conference against the free world, those who believe in freedom asserted themselves and succeeded in defeating all attempts to make of the conference a sounding board for neutralism and communism.

That we did not suspect this unexpected strength of democracy in Asia and Africa is a lesson we should remember. It shows that we have more friends than we know. In not knowing that we have such stalwart allies we are guilty of either indifference or neglect, and this we should correct at once. This is the first moral that we should draw from the Bandung meeting.

The second lesson is to be drawn from the fact that in Bandung the conferees exercised restraint of the highest order. Their utterances and decisions showed dignity and sobriety. No attacks were made based on racism. Where we feared the color line would be drawn because of the manner the participating countries were selected, nothing in the proceedings of the Conference showed that any of the delegates were animated by racism. Asia and Africa, through their delegates, extended to us the hand of friendship and good will. We should, in equal reciprocity, grasp that hand of friendship and good will. Here is where we can together lay the groundwork for peace for all mankind.

The third lesson is that we should not be too hasty in judging the motives and purposes of other nations. When the Conference was first announced, it was with misgivings that the convening of the meeting was received. Many fears were expressed. As a result, our Government, through President Eisenhower, failed to send a message of greetings to the Conference. This is unfortunate. We should have been the first ones to welcome the Conference and to send our official greetings to the conferees, the majority of whom turned out to be our best friends and allies. Here the State Department failed us in not giving our Government the correct intelligence and background information.

The fourth lesson is that as Ernest Lindley in his column in Newsweek aptly said, we cannot discount the Asians who in the Conference showed they have statesmen and diplomats of the highest caliber, seasoned and mature, who can match the best of Europe and America. Among these I wish to single out a former Member of this House, Gen. Carlos P. Romulo, who was the Philippines' chief delegate in the Bandung Conference. All the press dispatches were unanimous in acclaiming him as the leader of the democratic forces in the Conference. The Filipino people should be proud that in a meeting of 29 Asian and African nations it was a Filipino voice that spoke for democracy so effectively that the whole world listened.

Mr. Speaker, under unanimous consent, I include in the RECORD General Romulo's speech that will go down in history as a classic that turned the tide for the free world in Bandung:

STATEMENT OF THE HONORABLE CARLOS P. ROMULO, MEMBER OF THE CABINET, CHAIRMAN OF THE PHILIPPINE DELEGATION TO THE ASIAN-AFRICAN CONFERENCE, BANDUNG, INDONESIA

I am proud to bring to this conference the greetings of the President and people of the Republic of the Philippines.

We of the Philippines have a profound sense of the great historic events dramatized by this unique gathering; we were, may I remind you, the first of the new nations to emerge in the great rearrangement of the world which began after the end of the Second World War. Our Republic came to being, freely and peacefully, on July 4, 1946. Since that time we have watched with proud solidarity and a feeling of oneness the establishment of the other independent nations of a free Asia, so old and yet so new. We have in these 9 years taken our stand firmly behind the struggle of every people to become master of its own fate, to enjoy its own identity, to be responsible for its own acts, to join in the immense task of building a new structure of human well-being and free institutions, the task, indeed, of changing the face of the world. To the peoples of Africa, already setting forth on this same path, we pledge our friendship and all the moral and practical support within our power to give as they join us of Asia in the great universal effort to better man's estate.

We come as members of one great family long separated from each other. In this family reunion we are here to talk of man's estate. But I do not think it will serve us well to have come here from our many corners of the earth to shroud the truth about man's estate in platitudes, propaganda, or easy self-deception. The world is too harsh a place for this, our problems too great, too perilous, too complicated to allow us this luxury. This conference will justify itself if we share our views frankly and realistically

as brothers should. We will serve each other if we examine ourselves, if we state the issues and problems plainly as we see them, if we clarify, as far as we can, our needs, our choices, our goals—and our obstacles. Let us seek a true meeting of minds on those we share in common and where there are differences, let us try at least to understand them.

All who are represented here are certainly concerned with the issues of (1) colonialism and political freedom, (2) racial equality, and (3) peaceful economic growth. The history of the world in our time turns on the ways in which these issues are met and resolved, or not met and not resolved. We are part, all of us, of a time of great transformation, for each of us and for all the people on earth. It is a trying, difficult, dangerous time—but with it all a good time to be living in. Never before, surely, have so many people been consciously a part of the history through which they were living. We in this room are, for our brief moment, a part of this history. How do we see it? How do we understand it?

To begin with, the very fact that we have come together here in this manner illustrates the great new fact that these issues of freedom, equality, and growth are no longer merely national problems but world problems. Indeed, the United Nations was created as an attempt to grapple with this great new fact. In one sense, this conference suggests that for the peoples of Asia and Africa the United Nations has inadequately met the need for establishing common ground for peoples seeking peaceful change and development. But I think we must also say that if the United Nations has been weak and limited in its progress toward these goals, it is because the United Nations is still much more a mirror of the world than an effective instrument for changing it. It has been in existence only 9 years, and through that time always subject to all the pressures and difficulties of national rivalries and power conflicts, large and small. It is a place where man, not quite yet a reasonable animal, is trying very hard to become one.

We do not have to be satisfied with the rate of progress being made. But neither can we be blind to the great changes that have taken place in so short a time. The world is a very different place from what it was a scant 15 years ago, and hence the United Nations is a very different body from the old League of Nations. A primary difference is the presence of the new spokesmen for Asian and African peoples who never allow the Western representatives to forget that the United Nations Charter pledged the freedom and self-determination of all peoples and that there are peoples in Asia and Africa who take that pledge with literal seriousness, and who will not rest until it is redeemed.

The majority of independent nations represented here won their independence only within the last decade. Who would have been bold enough, 20 years ago, to predict that this would be so? Who will be bold enough now to say how soon or how slowly those peoples in Africa strong enough to win it will acquire the right to face their own problems in their own way on their own responsibility? The handwriting of history is spread on the wall: But not everybody reads it the same way or interprets similarly what he reads there. We know the age of European empire is at an end; not all Europeans know that yet. Not all Asians or Africans have been or are still aware that they must make themselves the conscious instruments of historic decision.

Political freedom has been won by many different means. The British surrendered power in southern Asia because they knew they could no longer maintain it and were wise enough to base their action on reality. The French and Dutch had to be forced to the same conclusion. The United States has at times appeared to us lacking in consistency and vigor in upholding the right of non-self-governing peoples to independence. It has on some issues leaned heavily in favor of colonial powers and has sometimes disheartened us because of its failure to make its actions dovetail with its ideals of equality and freedom. We think that this was more than regrettable; we think it has been unwise. Let it be stated in fairness however that uniquely among the colonial powers the United States in our case made a formal pledge of independence, fixed a date for it 10 years in advance, and fully and honorably redeemed that pledge. True, we fought ceaselessly for our freedom and never gave up our struggle and we earned it when it came. But we of the Phillippines have directly experienced the basic good faith of the United States in our own relationship and we feel that the principles upon which it was based will ultimately prevail.

It is to be hoped, however, that this conference will help remind all the Western powers that the issue of political independence for subject peoples does not depend on their goodwill or slow access of wisdom or virtue. The age of empire is being helped into oblivion by the aroused will and action of people determined to be masters of their own fate. Those of us here who have already won our independence were only the initiators of this process. All the others, almost all now in Africa, stand at various points along their own roads to full self-determination. There is much, of course, one cannot readily foresee. But everything we know and understand about history assures us that whatever new travails the future holds, the old structure of Western empire will and must pass from the scene. Will it expire quietly and in dignity? Will it go out crashing violenty? That will depend on many things. But the end is not in doubt.

There are at least three things more to be said here about this matter of national political freedom:

First, it is perilously easy in this world for national independence to be more fiction than fact. Because it expresses the deepest desires of so many people in the world, it can be unscrupulously used as a shibboleth, as a façade, as an instrument for a new and different kind of subjection. I know that on this score there are violently different opinions in the world. I can recall how new nations like India, Indonesia, and Ceylon were called puppets of imperialism when they were newly born to freedom. And of course, the Philippine Republic has been described by these same sources as a mere tool of the United States. On the other hand, there is the way some of us view the position of certain other countries which from our own perspective we consider as subservient to other powers. I wonder if in such countries you could read in the press or hear in the public speeches of their spokesmen anything resembling the open criticism and other attacks that were common fare in places like India and the Philippines even before independence? I wonder if any of the spokesmen of these countries would ever speak as freely in criticism of the bigger country to which they feel friendly or allied as, say, we in the Philippines speak our minds about the United States? I am sure you will forgive my frankness, but in this land of the ingenious and artistic wajang, of the wonderful Indonesian shadow play and puppet shows, I think we ought to say plainly to each other when we think a puppet is a puppet.

Secondly, is political freedom achieved when the national banner rises over the seat of government, the foreign ruler goes, and the power passes into the hands of our own leaders? Is the struggle for national independence the struggle to substitute a local oligarchy for the foreign oligarchy? Or is it just the beginning of the conquest of real freedom by the people of the land? Is there political freedom where only one political party may rule? Is there political freedom where dissent from the policy of the government means imprisonment or worse? It strikes me that autocratic rule, control of the press, and the police state are exactly the worst features of some colonialist systems against which we have fought all our lives and against which so many of us are still fighting. Is this really the model of the freedom we seek? Or is it the free interplay of contending parties, the open competition of ideas and political views in the market place, the freedom of a man to speak up as he chooses, be he right or wrong? I know there are many possible answers to these questions. But for my part and for my people, may I say plainly that we regard the struggle for freedom as an unending, constant, unremitting demand upon us, that with all our acknowledged failings, faults, and weaknesses, we are seeking to build in our land a society in which the freedom of our Republic will truly become the freedom of every one of its citizens.

Finally, in this world of contending great powers, the independence of the small or weak nation is at best a precarious and fragile thing. Obviously, the ultimate greater freedom will lie in a greater coherence, a uniting of regional interests, in the creation of counterbalancing moral, economic, and physical strength, in the greatest possible common action by all to avert the disaster of a new world war. Let us face squarely up to the fact that within the Nation we can regain our self-respect and grapple with our local problems but that for the primary goals of economic transformation and well-being and peace, the Nation no longer suffices. Western European man today is paying the terrible price for preserving too long the narrow and inadequate instrument of the nation state. We of Asia and Africa are emerging into this world as new nation states in an epoch when nationalism, as such, can solve only the least of our problems and leaves us powerless to meet the more serious ones. We have to try to avoid repeating all of Europe's historic errors. We have to have the imagination and courage to put ourselves in the forefront of the attempt to create a 20th-century world based on the true interdependence of peoples.

I have said that besides the issues of colonialism and political freedom, all of us here are concerned with the matter of racial equality. This is a touchstone, I think, for most of us assembled here and the peoples we represent. The systems and the manners of it have varied, but there has not been and there is not a western colonial regime, which has not imposed, to a greater or lesser degree, on the people it ruled, the doctrine of their own racial inferiority. We have known, and some of us still know, the searing experience of being demeaned in our own lands, of being systematically relegated to subject status not only politically and economically, and militarily—but racially as well. Here was a stigma that could be applied to rich and poor alike, to prince and slave, boss man and workingman, landlord and peasant, scholar and ignoramus. To bolster his rule, to justify his own power to himself, western white man assumed that his superiority lay in his very genes, in the color of his skin. This made the lowliest drunken sot superior, in colonial society, to the highest product of culture and scholarship and industry among the subject people.

I do not think in this company I have to labor the full import of this pernicious doctrine and practice. I do not think I have to try to measure the rule played by this racism as a driving force in the development of the nationalist movements in our many lands. For many it has made the goal of regaining a status of simple manhood the

be-all and end-all of a lifetime of devoted struggle and sacrifice.

Today this type of western racism survives in virulent form only in certain parts of Africa, notably in the Union of South Africa, but certainly in many other places as well on that vast continent. Against this every decent man on earth has to set his face. In the United Nations the Asian and African states have again and again forced this issue on the unwilling attention of the other members. There we could see palpably the extent to which western men have had to become defensive about their past racist attitudes. Few of the western countries were willing to go far enough in condemning the racial practices of the Government of the Union of South Africa. They have yet to learn, it seems, how deeply this issue cuts and how profoundly it unites nonwestern peoples who may disagree on all sorts of questions. Again, we can only hope that this conference serves as a sober and yet jolting reminder to them that the day of western racism is passing along with the day of western power over nonwestern peoples. Its survival in any form can only hang like an albatross around the necks of those many people in the West who sincerely seek to build a freer and better world.

No less than this can be said. But there is something more, too. It is one of our heaviest responsibilities, we of Asia and Africa, not to fall ourselves into the racist trap. We will do this if we let ourselves be drawn insensibly—or deliberately—into any kind of counterracism, if we respond to the white man's prejudice against us as nonwhites with prejudice against whites simply because they are white. What a triumph this would be for racism if it should come about. How completely we would defeat ourselves and all who have ever struggled in our countries to be free. There is no more dangerous or immoral or absurd idea than the idea of any kind of policy or grouping based on color or race as such. This would, in the deepest sense, mean giving up all hope of human freedom in our time. I think that over the generations the deepest source of our own confidence in ourselves had to come from the deeply rooted knowledge that the white man was wrong; that in proclaiming the superiority of his race, qua race, he stamped himself with his own weakness and confirmed all the rest of us in our dogged conviction tht we could and would reassert ourselves as men.

Our quarrel with racism is that it substitutes the accident of skin color for judgment of men as men. Counterracism would have us do the same: to lump white men by their supposed racial grouping and govern our acts and reactions accordingly. It is our task to rise above this noxious nonsense. We have the responsibility to remain aware that this kind of racist attitude has been the practice, not of all white men but only of some, that it flies in the face of their own profoundest religious beliefs and political goals and aspirations, that in almost all western lands, and especially in the United States, the internal struggle against racism and all its manifestations has been going on steadily and victoriously.

We have the responsibility to acknowledge more than this; this business of racism, or other things like it, is an outcropping of one of many human weaknesses that we all share. The racism of western white man has played an especially prominent role in history because the western man associated it with the establishment of his great power over so many nonwestern peoples. As such, it deserves the special and prominent place it must have in the thinking and feeling of everyone. But we must also soberly ask ourselves: Is there a single society or culture represented in this conference which does not in some degree have its counterpart of this kind of prejudice and ignorance? Where is the society in which men have not in some manner divided themselves for political, social, and economic purposes, by wholly irrational and indefensible categories of status, birth, and yes, even skin color? It was a major part of the greatness of India's immortal leader Mahatma Gandhi, that he devoted so much of his fruitful life of selflessness and sacrifice to a struggle against precisely this kind of thing in Indian life. Would that we all gave as much time to the mote in our own eye as we give to denouncing the beam in the eye of another.

Surely we are entitled to our resentment and rejection of white racism wherever it exists. But we are also called upon, as honest men who want to better man's estate wherever and whatever he is, to acknowledge that in degree we all suffer from the same sin of ignorance and immorality. I ask you to remember that just as western political thought has given us all so many of our basic ideas of political freedom, justice, and equity, it is western science which in this generation has exploded the mythology of race. Let us not preserve stupid racial superstitions which belong to the past. Let us work to remove this ugly disease wherever it is rooted, whether it be among western men or among ourselves.

Lastly, I have said that all of us here are concerned with peaceful economic growth. This brings us closest of all to the hub, the center, the heart of our common preoccupations, because the political forms and methods we seek and choose, the social ideas and ideals we embrace, are all wrapped up in the way in which we strive for growth. Economic growth, economic change, transformation of our backward and inadequate economies—these we all seek. These we must seek, else we stagnate and die. After all, it is precisely because the billion and a half people of Asia and Africa have begun in our time to strive for a better economic stake in life that most of us are here today. This is the great new overwhelming fact of this century. The way in which this is achieved will fix the shape of history for all future men.

We all confront the staggering facts of our economic backwardness. This has been partly due to factors of climate, geography, and the stubborn survival of obsolete social patterns. But it has also in large measure and perhaps decisively been the result of patterns imposed upon us by Western colonialism. This heritage is the heaviest burden we carry with us into the new epoch of national freedom. The great masses of our people live in a state of rural poverty. We need to diversify our economies. We need to industrialize in accordance with our resources and needs. We have to win a more balanced place in the market places of the world. We have to do this in a manner that will effectively raise the standard of living of our people. These are the things we have fought for. These are the things that some of us here are still fighting for. For these things above all, we have needed to be free to seek our own way.

But let us not have too many illusions about national independence. We arrive in the world as nations in the middle of the 20th century, not the 19th or the 18th. We have to strive to become nations in a time when history has already passed from the nation to larger units of economic and social coherence: the region, the continent, the world. It is a world as envisioned by Rabindranath Tagore, "not divided into fragments by narrow domestic walls * * *." The idea of national self-sufficiency served the Western World only for a short time as a means to effective growth. Indeed, the great travail of the Western World, its conflicts, rivalries, and wars have derived in no small degree from the fact that the nation, as such, has outlived its usefulness as an instrument of progress. Not even the great powers of today can stand alone, much less newly emergent states weak in everything but the will to grow. In this 20th century world the sober fact is that a purely national economy is an illusion. We cannot start where, say, England started two centuries ago. We have to make our places in a world that has already made tremendous advances technologically and where economic interdependence has become the key to effective economic development and growth.

Considering the present state of the world, with its profound conflicts and insecurities, this may be viewed by some as a crippling disadvantage. But in a very real sense, and a more hopeful sense, it is rather an advantage if we can but grasp it. It means that we need not go through the equivalent of the decades and centuries of ugly, painful, and costly development which occurred in most western countries. It means that if circumstances favor it, we can make use of the most ultramodern technologies to transform ourselves more rapidly, to make new and hitherto unforeseen use of our resources. Who knows yet what the new potentialities of nuclear power are going to mean for Asia and Africa? It is obvious that the real world we live in does not at this moment offer much promise of any early opportunity to find out. But here we have one of the real stakes we all share in preserving the peace, in creating international instruments which will put men to work for man's growth instead of his destruction.

Our fate is bound up with the fate of the whole world. National isolation, in any real sense, is an impossibility in our time, whether we think of an ideal world uniting its human and natural resources for the well-being of all, or the real world, deeply divided and groping its way to decisions that will in one way or another affect every person on earth. The fact is that we will need greater world coherence than we have now if we are to thrive. The fact is that the effective mobilization of world capital and resources will be absolutely vital to us in the process of mobilizing our own capital and our own resources. The fact is that these things will depend in great measure on the further course of the conflicts that now govern all world affairs. It is pure illusion to think that we can be independent of these big facts.

But this by no means leaves us helpless to act in our own interest. It does not mean that we have no choice but to leave the great decisions to others. Quite the contrary. Quite the contrary, because it is precisely in our lands, in our continents, that the most important decisions are going to be made. And it is we who will make them, by what we do or by what we do not do in the coming years.

It could be that Russia's bombs or America's bombs will determine the future shape of the world and the fate of humanity. If it comes to that the tragedy will be total: it will make all we say or do here or anywhere else quite irrelevant. Reason will die and the survivors will move as best they can into a new epoch of savagery. But I do not think the great decisions will come that way. I think the shape of the world is going to be determined in large measure by the way in which the peoples of Asia and Africa go about the business of transforming their lives and their societies.

What do we want? How do we propose to seek it? These are the questions on which the fate of the world really turns. In not fully understanding this, many in the western world commit their most tragic blunder. For our part, we of Asia and Africa have to face up squarely to the big choices that lie before us. We have to try to understand as clearly as we can exactly what they mean.

There are certain things in all our minds on this matter. We all want to the best of our power and wisdom to seek change in

terms of the genius of our own various cultures and histories. We all want no more foreign exploitation of our wealth for the benefit of foreign interests. We do not want our future development to turn out to be another alien graft on our lives. We want this development to raise the physical and educational standards of our peoples. What roads lead to these ends? How do we begin to face up to these vast and formidable tasks?

There is no magic wand or automatic formula to bring about social and economic change. It means that we have to assume our own heavy responsibilities. It means mobilizing people, mobilizing resources. It means great toil, flexibility, adaptability, intelligence. But it also means defining our goal. Is our goal just so many new industries or factories, new dams or bridges or transportation systems? Or is our goal the betterment and the greater freedom, through these and other things, of the lives of the people?

This is no simple rhetorical question. Wrapped up in it are all the troubled issues of our time. And because according to the joint communique of the Bogor Conference "the basic purpose of this Conference is that the countries concerned should become better acquainted with one another's point of view," may I outline for you our views on the possible choices open to us.

There is one road to change which some countries have adopted and which offer itself to the rest of us as a possible choice. This is the road which proposes total change through total power, through avowed dictatorship and the forcible manipulation of men and means to achieve certain ends, the rigid control of all thought and expression, the ruthless suppression of all opposition, the pervasive control of human life in all spheres by a single, tightly run, self-selected organization of elite individuals. I know that an elaborate series of phrases and rationalization are often used to describe this system. But I am concerned not with propaganda myths. I am concerned with realities. I think we all have to be concerned with what this system offers and what it means.

Does the road to greater freedom really lie through an indefinite period of less freedom? Is it for this that we have in this generation raised our heads and taken up the struggle against foreign tyrannies?

Has all the sacrifice, struggle, and devotion, all been, then, for the purpose of replacing foreign tyranny by domestic tyranny?

Do we fight to regain our manhood from western colonial rulers only to surrender it to rulers among ourselves who seize the power to keep us enslaved?

Is it true, can it be true, in this vastly developed 20th century, that national progress must be paid for with the individual well-being and freedom of millions of people? Can we really believe that this price will, in some dim and undefined future time, be redeemed by the well-being and freedom of the yet unborn?

The philosophers of this system have answered this question through their doctrine of the so-called withering away of the state. But the rulers who have established their power in real life and not in the realm of bookish dreams have abandoned this tenet of their faith. We have had ample opportunity to witness over more than a generation now that this kind of power, once established, roots itself more and more deeply, gets more and more committed to perpetuating itself. Moreover, and the whole logic of human experience throws its weight into the scale, this system of power becomes inherently expansionist. It cannot accept the premise of peace with opponents outside its borders any more than it can make peace with opponents inside its borders. It seeks and must seek to crush all opposition, wherever it exists.

This road is open before many of us. The gateway to it is strewn with sweet-smelling garlands of phrases and promises and high sentiment. But once you march through it, the gate clangs behind you. The policeman becomes master and your duty thereafter is forever to say aye. Even those who enjoy the role of mastery must know that this system devours its own.

No, my friends, I don't think we have come to where we are, only to surrender blindly to a new superbarbarism, a new superimperalism, a new superpower. We do not want leaderships in our countries subservient to foreign rulers, be they in London or Paris, The Hague, or Washington, or, we must add, Moscow. I think our peoples want to worship the Almighty and live in accordance with His laws, to better their lot, to educate themselves and their children, raise themselves from the degradation of want and disease and misery, by holding up their own heads and acting freely to achieve these great and difficult aims by their own free means in partnership with similarly dedicated people everywhere in the world.

That is the freedom of the democratic way of life. That is the freedom we want all the peoples of Asia and Africa to enjoy. That is the freedom that President Ramon Magsaysay of the Philippines had in mind when he authored the Pacific Charter which enshrines the dignity of man, his well-being, his security, his progress, his nation's right to self-determination. The Philippine delegation is here not only to reiterate the ideals of that charter but to underscore in this conference that it is the sense of the Filipino people that such right of self-determination includes the right of nations to decide exclusively by themselves their ability to assume the responsibilities inherent in an independent political status. This is the time for Asia and Africa to reassert this principle and serve notice to the world that only by its unqualified acceptance by everyone can there be peace and justice for all mankind.

The success of this conference will be measured not only by what we do for ourselves but also by what we do for the entire human community. Large as is the cause of Asia, there is a cause even larger. It is the cause of the human family in a world struggling to liberate itself from the chaos of international anarchy. In short, our cause is the cause of man. If the voice coming out of this conference speaks for Asia and Africa alone, the words will have energy and force but they will make no claim on history. But if our voice speaks for man—man as world citizen rather than world warrior—then we can return to our peoples with the knowledge that we have served them as they need most to be served.

Fellow delegates, our strength flows not out of our number though the numbers we represent are great. It flows out of our perception of history and out of vital purpose for tomorrow. If that purpose is stained by resentment or desire for revenge then this conference will be a fragile and forgetful thing. Let us, therefore, draw strength not from the hurts of past or present but from our common hopes—hopes that can come to life in all peoples everywhere. And if the test of that strength should be our ability to forgive, then let it be said that we were the giants of our time.

Let us invoke the blessing and the guidance of Almighty God over our deliberations so that this conference may prove to be the radiating center of the divine injunction "Thou shalt love thy neighbor as thyself" and we may help to make the East and West live together as enjoined by our ancient Asian creed, "We are all brothers under the canopy of heaven."

We Question George Humphrey's Judgment

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the following text of a splendid speech made by our colleague, the Honorable EUGENE J. MCCARTHY, of Minnesota, at the annual Jefferson-Jackson dinner of the Young Democratic Club of York, Pa., on Saturday evening, April 23:

ECONOMIC PHILOSOPHY AND TAX POLICIES OF SECRETARY OF THE TREASURY GEORGE HUMPHREY

(By EUGENE J. MCCARTHY, Member of Congress)

It is difficult to find or establish a frame of reference for criticism of the present administration. Even before President Eisenhower was elected, it was stated by one of his chief supporters, Senator Henry Cabot Lodge, that we should not expect him to have a clear stand on issues but anticipate that he would act on the basis of subconscious principles. We have since been assured that his appointments—Cabinet positions and others—are men of good will. If one questions program or policy, he is readily accused of questioning the integrity and the good intentions of these governmental officials. Mistakes do occur. Republican defenders say the President is not responsible because he was not informed. It was contended in a Washington newspaper recently that the "kitchen cabinet" should be held responsible. Apparently having excused the President, the current move is to excuse the Cabinet and to lay responsibility, if it is necessary to do so, on the third level of officials in the present administration.

I do not tonight intend to criticize the President, nor the third-level Government officials, nor even those in the second or Cabinet level who are not considered strong men or important influences on Government. I would like, however, to take up with you the record and the policies of Secretary of the Treasury George Humphrey, who is generally accepted as being the strongest man in the Eisenhower Cabinet. The story of his appointment as the Secretary of the Treasury has, insofar as I know, never been fully reported. Politically he called himself a Taft man before the 1952 convention. He is reported to have worked in some manner, although there is no extensive public record, for the election of President Eisenhower. Again according to a report, he was appointed Secretary of the Treasury on the recommendation of Gen. Lucius Clay. Whatever his background and whoever his supporters were, George Humphrey seemed quite ready to assume the duties of the Secretary of the Treasury. Apparently he almost immediately impressed President Eisenhower, who said, shortly after he took office, that "In Cabinet meetings I always wait for George Humphrey to speak. I sit back and listen to the others talk while he doesn't say anything. But I know that when he speaks up he will say just what I am thinking." If this is actually the case, it would seem quite unnecessary for George Humphrey to speak at all to the President unless the President preferred to have Humphrey tell the other Cabinet members what he, the President, was thinking rather than tell them himself.

The Secretary of the Treasury, as a man responsible largely for fiscal and economic

policy of the United States, has when he took office, I assume, some sense of responsibility with regard to statements made by Republicans in the course of the 1952 campaign. There were, of course, the regular, expected denunciations of taxes in general, promises of tax reduction, of balancing the budget, and reducing the national debt. Some Republicans spoke of imposing a 25-percent limitation on personal income taxes, charging that the graduated scale as it existed in the law was immoral. There were many Republicans who denounced the corporate profits tax and others who said that the excise taxes were iniquitous. They expressed general dissatisfaction with what their candidate called treadmill prosperity and spoke of stabilizing and at the same time expanding our economy. The Republican platform promised to "aid small business in every practicable way." "The Republican Party will create," the platform said, "conditions providing for farm prosperity and stability safeguarding the farmers independence and opening opportunities for young people in rural communities." These in general were the promises and the program with regard to Government finance and the American economy.

Let us look now to the performance. In the first 3 years of the present administration, there has been a budget deficit each year, and it is estimated that the deficit for fiscal 1956 will be approximately $3½ billion. If this estimate is correct, the 4-year Republican administration will show an increase in the national debt from approximately $259 billion at the end of fiscal 1952, to approximately $276 billion at the end of fiscal 1956—an increase of approximately $17 billion. The Republicans have attempted to distinguish between good and bad deficits—the standard being for the most part that a deficit occurring under a Democratic administration is a bad deficit, whereas one occuring under a Republican administration is a good deficit. A sharper distinction has been made by one observer who states the difference in these terms: That the Democrats spend more than they collect, whereas the Republicans collect less than they spend. Promises to give the country something other than treadmill prosperity have been partially fulfilled, but in a negative way. The gross national product declined by approximately $7½ billion in 1954. Talk of 100 percent of parity for farmers in the market place does not stand up well in view of the present parity ratio of approximately 86. The fact that farm income is generally down and that the number of people living on farms is declining does not square very well with the Republican platform statement that it would create conditions providing for farm prosperity and stability and that it would open opportunities for young people in rural communities. The rate of small business failures has increased.

Of course the Secretary of the Treasury is not entirely responsible for these developments any more than he would be entirely responsible if the level of prosperity had increased, if farm income were high, if unemployment were reduced. There are limits to what Government can do in the way of directing the American economy and fortunately, also, as result of the passage of legislation such as the social security program, the farm program, the Federal Deposit Insurance Corporation Act, and similar legislation, limitations were placed upon the disastrous effects which the operation of an entirely free economy and unrestrained competition might have upon the domestic economy of the United States. Nonetheless, Government policy, particularly fiscal policy, does have an important bearing upon the economic welfare of the Nation.

Let us look at the record of the administration. Shortly after being established in the position of authority, the Secretary of the Treasury initiated what was called a hard-money policy. This hard-money policy essentially involved an increase in interest rates so that those who had to borrow money would be required to pay more to those persons and institutions who were lending it. The tight-money policy has since been reversed or at least modified. The experiment, however, was expensive. For example, on one long-term Government bond issue, the Secretary of the Treasury set an interest of 3¼ percent, which was 30 percent higher than the previous rate of 2½ percent. This issue was extremely popular. It was oversubscribed by five times. The taxpayers of the country will pay in added interest on this bond issue alone over the life period of the bonds approximately $200 million. Interest rates on other Government securities were also increased and the increased interest rate spread throughout the entire economy. Although the administration has had to retreat from its extreme position on interest rates, its general policy has been one of tightening the money market and increasing the cost of money to borrowers. There is evidence that the economy is recovering now, but, I think, there is no question but what it was staggered and seriously hurt by the hard-money policy.

In the field of taxation, the attitude of the administration, or at least of the Secretary of the Treasury, is becoming clear. There has been, of course, no general attack upon all taxation, as was indicated there might be in the campaign. The direction of the administration's tax policy is indicated in the administration's support of two major tax changes. First, in its support of the dividend exemption provision in the 1954 tax law, and in its more recent opposition to the $20 income-tax credit proposed in the 84th Congress. The administration argued for the dividend exemption on the grounds that this would eliminate double taxation. It is significant to note, however, that at the same time the administration was asking for an extension of the regular corporate profits tax. I think it fair to ask the question as to why, if the administration was concerned about double taxation, it did not simply recommend that the corporate profits be reduced and the complicated provisions with regard to dividend exemptions not be injected into the tax program. This would have been the simple way to eliminate so-called double taxation. As a matter of fact, however, the corporate profits tax is to a large extent a regressive tax which falls upon the purchaser of the corporation's products or services—to a large extent, therefore, in the nature of a sales tax. Dividend exemption, however, gives tax advantage and tax relief to those who receive an income from investment. Seventy-six cents out of every dividend dollar are paid to the top 4 taxpayers out of every 100 taxpayers.

The Republican administration, led by the Secretary of the Treasury Humphrey, was successful in defeating the $20 income tax credit proposed by the Democratic majority of the House of Representatives in this session of Congress. The argument of the administration was that the condition of the Federal budget did not justify a reduction in taxes. The Secretary of the Treasury argued that this consideration was the primary one and that in view of the budget deficit the tax rates should not be reduced. It is interesting to note, however, that when the Republican tax reduction bill was under consideration in the 83d Congress, the administration in the face of a budget deficit of approximately $4½ billion supported a bill which was expected to reduce revenue by approximately $1½ billion. They then argued that revenue was not the important consideration, but that the economic effects of taxes were to be given primary consideration. Approximately 1 year later in anticipation of a deficit of $2.5 billion, the administration opposed as unsound a reduction of approximately $815 million in tax revenue arguing that economic considerations were of secondary importance.

On the basis of this record, I think that the following conclusion can safely be made. First, that one can expect no consistency in the arguments of the administration on tax or economic questions. Second, that the administration is not as strongly opposed to the corporate profits tax as it has sometimes indicated, but is rather concerned about reducing taxes paid by people in the high income bracket, especially when that revenue is derived from investment in corporations. Third, that it is not as anxious as it claimed to be during the 1952 campaign to reduce excise taxes, although there has been little indication of late that the Secretary of the Treasury intends to press for consideration of a national sales tax. Their policy is not one of killing the goose that lays the golden eggs, but rather one of overfeeding the goose.

Actually we should not be altogether surprised at the policies which have been adopted and supported by the administration. Examination of the statements of the Secretary of the Treasury indicate that he has acted about as we should have expected him to act and as we may expect him to act in the future. We should not, for example, be surprised that business failures in the $5,000 to $25,000 class increased by approximately 70 percent between 1953 and 1954. We should not be surprised to learn that the administration is inclined to favor in its defense contracts the larger corporations, for the Secretary of the Treasury has said that "America needs big business, its requires big businesses, big enterprises, to do the things in big ways that a big country has to have." I think that we would all agree that America does need big business, but that it also needs small business and businesses of medium size. We should not be altogether surprised that the administration's tax policies particularly have tended to favor investors, for the Secretary of the Treasury, testifying before the Senate Committee on Finance in 1954, said, "There is nothing more important for the future of America than to encourage widespread investment in American business." All of us would agree, of course, that investment in American business is important, but I am sure that few would say that there is nothing more important than such investment. We cannot, for example, sacrifice necessary provisions for defense in order to encourage American business. We cannot neglect our international problems in the interest of stimulating such investment. Nor can we sacrifice any large number of our own people to poverty or to unemployment in the interest of investment in business. What we have reflected in the statement of the Secretary of the Treasury is at best an acceptance of the trickle-down theory, and more obviously an acceptance of the old fallacy of accepting the primacy of economics over every other consideration. It leads one to believe that President Wilson was right when he said that the Republicans thought that the only persons who could be trusted with the prosperity and welfare of the Nation were those who had the greatest material stake in it.

In view of this emphasis on the part of the Secretary of the Treasury and the acceptance of his judgments by the President, we should not be surprised to learn, as we could

from a recent report of the U. S. News & World Report, that during the time covered by its survey the President had invited 294 businessmen to his dinners but during the same period, only 9 farmers. That while he had invited 294 businessmen, he had invited 8 labor union officials; 294 businessmen, but 6 church leaders; 294 businessmen, but only 30 educators.

We should not be too surprised at what the Secretary of the Treasury recommends with regard to taxes, since he stated to the Ways and Means Committee of the House that the only purpose which the Ways and Means Committee was to take into consideration in connection with tax programs was that of raising revenue. He said that questions of social reform, or social well-being, should not be considered in relation to tax policy. I suppose that had he been hard pressed, he would not have recommended, at least publicly, that taxes should be imposed so heavily upon low-income groups that they could not adequately support their families, but such a conclusion is certainly inherent in the tax policy which he announced to the committee.

The political and economic philosophy is perhaps best summarized in his statement: "We must remember the fundamental principle that the best government is the least government." If this principle, as he calls it, were accepted and carried to its logical conclusion, one would be an anarchist advocating no government at all. This statement of Humphrey does not express any kind of fundamental principle, but rather a fundamental misunderstanding of the function of government. The best government is the government which is adequate to the needs of the people and which performs those functions which government should perform. The function of laws in government and governmental institutions is to protect people from force and violence by those who are more powerful either in terms of physical, or economic power, or whatever other power they may possess; and on the positive side to promote as the preamble to our Constitution says, "the general welfare." In the period in which government was weak in this country, we had exploitation in the economic field by powerful forces—exploitation of men through unjust and depressed wages and inhuman working conditions; exploitation of consumers and of competitors; and exploitation, also, of our natural resources. It was the policy of those who were interested in such exploitation to keep government weak, because they were then relatively strong. The history of the United States shows that through government the people of the country have come to exercise some measure of control over these forces, and through government action to secure some measure of justice for all of our citizens. Of course, if government were weakened, the economic institutions and forces in which the Secretary of the Treasury is interested could operate with greater freedom and independence and so could use their power without intervention, or without opposition by government.

We need not question his integrity, nor his good intentions, but certainly we can question his judgment. If what he has said indicates what he really thinks, and if he intends to carry through to logical conclusions the potential of his political philosophy, then we have genuine cause to be concerned and to be alarmed, and, as active members of the Democratic Party, to intensify our efforts to continue control not only of the Congress of the United States, but also of the executive branch of the Government; not with the intention of using that power and control to advance our personal interests or the limited interests of the Democratic Party, but with the purpose in mind of controlling government and using it so that the best interests of the people of the United States may be served by the Government.

Persecution of the Church in Poland

EXTENSION OF REMARKS
OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. MACHROWICZ. Mr. Speaker, the 8th day of May constitutes the second anniversary of the isuance of the last official protest of the Catholic clergy in Poland against persecution of the church by the state Communist authorities. Severe repression has made subsequent effective protests impossible.

In view of the continued persecution of the Catholic Church in Poland, and in other countries behind the Iron Curtain, contrary to all human laws, and to international law, it is timely today to recall this memorable occasion.

On May 8, 1953, the last assembly of the Polish bishops was held in Krakow. The occasion was the 700th anniversary of the canonization of St. Stanislaw Szczepanowski, bishop of Krakow and patron of Poland. The Polish episcopate then assembled in Krakow, sent to Boleslaw Bierut, chairman of the State Council in Warsaw, a lengthy document presenting the situation of the church and religious life in Poland from 1950 to 1953 under Communist domination.

The document, an example of a great moderation, of a deep understanding of the apostolic mission of the church and of great love for the Polish nation, does not enter into any polemics, but states and lists "before God and history" the wrongs which Marxism has been doing to the Catholic Church and the Polish nation, trying to deprive it of its thousand-year-old Christian tradition and attempting to destroy in Poland the faith of the people in God.

This memorial has become the last great document of the Polish episcopate containing the signature of the Primate Cardinal Stephen Wyszynski. From that time it was impossible to hold another assembly of the Polish episcopate and from that time on the bishops were prevented from presenting any further documents on religious life in Poland and on the fate of the church there. Five months thereafter Cardinal Wyszynski, the head of the church in Poland, was placed under arrest and has not been heard from since.

At the very beginning of the document, the bishops state: "In accordance with truth, the Polish episcopate feels it is its duty to state that the situation of the church in Poland is not only not improving but, on the contrary, is steadily deteriorating. The responsibility toward God, the community and history demands that at least the more menacing negative aspects be named without covering them up, and defined accurately." After this preamble the bishops gave a list of wrongs which the Communist regime had committed during the past 3 years against the church in Poland. Among these wrongs the episcopate enumerates the "removal of religion from the schools and of God from the hearts of the youth," "political pressure and attempts of diversion among the clergy," "absolute destruction of the Catholic press and periodicals," "intrusion in church affairs and attempts at hindering Apostolic activities of the church," "unusual hard fate of the church in western territories."

Each of these charges was supported by substantial evidence. Furthermore, the episcopate emphasized "attempts and efforts of the episcopate in creating mutual relations."

The document was ended by a solemn declaration of the bishops of the following conditions:

POLISH BISHOPS' DECLARATION

Feeling that it is their highest duty, the Polish episcopate points herewith to the tragic fate of the church in Poland, to the symptoms of the opporession and its causes, and the sources from which flows the concern, the anxiety, and the exasperation of the broad masses of the Catholic community.

We see the basic and main cause of this state of affairs in the hatred which destroys the strength of our country and seems to forebode sinister wrangles. We are acting not with any controversial aims in mind, but only to emphasize the burning necessity of finding an honest and fair way out of the existing situation. We are seeking a positive solution, which would be beneficial both to the church and the state. Nothing is further from us than to destroy the unity, to introduce dissension, or spread hatred. So this time again we do not refuse to reach an agreement, we do not forsake the will for a peaceful solution and collaboration in the important task of a successful settlement of relations between church and state in accordance with the agreement reached on April 14, 1950. However, in the present state of affairs it depends solely on the sincere and good will of the government whether internal peace and reciprocal harmony which are so essential, will be really achieved. It depends on whether the government will forsake its radical, destructive hate toward Catholicism, whether it will abandon its aim of subjugating the church and turning it into an instrument of the state.

We wish that the government should clearly understand what the decree about the filling of church positions really means for the structure of the church. We therefore remind that by this act, which is illegal according to the constitution, the state has usurped for itself the right to a constant intrusion in the internal affairs of the church, sometimes pertaining to the conscience of the priests, and to a willful and systematic subjection of church jurisdiction to its own will.

This is inadmissible from the point of view of the church. First because the jurisdiction of the church pertains to strictly religious, internal and supernatural matters, such as teaching God's revelation, the teaching of Christian morals, the administration of the Holy Sacraments, the organization of religious services, the spiritual guidance of the souls and the consciences of the people.

In the name of what rights could the authority over such strictly religious matters be submitted to the authority of the state, which by its nature pertains to matters which are exclusively secular and temporal? Particularly, if that authority is based upon a materialistic and anti-religious ideology, and is filled with destructive hatred toward the church? Every person, even an atheist, should understant that such a dependence is quite impossible. Therefore Lenin justly condemned the subjugation of the church to the state as a "cursed and disgraceful" thing. This is moreover, an impossible thing for the church because, in accordance with its unalterable constitution, with regard to which even the Pope is helpless, there is not and cannot be in that Catholic community

another jurisdictional authority except the one which flows from above, from the Pope and the Bishops.

Therefore, whenever the secular authority willfully tries to grasp the ecclasiastical jurisdiction, in order to make it dependent, it usurps something which does not belong to it, and violates not only the rights of the church, but also the divine law. On what basis therefore could the government require of the Polish episcopate to accept a fact which is so glaringly inconsistent with the structure of the church and its rights, and which even violates the sacred divine laws.

Shortly after the announcement of the decree about filling the church positions, representatives of the episcopate deemed it their duty to make a formal protest in that matter. Today, the whole Polish episcopate protests.

We declare, aware of our apostolic mission, in a most solemn and categorical manner, that we cannot consider as legal and binding this decree, because it is inconsistent with the constitution of the Polish People's Republic, and violates the laws of God and of the church. "One should obey God rather than men."

We do not refuse to take into consideration the motives and the suggestions of the government. But in filling church positions we must be directed by divine and by ecclesiastical law, and we must appoint only those priests whom we consider, in our conscience, as fit and worthy. We find it difficult to hide how little worthy of those positions, especially the more important ones, are those, who yielded to external political pressure and allowed themselves to be used as instruments of diversion in the church. Those priests give very slight guaranty that, as representatives of the church, they will defend with devotion and firmness the essential and divine principles and rights of the church.

If it should happen that external factors will make it impossible for us to appoint competent and proper people to ecclesiastical positions, we are decided to leave them vacant rather than to place the spiritual rule of souls in the hands of unworthy individuals. And if someone should dare to accept any ecclesiastical position from outside (the church) let him know, that by the same fact he falls under the heavy punishment of excommunication.

Similarly, if we are placed before the alternative: either to subject ecclesiastical jurisdiction to the state making it an instrument of the latter, or to bear a personal sacrifice, we will not hesitate, we will follow the voice of our apostolic vocation and our conscience as priests, with peace of mind and the knowledge that we have not given the slightest reason for persecution, that suffering becomes our lot for no other reason than the cause of Christ and His church.

We are not allowed to place the things belonging to God on the altar of Caesar. Non possumus.

We respect the personal opinions of all people, also those of our present adversaries, whom we as Christians are not permitted to hate—but we demand the same respect for the religious opinions of Catholic Poles, especially children and the youth.

We respect the duties toward the nation and the state, and often remind our faithful about them, but at the same time we demand that no obstacles be placed in the way of Catholics for the performing of their duties toward God and the church. We are conscious of the special tasks and duties of the Catholic priest toward his country, and that is why we often reminded our priests about them, requesting their solicitude for the development and welfare of our country. But we also demand with emphasis that our priests should not be torn away from their religious duties, that they should not be drawn into political affairs which are alien to their vocation, that political pressure aimed at using them as instruments in the struggle of the state against the church be stopped, that they should not be forced to break their oath by which they pledged loyalty to the church and their bishops.

In short, in accordance with the principle of separation of church and state, as guaranteed in our constitution, the state must abstain from interfering in the religious, spiritual, and internal affairs of the church.

In the name of the welfare of our nation, we have the right to demand from the leaders of the Marxist camp a revision of the principles of ruthless hatred and ostracism toward our religion, the church and God. The Polish episcopate demands from the council of ministers that, in accordance with article 32.7 of the constitution of the Polish Peoples Republic, it undertake the defense of the rights of Catholics in the Polish Peoples Republic.

This memorable espiscopate letter of May 8, 1953, can be well described as an important historical document in the war against God, religion, and the church in Poland conducted by the Communist regime.

The history of this war with God and religion in a previous period, from 1945 to 1950, is described by another Polish episcopate letter dated September 12, 1950. It was signed by Cardinal Adam Stefan Sapieha and by the Polish Primate Cardinal Wyszynski. It was unanimously adopted by all the Polish bishops assembled in Czestochowa and forwarded to President Boleslaw Bierut. In it the following was said:

In the history of the Catholic Church in Poland the last 5 years (1945–50) have been marked by unprecedented oppression. Unilateral withdrawal of the concordat by the Polish state; failure of the state to give recognition to the church organizations in western occupied lands; the failure to permit renewal of Catholic organizational activities; gradual but steady liquidation of Catholic schools; unusually strong limitations on religious press and religious publications by censorship and limitations so that they have almost ceased to exist; depriving the church of diocesan publications; taking over by the state of social organizations and hospitals belonging to the church; barring of organization church life and compulsive registration of cloisters; limitation on the public freedom of religious cults and limitations of the right to conduct Mass and religious practices, such as missions, public processions, religious gatherings and congresses; the liquidation of the church welfare organization Caritas; nationalization of church properties; the press campaign against the episcopate; the limitation of religious practices in schools; removal from the schools of hundreds of religious text books; support of youth organizations with ideology inimical to Christianity; support of publications discrediting historically the accomplishments of the church in the field of scence and national life; antireligious propaganda conducted by the press, by lectures, and by thousands of publications; limitations on the freedom of conscience of members of organizations, parties, and trade unions; antireligious propaganda in kindergartens and schools, summer camps, and in youth camps; the use of the whole administrative apparatus, the courts, police authorities, and tax offices to exert pressure on the conscience of the citizenry and of the priests and bishops. All this is only a partial list and does not give a picture of the whole truth of the situation of the Catholic Church after 5 years (1945–50). Having this in mind the episcopate has, on many occasions, presented its complaints and protests to you, Mr. President and chairman of the committee of ministers. Unfortunately, it was without results. The last year, 1949–50, particularly after the concordat of April 14, 1950, was marked by a hastening of the tempo of the liquidation of the church's social institutions and activities.

This document of September 12, 1950, together with that of the Polish espisopate of May 8, 1953, gives a true picture of the religious persecution in Poland on the part of the Communist regime in the period from 1945 to 1953. They present a picture of the brutal war with God, religion, and the church conducted by the Communists in Poland.

With the arrest of the Polish Primate Cardinal Stephan Wyszynski on September 26, 1953, and his imprisonment by the Communists, an end came to the period in which the Polish episcopate could present this type of memorial, which is now a historical document, to the Warsaw regime. Since that time it is unknown where the Polish primate is imprisoned, what his condition of health is, and under what circumstances he is living. Despite the fact that it has been requested from all parts of the world, the Communist regime has to this day given no official information regarding him.

The high moral position which Cardinal Wyszynski has gained in the Catholic world is best attested to by the greeting sent by the American cardinals and bishops to Cardinal Wyszynski through the Voice of America during the last Christmas holidays. Cardinals Spellman, Stritch, Mooney, and McIntyre joined in the greetings, as did also a number of American bishops such as O'Boyle, Alter, Donahue, Keough, Lucey, Byrne, Gannon, Russell, Meyer, O'Hara, Cushing, Wosnicki, Kroll, and many other high dignitaries of the Catholic Church in the United States. They all emphasized the fact that in Cardinal Wyszynski, the primate of Poland, they see "a symbol of courage which every man should display in defense of freedom."

The Communist attack on the Polish Primate Cardinal Wyzsynski opened a new period of religious persecution in Poland. The war with God, religion, and the church took on a new form, but it never stopped or slackened.

After nearly 2 years the Polish bishops and the Polish episcopate are Communist prisoners of the Warsaw regime. Deprived of its leader, the Polish Primate Cardinal Wyszynski, there have been no plenary assemblies of the Polish episcopate for nearly 2 years. After 2 years the episcopate has been compelled by the Communist regime to be silent. The bishops have very rarely been able to be heard, and then only on strictly religious matters and on subjects in which they are compelled to speak by the Communists.

On the other hand, immediately after the arrest of Cardinal Wyszynski the Warsaw regime has pushed to the forefront the so-called patriot priests and progressive Catholics. In the memorial of September 12, 1950, the bishops already affirmed that these patriot priests were in conflict with their moral and church obligations, and many of them

were under church discipline. As to the so-called progressive Catholics, they were publicly condemned in February 1950 by the Primate Cardinal Wyszynski, who confirmed the fact that their activities and the activities of their publications cannot be considered as Catholic.

In the fall of 1953, after the arrest of Cardinal Wyszynski, the Communists called to life the so-called State Committee of Catholic, Ecclesiastical, and Lay Activists of the National Front. This committee was given the job of diversional work among the Catholic people. Later the Communists added to this group the "patriot priests," putting them under leadership of "progressive Catholics."

How ineffective was the work of this committee and how effective were the auditions of the western radio, particularly Voice of America, as best evidenced by the statement of the secretary-general of this committee on February 22, 1955, who, despairing on the lack of ability to operate effectively, said:

This national committee having ambitions to influence and to direct the processes of evolutions now going on in the minds of clergy cannot at any time afford to neglect the influence of western radio of diversional character on a certain group of priests and Catholics in general. These radios lost their appeal for the Polish people by unmasking their lies and hatred toward anything which is cherished in the heart of every Pole. Nevertheless these radio programs aim to disturb the minds of the faithful and to exploit for hostile political aims religious feelings and devotion to the church of people.

One of the means used by these western radios—which flatters us because it strengthens our belief in the righteousness of our ideals—is an avalanche of lies and insults directed against our movement. Our strength and our achievements compelled the enemy propaganda to change also its methods. Even they noticed our great movement and ineffectiveness to combat it from outside as it was when they successfully went to isolate progressive Catholic movement. Therefore the struggle has been changed for a diversion with the scope to concentrate on disintegrating processes and opportunistic tendencies within our movement. It is logical—if one is unable to conquer or destroy a movement, if one cannot retract its development, he must try to weaken this movement, to loosen it and undermine its ideals.

And therefore the weight of enemy propaganda is pushing now not on our organizational forces—it is even afraid to use its name—but is attacking the very ideology. The enemy propaganda is trying to undermine among the people its confidence in this ideology and abate its authority. They talk no more about a heritical group or heretical ideology, they discriminate not only people and their activities, but they strike against the fundamental belief of progressive Catholics.

This is the reason why we must come to certain conclusions for our further activity, why we have to deepen morale of our activists and take care of a high moral standard of our leading groups.

This wailing of those who were bent on destroying religious life in Poland is good evidence that their efforts have been unsuccessful and have not fallen on fertile ground.

In the perspective of 10 years of religious persecution in Poland and in the light of the history of 10 years of the war of Communists with God, religion, and the church in Poland, it is now clear how important were the statements of the Polish episcopate. It is obvious that the Communists to the present time have been losing that war. The Polish nation has successfully fought off the attacks. This, however, does not minimize for a moment the dangers which appear to exist. The Communists have chosen Poland as the base of their great diversion war with the entire Christian world. The so-called patriot priests and progressive Catholics are being used by the Communists to divert activities in various countries in the world. They are being sent to Belgium, France, Italy, and even to North Vietnam and to the United States under the guise of various missions, sometime diplomatic. The Catholic mask is used to conceal their Communist activity to procure advantages for Moscow. We must consider these matters when we reflect on this second anniversary of the historical document, the memorial of the Polish espiscopate of May 8, 1953. We must remember that the goal of the Communists is not only to destroy the Catholic world in Poland, but to destroy all religious activities everywhere in the world, including these United States.

Increase in Minimum Wage Aids Independent Local Merchant

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include an editorial from the May 9 edition of the York (Pa.) Gazette and Daily. This timely editorial summarizes some very forceful arguments in behalf of legislation increasing the minimum wage to $1.25 per hour:

AN IRONIC SITUATION

The United States Chamber of Commerce is supposed to represent the small retail merchant. But every time the chamber goes on record about a particular issue, it takes a position which is opposed to the interests of the retail merchant.

The minimum wage, for instance.

The present legal minimum is 75 cents an hour, which means that a man supporting a family at the rate of the minimum wage would receive a gross weekly income of $30 for a 40-hour week. Thirty dollars gross, of course, is not what the wage-earner brings home to his family. More likely, for the average family, it would be closer to $20.

There are proposals to raise the minimum wage to $1.25 an hour. This is the rate supported by organized labor. The Eisenhower administration is sponsoring an increase to 90 cents an hour. Others feel the minimum ought to be pegged somewhere between the 2 figures, perhaps at $1 or $1.10.

But not the United States Chamber of Commerce.

The national chamber wants to keep things just the way they are—at 75 cents an hour, or between $20 and $30 a week.

The retail merchant, the fellow the United State Chamber is supposedly to be representing, depends on consumer purchasing power for his volume of business. It does not take much thought to realize how much purchasing power in bulk can be put together from figures of $20 to $30 a week. Very little. The bare necessities of life can be obtained for that amount of money. Just think of a family with 2 or 3 children trying to live on, say, $24 a week. Fantastic.

Moreover, the secret of purchasing power does not lie in profits. Profits flow to a relative few. They are essential to expansion and to creation of new enterprise. But when they are held at a high level at the expense of wages, the opportunity for expansion or for new enterprise does not appear. For there is no one to buy.

This is the lesson such organizations as the United States Chamber of Commerce cannot bring themselves to study.

If they truly had the interests of the retail merchant at heart, or if they took anything except the most shortsighted view of economic realities, they would be out campaigning like zealots for a substantial increase in the minimum wage.

Here, then, is an ironic situation. The organized labor movement is supporting what is in the interest of the average retail businessman. But the United States Chamber of Commerce is supporting the interests of a selfish myopic few.

Proposed Antitrust Action of the Department of Justice Against the ANPA

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. HÉBERT. Mr. Speaker, President Richard W. Slocum discussed the proposed antitrust action of the Department of Justice against the ANPA in a speech in Chicago, May 10, at the convention dinner of the National Newspaper Promotion Association. After discussing current business problems of newspapers, he said:

I don't yet know enough about the proposed suit by the Department of Justice against ANPA and others to appraise its legal merit. I have seen but 5 or 6 of the several thousands of letters and documents the FBI took from the files.

In my starting years I was a Philadelphia lawyer but I never practiced in the so-called antitrust field.

But as lawyer or newspaperman or citizen I know enough to be concerned when the Federal Government exhibits a determination to saddle the press with a continuing injunction.

When we were told by top Justice Department officials the results of their investigation we were told we were going to be sued, but that a trial could be avoided and the suit wrapped up in a consent decree which the Department would be willing to take whatever time was necessary to work out. We said, well, can't we go into the facts with you and give you our side of it—maybe clear up wrong interpretations or conclusions from that material—and if the law has advanced or extended its prohibitions so that whereas 10 years ago we were not in violation but are now, tell us what those things are and we will change them. Certainly the press does not want even to try to

operate beyond legal right and if the law has changed by Supreme Court decision, as they told us it had starting about 10 years ago, we will adjust to whatever the law may now be.

We emphasized that the press claims no special position for itself. That it wants or would accept no disposition of the matter except in accord with proper application of current law. We thought there was advantage to everyone, and certainly fairness, if we could talk the whole situation over with them.

When we expressed those things we were told we could talk and they would not rush the talk, provided the talks would end in a consent decree; no willingness to talk about whether or not the antitrust division had gotten the right understanding of our activities—whether they might be wrong on some facts, as they were in the early stages when they thought a standard rate card meant advertising rates were standard instead of it being merely a card standardized in size to fit a No. 10 envelope.

This is supposed to be the day, and it is so preached in high Government places, that people should take time to discuss things before they fire their guns. But, no, in the Justice Department of the Government we couldn't sit down and talk unless we were talking about a consent decree. We first had to agree to confess our guilt. The only thing we could talk about would be our sentence. It would be in the civil area of the law, not the criminal, but the idea is the same.

And that is why I am concerned, greatly concerned, and why you, as newspaper men and women, should be concerned. Concerned not that ANPA might have to change as court law may have changed, but concerned over the Justice Department's determination to hang an injunction upon an important operating arm of the press—ANPA—and have it constantly in court and subject to the contempt determination of a judge, on application at any time of a Department of Justice that may have in it people who berate and belittle the press. Don't think that can't happen. Just think of the attitude toward the press again recently expressed by some people in high places, or recently there—partisans who don't like the ceaseless search of newspapermen for news the public is entitled to have or who try to smear the press with partisan unfairness because it does not view things their way.

The importance of the press is not to its owners, or the jobs of its craftsmen. Its importance is to the people, as the active working trustee of their fundamental freedom, their right to know what their Government is doing so that it can make the proper decisions, for public opinion is the true determinant of our course.

So, when a Department of Justice insists on blood before it will talk—is not willing to discuss merits unless it has been promised a public victory and some kind of a restriction on the press—there is the thing really to worry about. A will to understand correctly before acting is more important for the people to have in the Department of Justice than a prosecutor complex.

Do with the press whatever the changed law requires but don't be afraid to discuss the facts, or reveal opinions on anything that contributes to proper determinations. The Department of Justice has been wrong many times before in its accusations. Why it isn't willing to take a further look here with us before firing, is something for ponder and for regret. The public servant who thinks costructively is willing to discuss facts. He is not in such a hurry after almost 2 years of thinking about a matter that he will not take a little time to talk, and where the result may be so important and the interest of the public so great he would do well to think more of being right and less of exacting conceded victory.

Of one thing I am satisfied, this decision to haul the press into court is the decision of the top man, the Attorney General himself, joined by the Assistant Attorney General in charge of the Antitrust Division, Stanley Barnes. I would not lay at their door all of the thinking and purpose I would ascribe to their underlings but I believe they have been too ready to follow the will of their underlings.

It is not too late to avoid or correct these mistakes. The Department of Justice should and still can, if it will, talk this situation over on its full merits with ANPA. ANPA will gladly go into the matter on such basis, prepared to make any necessary changes. What is right is never blocked nor should the position of either party be "frozen by public announcement." Apart from being willing to discuss the matter, ANPA has not yet determined the course it should take in the best interest of ANPA, the press, and more important, the public. We had a legal opinion from our counsel and that was released for all to see. ANPA's Board has not all the information it should have before making its decision. It asked the Justice Department for a copy of the proposed bill of complaint but that was denied; presumably the victory complex might be injured by revealing the Department's intended lines of evidentiary attack.

It is the Department of Justice that blocks full constructive discussion—a simple procedure accepted as fair and commonsense and modern in other fields of possible disagreement—by insisting any such talk must be conditioned on our agreement to end up saddled with a court injunction.

ANPA asks only what good sense and good will and fairness should quickly grant particularly from a Government agency, and so long as it is refused ANPA must move with added concern and caution. Its course will be determined by a deep consciousness of its trusteeship of the free press for the people.

ANPA is not looking for a fight. It hopes there need be none. It is prepared to help avoid one. But it never runs for cover when it is challenged and it puts fundamental fairness and constructive results above legal maneuvering and victory complexes.

Public Power Projects

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. CRETELLA. Mr. Speaker, I include with my remarks a very interesting communication received from a constituent, Mr. Eugene F. O'Hara, of New Haven, Conn., which I think is the most informative communication I have received on this subject. You will note that it is not a mere attack on an important problem for the sake of opposition. Mr. O'Hara's presentation, arguments, and his conclusions are worthy of the few minutes' time of my colleagues to read it.

The letter follows:

NEW HAVEN, CONN., *May 1, 1955.*

Hon. ALBERT CRETELLA,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN CRETELLA: The present administration, while proclaiming its economy, is nurturing a pair of multimillion-dollar programs that can deal crippling blows to our natural resources. These two projects are regional in their immediate impact, their economic effects will be felt by every American taxpayer, not only for their huge initial cost of construction but also in a loss of wildlife resources that can never be replaced by dollars and cents. These projects are planned for widely separated sections of the country, Arkansas and Idaho.

ARKANSAS

The Cache River Basin is slated for a drastic drainage program by the Army engineers.

The Cache River is 210 miles long and is dotted with lakes, marshes, and forests, all crammed with wildlife. This valley has been part of the greatest hunting and fishing area in the United States since the dawn of American history. What is planned for the Cache River Basin was done to the St. Francis River Basin (which parallels the Cache River Basin some 10 to 30 miles to the east) which now cannot support any wildlife.

The land that they obtain from this project theoretically will be clear and used for farming. The Cache River will be transformed from a meandering stream that supports numerous lakes, bayous, and ponds, into a fast moving drainage canal that will empty into the White River (which empties into the Mississippi River).

At a cost of $22,400,000 the Army engineers say they can do the job, this cost being charged off to the rise in property values that is supposed to result. However, the Army engineers overlooked the fact that it will cost an additional $100 an acre (there is 2,000 square miles in the basin) to clear the land and make it useful farmland. There is the physical factor that must be considered, that is the water that is drained out of the basin will flow into the White River and on to the Mississippi. This could definitely create a flood hazard to the lower White River. The main reason for this drainage program is to create farm land. The main crop will be rice although row crops such as cotton and corn will also be raised. The United States grows about 1 percent of the worlds rice crop and that is more than the people of the United States consumes. Rice elevators throughout eastern Arkansas are bulging at the seams. Export to the foreign market on a profitable basis is impossible. What happens to this extra rice? We taxpayers buy it. We taxpayers also pay to make the farmland on which this extra rice is grown.

The Army Engineers claim flood control, but that is to impress you in Congress as much as anything else. The people of Arkansas will tell you that the Army will create more floods than they will control. The best way to control floodwater is to let it go off into small ponds, lakes, and etc.

Let us consider the other damage that will be done to the wildlife in Arkansas. Some $50 million a year is spent by sportsmen in Arkansas most of it in the region around the Cache River Basin. The fur-bearing animals alone are worth a million dollars a years to commercial trappers.

The wet lands of eastern Arkansas are worth far more in their present condition than they ever will be as farm lands. It will cost millions of dollars to transform them into agricultural lands and if it is done, what have you got? A $50 million a year industry obliterated and in its place a false prosperity for relatively few which has to be supported by the rest of the Nation.

This drainage program doesn't affect the sportsmen of that State alone but if the Arkansas bottom lands are eliminated the Mississippi flyaway may be dealt a blow from which it can never recover. Once the Army engineers put over the Cache River deal, what's to prevent them from similar programs on the L'Anguille and Black Rivers

(both of which parallel the Cache) and other waterways that are throughout the country that are today among the last strongholds of wildlife.

IDAHO

There are two high concrete dams that are proposed for the Clearwater Basin in Idaho.

The pro factions contends that the dams will furnish much needed hydroelectric power for an expanding Northwest, will make huge areas of valuable timber available, and will bring prosperity to the towns of Lewiston and Orofino.

The anti faction maintains that the American public is being asked to subsidize power companies and timber interests by footing the bill for ruinous exploration of Idaho's resources.

It is readily admitted that the dams will produce electric power and will make available huge areas of timber that are now somewhat difficult to get at. It is also conceded that if the dams are built a minor business boom may result for the towns of Lewiston and Orofino. But what will all this cost, who will pay for it and will it be worth the price?

The Army engineers said fish-passing facilities for both adults and fingerlings will be installed. So far the greatest height attained by spawning salmon in passing a dam over a fish ladder is about 60 feet. Both proposed dams at the Clearwater Basin will be close to 600 feet. Fish cannot exist in a body of water that fluctuates nearly 200 feet, which is exactly what will happen if the dams are built.

These dams would cut off one-third of the range of the big-game animals in the affected region. There is already a shortage of range area in this region.

Idaho is a great hunting and fishing State. Its income from fishing and hunting, over $43 million, is one of its chief sources of revenue. Damming the two forks of the Clearwater River would deal a body blow to the hunting and fishing in Idaho, not only in the immediate area but to the State as a whole.

The recreation values will be mighty slim for the two new lakes, for who is going to build a house or go boating on a lake whose surface jumps up and down for 200 feet between near vertical walls?

The Lewis and Clark Highway situation is one that directly concerns every taxpayer in the Nation. If the Penny Cliffs Dam (one of the two dams proposed) on the middle fork of the Clearwater is erected, it will flood out 46 miles of the highway already built. This road cost $100,000 a mile in its present condition. Also the backed-up water of the dam will flood out five bridges, a million-dollar United States Forest Service installation and numerous dwellings. The famed Selway Falls will be but a memory because the water will penetrate beyond it for 6 miles in the Selway-Bitterroot National Forests.

The road that will have to be built to replace the Lewis and Clark Highway will cost the taxpayers at least $400,000 a mile and will be much longer.

The Army claims for the two dams is flood-control help amounting to $1 million a year, yet the Idaho conservationists say that its Clearwater River has inflicted only $3.5 million of damage in 17 years.

If the dams are built it will cost the United States taxpayer $309 million (estimated cost of the two dams) and we will hand over these structures as gifts to power interests so that they can erect powerhouses. Five interested power companies formed the Pacific Northwest Power Co. and petitioned the Federal Power Commission for a permit to construct power units at the dams, they have changed their plans now.

Since Congress has to give the Army engineers the money to go with these projects, I thought I would write you and state my views on the matter. (I got most of my information from different articles I have read. I took this information to be truthful and would appreciate hearing from you as to the outcome of this matter. Thank you.)

Sincerely,

EUGENE F. O'HARA.

Address of Hon. James A. Farley Before the Canadian Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert a fine address given by the Honorable James A. Farley before the Canadian Manufacturers' Association in Montreal, Canada, on April 29, 1955.

The address follows:

Many distinguished Canadians and Americans have appeared before the Canadian Manufacturers' Association in the past and I consider it a privilege to address your splendid organization, conscious of the fact that, as in the rest of Canada, it is representative of the industrial and business life of the metropolis of Canada.

The tremendous growth of your manufacturing industry and the part it has played in the development of the country is too well known to require elaboration at this time. It has reached the point where today it is by far the most important single factor in the economic fabric of Canada as a whole and of Quebec Province in particular.

Your achievements and those of our own industry across the line have been instrumental, under our democratic system, in the establishment on this continent of the highest standards of living enjoyed by mankind.

Moreover, as the result of her magnificent contribution to the cause of freedom, Canada has, in recent years, won a leading place in the councils of the world. Leadership involves responsibilities. Your country and mine have been called upon to assume the burden of great responsibilities, and circumstances have willed upon us a common mission. You are particularly kind in inviting me to discuss this mission in today's world. Diplomats and scholars are discussing this subject throughout the United States and Canada alike. I can only contribute the observations of a man whose life has followed the paths of practical politics and still more practical business. Yet it is possible that politicians and businessmen as well as students can make a contribution to this, the chief problem of our time.

I think this is the best possible place to offer such a contribution. Throughout the entire world no two great, independent countries have more nearly achieved civilized international relations than have the United States and Canada. If everywhere in the world, relations between peoples and governments were carried on as they are between the people and Government of Canada and the people and Government of the United States, the world's pressing dangers would be met.

We share a common resource, the electric power of the magnificent spillway of the St. Lawrence River. We have borne together the costs and the expenses of developing that splendid gift of nature according to a common plan. There are many other illustrations. It is not too much to say that our two nations have attained the highest level of foreign relations known to civilization.

One other factor makes it, I think, not presumptuous for me to claim that we have a common mission. Both our countries are the product of religion and education, far more than they are of politics or war. The United States, like Canada, owes its framework chiefly to great Christian movements, which have given form to its institutions. Canada, like the United States, owes an enormous debt to its universities and colleges, founded in hope and now grown great. One cannot think of Canada without thinking at once of your own McGill and Montreal Universities, and of Laval and Toronto, just as one cannot think of the United States without thinking also of Harvard, of the University of Notre Dame and of the University of California, and of numberless great and small colleges in between. In both our nations, pioneers built churches and schools. Now in their maturity, both give us the strong red blood which is the life of great democracies.

So we have a common understanding of each other, and from that comes a common mission in world affairs.

I, for one, am not as happy about the state of world affairs as some who today are writing and speaking about them. Our free world is under pressure. In the next few years, it is quite likely to be tested as never before. In Europe there is, for the moment at least, an alliance which may serve to hold the Communist powers at bay. But in Asia we have not peace but an armistice resulting from the bloody stalemate of the Korean war and a French defeat in Vietnam. Both in Indonesia and Indochina, I am afraid we are slowly losing another major area to Moscow's Chinese partner. Still more disturbing, and as we sit here, the Colombo powers with Communist China as the driving force, is holding a conference of some 30 Asiatic and African nations. The Chinese Communists, of course, paraphrase it as a league of "peace." What they mean to do is to create a pro-Communist alliance of all the nonwhite races against the white races. Their propaganda agents are entirely frank about this. They are frank, too, in insisting that they consider the United States as an enemy. Perhaps you will not disagree if, as an American, I think that an enemy of the United States is necessarily an enemy of Canada, just as we consider an enemy of yours to be an enemy of the United States.

Now, don't believe that I hold, or that I think that you hold, that there has always been, and always will be, smooth sailing between our two countries, or that public opinion on any issue is necessarily the same in both countries. Healthy minds do not always agree, but it is the health and open discussions which will always bring us to the best understanding. An illustration of this is found in the recent statements of the official diplomatic representatives of your country and mine. I pick up a well-known international magazine which, under the head of Diplomacy, refers to Life With the United States. I read:

"External Affairs Minister Lester B. Pearson created a small flurry 4 years ago when he warned Canadians that 'the days of relatively easy and automatic relations with our neighbor (United States) are over.' Last week in a policy speech before the Canadian Club, of Toronto, he reexamined the suggestion and confirmed his earlier prediction.

"'It was true then,' he said, 'and is still true now. Not because our relations are less friendly or close than they used to be but, on the contrary, because they are closer than ever. * * * (We) must now discuss together frankly a good many topics on which each

could previously afford different and even divergent views.'

"Those topics include war and peace; and Mr. Pearson continues: 'Today I think that the neutrality of either of us, if the other were engaged in a major war in which its very existence were at stake, would be unthinkable.' Nevertheless, 'certain United States commitments, those, for instance, covering help to Chiang Kai-shek in Formosa and certain Chinese coastal islands, have not been accepted by us.'

" 'The situation,' Pearson summed up, 'is something like living with your wife. Sometimes it is difficult and even irritating to live with her, but it is always impossible to live without her.' "

I have also before me the official press release from the United States Embassy relative to a statement made by the Secretary of State of the United States whilst in Canada a few weeks ago. The press conference concluded with a question and answer period, from which I quote:

"Question. Mr. Pearson said that in the event of a major war it would be impossible for Canada to stand aloof if the United States was at war. Some people interpreted that to mean the United States can now count on Canada in an emergency, and therefore you will not pay as much attention to any protest against American foreign policy you get from Ottawa?

"Answer. It is decidedly not true. The extent to which our countries can count upon each other depends primarily upon whether or not we each conduct ourselves in a way which wins the moral approval and support of the other.

"Now, there are, to be sure, explicit engagements which are expressed in the North Atlantic Treaty. Aside from that, the question of whether we support each other depends on the judgment that each country has of the other. I would not expect that Canada would blindly support the United States and I suppose the Canadian people would not expect to count on the support of the United States if they should engage in a venture which alienated public opinion in the United States."

Mr. Dulles adds what I think is of real importance, and I quote:

"It is highly unlikely that those contingencies will occur, because we do have the same ideals, and because we do keep in touch with each other. Common action depends, for its mainspring, upon what our Declaration of Independence calls 'a decent respect for the opinions of mankind.' That relationship makes it sure that each of our countries will seek and pay heed to the views of the other."

As I read these lines there comes before me the report of Hansard on the conclusion of the discussion last week on Canada's foreign relations in the House of Commons. Mr. Pearson, with clarity and logic, closes a long debate. I quote:

"It is quite true that there are strains and stresses on the coalition at the present time. There has never been a coalition, even in wartime, which was easy to manage. In peacetime, they are not very often necessary. But in a period such as we have at present, between peace and war, a coalition is not only desperately required but it is very difficult indeed to manage. So there are stresses and strains now pressing against it, but we will be able to weather them."

The Minister cites from the Economist—that great English publication:

"The danger of the next few months is that, confronted by the threat of renewed fighting off the China coast, many otherwise sensible people in Britain"—and the writer could have added Canada—"will say that they would rather have peace than the American alliance. Nothing, in fact, could be sillier, for there is no such choice. It is still possible to have both peace and the alliance. It is certainly not possible to have peace for long without it."

Mr. Pearson then concluded:

"We wish to have in this Parliament and in this country both peace and the alliance—not merely the American alliance but an alliance for friendly cooperation with all peace-loving free countries of the world."

In any event and whatever problems we have to face, I am sure our two countries will come through the crisis years ahead in quiet but unquestionable triumph. We shall, I think, make it clear to the world that creative communities of freemen make stronger nations and give more to their own people, and to all other peoples, than any other form of organization man has yet devised. We shall not do this by boasting about it, though the boasts are true. We shall not do it by threat to use atomic or other force, though we do have that force. We shall no do it by new and greater scientific discoveries, though it is clear these are already in sight. We shall do it because by successful example at home, and by cool and resolute maintenance of our rights abroad we will inspire whole peoples to follow our course. We will make membership in a free community of nations more attractive and more advantageous than servitude in any Communist empire.

It is no accident that communism has established no effective bridgehead either in Canada or the United States. The reason is simple: the people of Canada and the people of the United States have already achieved results beyond the wildest promises of Communist dogma. In the light of the achievements of Canadians and Americans, Marxism belongs not in the 20th century politics but in a 19th century museum. If, throughout the world, peoples knew that they could live as our peoples do any Communist empire would promptly begin to contract.

There is evidence that this process is already beginning on Russia's western borders. Hungarians, Poles or Czechs look across the Iron Curtain and wish they were on the free world side. The stirrings in those captive satellite countries and in East Germany already suggest that Moscow domination there rests now only on besieged and isolated occupation forces; there is no assent of peoples; the promised revolution proved to be only a bloody conquest. To that fact, perhaps, we owe the upsurge of coexistence talk which has emanated from Moscow. Now as our two countries, both great trading nations, increase our understanding and wisdom in the ways of foreign commerce, as we find means of assuring that our trade shall benefit other countries as well as ours, we emphasize the clear advantage of the free world system, not by talking but by doing.

This is apparently beginning to be achieved in the West. I am confident it can be achieved in the Far East. The process there will be longer. The task will be larger. Whole populations there have never known freedom; to such people one master is no worse than another; the lot of the coolie is the same in either case. But if a way can be shown by which those masses of coolies can have themselves a stake, however modest, in the miracle of our 20th century American production, the picture changes. A beginning has been made along these lines in that great archipelago which is today the Philippine Republic. Canadian enterprise has made a beginning in other parts of the Pacific. Our two countries have worked together toward that end in the less favored countries of Latin America. We can, we should, and indeed we must, make it clear that liberty and prosperity go together and that prosperity is not bought at the price of freedom. After all, Russia, struggling desperately to give her own people the most modest standard of living, is not the country which can introduce to Asia the almost limitless production all Canadians and Americans take for granted.

The word "freedom" is used advisedly. In our countries we speak of democracy. Freedom will very likely find different forms in different countries. Here we are devoted to our own democratic form. We will gladly teach it to any who wish to learn from us. But we cannot impose it, and have no business to try. What we can do is to make clear that the chief end of any government is the development of free men in a system by which they work together. Each people has its own wisdom about its own affairs. Probably even the most backward people can teach us something. Their ways are not our ways. But we will be well advised to work with them within the forms which they themselves know and understand.

In thus working for a peace which shall be real and not a double-talk mockery, both of us must increasingly work together and with other nations. Canada was among the first signers of the Declaration by United Nations on January 1, 1942, which foreshadowed the United Nations organization of today. Sometimes we falter in using that great organization well; but it remains the frame of our hope of the world to be, a world at peace, under law, guaranteeing freedom from fear to the world.

Combined our two countries constitute in present fact the largest and strongest single regional group in the free world. There are others like it, notably the British family of nations, the Commonwealth, and the Atlantic group we call NATO. In building these as we have, we cannot forget that, at long last, statesmanship must bring them all into harmony. This is not theory. In Montreal are the headquarters of the International Civil Aviation Organization, a United Nations agency. Because of it a Canadian pilot leaving Móntreal knows he will find the same signals, the same language, the same rules for landing or leaving in Paris or Bombay or Manila that he has in his home airport. This is a measure of real, tangible peace. The time must come when the major human necessities are dealt with in as commonsense cooperation as has been worked out in the air.

Our purpose must be to work toward this goal of world peace and world civilization without war. We know, of course, that this is not wholly our choice. There are situations in which all of us must stand and fight, rather than surrender the principles by which we live. My belief is that general war grows less likely. Modern warfare is too horrible, its results are too unpredictable, for any sane group to adopt war as a policy as Hitler did in 1939. Obviously, between us we must maintain such strength that no one will dare to pick a quarrel or take by force because no counterforce exists. With care, strength, and clear head, I think matters can be managed so that the armed challenges made in Korea and more recently in Indochina will not be tried again. No one can guarantee success in the field of foreign relations; but we shall try. In this task, as an old politician, permit me to suggest that the men running foreign affairs—the men in our State Department and your Department of External Affairs, need all the help and sympathy and support you and I can give them, whether we are of their political faith or not. They are playing with tremendous hazards, and their burden is greater than any in recorded history.

Are we starryeyed in thinking that the vast task of bringing a reasonable measure of peace to the world may be accomplished in the coming generation? Perhaps; but the example of Canada makes me believe it can be done. Your country was born of diverse races with different languages. History insisted they were sworn enemies; and you refused to accept that decree. You had to

build a nation out of different civilizations, customs, and religions. Beyond possible expectation you nobly accomplished that task. In my own time, your great Prime Minister, MacKenzie King, a Scot, steadily worked with Canadians of French ancestry, religion, and custom. I know that his brilliant successor, the Right Honorable Louis St. Laurent, of French-Canadian ancestry, no less carefully works with his countrymen of English stock. With patience, tolerance, and commonsense, you made a union when elsewhere in the world race rivalries, disorder, and hatred were the order of the day. In my own country Irish and English, Italians, Germans, Jews, and Negroes have steadily moved toward union so that today Americans, the most composite population in the world, are also the most unified. We have done in North America what has not been achieved in any other part of the world.

In virtue of these achievements, Canada and America can claim the privileges, as they must assume the burdens of a common mission. We must enter upon it without superiority. And, with faith, we can justifiably draw assurance and strength from awareness of solid results already attained. "To each and all our equal lamp at peril of the sea," wrote Kipling of the English coastwise lights. No less great is the guiding fire of the fellowship of two great nations in a dangerous but splendid time.

Fluoridation of Water

EXTENSION OF REMARKS
OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter addressed to the Honorable LOUIS C. RABAUT, chairman, House Appropriations Subcommittee, House of Representatives, Washington, D. C., by Miss Vera E. Adams, president of the National Committee Against Fluoridation, Inc., Washington, D. C., protesting the use of public funds for fluoridation of the water supply in the District of Columbia.

Miss Adams' letter is as follows:

NATIONAL COMMITTEE AGAINST
FLUORIDATION, INC.,
Washington, D. C., April 29, 1955.

Hon. LOUIS C. RABAUT,
Chairman, House Appropriations Subcommittee, House of Representatives.

DEAR MR. RABAUT: I am submitting for the record a statement opposing the further use of public funds for fluoridation of the water supply of the District of Columbia. I will summarize this statement here as briefly as possible.

The National Committee Against Fluoridation, representing 38 of our States, also Alaska, and Canada, and about 30 million of our citizens inhabiting some 500 cities, towns, and smaller communities which have rejected mass medication as practiced in the fluoridation of our drinking water, respectfully requests the earnest consideration of your committee for the following recommendation:

"That no further funds be included in the District budget for the fluoridation of the water supply of the District of Columbia, or any communities which may be served by its water system."

At the present time there is a fiscal crisis in the District, and many crying needs must go unmet. The voteless citizens are threatened with new taxes that will almost take the food out of their mouths. We vigorously and righteously oppose the use of taxpayers' money to support the further fluoridation of our drinking water, for the following reasons:

1. The fluoridation program involves tremendous and inexcusable waste of much-needed funds.

By mathematical proof we get the astounding fact that only two hundred and fourteen ten-thousandths of 1 percent of all the money appropriated and spent for this mass medication procedure is accomplishing anything at all, either for good or bad, while the other 99.97 percent of the money is being simply thrown down the drain. This can be specifically proved, but the detail cannot be covered here.

2. Fluoridation is unconstitutional.

The mass prescription and mass medication represented by fluoridation of the total water supply available to our citizens is indisputably unconstitutional. Tooth decay is not a communicable or a contagious disease, nor is it fatal, and the so-called police power which has been applied in the introduction of this system without the consent of the people has been definitely misapplied, as police power of the State, from which public health authority stems, has no place in the prevention or treatment of a disease which harms only the individual victim thereof. According to an eminent authority, Dr. Veikko Hurme, of the Forsyth Dental Infirmary for Children in Boston, "the procedure will be mass medication without parallel in the annals of medicine." On grounds of individual liberty, integrity, and religious freedom, mass medication is evidently unconstitutional.

3. Neither the ultimate possible benefits nor the possible long-range harmful results of fluoridation have been conclusively tested and proved.

Sodium fluoride, or sometimes sodium silicofluoride as used in the District, is a virulent, cumulative poison, 85 times as toxic as the calcium fluoride which occurs naturally in many water sources and is deceptively claimed to be identical in its nature and action. It is a by-product of the aluminum industry, colorless, odorless, and tasteless, and therefore the more dangerous because undetectable. This type of poisoning does not lend itself to ready diagnosis, and usually shows up only in autopsies. Should we not be rather cautious in introducing into our drinking water, which is an element indispensable to life, a chemical so toxic that it has been used for years as a rat and roach poison?

And here let me just call attention to a strange fact. Since November 1952, several months after our water in Washington was fluoridated (2,800 pounds are dumped into our reservoirs every day), 26 Members of our Congress have passed away, and 2 members of our Supreme Court also. This record stands out glaringly as against a former yearly average of two deaths. It may be merely a rather queer coincidence. We cannot prove it one way or another now. It is too late.

The verdict after exhaustive and purposeful investigation by Congress 3 years ago was that fluoridation was at best a calculated risk. But they are now coining money out of the imposition of this calculated risk upon the supposedly free people of this country, who are being subjected to a simultaneous and intensive drive from east to west and north to south. Dr. A. L. MILLER, former public health director in Nebraska, at the Delaney committee hearings in February 1952, made a very illuminating statement which I quote: "It rather shocks me to know what the public health is trying to get A. L. MILLER to do to his people in Nebraska, and thank God the people out there can think for themselves and did not accept all the stuff that someone was trying to push down their necks at that time, including myself, because I thought maybe there was something to it. * * * This frightens me a little when the public health people go so far as to mislead, and distort a national condition in order to put over an objective they might have in mind." Nota bene.

The people all over this country are looking to Washington citizens to get rid of fluoridation, because Washington, the Capital City, is serving as a useful argument by way of example and precedent. They don't seem to be able to realize that we here are nothing but guinea pigs, ready subjects for any experiment our local authorities see fit to perform. So some of us who don't mind hard work, without any pay therefor, are trying to do our bit toward emancipating our Capital City from this incubus, and we don't want any more of our hard-earned money to perpetuate it.

We who want to keep our freedoms under the Constitution, and who are opposing the imposition of this mass medication on moral, ethical, legal, and religious grounds, are being subjected to slander and even threats, and are called crackpots by our more scientific brethren. Let us hope and pray that there are not 30 million crackpots in America.

Sincerely,

VERA E. ADAMS,
President.

THE UNIVERSITY OF THE STATE
OF NEW YORK,
THE STATE EDUCATION DEPARTMENT,
Albany, October 26, 1954.

Dr. JAMES G. KERWIN,
Department of Health,
Municipal Building, Passaic, N. J.

DEAR DR. KERWIN: Your letter of October 21, 1954, requesting definite information in dental care in two specific communities has been received.

The specific information you desire is herewith itemized in accordance with reports forwarded to us by the two communities.

Kingston:	
Enrollment	5,403
Number of pupils inspected	5,308
Number of pupils with defects	2,209
Number of pupils under treatment for defects	1,551
Newburgh:	
Enrollment	5,119
Number of pupils inspected	4,969
Number of pupils with defects	3,139
Number of pupils under treatment for defects	2,072

If further information is desired, feel free to ask, and we shall try to cooperate.

Sincerely yours,

JOHN A. FORST, M. D.

Above is an authentic reproduction of a letter from one public-health authority to another on the subject of fluoridation. Note that Newburgh, which has fluoridated its water supply for 10 years, showed more tooth decay among schoolchildren than Kingston, the "control" city, whose water was unmedicated in the same period.

Of 5,308 children in fluorine-free Kingston, 41.6 percent had tooth defects with 20.6 percent then under treatment. After a decade of fluoridation, examination of 4,949 school children in Newburgh showed 63.4 percent with decayed teeth and 31.0 percent under treatment.

These data from a New York health official to his New Jersey colleague disprove recent statements that the Newburgh experiment has reduced dental caries more than 57 percent among the schoolchildren of that much-publicized community.

Cleveland's George Humphrey

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. VURSELL. Mr. Speaker, I have just read an excellent article by the noted business writer, Larston D. Farrar, relating to Secretary of the Treasury George M. Humphrey. This article appeared in the Clevelander, which is published by the Cleveland (Ohio) Chamber of Commerce, and I believe that it should be placed in the CONGRESSIONAL RECORD so that other friends of Secretary Humphrey might read it.

The article follows:

CLEVELAND'S GEORGE HUMPHREY—HOW'S HE DOING IN WASHINGTON?

(By Larston D. Farrar)

Secretary of the Treasury George Magoffin Humphrey (he gets along without the middle name or initial now, except when formal occasion demands) was in Cleveland from 1917 through 1952. That's 35 years, more or less, spanning three major wars and a depression. He has been in Washington since early 1953, being one of the first members of the new Eisenhower Cabinet to win confirmation by the Senate. That's only a little more than 2 years, although it seems longer to him.

How is he doing—personally—away from his hometown?

SOME ANSWERS

Here's how he answered that question recently:

"I suppose one of the things I miss most by being in Washington is the chance to get outdoors more for such things as riding, hunting, and so forth. Then, of course, I miss not seeing as much of our children and the grandchildren as we used to in Cleveland, although we still can get together occasionally.

"Probably the other biggest difference between Cleveland and Washington is that in Washington one's time is not one's own. There are many people whom you must see when they ask. That is, of course, the way it should be in a democracy. But it is much different than in private business.

"One of the nicest things about Washington is the fine quality of the other people in the Cabinet and their wives. They are a fine lot of people who are given to working for the best interests of the country. There is very little internal bickering around the people in President Eisenhower's official family."

Actually Mr. Humphrey likely stays so busy these days that he could not possibly outline, in a hurried interview, all the really vast differences between his life now and the life he led in Cleveland, where he was top man in the M. A. Hanna Co., one of Cleveland's largest enterprises and not considered small even among the industrial giants of America.

For instance, he soon learned, on coming to Washington, that he had to live in an atmosphere surcharged with publicity. Whether he wished it or not, he had to scan the newspapers closely for references to himself, or to his agency's vast ramifications, every morning. All day, he figuratively has had to stay close to the teletype machine which clatters out news of developments on Capitol Hill, any one of which might alert him, and his associates to the need of issuing a counterblast to some Democratic claim, or correct some erroneous figures given out by a Congressman in error. He early learned in Washington something that never had quite impressed itself upon him in Cleveland—that public officials must have what one politician has called "hides as tough as pachyderms." He has been lampooned in cartoons, held up to sarcastic scorn in the Senate, and even damned with faint praise by some who might be called his friends and supporters.

He wastes little time in "answering" the jibes of his political enemies. He, however, like every member of the Cabinet, watches for references to the Eisenhower tax and monetary program that can be answered seriously and immediately. That is why, in recent months, he has been featured in the headlines more than once, lashing back at the Democrats who were trying to put over the political program of cutting taxes for individuals, in spite of the mountainous and mounting Federal deficit.

Another big difference between his life in Cleveland and his life in Washington—at which he hinted in his interview—is the mobility which he enjoyed in his job in private industry and the lack of mobility under which he now labors. Like any other public servant, he is not his own boss. He must respond to events, and cannot dictate developments, even on a day-to-day basis. Because of the continuing emergency nature of his post—or any high Federal post—in the sense that each week brings new political challenges, either at home or abroad, he has to stay close to home base, except on the brief weekends when he and the President, or some other headline figure, can get away for quail hunting, or go on some official mission for the Government.

George Humphrey's active mind always has made his life full and interesting. But in Washington it is more hurried. Perhaps that is why he has learned even more to smile—and any picture which shows him with a cheerful face is not make-believe with Mr. Humphrey. He does laugh a lot—at himself, and at others. He laughs readily, which may explain why he is a great favorite around the inner circle that encloses President Eisenhower, and also is considered "one of the club" when he is before a Senate committee for one reason or another. Senators, even those of the opposition, make it clear to him and to the public that they like George Humphrey, the man, however much they may poke fun at George Humphrey, the Republican, or George Humphrey, the Secretary of the Treasury.

GOOD CONGRESSIONAL RELATIONS

His easy liaison with Congress began, in fact, from the first day he appeared before the Senate Committee on Finance to be examined for confirmation.

When, in an atmosphere that had been made heavy because of the disclosures that some big-business men named to the Cabinet might retain some of their business connections, Mr. Humphrey came to the committee he surprised the Senators by telling them he had resigned all his official positions (which paid him about $300,000 annually) and all of his directorships. He said he would keep his stock in Hanna and affiliates because, if he sold it he would have the problem of where to put the money. If he put it in a bank he could be accused of following policies to influence the bank, since the Treasury, through the Comptroller of the Currency, very definitely has much jurisdiction over banks.

Senator EUGENE D. MILLIKIN, Republican, Colorado, the chairman, at one point addressed Humphrey as "Mr. Hanna," which drew general laughter. Mr. Humphrey guffawed, as did Mr. MILLIKIN, who said: "Well, it's a good Republican name."

"That's right and I'm proud of it," Humphrey replied.

Within a week, Life was quoting the new President Eisenhower as saying: "In Cabinet meetings, I always wait for George Humphrey to speak. I sit back and listen to the others talk while he doesn't say anything. But I know that when he speaks up, he will say just what I am thinking."

Easily, naturally, George Humphrey took the new role into which he had been cast by events. He spoke with the same down-to-earth directness with which his Cleveland friends and associates were familiar.

To reporters who wanted to see some overnight miracles, he responded: "You can't set a hen in the morning and have chicken salad for lunch."

Another time, he borrowed from the jargon of the hunter to explain to a reporter how he had to take up one problem at a time, even in an agency with a half-dozen offshoots and a thousand responsibilities: "Get your ducks in a row."

The Reporter, a magazine that has viewed the entire Eisenhower administration with jaundiced eye, early sized up Mr. Humphrey like this—and not yet has changed its opinion: "He is deft in choosing and using men. He has a startling talent—some would say a genius—for getting all relevant information quickly and then making a swift but unhurried decision. And he has a quiet, confident manner that commands the trust of all those who work with him. * * * In the business world, Mr. Humphrey is a natural leader. But his is a leadership wholly without histrionics. He rose to his place of eminence in American business without depending on the modern arts of publicity * * *."

However, there is every reason to believe that Mr. Humphrey has mastered the art of publicity, to a large degree, as evidenced by the solid hold his words have over a large segment of the American people, long after his detractors have striven to tear him down, and, in fact to send him back to Cleveland and retirement.

Secretary Humphrey has a pretty strict regimen, even for Washington. He is at the office by 8:30 or 9 a. m. every morning, eschewing the liveried chauffeur that could be his. He drives a modest 1952 Buick coupe to the Treasury building, except on the mornings—twice a week—when he swings into the White House drive for breakfast with the President. Easily one-third of his time is taken up by visitors who simply must see him, another third is taken up with Congressional demands, and another third in deep study, or conferences with his associates.

In Washington, as in Cleveland, he has won a reputation for getting good men around him, and, so far, there has not been even a breath of personal or political scandal relating to any of the men who work with the Treasury in this administration. Of himself, he once said: "I'm as good at picking partners as any man in the United States." That was referring to his business partners, but it refers as well to his Government partners, ranging from his fellow Cabinet officers to those whom he directly chose to assist him in carrying on the complex affairs of the Treasury.

The Secretary of the Treasury is not one man—he must be many men, at the same desk. He is top boss of the Bureau of Internal Revenue, the Secret Service, the Bureau of Narcotics, the Bureau of Engraving and Printing, the Bureau of the Mint, the United States Coast Guard, and the Coast Guard air arm. He presides over a domain of some 88,000 people, has his own flag, serves as trustee for some $18 billion in the social-security funds, and is Chairman of the National Advisory Council on International Monetary and Financial Problems.

Mr. Humphrey directs his farflung operations from room 3330 in the Treasury Building, hard by the White House on Pennsylvania Avenue. This building, like many other things, has changed greatly in the past 2 years, for one of the Secretary's first orders was to have it washed. It is no longer Wash-

ington's prize pigeon roost, a fact that George Humphrey smilingly considers one of his minor accomplishments.

Proof of his inevitable good humor was revealed recently to a United Press photographer. Secretary Humphrey was waiting at the airport in San Francisco for his son to arrive when he noticed the photographer fidgeting nearby. Mr. Humphrey asked the photographer why he was waiting around.

"There's an old codger named Humphrey on that plane coming in and he's Secretary of the Treasury. I have to kill my time waiting for the old goat."

The Secretary waited until the plane came in and then watched the minor tragedy unfold. The photographer approached young Humphrey, who had been pointed out among the descending passengers, and remarked: "You can't be the Humphrey I want. He's an old man." At that point, the Secretary disclosed his identity and began to laugh. How genuinely he can laugh is seen in the photograph, now one of his cherished possessions.

The Springfield Girls' Club

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues that this week we are observing National Girls' Club week and the 10th anniversary of the founding of the organization. This is particularly significant to me, and to my fellow Members from the great commonwealth of Massachusetts, because the birthplace of the Girls Clubs of America, Inc., was in my home city of Springfield.

The Springfield Girls' Club was one of the 19 charter members of the corporation founded in 1945. And the Girls Clubs of America, Inc., maintains its national headquarters in Springfield. When one realizes that the purpose of the organization is to provide daily out-of-school activities for young girls, it is easy to understand why the Girls Clubs of America, Inc., has prospered during the last decade. The organization has expanded beyond Springfield, and now maintains 50 clubs located in 16 States and in Canada.

Mr. Speaker, I ask that an editorial that appeared in the Springfield (Mass.) Union on May 9, 1955, paying tribute to this great achievement be printed in the RECORD. May I also footnote my remarks with an expression of pride that greater Springfield takes in the fact that the president of the Girls Clubs of America, is Mrs. James A. Seaman of Longmeadow, Mass.

A SPRINGFIELD SPECIAL

Springfield, being the birthplace of the Girls' Clubs of America, Inc., takes special interest in the celebration of the 10th anniversary of the organization this week, which has been designated as National Girls' Club Week. The Springfield Girls' Club was one of the 19 charter members of the corporation when it was founded 10 years ago, and the national headquarters is maintained here.

During the decade the 19 member units have expanded to 50, with clubs located in 16 States and Canada. The Springfield club, which is 56 years old, is junior only to the club in Waterbury, Conn., which is 91, and the one in Greenfield, which has been in existence 60 years.

Girls' Clubs of America, Inc., of which Mrs. James A. Seaman, of Longmeadow, is president, is the only national organization that provides daily out-of-school activities for girls. Its theory is that many of the girls served by such groups need a daily program. Membership dues are nominal, so that any girl can afford to belong, and special attention is given girls in the 6- to 12-year-old group, along with the regular program for teen-agers. Designed to supplement the training and opportunities that often are lacking in the home, the clubs' program places heavy emphasis on training in homemaking skills.

The Springfield Girls' Club, recognized as one of the best in the national organization, features a well-rounded program aimed at personal improvement of the members. For instance, a recent library program was inaugurated, and, in the words of one of the adult officers, "the resulting interest in good literature among youngsters who, possibly, have little exposure to books outside the schoolroom, is amazing."

For healthy growth and constructive work in building the community, the Girls' Clubs of America, Inc., deserves praise and congratulations on reaching its 10th birthday. We in Springfield are especially proud of the part that has been played by the Springfield Girls' Club, both in the national group and in the betterment of our own city for more than a half-century.

One Hundred Years of Service

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. HÉBERT. Mr. Speaker, this splendid editorial from the pages of the New Orleans States tells eloquently the enviable century old history of the State board of health of Louisiana.

Several of my colleagues from Louisiana have already taken occasion to pay tribute to the hundredth anniversary of the Louisiana State Board of Health. I join them by way of calling this editorial to your attention:

ONE HUNDRED YEARS OF SERVICE

Appropriately, doctors, nurses, scientists, engineers, educators, technicians, and administrators attending the joint meeting here of the southern section of the American Public Health Association and the Louisiana Public Health Association are going to use the occasion to pay tribute to the State board of health as it marks its 100th anniversary.

That the State board can boast that with 100 years of service it is the oldest such institution in any of the United States holds some importance. But much more important is the fact that it has used that century of service to transform the State from a disease-ridden swampland to one of the healthiest spots in the nation. The services it has performed and continues to perform have had a very important role in increasing the life, and health, expectancy of every resident of Louisiana.

Wonder drugs which cure disease have captured the medical spotlight through the years. But working unspectacularly outside of the bright light of publicity, the board of health has done even more than the wonder drugs, by using the potent weapon of preventive medicine to eradicate disease by eliminating their causes.

Day in and day out the bulk of the board of health's work is pure drudgery. Immunization shots are provided. Rabies control programs pushed. Disease bearing insects and rodents are targets of continuous battles.

Plans for public buildings, hospitals, schools, and garbage disposal plants are laboriously checked to make sure that their construction is carried out according to best known rules for sanitation. Food production and processing plants and the places which sell food are checked constantly to insure consumers foodstuffs that are safe. Campaigns to search out tuberculosis sufferers are carried out. And there's a continuous educational campaign, through lectures, movies, and pamphlets, to get all the facts of health before the people.

Perhaps these are unspectacular things, but the result of this work has been far from unspectacular.

For with the years—and the incessant campaigns—many of the diseases which formerly were as commonplace as the common cold are all but unknown today. Rare, for example, is the person who suffers from yellow fever, dengue fever, bubonic plague, malaria, hookworm, typhoid, and cholera.

And most spectacular of all the results is the fact that health department figures show the death rate in Louisiana today is 80 percent less than it was 100 years ago when the State board of health began its work.

Whatever accolades the public health associations are inclined to bestow on the board of health would seem to be well merited.

Limiting the Power of Congress

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. GWINN. Mr. Speaker, the other day a proposal in Congress to reduce personal taxes by a meager $20 a head was called fiscal irresponsibility. That was true because of worse fiscal irresponsibility by Congress for more than 20 years right up to this minute. It has been making appropriations for grants-in-aid, loans, subsidies, and gifts. It has authorized spending, borrowing, and running deficits that make the proposed reduction in taxes impossible—irresponsible. This costs us more than $10 billion annually. It takes at least 1,400,000 Federal employees to operate our extraneous, unconstitutional functions of government. They cost in salaries and other overhead more than $6 billion. Nine hundred thousand employees could perform all the legitimate constitutional nonmilitary functions of government—and do a better job.

Our dollars are cut in half with fantastic Federal debts and mortgages

amounting to more than half the value of our property. That means that half the value of our private property has been confiscated or transferred to government already. When income is taken up to 92 percent by government that means individual responsibility to manage ourselves and our property is suspended.

Something has to be done about it. Or we shall have unlimited governmental irresponsibility in the management of our affairs permanently fastened upon us.

Indeed, is it not a fact that any people who tolerate mere men exercising unlimited powers over them have become themselves temporarily irresponsible? No sensible organization of men turns loose its officers to do anything they like and spend whatever they please. Their powers are always specified and limited in scope and spending to carry out the stated purposes of the organization. Congress is in that ridiculous position of being unlimited in functions and spending power.

Do we need another decade—even another day—to demonstrate that Congress is incapable of correcting its own helplessness without the people's help.

The simple remedy, then, lies in taking away from Congress the excess power to appropriate the people's property which it now exercises. Limiting its spending power necessarily limits its functions. A first step in that direction has been taken by the introduction of an amendment to the Constitution by Senator EVERETT M. DIRKSEN and Congressman CHAUNCEY W. REED—Senate Joint Resolution 23 and House Joint Resolution 182.

Congressman REED, when he introduced the amendment in the House on January 3, 1955, summarized its provisions as follows:

First. As to income taxes: the amendment limits income taxes on both individuals and corporations to a maximum rate of 25 percent, but permits Congress by a vote of three-fourths of the Members of each House to exceed that rate provided the top rate does not exceed the bottom rate by more than 15 percentage points. For example, if the bottom rate were 20 percent, the top rate could not exceed 35 percent. If the top rate does not exceed 25 percent, however, there is no restriction at all on the bottom rate. It could, for instance, be 1 percent or one-half of 1 percent. Subject to the foregoing limitations, the rates on corporate incomes may vary from those on individual incomes.

Second. Death and gift taxes: The amendment gives to the States the exclusive power to impose death and gift taxes.

The Reed-Dirksen proposal recognizes some basic first principles that the Marxian tax system we now have does not. First, there is a point of diminishing returns in the collection of taxes. Low rates may produce more revenue than high rates. Second, the great bulk of income taxes in a progressive rate system is collected from the lowest tax brackets; and third, that as between separate governmental taxing units, the one closest to the people can perform most efficiently and economically.

The first principle is best illustrated by the use of Henry Ford as an example. In 40 years, Mr. Ford's fortune increased from $1,000 to $1 billion. If the Ford Motor Co. had been subjected to a 50-percent income tax during that 40-year period, its net worth would have been only $1,470,000 and would have paid only $1,470,000 in taxes; but with a 20-percent income tax the net worth at the end of 40 years would have been $66,500,000 and taxes collected $16,600,000 or almost 16 times as much as collections from a 50-percent tax. On that principle American mass-production was built. We have proved to the world that mass-produced, low per unit cost products yield more profits and pay more taxes than high per unit costs and high rates of taxes.

To illustrate: During the 1920's the high World War I tax rates were drastically lowered. The following table shows that although maximum rates were lowered and personal exemptions increased the revenue yield was greater:

Year	Total internal-revenue collections	Maximum rate (percent)	Personal exemptions
1925	$2,584,140,000	40	$2,500
1926	2,836,000,000	24	3,000
1927	2,865,863,000	24	3,500
1929	2,939,054,000	20	3,500
1930	3,040,146,000	20	3,500

The reason for this is obvious. The great bulk of revenue comes from the first and lowest bracket of the income taxpayers. For many years about 85 percent of all taxes collected have come from the lowest bracket, viz, being the 20-percent bracket. Only 3 percent, or about $2 billion, is provided by rates in excess of 34 percent.

It is obvious from the foregoing that if the Government continues to require large revenues, the lowest income producers will be required to provide by far the greatest share of taxes. Conversely, tax relief in the lower brackets results in the largest possible reinvestment in production and tends to increase profits and taxes paid to the Government.

So real relief can be effected only by drastically reducing expenditures or by reducing the tax rates so as to increase incentive and investment in productive enterprise. As Congressman REED points out, this would increase the national income which constitutes the tax base and thereby increase the revenue.

The most important effect of the amendment is the restoration to the States of the fiscal ability to meet the needs of their people. The States have lost that power to a great extent and consequently have either been forced to rely on the various grants-in-aid programs, or have surrendered to the Federal Government the responsibility for the performance of services that are primarily of State and local concern. This shift of power and responsibility is in clear violation of our constitutional concept that the unit of government closest to the people can most capably serve them. The Constitution provides for a neat division of powers, reserving to the States the bulk of sovereignty and granting only explicit and very limited powers to the Central Government.

This balance has been upset by reckless use of the unlimited taxing power granted to the Federal Government by the 16th amendment and the court interpretations of it. By preempting the tax sources the Central Government has been successful in arrogating to itself virtual control over the lives and property and liberties of the American people. The States exist too much by sufference and function too often as agents for the distribution of the Federal largesse. The extent of the shift of sovereignty is indicated by the fact that 20 years ago the States and localities collected 75 percent of all tax revenues in the Nation, while today the Federal Government collects 75 percent.. The pen is indeed mightier than the sword, but the power of the purse is invincible.

The Reed-Dirksen proposal reverses this trend toward centralizing government power by restoring to the States some of the sources of tax revenues. The amendment returns to the States the exclusive power to levy death and gift taxes. These taxes constitute a small item in the Federal tax picture—about 1 percent—but represents a considerable revenue to the States. The right to control the transfer and devolution of property is one of the historical attributes of sovereignty, and clearly belongs to the States. Secondly, the amendment's limitation on confiscatory rates in the higher brackets guarantees to the States that the wealth created within their boundaries will remain there to create more wealth and consequently produce more and greater tax revenues for the States.

The amendment is a compromise, recognizing that in emergency situations the Federal Government must have great fiscal powers. But it also assures the American people of fiscal and, consequently, political sanity in normal times. That is the least we can do for the Nation's 66 million taxpayers.

The following is an address delivered on the floor of the House, January 31, 1955, by Congressman CHAUNCEY W. REED, of Illinois, introducing House Joint Resolution 182—Reed-Dirksen amendment:

LIMITING THE POWER OF CONGRESS TO TAX INCOMES, INHERITANCES, AND GIFTS

Mr. REED of Illinois. Mr. Speaker, 2 years ago in the 1st session of the 83d Congress, the Honorable EVERETT W. DIRKSEN, Senator from Illinois, and I introduced in the House and Senate a joint resolution proposing an amendment to the Constitution of the United States limiting the power of Congress to tax incomes, inheritances, and gifts—House Joint Resolution 103 and Senate Joint Resolution 23. Senator DIRKSEN and I are introducing the same resolution again this year.

The principal provisions of the amendment may be summarized as follows:

First. Income taxes:

The amendment limits income taxes on both individuals and corporations to a maximum rate of 25 percent, but permits Congress by a vote of three-fourths of the Members of each House to exceed that rate, provided the top rate does not exceed the bottom rate by more than 15 percentage points. For example, if the bottom rate were 20 percent, the top rate could not exceed 35 percent. If the top rate does not exceed 25 percent, however, there is no restriction at all on the bottom rate. It could, for instance be 1 percent or one-half of 1 percent.

Subject to the foregoing limitations, the rates on corporate income may vary from those on individual incomes.

Second. Death and gift taxes:

The amendment also gives to the States the exclusive power to impose death and gift taxes.

It should be observed that the amendment merely limits the degree of tax rate progression. It does not prescribe the top rate that Congress may impose. Hence, it cannot be argued that the amendment impairs the Government's power to raise needed revenue during either peace or war, except, of course, with respect to the revenue derived from the estate and gift taxes, which is only about 1½ percent of the total. In other words, the amendment does not limit the amount of revenue that may be raised, but limits merely the manner in which it may be raised.

Its purpose and effect are merely to eliminate in large measure from our system of taxation its socialistic features; namely, first, the heavy progressive feature of the income tax; and, second, the confiscatory death tax, which will eventually dry up the sources of private capital and lead to the establishment of socialism with the accompanying loss of the people's liberty.

In a statement to the Temporary Economic Committee prior to World War II, Adolph Berle, Jr., Assistant Secretary of State, made the following significant prophecy:

"The Government will have to enter into direct financing of activities now supposed to be private, and a continuance of that direct financing must be (mean) inevitably that the Government will ultimately control and own those activities. * * * Over a period of years the Government will gradually come to own most of the productive plants of the United States."

I am convinced that Mr. Berle's prophecy will come true unless action to prevent it is taken before it is too late.

Legislation by Congress is obviously insufficient; for the work of a good Congress may be easily undone by that of a radical Congress.

The need of reform would seem to be obvious and I know of no way of giving permanence to such reform except through a constitutional amendment.

The ultimate objective of the amendment is a top individual income tax rate of 25 percent and a beginning rate of much less than 10 percent.

In determining whether such an objective is realistic it will be helpful to consider the possible tax effect of a budget of more reasonable proportions than the present one. The budget estimate of expenditures for the fiscal year ending June 30, 1955, is $63.504 billion. According to the Federal Budget in brief, Government expenditures for the comparatively recent fiscal years of 1948 to 1951, inclusive, were as follows:

	Expenditures (in billions)
1951 (which included a full year of the Korean war)	$44.058
1950	39.606
1949	39.507
1948	33.068

Prior to 1942, which was a war year, the largest expenditure of the Federal Government in any year was $18.4 billion in 1918, which was also a war year.

Let us suppose now the following changes in the budget receipts as estimated for the fiscal year 1955:

First. A reduction in the individual income-tax rataes to 10 percent on incomes up to $10,000 and 25 percent on the amounts in excess of $10,000; and

Second. Elimination of estate and gift taxes.

These changes would reduce the budget receipts to $47 billion, which is $3 billion greater than the budget expenditures for the fiscal year 1951 which included a full year of the Korean war. It is $7.5 billion greater than the budget expenditures for the fiscal years 1950 and 1949.

A beginning rate of 5 percent, instead of 10 percent, on individual incomes would reduce the receipts to $41.5 billion. This is $2 billion above the 1950 and 1949 expenditures, to say nothing of the $33 billion expenditures in 1948.

It would, of course, take some years to secure the adoption of the amendment, since it must be approved by two-thirds of both Houses of Congress and ratified by the legislatures of three-fourths of the States.

About 85 percent of the estimated revenue from the individual income tax, which produces over half of the total revenue of the Federal Government, is produced by the first bracket rate of 20 percent when applied to the entire amount of taxable income in all brackets. Only 3 percent—about $2 billion—is provided by the rates in excess of 34 percent.

Accordingly, if we are to have enormous expenditures and correspondingly large revenue, the great bulk of the revenue must come from persons of small and moderate means. The only possible way to give relief to such persons is either, first, by reducing the need for revenue through cutting expenditures; or, second, by increasing revenue through a drastic reduction of the present confiscatory higher bracket rates so as to increase incentive and investment in productive enterprise. This would increase the national income which constitutes the tax base and thereby increase the revenue.

Any immediate loss in revenue through the elimination of the higher individual rates would undoubtedly be only temporary. Eventually the lower rates would produce greater revenue than the higher rates now in force.

Another important effect of the amendment which has not been sufficiently stressed would be to restore to the States the power to be financially independent and to free themselves from Federal domination. The Federal Government should not be permitted to hog the revenue and hand back part of it to the States on conditions.

It should be remembered that with minor exceptions every dollar spent by the Federal Government comes from the same sources of revenue that are available to the States. The States should raise the revenue and spend it themselves. Responsibility for the raising of revenue is one of the best checks upon extravagant and unwise expenditures. It is too easy to spend money raised by someone else.

Moreover, the States and municipalities are better fitted than the Federal Government to perform the services which are primarily of State or local concern and they would do so at much less cost. Performance of these services by the Federal Government has meant the maintenance at great cost of a vast horde of bureaucrats on the Federal payroll, many of whom could readily be dispensed with.

To summarize, the proposed amendment—

First. Largely eliminates from our Federal system of taxation its socialistic features and thereby puts an end to the use of the taxing power as means of forcing us into socialism;

Second. Does not impair the power of the Federal Government to raise revenue;

Third. Does not shift the burden of taxation from the rich to the poor;

Fourth. Aims at reducing eventually the taxes of everyone so that the top rate will not exceed 25 percent and the bottom rate will not exceed 10 percent, with the prospect that it will be much less;

Fifth. With lower rates will increase the national wealth and over the years the Federal revenue;

Sixth. Will restore to the States the power to be financially independent and to free themselves from Federal domination.

In the final analysis the problem resolves itself into the simple issue of whether we are to have in this country a system of society based upon, first, private enterprise and our constitutional form of government; or second, socialism. Both reason and the experience of other countries lead to the conclusion that our present system of confiscatory income and taxes, if long continued, will ultimately result in the establishment of socialism in place of our present system.

The changes in the impact of Federal taxes on the great bulk of the taxpayers involved in the proposed amendment are, as I pointed out, comparatively minor. Their beneficial effect, however, would be far reaching and decisive.

The changes in the income-tax provisions proposed in connection with and partially effected by the 1954 Revenue Code, such as reductions in the tax on dividends and increases in certain deductions and exemptions, are costly in revenue and will have only minor effect on the economy. The major evil to be corrected is the one at which the proposed amendment is aimed.

I cannot emphasize too strongly that this amendment is vastly different from the amendment which has been going through the State legislatures, an amendment which limits the power of Congress to impose income, death, and gift taxes to a maximum rate of 25 percent with no right to suspend the limitation except in time of war. That amendment is altogether too rigid and would seriously impair the Government's power to raise needed revenue from the income tax in time of peace.

The following is an address delivered on the floor of the Senate, January 21, 1955, by Senator EVERETT M. DIRKSEN, of Illinois, introducing Senate Joint Resolution 23—Reed-Dirksen amendment:

THE PROPOSED CONSTITUTIONAL AMENDMENT LIMITING CONGRESSIONAL POWER TO TAX INCOMES, INHERITANCES, AND GIFTS

Mr. DIRKSEN. Mr. President, in January 1953 the Honorable CHAUNCEY W. REED, of Illinois, introduced in the House, and I introduced in the Senate, a joint resolution proposing an amendment to the Constitution of the United States limiting the power of Congress to tax incomes, inheritances, and gifts—House Joint Resolution 103 and Senate Joint Resolution 23.

This amendment would limit income taxes to a maximum rate of 25 percent, but would permit Congress by a vote of three-fourths of the Members of each House to exceed that rate at any time without limit. Where the top rate exceeded 25 percent, however, it could be no more than 15 percentage points above the bottom rate. For example, if the bottom rate were 15 percent, the top rate could not exceed 30 percent. If the bottom rate were 20 percent, the top rate could not exceed 35 percent. If the top rate did not exceed 25 percent, however, there would be no restriction at all on the bottom rate. It could, for example, be 1 percent, or one-half of 1 percent.

This amendment would also deprive Congress of the power to impose death and gift taxes, and would leave these means of raising revenue exclusively to the States, where they belong, and competition among the States would tend to keep the rates within reasonable bounds.

Representative REED and I are introducing this joint resolution again this year.

The proposed amendment has met with wide approval. Important national organizations have endorsed it, including the American Bar Association, the American Legion, the National Association of Manufacturers, the Western Tax Council, the Committee for Constitutional Government, the

Life Insurance Policyholders Protective Association, the National Economic Council, and the National Small Business Men's Association.

I cannot emphasize too strongly the importance of this amendment. Its objective is to save our American incentive system, commonly spoken of as the private-enterprise system, on which our very form of government depends.

Our present system of taxation, with its heavy progressive income and inheritance taxes, will eventually destroy this system and result in the substitution of some form of socialism.

Karl Marx, in his Communist Manifesto of 100 years ago, fully recognized the importance of these taxes as a means of destroying the private-enterprise system by including in the 10 planks in his platform the following:

First. A heavy progressive or graduated income tax.

Second. Abolition of all right of inheritance.

For the past two decades the Federal Government has been following the course prescribed by Marx by imposing a heavy progressive or graduated income tax, and while not abolishing the right of inheritance, the Federal Government has been increasing the rates of the death tax until the top rate is now 77 percent.

The progression in income-tax rates from the beginning rate of 20 percent on incomes of $2,000 and under to 91 percent on incomes of more than $200,000 is progression of a most extreme character. It not only confiscates the larger incomes, but it bears most heavily on the middle incomes, the group at which Marx particularly aimed in his advocacy of heavy graduated income taxes.

Reason and the experience of other nations, and most recently that of England, demonstrate beyond all question that unless our policy of taxation is changed, the system of society under which this country has prospered and grown great will come to an end and some form of socialism or communism will supplant it.

How, one may ask, will the proposed amendment keep the rates down? The answer is this: The amendment would make it in the interest of every taxpayer, first to keep the top rate down to 25 percent—as compared with the present rate of 91 percent; and, second, to keep the bottom rate no higher than 10 percent—as compared with the present rate of 20 percent. It is expected that the beginning rate will ultimately be much less than 10 percent.

The proposed amendment is just as important for the small taxpayer as for the large. This united self-interest of all taxpayers is relied on as a force that would keep the tax rates within reasonable bounds. There are 66 million individual income-tax payers in the United States. Most of them vote.

It should be noted that the proposed amendment merely limits the degree of tax-rate progression. It does not prescribe the top rate that Congress may impose. Hence, it cannot be argued that the amendment impairs the Government's power to raise needed revenue during either war or peace.

The proposed amendment will reduce the burden of taxation on those with the smaller incomes. A fact not generally realized is that the great bulk of the revenue from the individual income tax comes not from the taxpayers with large incomes, but from those with small incomes. That is so simply because the small incomes, in the aggregate, constitute the bulk of the national income. For example, only 3 percent—about $2 billion—of the total estimated Federal revenue of about $60 billion for the fiscal year ending June 30, 1955, is produced by the individual income-tax rates above 34 percent, which is 14 percentage points above the present beginning rate of 20 percent.

Contrast these figures with the effect of an increase of only $100 in the present $600 personal exemption and credit for dependents. Such an increased would result in a reduction of 7 million in the number of income-tax payers and a revenue loss of $2.5 billion. This is one-half billion dollars more than the total revenue received from the individual income-tax rates above 34 percent.

Accordingly, if we are to have enormous expenditures and correspondingly large revenue, the great bulk of the revenue must come from persons of small and moderate means.

The only possible way to give relief to the small-tax payers is either (1) by reducing the need for revenue through cutting expenditures, or (2) by increasing revenue through a drastic reduction of the present confiscatory higher bracket rates so as to increase incentive and investment in productive enterprise. This would increase the national income, which constitutes the tax base, and thereby increase the revenue.

Any immediate loss in revenue through the elimination of the higher individual rates would undoubtedly be only temporary. Eventually, the lower rates would produce greater revenue than the higher rates now in force.

That the present confiscatory rates of the individual income tax are not approved by a large majority of the American people is shown by Gallup polls. The vote of those having an opinion was 2 to 1 in favor of a 25-percent top limit in the September 1951 poll, and 3 to 1 in the July 1952 poll.

As I have already stated, the proposed amendment also deprives Congress of the power to impose death and gift taxes and leaves these means of raising revenue exclusively to the States, where they belong, and where competition among the States would tend to keep the rates within reasonable bounds. Under existing laws the tax on the estates of decedents runs to a high of 77 percent, and the tax on gifts to 57.75 percent. These rates are manifestly confiscatory, and they have very harmful economic effects. They not only seriously impair the incentive to work, save, and invest in productive enterprise, but they are extremely destructive of capital and, in the long run, will destroy the accumulations of capital that are so necessary for industrial activity and expansion, with the resulting beneficial effects on our economy.

Moreover, the heavy taxation of large estates compels the rich to seek comparatively safe liquid investments in order to provide for the heavy taxes that will be imposed upon their estates at death, thus further reducing the capital available for risky business ventures.

The harm done to the economy by the present high rates of death and gift taxes is out of all proportion to the revenue produced, and cannot be justified by any argument based on fiscal needs. Even with the very high rates now in force, the revenue from these taxes is comparatively trivial. In 1953 it was $891 million from the two sources. This was a little over 1 percent of the total budget of $74 billion—enough to pay the Government's expenses for about 4 days. The gift tax is merely auxiliary to the estate tax, and both should be dealt with alike.

Of particular concern is the destructive effect of the heavy estate taxes on small business. The conclusions of the Select Committee on Small Business of the United States Senate in its report published in June 1953 was that estate taxes often lead to the disappearance of small or medium-sized independent businesses or their merger with the dominant segment of an industry.

Let me add that this statement represents not only my own views but those of Representative REED, who joins me in making the statement.

International House

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. HÉBERT. Mr. Speaker, there are three great institutions in New Orleans—the Mardi Gras, the Sugar Bowl, and International House.

International House is a unique organization which had its beginning some years ago and which has since become one of the most-talked-about institutions in the world.

As an example of the impact which International House has made on the Nation there have been three editorial comments on International House in three scattered sections of the Nation within a week.

In Cincinnati, Charles Nutter, the energetic, able, and farsighted managing director of International House, drew attention from the Cincinnati Enquirer.

In New Orleans the Item commented editorially on the activities of a group of citizens of Cincinnati in organizing an International House of its own.

In Houston, New Orleans' great rival in the South, the Post carried a feature story on International House and told of its history and the important role which one of New Orleans' great civic and business leaders, William G. Zetzmann, played in making it a reality.

Here is the editorial from the Item and the feature story from the Houston Post:

[From the New Orleans Item]

ADOPTS INTERNATIONAL HOUSE PATTERN—CINCINNATI LOOKS SOUTH

Cincinnati is the latest city to awaken to the possibilities of trade with Latin America—the fastest growing area of the world and one of its most attractive markets.

Forty business and civic leaders there have organized the Midwest International Trade Development Center, which they hope will develop into something similar to International House.

The other day they heard an address by Charles Nutter which the newspapers there played on page one. "I hope you go ahead with this project," he encouraged. "Get it underway and it will sell itself."

The Cincinnati Enquirer, commenting editorially, said:

"Some startling facts about the buying potential of our southern continental neighbors were given by an expert, Charles Nutter, managing director of New Orleans' famed International House who has spearheaded the most imposing trade development plan any city in America has instituted.

"He has for more than a decade devoted his energies to a plan which in many ways is similar to Cincinnati's. He has seen his efforts bear great fruit."

Nutter's address typifies the aid International House and other New Orleans agencies have given to cities around the country interested in emulating our programs.

Many cities have sent delegations or individuals to explore our activities on the international scene. These include San Francisco, San Diego, Los Angeles, and Seattle on the Pacific; Boston, Philadelphia, and Miami on the Atlantic; and Houston on the Gulf. At least 25 other major communities have

written for information. All have received full cooperation.

This is evidence of how, more and more, the people of North America are looking south.

The Inter-American Investment Conference was a further big-scale demonstration of this and its impact will be felt for years. (The followup service at International House reports a continuing stream of inquiries from throughout the hemisphere.)

This exchange of information and of ideas is healthy, and so is the competition between our cities. We live in an exapnding economy and we in New Orleans are glad to see other places flourish, too.

We must not conclude, however, because of our headstart at International House and the Trade Mart that we've "got it made." On the contrary, we must strive to extend our front position as an international city. And competitive activity elsewhere should serve as a stimulus to doing just that.

[From the Houston Post]

INTERNATIONAL HOUSE SYMBOL OF A PROFITABLE "SIMPATICO"

(By Jim Mathis)

The city that care forgot.

This is the New Orleans that Texans know. The grand old lady of the yellow, surging Mississippi River.

A city of quaintness, fervent piety, strange sins, joyous laughter, and hep jazz. It has ancient trolley cars, Pat O'Brien's, Gypsy Lou, street peddlers, and Pirate's Alley. A playful place of surface charms.

Don't you believe it.

The New Orleans of today is a rejuvenated giant with one aim—regaining its No. 1 place in the Gulf coast sun. Beneath that wrought iron and magnolia front are steel sinews of commerce and dollars.

For its resurgence, wise Orleanians chose the city's greatest asset and Houston's greatest current weakness—its port and foreign trade, respectively.

While brash, young Houston rests for a time on its turbulent, half-century laurels, New Orleans is quietly and delicately plucking the leaves from the wreath.

In 1954, as in the past 5 years, New Orleans is second only to New York City in the dollar value of water-borne commerce through its miles of docks.

New Orleans is willing to concede that Houston is No. 2 behind New York in tonnage through its port, but officials ask a pointed question:

Which is more desirable, tonnage or dollars?

It's obvious they'll take the cash.

With Houston dropping in tonnage since 1952, even the margin of annual tonnage is now narrow. Houston's 1954 estimated figure is 40,647,159 tons; for New Orleans about 39.5 million tons.

New Orleans is still the only port outside of New York City which operates on the billion dollar level in foreign trade. It has no intention of letting any one else slip up on it in that field.

From a wartime peak of $700 million annually in foreign trade, the city has zoomed to $2 billion. Nothing is likely to halt that climb except a general decline in foreign trade.

A combination of geographical and community spirit, a spirit unmatched in postwar years—have formed the basis for New Orleans' resurgence.

When Jean Baptiste Le Moyne, Sieur de Bienville, chose the site of New Orleans in 1718, he chose as wisely as did the Allen Brothers, who promoted Houston.

New Orleans lies 110 river miles from the sea, inside a crescent bend of the Mississippi, which seldom drops below 150 feet in midstream.

In effect, the city lies squarely at the small end of a mighty funnel through which drains half the Nation's export goods.

When port agents send publicity maps into the hinterlands to promote commerce, the maps do not only lay claim to the natural Mississippi Valley business, however.

The western line of their territory starts at El Paso, runs northward through New Mexico, Colorado, western Wyoming, and into northwestern Montana.

The eastern boundary begins at Savannah, Ga., on the Atlantic Ocean, runs northwestward through South Carolina, Tennessee, Kentucky, Indiana, Chicago, Ill., and Wisconsin.

A network of tributaries, and the Mississippi itself, touch 31 States from Minnesota to Louisiana.

Texas, of course, is only a minute portion of this commercially fertile field, somewhat larger than even the Louisiana Purchase. (Oddly, freight rates from many west and mid-Texas cities on the Texas & Pacific Railroad are less to New Orleans than to Houston.)

The essence of New Orleans' advantages in location, however, is in the tremendous barge traffic plowing down the Mississippi. Tons of bulk commodities such as ore and grain pour into New Orleans by this route for transshipment to foreign destinations.

These unwieldly barges serve a secondary purpose, also. The cheapest transportation known, they force competing railroad lines to keep rates into New Orleans at a minimum.

With all these advantages, New Orleans became the first port of the Nation, even ahead of New York, 100 years ago. At that time the port was already 150 years old: Houston was an infant.

But time was to bring reverses to the city, and the postwar years of World War I found it in 16th position in value of cargo. It became a pawn of political regimes, and at one time 2,000 persons drew checks from the port commission, although few ever reported for work. Docks rotted.

A reform movement ended this deadheading, and a constitutional amendment took the State-owned port out of politics. Now board members serve 5 years, with staggered terms. Candidates are named by the presidents of trade and civic organizations, narrowed down to a list of three, from which the governor must choose one member.

World War II meant a boom to the port, and New Orleans became a major port of embarkation for the armed services. It performed well enough to get the warm praise of Army officials. A survey showed New Orleans could handle cargo cheaper and faster than even New York. The city prospered along with its port.

The years of peace, however, were just ahead, and with them the specter of another lean era. This time merchants and businessmen knew what to expect, however, and they weren't having any of it.

A survey disclosed what most suspected—70 cents of every dollar in the city came directly or indirectly from port activity. Businessmen pondered the future, cast about for possibilities.

William G. Zetzmann, a soft-drink bottler, acted first. He sent letters to 55 businessmen, asking them to a luncheon to discuss ways to promote foreign trade.

"Don't bother to come unless you have a lot of money to invest in the future of your city," Mr. Zetzmann wrote.

Of those invited, 53 came—to pledge $250,000 at that first meeting. This grew to $600,000 within 1 year, and by 1945, the organization—formally labeled International House—had purchased a 10-story building in the center of the city. Three stories were converted into a club, and International House was ready to go.

It began as an organization of 500 members. Each had to furnish bank references, and dedicate a goodly part of his time to the task of making foreigners feel at home in a strange land.

Today, International House has 2,400 members, and more are clamoring for admittance.

It works something like this:

A businessman from Brazil arrives in the city on a definite mission. He is brought immediately to the International House. He gets a membership card, an office and a bilingual secretary within 10 minutes.

Then the World Trade Development Department gets busy, finds out whether the businessman wants to buy or sell. Appointments are made for him, and business contacts furnished. He gets a list of all the suppliers or merchants who sell or buy the merchandise or service he wants.

If he wants to conduct his own research, a fully staffed, fully equipped business library, in many languages, covers one part of the building floor.

An International Relations Department moves in then, to make reservations for plane or train visits to other cities, to round up social entertainment, a bilingual assistant to help the visitor's wife shop, or even a multilingual baby sitter.

All these services are absolutely free. The visitor pays only for his food and drinks, perhaps not even these.

Its services are not confined to the foreign visitor, however. The same help is offered to the American businessman, with special emphasis on assistance to the small manufacturer to whom foreign trade is an unknown field.

The development department's files bulge with records of contacts made and the results.

A manufacturer in an Illinois city who had never exported his farm machinery before, is now routing a major part of his business through New Orleans to ports of South American nations.

A Tampa, Fla., baby stroller builder sold 452 of his strollers within 6 months to Latin American buyers there.

Some $30,000 in leaf tobacco from Kentucky went out to Africa and the Canary Islands through International House contacts.

Not all contacts are small. One multimillion dollar flour deal began from a single contact furnished a Kansas City, Mo., firm.

What New Orleans expects of this service, and is certainly getting, is at least a portion of the shipping generated by the connections it furnishes. In most instances New Orleans gets all of it.

But New Orleans, wisely, has decided that one-way traffic is not the sole answer to foreign trade. Representatives promote imports as avidly as exports.

A direct growth of this effort is the International Trade Mart, a sleek, five-story building a block away from International House.

Here, foreign nations and manufacturers may rent space and display their products. Buyers from New York City or Chicago may come directly to New Orleans, look over items ranging from Belgian handmade shotguns or African patio mats, to Indian embroidery.

Organized in 1945, with 66 percent of its space rented when it opened, the Trade Mart now operates at capacity. It has always been in the black, and is retiring its bonds ahead of schedule.

Its offices now exhibit over 600 items, from all over the world.

Clay Shaw, director of the mart, estimates that $50 million in business is done annually through the mart.

To keep pace with the growing use, the interlocking boards of the two institutions are already negotiating for construction of a new international building, one at least 12

stories and with more space. They expect to have it in operation within 30 months.

Indicative of the long-range approach to foreign trade taken by the city is the International House's devotion to its cultural program—interchange of Latin American and American students.

In 1945 the International Relations Department organized 13 Louisiana and Mississippi colleges into an exchange group, and even pulled scholarships from many of Latin or South American students.

In the last 10 years, over 10,000 Latin or South American youngsters have moved through New Orleans to these colleges. The program became so effective that the Cordell Hull International Foundation asked that the International House take over direction of its exchange efforts.

Today, approximately 6 percent of Louisiana State University's enrollment is Latin American. In New Orleans, there are 25 Latin American interns and nurses doing advanced work in hospitals.

These youngsters, of course, will grow up as the leaders in their country. When someone says United States they will think New Orleans. As their influence spreads, the direct benefit to New Orleans will become incalculable.

In postwar years, New Orleans has also renewed, through the International House, its trade and travel missions. There have been 21 big plane flights, and countless smaller and individual missions. Writers, newsmen, and businessmen from all over the Mississippi Valley have made these forays.

Mayor de Lesseps Morrison, the city's energetic young mayor, has made 12 of these flights.

The mayor is also on call to entertain the visiting Latin American officials, as are other officials and businessmen. It's no trouble at all in New Orleans to whip up a 300-man luncheon or dinner for an important visitor.

Rounding out the port's extracurricular promotional efforts is a free trade zone—a 12-acre area set off in the port in which foreign goods may be kept without custom charges.

Inside this zone, a foreign manufacturer or a New Orleans importer may store and process goods which may be sold in the United States or transshipped to other nations.

If the goods are sold here, the customs levy is made. If they go out again to other nations, no charge is levied.

Since the zone was established, the giant Sears & Roebuck firm has moved all its imports through New Orleans. Sears maintains a huge warehouse, filled with items like Japanese dishes and Italian motor scooters destined for its South American retail outlets.

Importers of Brazil nuts bring shipments into the zone, clean them and dry them before importation to reduce customs cost.

"LOSS LEADER" PAYS OFF ON ITS OWN

Another importer cleans and processes coffee beans. A $75,000 wool and cotton fumigator has been established by the port commission in the zone.

While importers pay no customs in the zone, they do hire New Orleans labor, drayage, and pay warehouse fees. And the zone generates considerable traffic for the port, like a grocer's loss leader.

Despite all these outside community efforts, the visions of developing foreign trade would have been impossible of fulfillment had not the port proper kept abreast with facilities and service.

Shut off from new construction along its 52 miles of waterfront during the war years, the port faced a big overhaul task as restrictions lifted. Luckily, wartime commerce had built up a backlog of funds for changes.

About $16 million has been poured into the reconstruction and replacement of old wooden wharves, some over 50 years old. A number of modern facilities have been built. Over $7 million went into doubling the capacity of the port's grain elevator, which now holds over 5 million bushels.

Present plans call for expenditure of $10.5 million for 1955, and an overall total of $44 million. Port officials publicly say the facelifting can be done in 10 years, port engineers say privately it will take 20 years.

Whatever the time, the money is being plowed into the port. And solely from revenues. The port hasn't issued bonds since 1939.

With the exception of approximately $400,000, all the revenue from a Louisiana gasoline tax goes into servicing bonds issued prior to 1939. The time may come, and soon, when the port must finance part of that $44 million expansion with bonds.

Currently, the port commission has jurisdiction over 77 berths, along 7½ miles of riverside, in the New Orleans Port. Of these, 63 are for general cargo and 14 for special purposes. Two are banana terminals which give New Orleans the edge over all other ports in importation of this fruit.

There are scattered over 5½ miles, 27 private berths in the port, varying from 450 to 500 feet in length. Many of these are for special purposes or are for the United States Navy.

By this November, Port Dircetor W. J. Amoss says, the dredging of the present 5½-mile Industrial Canal linking the river with Lake Pontchartrain to a depth of 30 feet will be completed. This will bring the port some 55 miles nearer to the Gulf of Mexico, at least for the smaller freighters. It will be that much more advantage for the port, even at 30 feet.

Port figures show that 6,342 vessels entered the harbor in 1954. Of these, 3,878 were deep sea craft, and 2,464 inland craft.

Many Orleanians, while fascinated by the continued boom in foreign trade, are happier over the influx of industry in the area. Tremendous strides have been made in recent years.

Some estimate that over $1 billion in permanent industry has moved onto the Mississippi, or the Industrial Canal, since 1950.

The largest single new plant is the Kaiser Aluminum Works, a $145 million plant for production of pig aluminum. Chrysler Corp. converted an unused plane factory into a tank engine installation worth $70 million. The American Cyanamid and Chemical Corp. invested $47.7 million into the production of fertilizer, and Lion Oil put $31 million into an anhydrous ammonia factory.

Shell Oil, an oldtimer at New Orleans, expanded its facilities by $30 million, as did other major plants in the area.

An index of the industrial growth may be seen in the booming annual expansion of the local power companies, Louisiana Power and Light and the New Orleans Public Service Co. Both spend over $10 million annually.

The whole of New Orleans has felt this new blood pumped into old veins, and responds accordingly.

Port Director Amoss calls this response, from the International House to the cabbie who is exceptionally pleasant to a foreign vistor, "a state of mind that we enjoy in New Orleans."

"To put it in a word, we are 'simpatico'," Mr. Amoss continued.

That is a Spanish word which, liberally translated, means "in sympathy with."

"We feel here that Latin Americans and other foreigners, no matter from where, aren't rascals just because they are foreigners," Mr. Amoss said. "It's an outgrowth of long experience in New Orleans, an understanding through our mixture of peoples for centuries.

"It trickles down from the top to the clerks, the police, and all levels.

"Perhaps our efforts are part necessity, and certainly a great many interests aren't unselfish. But I don't think we have to apologize for such unselfishness."

Mr. Amoss credits the International House with crystallizing the "simpatico" feeling already present, and channeling it into a productive force.

But he feels that the credit should be more widespread—all over the community.

He and other port officials point to the long, happy relationship with labor in New Orleans—there hasn't been a strike in decades.

"You can't develop this feeling overnight," Mr. Amoss ended.

So while other gulf coast ports hang on grimly to what business they have—or let it slip gradually—New Orleans holds more promise for the future, and cash for the present.

Right now, 53 percent of the city's total foreign trade is with South or Central American cities.

And 10 percent of the European commerce has been directed to gulf ports through its International Mart, with New Orleans getting the big chunk.

You can still hear the best in jazz on Bourbon Street, sip soup at Antoine's if you want to stand in line, or pay exorbitant prices for antiques—all the modern pleasures of a tourist are still to be found in New Orleans.

But the solid heart and the real color of the city lie in the hoot of steamship whistles and the smudge of factory smoke.

Four Chaplains

EXTENSION OF REMARKS
OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. QUIGLEY. Mr. Speaker, the story of the four chaplains who gave their lives that others might live when the *Dorchester* went down during World War II is a story that will thrill and inspire throughout the life of the world.

In order to perpetuate the memory of these brave men, the city of York, Pa., is naming one of its new school buildings after them. This is a particularly apt memorial for one of the chaplains, Rabbi Goode, is from York.

I include as part of my remarks the following poem written by Ira H. Jackson, of York, and dedicated to the four chaplains:

THE FOUR CHAPLAINS

Bound for lands across the sea
To battle the foes of democracy,
A transport became a blazing wreck,
Torpedoes crashed through hull and deck,
Sending heroes to watery graves,
Swallowed up by the ocean waves;
The morbid news brought grief and gloom,
February marked their month of doom.

It's a tragic story to pen,
Four chaplains, served their God and men;
Commandments and cross; the insignia on
their coats;
The chant of prayers, heard from their
throats;
Ministers, priest, and a rabbi.
Stood with hands uplifted to the sky,
In line of duty they choose to die;
Aiding others, with preservers close by.

The Protestant, Catholic, and Jew.
Praying to the one God they knew,
It serves a sermon for the bigot;
That he be ever tolerant, and not forget,
Linked as one; Protestant, Catholic, and Jew,
Went to death and glory; to the one God,
they all knew.

—*Ira H. Jackson.*

Farm Groups Misguided Right-To-Work Backers

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I include herewith in the RECORD a story from the AFL News-Reporter of February 18, 1955, dealing with right-to-work legislation:

FARM GROUPS MISGUIDED RIGHT-TO-WORK BACKERS

POCATELLO, IDAHO.—Idaho farm organizations, which sponsored "right-to-work" legislation in the State, were told they were misguided sponsors of "disreputable merchandise" by the editor of the Pocatello Enterprise.

The editor, Perry Swisher, Republican member of the Idaho Legislature, said:

"If we were a farmer, we would be outraged if a union man or labor-management specialist started writing laws to govern weed control, irrigation districts, Bangs disease, brand inspection, and seed certification."

MISGUIDED SPONSORSHIP

"Yet today the leaders of two Idaho farm organizations are busy trying to sell Idaho lawmakers on a drastic proposal in the field of labor-management relations. It is the bill so speciously called the right-to-work bill.

"Responsible organizations familiar with industry and organized labor have refused to sponsor the bill in Idaho. A few arch conservatives among management have quietly egged it along but, from embarrassment rather than fear, decline to make their quaint thinking a matter of record.

The Idaho Farm Bureau and the Idaho Farm Grange, whose leaders know a great deal about agriculture and a great little about industry, have misguidedly assumed sponsorship of this disreputable merchandise.

"A 'right-to-work' law has been enacted in several States after strong financial backing by the autocrats of Texas, the screwballs in Los Angeles, and the scattered haters who still believe every workman's lunchbox hides an anarchist's bomb.

"We've been listening to 'right-to-work' lobbyists call the roll of the States who have adopted the law. By and large they are States in the South, where slavery continues to be more popular than anything we have in the 20th century, or States in that area of the Midwest where economic vigor has been lost and the more venturesome people have been moving on."

BARRIER TO EXPANSION

"Idaho's future lies in the direction of the States to the west of us. New enterprise, new industry, new population are in sight. Idaho's agriculture, along with Idaho's cities will gain prosperity unless barriers to expansion are laid by cranks who think more of social vengeance against one class or another than they do of peaceful and energetic development.

"At base, the right-to-work bill destroys the right of wage earners to bargain collectively with management. It is as simple as that. Destroying the balance between management and labor can only reenact, needlessly, the industrial civil war out of which our vigorous modern economy has grown.

"A vital feature of that economy is that a better paid working class has enormously enlarged purchasing power, and agriculture has been a beneficiary of that change. Stated a bit too simply it can nonetheless be said that when purchasing power falls off among the wage-earning millions, farm income drops. And drops faster than could be offset by any minor savings industrial management might pass along if labor's bargaining power were broken."

RELATIONS ARE BETTER

"Relations between management and labor are not ideal in Idaho. They aren't anywhere. They never will be. But they are better than they were 5 years ago, and eminently better than they were 20 years ago. And immeasurably better than they were a half century ago.

"Let's stay sane in Idaho, no matter how far into its sad past the Deep South wants to crawl. Let's have no farm group carrying water for the enemies of the wage earners, nor the workers opposing farm prosperity, nor either group hindering work and investment toward a greater Idaho. In a hundred fields the farmers, the workers, and management have common interests in improving the structure of Idaho law, Idaho government, the Idaho economy, the Idaho tax system. All of us have a right to work, toward greener pastures. But no group among us can claim the right to work toward the destruction of the bargaining or marketing rights of other groups not without doing ultimate damage to us all."

Address by Hon. George M. Leader, Governor of the Commonwealth of Pennsylvania, at Dinner in Honor of Genevieve Blatt, Secretary of Internal Affairs, at Zembo Mosque, Harrisburg, May 3, 1935

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address given by our distinguished Governor of Pennsylvania, the Honorable George M. Leader, at the testimonial dinner in honor of Miss Genevieve Blatt, secretary of internal affairs of Pennsylvania, at Harrisburg, on Tuesday, May 3, 1955:

If betting were not against the law in Pennsylvania, I would make a small wager that the majority of the people in this Mosque tonight cannot remember the names of the Democratic candidates for State treasurer and auditor general in 1952.

I can, rather vividly, and Genevieve Blatt can.

Because, utterly obscured in the Presidential campaign of that year, two young and inconspicuous people ranged up and down this State campaigning for two fiscal offices that interested them very much—but the public not at all.

Those two people were George M. Leader and Genevieve Blatt.

Tonight, we are not quite so young and we are a trifle more conspicuous.

You can imagine, therefore, the pleasure I take in this second inauguration day. The Democratic entry of Blatt and Leader did not do so well in its maiden race, but we sure swept the field in the derby.

The great strength of the Democratic Party lies in the fact that it is never scared, never afraid. We are willing to pioneer, and it was good typical Democratic pioneering which made us the first major party to designate a woman as a candidate for statewide office in Pennsylvania.

We are the party—and it will be long remembered—which first elected a woman to a major office in the State.

And I would make this second wager tonight.

When the day comes—as it some day will—that we elect a woman governor in Pennsylvania, you can be sure that she will campaign and win on the Democratic ticket.

I am not throwing Genevieve's bonnet in the ring.

The point I am making is that the Democratic Party is the party of action, the party of progress, the party of movement with our times.

This day is the last of the ceremonies which go with the changing of the guard in Harrisburg. The baskets of flowers, the congratulatory messages, the jubilation and the hurrahs are now, finally, once and for all behind us. The parties are over; the time of grim and solemn testing is well underway.

All the world, the cynics say, loves a winner.

It takes no special brains, no special courage, to join a victory parade.

And in every group, in every association of men and women, there are those whose reactions in time of stress are obviously those of Robert Burns' field mouse: "the wee sleekit timorous cowerin' beastie, Oh what a panic is in thy breastie."

The great strength of the Democratic Party is that its leaders do not panic. Democrats do not run back and forth, to and fro, with every pressure; Democrats can endure criticism even when it is misrepresentative and unfair; Democrats try to recognize their responsibilities and carry them out in manly, uncomplaining fashion.

The Democratic Party does not breed timorous field mice.

The tenure of this State administration can still be measured in days and weeks. We are still new. We are to a large measure untried. We are going to make our share of mistakes—mistakes in tactics, mistakes in judgment.

But, so far as I am given strength, this administration will never make the one unforgivable mistake—the mistake of losing heart, the mistake of running from a fight, the mistake of losing a sense of purpose and responsibility.

This party of ours, this Democratic Party which we love and serve, has come into majority status in Pennsylvania.

To hold that status, it must act like a majority.

It must be responsible and cohesive—in the Governor's office and in the administrative departments, in the legislature, in the courthouses, and in the city halls, in the State committee, in the county organizations.

A minority party enjoys a kind of luxury which is no longer ours. That is the luxury of avoiding the hard decisions, playing to the galleries, running loose in as many directions as there are party members. Our clear and present danger—our only danger—is that some of us may forget our duties and our obligations as a majority party entrusted with great power; that through forgetfulness, some of us may slip back to the habit patterns of minority irresponsibility.

If that slip occurs in any considerable fraction of our party membership, it should be clear that the entire Democratic Party will be the loser.

It won't take long until we are all of us back in the minority again.

Such a minority psychosis—the against psychology—has plagued the Republican Party nationally and bedeviled and humiliated the Eisenhower administration.

In the behavior of such Republican leaders as Senator KNOWLAND and Senator BRIDGES it even menaces the peace of the United States and brings closer the terrible threat of atomic war.

Here in Pennsylvania we are resolved that this administration will not be so frustrated. In that resolve, I know that I am joined by the tried and forceful senior leaders of our party.

We won a great popular victory last November.

We intend to go on winning them for a long, long time.

Each of you, my fellow Democrats, contributed to our victory. Each of you played a great part, a vital part, in electing me to this governorship.

Tonight, I ask each of you to work as closely with me, as devotedly with me, as you did in the campaign, so that together we can give this State an administration that will merit the continuity of he Democratic Party in the control of our affairs; so that together we can assure the future of Pennsylvania and the place of the Democratic Party as the guardian of that future.

Will you do that with me?

In return, I can only pledge to you the last limits of my strength, every ounce of my being, every nerve and sinew and waking hour of my life in these 4 years of arduous duty.

Now, let us be quite frank and admit the honeymoon is over.

The honeymoon was bound to be over when we came to grips with the problem of financing the government of this State.

The budget I submitted is, within reasonable areas of consideration and adjustment, the proper answer—the only answer—to the demands placed upon us by our laws and by our circumstances in Pennsylvania.

The tax program I submitted, again within reasonable areas of consideration and adjustment, is the proper answer—the only right and fair answer—to our need for adequate revenues to meet the obligations of the State.

I intend to advocate them, fight for them, argue for them, explain them, and see them through the house of representatives of this Commonwealth.

They meet the Democratic platform, the Democratic campaign, the Democratic pledges both of principle and specific action.

I can understand and sympathize with the present circumstances of such Republican leaders as Charley Smith. In 1951, the Legislative Journal is full of Smith's arguments for an income tax, even when it was a very poor and crude unclassified income tax. In 1953, Charley Smith was equally vehement in support of the sales tax. Now, in 1955, Charley Smith has at last reached the politician's heaven on earth—he is against all taxes.

And certainly I bear no resentment against an old pro like Harvey Taylor, or a pitiful front man like Miles Horst.

But, of all the people in Pennsylvania, the one man who should keep as still as a clam in 20 feet of water is our junior Senator and former Governor, JAMES HENDERSON DUFF.

You are not supposed to mention a rope in a house where a man has been hanged.

If that is true, you would think that a man with DUFF's record in the fiscal management of Pennsylvania would observe a decent silence when the men who are the heirs of his bad management are acting as receivers for his bankruptcy.

JAMES H. DUFF was certainly not the man to rock 'em and sock 'em. His play was to hit and run.

Under the Duff administration, the soldiers' bonus was passed with a whoop and holler. It added nearly a half a billion dollars to the State's debt, and the budget I have just submitted requires $63,490,000 to pay the debt service on it during the next 2 years.

DUFF never asked for a tax to pay the bonus.

He got out before the bills came due.

Under the same Duff administration, we began the practice of mandating teachers' salaries with the State paying the bill.

That item has now climbed to $426,840,000 in the current budget estimates.

DUFF never asked for a tax to meet the bill.

He got out before the bills came due.

DUFF preached the good gospel of clean streams.

That item is costing the State $3,200,000 in the current budget estimates.

Again, the Duff formula was to get the credit and fumble the check.

DUFF not only deceived the people of Pennsylvania; he even deceived his running-mate and chosen successor, John Fine.

Now, this man—venerable in his more than three score years and ten—sneers at what he calls a "short-pants" administration.

I seem to be wearing my pants at the normal break above the shoe top, but regardless of such child's play, I am determined to do one thing in complete variation from the venerable Senator.

The Duff administration was a short-change administration—a cold-blooded confidence game which brought our State to its present crisis.

This administration is going to balance out, with its commitments honored and its bills paid and the Republican deficit squared away.

There are two more things that people should remember, if Senator DUFF has the brass to talk taxes again in this Commonwealth.

To evade pressures on the State, he pushed through Act 481—the tax anything law. DUFF is the godfather, the enabler and creator, of every wage tax in this State except Philadelphia's, of every excessive head tax, of every mercantile tax, of every local real estate transfer tax, of every amusement tax, in this Commonwealth.

Finally, and with this we'll have enough of DUFF, as a United States Senator he has been voting the Humphrey-Eisenhower tax policy. That policy is billions in tax reductions for the corporations and the dividend rich fat cats, and not 1 cent for the Senator's boasted "average guy." The $20 per person tax reduction, which the Democrats pressed in Washington and DUFF opposed, would have meant more in tax benefits to the average Pennsylvania family than this hotly disputed State tax program will cost that same "average Pennsylvania family."

I know that to talk taxes at a party is to be a skeleton at a feast.

But this problem is before us, and this Democratic Administration will succeed or fail as we succeed or fail in solving it.

I am quite aware that the tax proposals got off to a bad start, because they were "leaked" incorrectly while discussions were in progress at the Capitol. I know that it has been misrepresented; I know that it is getting a bad press from the same editorialists who were so righteously for fiscal responsibility when Sam Rayburn was trying to reduce the Federal personal income taxes.

But I also am sure that it is substantially right. Being right, it will get its full measure of public support when the public gets honest facts instead of distortions. That's my job, and I hope that you will also make it yours.

Most people have been led to believe that the choice is between the classified income tax and the present 1 percent sales tax with all its exemptions. You and I know that there is no such choice. The choice is between the classified income tax, and a 3 or 4 percent sales tax with no exemptions except take-home food.

The proposed tax program is not a wage tax, nor a flat income tax—and any person who says otherwise is telling a deliberate untruth.

It is a tax program based upon ability to pay.

It distributes the burden fairly between business and the individual.

It is better for the farmer than an increased sales tax.

It is far better for every low and moderate income family than a 3 or 4 percent sales tax.

It will not raise prices; it will not raise rents; it balances the favoritism shown investment capital by the Eisenhower-Humphrey tax policies in Washington.

This tax program should be supported by farm organizations.

It should be supported by intelligent business.

It should have the full support of organized labor.

It should have the full, the willing, the vocal support of every Democrat who campaigned on our party platform and our established party principles.

I search into my heart; I look into my conduct each day and examine my relations with all who work with me, to be sure that this office is not making me—as it may have made others—stubborn, or self-proud, or arrogantly demanding of my colleagues. I pray that I will have the strength to stand for what is right, for the exact discharge of my obligations. I trust that God will give me the wisdom to find the way.

In such searching, in such prayer, in such trust, I have made this vow:

I will not pass this government of Pennsylvania into my successor's hands still weaker than it was given me; I will not pass this government to my successor except as a solvent government, a strong government, a government capable of meeting its obligations.

With your help, and the help of all men and women of good will in this Commonwealth, I mean to keep that vow. When that vow is kept, although the leap into the future is long, I am sure of one thing, because we will have earned the right by our performance:

My successor and his successor will be Democratic Governors of Pennsylvania.

Hurricane Warning

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. HAND. Mr. Speaker, it is unquestionably true that during the period of the last dozen years, hurricanes have appeared along the Atlantic coast with a far greater frequency than ever before. We are apparently in the midst of a cycle which appears to have diverted shoreward the course of these storms, and every Member of this House is familiar with the devastating damage they have done to property along the Atlantic seaboard, and what is worse, a substantial loss of life has resulted.

I think it is timely, therefore, to include an editorial from the New York Times of May 9, 1955, referring with favor to the bill now pending introduced

by my colleague, the gentleman from Connecticut [Mr. PATTERSON].

The editorial stresses earlier hurricane warnings, but the purpose of the bill is equally directed to a better study and detection to tornadoes which likewise have done such great damage throughout the Nation.

It is so obvious that the country needs earlier warnings of these windstorms, that there seems to be no sensible argument against the purpose of the Patterson bill. I have no means of knowing whether the proposed appropriation of $5 million is necessary, or whether a lesser amount will do, but I am convinced that the Weather Bureau needs additional stations and additional personnel if the people are to have effective notice, and thereby are to be enabled to minimize their damages and in many instances to save their lives.

The editorial follows:

HURRICANE WARNING

Last summer's hurricanes killed 200 people and caused about $800 million damage to property as they tore into the coasts and back country of our northeastern States. They also confirmed the grim presumption that this part of the country is now definitely in the hurricane zone. Disaster experts, however, estimate that 90 percent of the loss of lives and possibly as much as 25 percent of the property damage from hurricanes could be prevented if the Weather Bureau were able to give more precise and timely warnings broadcast over all our communications media and based on much more knowledge than it has about the air currents far aloft and out to sea.

In view of all this the public has a right to expect an immediate and substantial increase in the Bureau's facilities and personnel. Shocking as it will be to those unfamiliar with the Federal budget now before Congress, nothing of the sort is in sight for the next fiscal year (July 1, 1955–June 30, 1956). In a letter published on this page a well-known meteorologist raises a timely alert as to this dangerous situation. His letter, however, suffers from understatement.

If the appropriations called for in the budget are not increased the Weather Bureau will not, in practical effect, get a cent more for research and its general weather reporting services next year than this. The Bureau itself states in its budget justification that "research in 1956 is planned at about the same level as for 1955," and there will actually be one less staff member assigned to this work.

The overall budget for next year, it is true, is $3 million more than last ($27,850,000) plus a special $5 million extra for equipment to be spent over the next 4 years. But the $3 million is to cover the expenses of taking over observation activities which the Air Force previously carried on, and the $5 million—except for new radar installations—is largely to replace old equipment. No more stations are provided for and no strengthening of the present inadequate and underpaid but expert staff. (The Bureau has lost 1,000 employees since 1949 and the average annual pay of those who remain is $4,864.)

The very least that should be done by Congress is to pass the Patterson bill (H. R. 5260), which provides an additional $5 million above the budget allowances for the Weather Bureau—to be used exclusively "in the operation of an emergency hurricane warning system." But Congress might well look into the adequacy of the Weather Bureau's budget all along the line. As far as hurricanes are concerned, additional expenditures now may well be covered, and many times over, by savings to the public in the long run.

Power Policy Debate Erupts

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1955

Mr. MOSS. Mr. Speaker, the Christian Science Monitor, on May 11, 1955, printed a report on the current hearings by the House Government Operations Committee's Public Works and Resources Subcommittee, under the chairmanship of Congressman EARL CHUDOFF, of Pennsylvania.

The report explains clearly the developments in the hearing so far. Since there has been great interest in this hearing—a hearing which, I believe, will develop many facts in an important field—I wish to bring the report to the attention of the Members.

POWER POLICY DEBATE ERUPTS

(By Richard L. Strout)

WASHINGTON.—A full-scale debate on the vexed question of private and public power policy under the GOP administration is on the way.

Public-power advocates opened a major attack here against administration policies as set by Douglas McKay, Secretary of the Interior. Spokesmen of the Interior Department will reply after the attack has developed.

Mr. McKay is charged with undermining the will of Congress by administrative changes benefiting private utilities.

Simultaneously it is learned that a group of some 80 Representatives, largely from the Pacific Northwest and mostly Democrats, has been formed to give battle to Eisenhower power policies as expressed through the Interior Department.

The long-smouldering clash broke into the open before a House subcommittee.

ADMINISTRATIVE REPEAL?

Leading the attack are former New Deal executives of the Department of the Interior who charge a 20-year program is being scrapped and the "will of Congress" set aside, not through direct repeal of laws but by the oblique approach of financial attrition, and administrative reversals under Mr. McKay's direction.

C. Girard Davidson, former Assistant Secretary of the Interior, and Walton Seymour, another one-time Interior Department official under Democratic auspices, charged that Secretary McKay quietly dropped, last August, a regulation safeguarding Federal rights in the transmission of public power.

Counsel of the Subcommittee of the House Committee on Government Operations showed a photostatic letter from James D. Geissinger, representing the Pacific Gas & Electric Co., addressed to the Solicitor of the Interior Department, April 9, 1954, declaring:

"Specific suggestions have been made by the Pacific Gas & Electric Co. attorneys representing other of the Western States utilities."

SECRECY CHARGED

These "suggestions," witnesses asserted, were in behalf of the policy put into effect by Mr. McKay which reversed the earlier Roosevelt-Truman policy. The change was made, they charged, without newspaper announcement and abandoned "valuable rights of the Government," previously upheld by the Supreme Court of the United States.

In return for the right to build a power line across public lands, witnesses explained, Washington previously required private utilities to allow the Government to employ any free time on these lines to transmit Federal power, upon payment of an equitable share of operation and cost.

This system was embodied in a so-called "wheeling provision" first worked out in 1948. The object was to avoid the waste and duplication of transmission lines. The result was said to have been a mutual advantage to public and private companies.

Private companies, however, in some instances objected to the system, notably the Idaho Power Co. and the Pacific Gas & Electric Co. of California.

COORDINATION VITAL

Mr. Seymour, who said he is now a private consultant, argued that in any big interconnected power system like that in the Pacific Northwest the integration and coordination of power transmission is as important in ultimate price to the consumer as the cost of the electricity at the dam. The "wheeling" arrangement was a failure in this coordination.

Mr. Davidson gave a specific example of how the system worked until Mr. McKay reversed it. To promote utilization of rich phosphate deposits in Utah, Wyoming, and Montana, he said, the United States Bureau of Reclamation proposed a transmission line to bring in Bonneville power. The Idaho Power Co. applied for the right to build the line, over public lands. The Interior Department offered to let them build in return for a wheeling arrangement with safeguards for the company.

The Idaho Power Co. refused the arrangement, Mr. Davidson said, although the Supreme Court upheld a similar provision in 1952.

Mr. McKay took over the Interior Department in 1953. According to Mr. Davidson, on August 11, 1954, the wheeling regulation was quietly dropped as an administration policy.

Witnesses Davidson and Seymour charged that this constituted a blow to Federal operation.

RIGHTS RELINQUISHED

"It relinquishes valuable rights of the Government; it makes the sale of Government power more difficult and costly; it tends to permit the monopolization of Government power by limited groups; and it is definitely contrary to the public interest," Mr. Davidson charged.

Messrs. Seymour and Davidson said that this is only one of a variety of administrative reversals made by Mr. McKay designed to undermine the express language of Congress, which grants preference to public bodies and cooperatives to purchase the power generated at Government dams.

It is this latter angle that subsequent testimony will cover.

The preference clause witnesses said, was written into the Reclamation Act as far back as 1906. In the act setting up the Bonneville Dam, Congress wrote authority "to provide, construct, operate, maintain, and improve such electric transmission lines * * * as he finds necessary."

Speeches and statements of Mr. McKay and subordinates were put in the record implying opposition to Federal transmission lines and the preference clause to public agencies.

Fred G. Aandahl, Assistant Secretary under Mr. McKay, was quoted as saying:

"There are a number of things that can be modified administratively. If we just break away from that concept of a Federal power wholesale monopoly, tied in to local public power * * * we can correct a good many of the evil effects that the Federal power system has brought to our communities during the past year."

The Partnership Program—Eisenhower Reverses Public Power Policy

EXTENSION OF REMARKS
OF

HON. DON MAGNUSON
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks, I should like to place in the RECORD the first of two articles appearing in the Evening Star which discuss the administration's power policy, or lack thereof.

Written in concise, understandable language, this article by Joseph A. Fox explains why it is that under Mr. Eisenhower, "not a single new Federal hydroelectric project has been started."

The first article appeared in the May 11 issue:

THE PARTNERSHIP PROGRAM—EISENHOWER REVERSES PUBLIC-POWER POLICY

(By Joseph A. Fox)

President Truman, speaking at the Hungry Horse power-project dedication in Montana in the late days of the 1952 campaign, showed a flash of grim humor.

With a wave of his hand, he told the audience to take a good look at the dam harnessing the waters of the Flathead.

"It's the last one you'll see for a long time, if the Republicans win next month," he said.

The jibe was prophetic.

The multi-billion-dollar public-power boom of the Roosevelt-Truman era represented by Hungry Horse, has been smothered in the 27 months of the Eisenhower administration.

As a candidate preaching get-the-Government-out-of-business doctrine, Mr. Eisenhower promised that development of natural resources—a euphemism for hydroelectric-power projects—would be a partnership arrangement between the Federal Government on the one hand and private enterprise and local public groups on the other.

The Government would no longer do it all, he said.

That promise became the basis for the Eisenhower administration's policy. How closely the policy has been followed is disclosed by the fact that since Mr. Eisenhower took office, not a single new Federal hydroelectric project has been started.

The private-power industry has made no attempt to conceal the fact that it is happy over this turn of events. It feels that the progress of a Federal juggernaut, which now handles about 20 percent of the Nation's power business, has been stopped.

While the Government's main concern was with hydroelectric-dam projects, which transform the energy of falling water into electricity, there was also Federal expansion into generation by so-called steam plants, which burn coal, oil, and other fuel. Since nonhydro methods of making power now provide all but about one-seventh of all electricity—Federal and private—sold, the industry had cause to fear further Federal expansion beyond the hydro field.

Since the partnership policy went into effect, the Federal Power Commission has been swamped with license applications for dam sites from private companies. The companies, with sales already hitting $7 billion a year, are showing no hesitancy in moving to take on projects of any size if the power involved promises to be a paying proposition.

The net result of all this is the buildup of a red-hot political issue for 1956, particularly in the Northwest. While Democrats have gone along with some of the Eisenhower domestic policies, there has been no meeting of minds on power. The debate on this issue that got into the congressional elections last year was only a pale forerunner of what is to come.

The Republicans as a whole—there are a few exceptions—tag public power with such descriptions as socialism and tax-supported monopoly. Generally speaking, public power rates are about half of those charged by private combines. Foes insist this is only made possible because of lower taxes enjoyed by public power projects, largely, exemption from Federal income tax.

Democrats say the growth of the public power concept was progress, which now has been stalled.

Franklin D. Roosevelt backed the Government into the power business in a big way in the early 1930's by soft-pedaling hydroelectric development as a sort of casual by-product of depression era pump-priming, reclamation, irrigation, and flood control work.

As of today, the Government has the better part of an $11.5 billion investment tied up in power producing facilities at a hundred sites in Bureau of Reclamation, Army Engineers, and Tennessee Valley developments. The Tennessee Valley and Pacific-Northwest States are the big areas of operation. But lesser projects dot the map throughout the country. In the Tennessee Valley, the demand for Government power has outrun the water supply, and steam plants have been added to supplement the dams.

Public agencies are the preference customers of these outlets, with much of the current going to farm cooperatives.

Here is the scoreboard since the Republicans took over:

1. Work on projects underway has been continued, but no new projects have been initiated.

2. Private utilities with administration approval, are reaching for sites the Democrats had planned for Federal development.

3. Farm cooperatives complain bitterly that administration policies are curtailing their supply of Government power and forcing them to depend more on private utilities—at higher rates.

4. President Eisenhower has recommended to Congress but two plans for regional all-Federal waterway development. Those are Frying Pan-Arkansas and the upper Colorado River. Both are of questionable value as power assets.

5. The President has made it clear that his idea of partnership is to let private industry or State or local public agencies take over the revenue-producing power business when multipurpose joint projects are developed. This leaves the Government with the flood control, navigation, and other nonreimbursable phases of development for which the Treasury foots the bill. If power only is involved in a development, the Government steps aside to let private capital do the job.

HAPPY DAYS FOR INDUSTRY

In short, private power finally has found the silver lining in the clouds that hung over the industry through New Deal and Fair Deal. And it is planning new expenditures in the billions.

The administration expresses complete satisfaction with the situation.

Private initiative has gotten a break, it is argued, and the Government has saved money.

The partnership program, say administration officials, has avoided huge Federal outlays, which benefits the taxpayers.

The public power people retort that the whole thing adds up to a sellout to the interests. They say, too, that intrusion of private projects into Government setups means an end to integrated development of the Nation's water resources.

When President Eisenhower took over on January 20, 1953, the proposed budget which President Truman had left behind for the upcoming fiscal year was scrapped and with it went provision for funds for expansion in the two great public power domains—Tennessee Valley and Columbia Basin.

The TVA had been slated to get another steam plant at Fulton Landing, Tenn., to meet increased Atomic Energy Commission demands. Instead, the administration negotiated the controversial Dixon-Yates contract for TVA power, which now is in the courts.

Hells Canyon, in the middle stretch of the Snake River between Oregon and Idaho was the site of a proposed key development for Columbia Basin. The Government stepped aside there, however, and paved the way for the Idaho Power Co. to come in if clearance can be obtained from the Federal Power Commission.

Projects already started by the Democrats ran into reduced appropriations and a consequent slowdown, critics assert, but there were no stoppages.

A few months later, a new statement on policy from the Interior Department, the principal marketing agency for Federal power, brought more bad news to the public power forces.

Essentially, it disclosed a complete reversal of the philosophy of the previous 20 years, setting out bluntly that "it is recognized that the primary responsibility for supplying the power needs of an area rests with the people locally."

In the future, it was made clear, the Government, instead of going all out for power development, would be concerned primarily with reclamation and navigation needs in setting up water resources projects, and think secondly of the power production angle.

The Department also underscored its intention of confining construction of transmission lines between power dams and delivery points to those cases where private industry would not provide such facilities. This was in accord with a principle laid down by Congress a few years previously which rural cooperatives fought because it boosted their power costs. With direct lines to dams, Government customers naturally pay cheaper rates than they would if they had to pay a delivery charge to a middleman.

The new policy directive also served notice that the Interior Department would take another look at Federal rate structures to be sure they protected taxpayers' interests and would provide sufficient revenue to amortize project costs within the standard 50-year liquidation period.

This carried a step further an earlier move by the Budget Bureau to bring Government power rates more in line with those of private concerns by setting up a new yardstick for the allocation of construction costs against the power projects in multi-purpose developments.

HOW IT WORKS

Construction costs figure in the rate base. The larger the construction costs charged against power, the higher the rate.

Public-power foes always have insisted that the cost allocation on Federal power projects has been underestimated, and rates consequently held down because construction charges properly assessible against generating plants have been passed on to flood control, navigation, or other project features.

The new policy did continue a requirement that utilities pass on to consumers any savings made possible by the purchase of Government power. Controls, however, were dropped over the resale rates charged by public agencies. It was felt these were unnecessary.

All these and other changes wrote finish to the Roosevelt-Truman Federal power boom.

Fishers Island Sound

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. DODD. Mr. Speaker, with further reference to the bill which I have introduced calling for a full investigation of the problem of protecting the shores of Fishers Island Sound from storm and hurricane tidal floods, H. R. 6093, I wish to bring to the attention of the House today some additional information.

If I were to predict that during the next Atlantic hurricane season millions of dollars in personal property and many entire industries now located on Connecticut shores will be wiped out, I believe that this body would institute some sort of emergency powers to get action in time to prevent such a catastrophe.

Well, after personally inspecting the Fishers Island Sound area lost weekend I do so predict—if last year's violence is repeated. The Stonington area, for example, where one of my Hartford constituent's plant is located, will suffer damage not alone from the extreme violence of a hurricane but even more likely from the lesser furies of Atlantic storms which now sweep in from the east and southeast with increasing regularity.

A native son of Stonington and president of the Stonington Boat Works, Inc., Mr. Henry R. Palmer, Jr., has proposed what appears to be the best defense at the least expense for this extremely vulnerable area. His plan, which suggests a series of breakwters extending on a broken line, following the reefs, from Watch Hill Point, R. I., to the east point of Fishers Island, N. Y., promises protection for the greatest number of people and their properties. I have yet to see a so-called coastal erosion plan by a single construction project which would protect such an extensive area as these shores of Fishers Island Sound in Rhode Island, New York, and Connecticut.

The proposed Palmer breakwaters would restore that line of reefs from Watch Hill Point to East Point, Fishers Island, to its former protective status.

Since those reefs have been flattened, in recent years, and only since then, has Stonington Harbor lost its value as a harbor of refuge. In a strong easterly storm there is no harbor of refuge now between New London, Conn., and Point Judith, R. I. A comparison of older charts with the new will show that Stonington Harbor, for example, has lost its usefulness as such in almost direct ratio with the gradual lowering of those reef barriers.

Consequently, heavy seas now sweep into the Stonington area directly from the Atlantic Ocean and the wave action continues on down the Connecticut shoreline in a westerly direction. This, I say, happens during easterly storms, which occur with increasing regularity. Water damage along this extensive Connecticut coastline is still greater during the hurricane season.

Connecticut, like many other States, is anxiously trying to attract new industry. But many long-established industries along this Connecticut coastline have said they would leave if they must suffer the severe water damage of 1938, of 1944, of 1954; resulting from the cumulative power of Atlantic wave action; if they must be continually threatened by storm-driven seas which now enter Fishers Island Sound over the once-protective reef line between Watch Hill and Fishers Island. Even the Stonington fishing fleet, Connecticut's largest, will have to seek refuge elsewhere unless Federal action is forthcoming soon.

I have therefore introduced a bill asking for authority to investigate and correct this situation by the construction of breakwaters to protect the entire Fishers Island Sound area. Since personally inspecting the reef line between Watch Hill, R. I., and Fishers Island, N. Y., last Friday, I am more convinced than ever that this is our first line of defense. I ask that the provisions of this bill be given immediate consideration by the Secretary of the Army and that he instruct the Chief of Engineers to expedite the necessary survey and immediately to take appropriate action in the most expeditious manner possible toward the construction of those breakwaters.

I am well aware of the hazards of hurricane violence which threaten the entire Atlantic seaboard. However, while I respect the needs of others, I would remind this body that to my knowledge no other such extensive and heavily populated and highly assessed area so threatened can be so readily protected by a single project of breakwaters construction. The need is apparent to those who would study and compare the coastal charts, past and present. It is a need which can be fulfilled, and easily so, whenever authorized by Congress.

I ask that this project be given serious consideration, that it be given the same degree of priority in any overall Atlantic seaboard coastal erosion legislation that the area in question was given by the hurricanes of 1938, of 1944, of 1954.

Shorter Route to the Orient

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. PELLY. Mr. Speaker, a little news item in the Seattle Post-Intelligencer brings to mind the ancient Chinese saying "A picture is worth 10,000 words." On May 10, 1955, this newspaper described 10 American soldiers with their wives and children at the Seattle-Tacoma International Airport after disembarking from a regularly scheduled commercial flight from the Far East.

This article depicted the fathers wrestling with paperwork in connection with processing by officials of the Seattle port of embarkation, while wives, mothers, and children drank milk, munched cookies, or watched TV. Significant was this statement:

> The group was the first of 357 men and dependents who will make the trip by air during May. The armed services are making use of regularly scheduled commercial flights.

The point is this, and this picture does not require 10,000 words. Whoever is responsible for this travel routing should be commended. Someone has recognized the advantage of the shorter circle route to the Orient, which, according to the Library of Congress, is as follows:

	Miles
By sea:	
From San Francisco to Yokohama (via Honolulu): Actual steaming time (15 days 18 hours and 30 minutes)	5,488
Distance taking great circle route: Actual steaming time (13 days and 45 minutes)	4,536
Difference in miles, 952; difference in time, 2 days 17 hours and 45 minutes.	
By air:	
From Seattle to Tokyo (via Anchorage and Cold Bay): Flying time (10 hours 45 minutes)	4,806
From San Francisco to Tokyo (via Honolulu and Wake Island) (Pan American route): Flying time (17 hours and 15 minutes)	6,256
Difference in miles, 1,450; difference in time, 6 hours and 30 minutes.	

By sea or by air, whether it is personal property, postal mail, or perishable food, there is only one answer—the saving in distance is a saving of time and dollars. All oriental service should be concentrated through the Port of Seattle, even though the Chief Examiner of the Federal Maritime Board classified Seattle as "economically tributary" to San Francisco.

Personal Explanation

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. WESTLAND. Mr. Speaker, for the past 3 days I have been pretty much flat on my back with a virus that bit me rather severely, and I have been unable to attend the sessions of the House. From the look of the RECORD, it seems as though there have been more rollcalls, quorum calls, and votes than might have occurred normally in the period of a couple of weeks. Since I had no control over the timing when those bugs were going to bite, I was unable to attend the sessions and consequently have no recorded votes on the bills which came up on the floor of the House.

However, had I been present I would have voted for the conference report on the postal pay raise. Although I firmly believe the President will veto the present bill, I nevertheless feel the bill should get before the President for his immediate action so it can become law or be vetoed. Then the Congress can quit playing politics with the purse strings of the postal and civil-service employees of this country and produce legislation

which will put money into their pockets now.

I also would have voted against recommittal of the Hawaii-Alaska statehood bill, for I believe both Territories are ready for statehood. According to the RECORD, there was a lot of talk about Communist influence and Harry Bridges in the Hawaiian Islands and apparently for that reason, a lot of the Members voted against statehood for Hawaii and Alaska. I thought the remarks of Congressman RUSSELL MACK, of Washington, were very pertinent when he stated:

Why should we punish Hawaii by depriving her of statehood for something that we ourselves have not done?

In other words, the United States had been unable to get rid of Harry Bridges during a period of a good many years, yet some would deprive Hawaii of statehood for inability to get rid of him in a comparatively short time. This reasoning seems entirely illogical to me.

Coming from a district which is close to Alaska, I am particularly concerned with statehood for that Territory. I believe the people of Alaska have demonstrated their ability to govern themselves and to become a member of the United States. I therefore would have voted in favor of statehood for both of these Territories.

Postal Pay Bill

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks I include the following article from the St. Louis Globe-Democrat of May 11, 1955:

POSTAL PAY BILL

Uncle Sam's 500,000 postal workers not only carry the mail. In an election, their votes may carry the precinct. That fact had great weight with the House of Representatives this week when it voted to hike the wages of postal workers by 8.8 percent.

Postmaster General Summerfield predicted that the White House would veto any increase larger than 7.7 percent. But even that threat marked a retreat for the administration. Earlier, its leaders had tried to hold the line at a 6.5 percent pay hike.

When the chips were down, even the GOP Congressmen deserted the Postmaster General. Most of them joined the solid Democratic bloc to approve the higher figure by a landslide vote. Only 66 Congressmen backed up the administration. All of them were Republicans.

The vote in the House, 328 to 66, was big enough to override a veto, if the White House invokes one. Next week the Senate is expected to duplicate the House's stand.

The chief argument against the pay boost was that the Post Office Department is in the red, and can't afford that big a wage increase. The same argument would apply to all branches of the Federal Government, since the entire national budget is running a deficit.

But that didn't stop Congress from voting its members a 50 percent wage hike this month, with the consent of the White House.

Justice, as well as politics, is on the side of the post office employee.

H. R. 4560

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement presented to the House Interstate and Foreign Commerce Committee by the Honorable William G. Stratton, Governor of Illinois. Governor Stratton has stated clearly and forcefully the interest of the people of Illinois in the passage of H. R. 4560, which would amend the Natural Gas Act to terminate the restrictions imposed as a result of the decision of the Supreme Court in the Phillips Petroleum case. I believe that his remarks merit the thoughtful attention of the Members of this body.

The statement follows:

Mr. Chairman and gentlemen of the committee, I am happy to have an opportunity to appear before your committee. The people of my State have an interest in the proposed amendment to the Natural Gas Act equal to those of any other State. First of all, the State of Illinois is itself a producer of petroleum and natural gas. In the second place, Illinois is a large gas consuming State and a large importer of natural gas by interstate pipeline. Thirdly, as chairman of the Interstate Oil Compact Commission I am deeply concerned that the Natural Gas Act as currently interpreted will, if not amended, come into direct conflict with the successful conservation programs set up and administered by our State governments.

As a producer of gas, the State of Illinois is overshadowed by a great many of its sister States. In current production of gas, Illinois ranks 16th among the gas producing States, and in gas reserves it ranks 19th. I feel that the problems of the gas producing States can be better discussed by Governor Kennon of Louisiana. You have had the benefit of a discussion of conservation of this vital natural resources by Gen. Ernest O. Thompson, the dean of conservation under State regulation.

It is Illinois' role as a large consumer of gas that will be of chief interest to your gentlemen. During 1953, the latest year for which Bureau of Mines figures are available, Illinois' oil and gas wells had a total net production of a little less than 33½ billion cubic feet of natural gas. Of this amount, some 24 billion cubic feet did not leave the producing fields. Most of this gas was used to generate power for pumping oil wells, to provide the heat necessary for the operation of oil and water separators on the producing leases, and reinjection into oil producing formations for pressure maintenance purposes. Our marketable gas production came to a little over 9¼ billion cubic feet, which brought the Illinois producer at the wellhead an average price of 16.8 cents per thousand cubic feet.

In the same year, 1953 the State of Illinois imported from States to the southwest of us, chiefly Texas and Kansas, a total of more than 363 billion cubic feet of natural gas. The pipeline companies importing this gas to our State paid in the fields where they purchased it an average of 7.7 cents per thousand cubic feet at the wellhead—less than half the amount realized by producers of gas in our own State. In other words, we imported for our own use in Illinois during 1953 more than 40 times the volume of gas we produced ourselves, and the importing companies paid the southwestern producers for this gas less than half the amount realized by our own producers in the State of Illinois. These facts clearly evidence that economies enter into the price received at the wellhead, including cost of transportation over long distances to the principal consuming areas.

These figures give some idea of the magnitude of the job that the Illinois gas utilities, and the gas pipeline companies which supply them, are doing to provide the people of our State with a large volume of natural gas. They have been public service companies in the full sense of the word.

We in Illinois early enjoyed the benefits of natural gas delivered by long-distance high-pressure pipelines. The Natural Gas Pipeline Co. of America, a subsidiary of the Peoples Gas Light & Coke Co of Chicago, in 1931 took advantage of high-pressure transmission pipe (then only recently perfected) to build a long-distance interstate pipeline from the gas-producing area of the Texas Panhandle Here long-term contracts for the supply of gas could be secured Here were enormous undeveloped gas reserves in an area far removed from the populous centers of consumption Panhandle gas was literally all dressed up with no place to go, for until the advent of the high-pressure transmission line, gas could not be transported economically over long distances. The high-pressure pipeline, by compressing gas to a fraction of its volume, made possible unit transportation costs low enough to allow natural gas to become a competitive fuel in the Chicago market

Since the end of the war, the Peoples Gas Light & Coke Co. has begun supplying gas home heat to 140,000 Chicago households that did not have it previously. The Northern Illinois Natural Gas Co., which serves 236 communities in the area adjoining Chicago, was heating 45,000 homes in 1945; today this number has risen to 176,000. Peoples' has a waiting list of 115,000 homes who want gas heat as soon as it can be supplied to them; Northern Illinois Natural Gas Co. has a like waiting list of 113,000 householders, a total in the Chicago area alone of some 228,000 families who want gas heat. Our Illinois Commerce Commission, the regulatory body charged with overseeing utility rates, estimates that in our State at least 300,000 families, or at our family quotient of 3.7, a number of people in excess of one million, more than the total population of several States, are waiting for gas heat.

Some of our utilities now have organized the Natural Gas Storage Co. of Illinois, to develop a large underground storage reservoir at Herscher, 55 miles south of Chicago. Here gas in excess of demand in summer months is stored in underground cavities. Eventually this Herscher storage project will be capable of storing many hundreds of millions of cubic feet of natural gas during the summer months. In winter, the gas will be withdrawn during the periods of peak demand.

But the problem of chief concern today to our public utility gas companies, and to me as governor of one of the largest gas-consuming States, is the finding of additional reserves of gas as a future supply for the pipelines that are already built—and to make possible the construction of additional pipeline facilities so that Illinois may have natural gas for all who want it. The decision of the Supreme Court in the Phillips Case last June, and the subsequent restrictive orders which the Federal Power Commission has issued, have endangered the acquisition of additional gas supplies.

The Natural Gas Pipeline Co. has proposed a 350-mile, large-diameter pipeline, costing $32,000,000 to run from its southern terminus in the Texas Panhandle into Oklahoma, to supplement its present facilities. This company has been conducting negotiations for large-scale additional purchases of new gas reserves. The restrictive regulations promulgated by the F. P. C., under the Phillips decision, has materially hampered, and in some cases terminated negotiations for addi-

tional supplies of natural gas, between the pipeline company and producers.

The Texas-Illinois Natural Gas Pipeline Co., which also transports large quantities of gas into our area, has encountered similar experiences. It has endeavored to obtain large new commitments from producers in these fields, but these commitments have not been forthcoming because of the uncertain position in which the natural gas producer finds himself.

I, for one, cannot find it in my heart to blame the producers with whom they are negotiating. The producers are, under current regulations, being asked to sign long-term contracts in the certain knowledge that the terms and prices fixed in these contracts can be changed or abrogated at will by FPC order, making it impossible for either party to fulfill the contractual obligations agreed upon. Such a situation is not in accord with the principles of law or the fundamentals of common sense.

Mr. James F. Oates, chairman of the Peoples Gas System, which owns a controlling interest in both these pipeline companies, expressed the same point of view several weeks ago in a speech he made in Boston: "The Peoples Gas System is not in conflict with the basic attitude of the producers as to amendment of the Natural Gas Act. Fundamentally, we agree that in the long run the public will be best served by keeping the production phase of the business free of Federal regulation. We believe, as a matter of economic principle, that the production of such natural resources as natural gas, in which great business risk is inherent, should be free of regulation particularly since competition is fully operative." And in its annual report for 1954 the same company said further, "As a large-scale purchaser of natural gas from independent producers, the Peoples Gas System wishes to stand by the prices specified in its agreements now or hereafter in effect. It expects those with whom it bargains to do the same."

The Illinois consumer is already protected against overcharges by the rate-regulating authority of the Illinois Commerce Commission. Far from experiencing a sky rocketing increase in rates, the people of my State have enjoyed practically stable gas rates in a time when the cost of nearly everything else has climbed steeply upwards. These rates were not artificially low prices promulgated by regulatory fiat. Our regulatory commission has an obligation to see that the public utility serving the customer makes its expenses and a reasonable percentage of profit. When rates are too low to provide this amount, the commission is empowered to order an increase. When rates provide a yield in excess of the amount which the public utility company is allowed to make, the commission can and does order a rebate to the utility company's customers.

Our continuing low gas rates have, to my mind, been proof of increased operating efficiencies on the part of the companies concerned. As natural gas consumption mounted, and increased the amounts of gas moving through the pipelines, lowered unit costs resulted. The increasing use of high thermal content natural gas in the facilities of the public utility distributing companies allowed them to supply a greatly enlarged volume of business without appreciable expansion of their mains and other facilities. This kind of increased efficiency, rather than arbitrary rate-making, has been responsible for keeping at a low level the price of gas delivered to Illinois householders. In this regard, the cost of living increased 54 percent from 1945 to the end of 1954. In contrast the averages of typical monthly gas bills for five important Illinois cities have changed as follows: Monthly use 10 therms, a decrease of 12 percent; monthly use 25 therms, a decrease of 12 percent; normal monthly space heating use, an increase of 10 percent.

Since 1938, when the Natural Gas Act was enacted for the purpose of regulating the interstate gas transmission lines, the public utility companies have also been protected against overcharges by the pipeline companies who supply them. The Federal Power Commission, which was appointed as the regulatory body under the Natural Gas Act, allows rate increases in approximately the same manner as the commission which regulates public utility rates in my State. The rates that a pipeline company can charge are based upon its operating expenses plus a return on invested capital.

H. R. 4560, which is currently under consideration by this committee, would amend the Natural Gas Act so as to exclude from Federal jurisdiction the local business of producing, gathering, processing, treating, compressing, and delivering gas in or near the field where produced, and so as to eliminate Federal price fixing of this competitively produced product when sold by the producer in or near the field. While the bill will permit interstate pipelines to expense their gas and the gas of their affiliates at the reasonable market field price, yet the bill assures the consume that the pipeline company will not pay or be allowed to expens more than a reasonable market field price for the gas it purchases or produces. Under the bill a pipeline company cannot afford to pay more than a reasonable market field price for gas it purchases because when rate increases or applications for certificates are considered by the Commission, it must consider whether the price paid under new or renegotiated contracts which form the basis of such increase or certificate application are the reasonable market field price for the gas.

The 300,000 families in my State who want gas for heating, and who do not now have it, are under no illusions that additional Government regulation of the producer will give them the gas they need. Quite the contrary. The additional reserves of gas which we need to assure future supplies to our State and make possible increases in our present supply will not be committed by producers signing pig-in-a-poke contracts whose terms the FPC may instruct the pipeline companies to ignore. Nor, if the producing business is to be regulated as if it were a public utility, do we expect the people now in the business of wildcatting for oil and gas to continue active development—if all they can expect, when successful, is a utility type of return on their investment.

There are few businesses in the United States as highly competitive and as heavily laden with risk as exploring for gas and oil. I cannot see how anyone can contend that exploration for and production of gas has any of the characteristics of a utility-type operation. The recent hearings by the Federal Power Commission, in docket R–142, demonstrated, if nothing else, the complete impossibility of attempting utility-style regulation of producers' prices with anything approaching fairness.

At the Interstate Oil Compact Commission meeting held at Omaha, Nebr., September 9–10, 1954, the commission unanimously adopted a resolution from which I now desire to quote, in part, as follows:

"The exercise by the Federal Power Commission of the authority imposed upon it by the decision of the United States Supreme Court aforesaid and Order 174–A will conflict with, impede, burden, and be detrimental to the enforcement by the States and their agencies of regulations for the conservation of oil and gas and necessarily result in decreased supplies of these essential products and in higher prices to the consumer to the great detriment of the Nation, the public, and the consumer, as well as the producer."

As chairman of the commission, I urge that the remedial legislation under consideration by this committee is in accordance with and will meet the fundamental objectives of the resolution and petition of the compact as set forth in its full resolution and petition.

Further, as Governor of the State of Illinois and representative of one of the largest gas-consuming populations of the Nation, it is my belief that these remedial amendments will result in the future discovery, and availability at reasonable prices, of new large reserves of natural gas for the use, benefit, and convenience of all our people. I believe that, for the reasons I have already outlined, the gas-consuming public of my own and other States is already adequately protected against unreasonably high prices, and will be still further safeguarded by the new protective measures contained in H. R. 4560. I therefore earnestly recommend that your committee report favorably on such resolution.

The Influence of Foreign Trade

EXTENSION OF REMARKS

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I am pleased to insert in the RECORD for the edification of Congress an editorial which appeared in the Bakersfield Californian under date of February 19, 1955. The article presents some pertinent facts with respect to foreign trade.

THE INFLUENCE OF FOREIGN TRADE

How deeply the congressional debates on foreign trade and the tariff affect the livelihood and welfare of persons residing in the interior States is well demonstrated in a series of studies conducted by major steamship companies and the results may be considered important to all inland cities as well as those who are located on seacoasts.

The development of a healthy merchant marine by the United States has long been termed a consideration of importance, not only for port cities but for communities whose products are transported to foreign countries on the sealanes. The importance of foreign trade has been found to be widespread.

The studies have so far concerned the States of Ohio, Indiana, Michigan, Illinois, Wisconsin, and Missouri. The findings have implications that affect nearly every other State in the Nation.

The recent summary published by the committee conducting the surveys includes the following points:

The jobs of both skilled and nonskilled workers depend upon imports and exports by ship.

The prices a farmer gets for his crops are sensitive to international trade volumes.

The sales revenue of an industrialist is directly reflected in overseas business, since raw material supplies and prices are affected by imports aboard oceangoing vessels.

The extent of shipping's role in agriculture was best demonstrated by the fact that 40 million acres, or 62,500 square miles of farmland, were required to grow American farm produce exported by ship in 1953.

In the study that concerned itself with the States of Illinois, Wisconsin, and Mis-

souri, the results showed that American merchant ships enabled corn to become the leading export crop for this area, with an annual revenue to farmers from this crop set at $50 million, and every fourth worker in the tractor manufacturing plants in these 3 States owed his job to foreign trade, with $215 million worth of farm machinery being shipped overseas from this area in 1952.

That the trade is two way in its benefits is shown in the instance of Brazil, which shipped $670 million worth of coffee to the United States and spent $35 million for the goods produced in the 3 States covered by the survey. Similar benefits are felt in other areas as well.

California, with its huge cotton crop forming the chief export commodity, has a clear stake in the development of a healthy foreign trade, especially since manufacturing and other industries have taken root in this State.

A strong merchant marine would serve the Nation well both in peace and in war and this should be considered a prime project, now that other countries are busy increasing their activity in this field.

Atom Merchant Ship Should Be Carefully Considered

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Worth a Second Thought," which appeared in the May 8, 1955, issue of the St. Louis Post-Dispatch:

WORTH A SECOND THOUGHT

We are glad that Congress is examining with a critical eye President Eisenhower's plan for an atomic-powered "peace ship." Representative STERLING COLE, New York Republican, thinks the ship would cost too much for a publicity stunt and do little to promote peaceful uses of atomic energy. Representative MELVIN PRICE, of East St. Louis, Democrat, doubts the practicality of the idea.

Both Congressmen, of course, give the President full credit for the best of motives. But it is well to examine such proposals with care. Sometimes what seems at first glance to be a promising stroke in public relations turns out to be quite otherwise.

A merchant ship run by a nuclear reactor would indeed be a dramatic demonstration of atomic energy harnessed to peaceful uses. But as the ship sailed its smokeless course from port to port one conspicuous thing about it would be the American flag flying from the stern.

Naturally, that would not bother Americans. The question is how it would affect the people in foreign lands whom the ship was intended to impress. There is just a chance that they would resent, rather than admire, such a forceful reminder of American wealth, power, and technology. They might put the peace ship in the category of tasteless boasts about our advanced plumbing, high-powered cars and other evidences of a standard of living which other nations have not yet attained.

In these matters there can be no absolute certainty. But before Congress votes $30 million to build the peace ship and $500,000 a year to run it, perhaps some representative foreigners should quietly be asked what they think of the idea as a way of winning friends.

An Analysis of the New Trends in the Russian Propaganda Program

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. FEIGHAN. Mr. Speaker, on May 1 I had the privilege to appear on TV station WXEL, Cleveland, on the program, Tell Your Congressman. On this occasion I had as my guest, Dr. Edward M. O'Connor, a longtime student of communism who has served in numerous official capacities here in Washington. Because of the warm response I have had from the people of Cleveland to this program, under unanimous consent, I include the full transcript of that program in the RECORD:

Mr. FEIGHAN. The big news in Washington this week had to do with the question of peace or war—something which is, of course, of keen interest to all Americans.

President Eisenhower sent a message to Congress including recommendations relative to a mutual security program. At the same time, we here in Washington watched with keen interest the Bandung Conference. Then there was the proposal made by Chou En-lai, the Russian stooge in Red China, suggesting the possibility of a peaceful settlement in the Far East. These events were topped by the Russian maneuver on the Austrian peace treaty leading to their independence. Because these were the big events in Washington this week, I have invited a well known and recognized authority on international affairs to be with me today. I would like to introduce Dr. Edward M. O'Connor, consultant to the United States Government.

Dr. O'CONNOR. Congressman, it is a pleasure for me to appear on this program with you. I have followed your work and your keen analysis on these vital problems which affect the security of the American people. You have my congratulations for the principled and courageous stand you have always taken on the fundamental issues.

As you have stated, President Eisenhower has recommended $3½ billion for the mutual-security program in next fiscal year. How do you feel about this proposal?

Mr. FEIGHAN. Well, I think I should point out that of the total amount recommended by the President, $1¾ billion go for military assistance, and the balance for economic development and technical assistance to the free nations of the world—particularly for those nations which recently acquired their national independence in south and southeast Asia.

Dr. O'CONNOR. What do you feel is the best way to evaluate the need for such a program?

Mr. FEIGHAN. Events of the past week indicate the need for a practical and well-administered mutual-security program. For example, the conference of Asian and African nations held at Bandung, Indonesia, last week, very clearly pointed out that the Chinese Reds are bent on bringing all Asia and Africa under Russian slavery. Chou En-lai, a notorious Moscow stooge, tried desperately to turn all the nations of Asia and Africa against us and to brand us as aggressors because we had the moral courage to stand up for the human rights of the Koreans, the free Chinese located on Formosa, as well as the people and nations of Asia.

Dr. O'CONNOR. Mr. FEIGHAN, I followed very closely your analysis of the issues involved in the Bandung conference long before it opened, as well as your evaluation of the conference before it ended. In particular, I feel that your estimate made public a week ago Thursday, to the effect that the newly independent nations of south Asia would not be taken in by the clever propaganda of the Communists, stands as a real tribute to your study and practical knowledge of the methods, tactics, and objectives of the international Communist conspiracy.

Mr. FEIGHAN. I appreciate your saying that because I feel that unless we carefully study the enemy, we will never be able to work out plans or programs calculated to bring about his defeat and at the same time prevent war, if possible. Months ago, in a discussion on the subject of communism and its techniques and objectives, I stated that unless we undertake a positive and determined stand against Communist aggression, World War 3 would certainly result. Altogether too many people then took the position that if we stood up for what was right we would offend the Russians and they would consequently start a war. Fortunately, very few today take that point of view and more and more Americans are demanding that we undertake a positive political action program against hte criminal conspiracy of communism.

Dr. O'CONNOR. I presume, Congressman, that you also have reference to the so-called experts who claim that there are only two courses open to the free world—either we accept peaceful coexistence with the Communists or engage in preventive war.

Mr. FEIGHAN. Yes; I do. I oppose both peaceful coexistence and preventive war because as I have so often said neither one serves the interests of the American people. Peaceful coexistence is an old-fashioned Russian bear trap, which is only another phrase for surrender. The phrase "preventive war," in my opinion, was cooked up in the Kremlin in order to prevent red-blooded Americans from standing up for what is right and defending our interests when occasion demands.

Dr. O'CONNOR. You and I would certainly agree that the Communists are just as clever as they are evil. For example, the maneuver of Chou En-lai, over the past weekend in which he expressed a desire to negotiate with the United States in order to prevent war in Asia. That is a maneuver we had better take a couple of good looks at before we begin to move.

Mr. FEIGHAN. To understand the proposal made by Chou En-lai to negotiate with us we first have to remember that his timetable for the conquest of all of Asia and Africa was upset at the Bandung Conference. At that conference the intelligent leaders of the newly independent nations of Asia identified communism as a new type of Russian colonialism, more despotic and tyrannical than any experienced by the people of Asia in the past. These enlightened leaders served notice on Moscow and all others who are attempting to engage in any form of imperialism or colonialism that they are prepared to fight for the sovereign rights of their nations. This display of enlightened statesmanship forced Chou En-lai to make what appeared to be a sensational proposal in order to get his name in the headlines. This is what caused him to propose that the United States and Communist China could settle their differences by peaceful negotiation.

Dr. O'CONNOR. Congressman, do you feel that in connection with the so-called proposal by Chou En-lai that some people in Washington spoke out too soon as to whether we should or should not sit down at a conference with Communist China?

Mr. FEIGHAN. I most certainly do. I feel some people here in Washington spoke out before they knew the real contents of the Communists' proposal. To put it bluntly, I think they grabbed the Communist bait, which, of course, was dressed up in pretty ribbons, before they took a real look at the bait itself. It is now obvious that the proposal made by Chou En-lai is in no way

different from that which he has been demanding for a very long time. He now offers, as he has in the past, to sit down with us providing the free Chinese are excluded and at this conference we are to hand over to him the still free Chinese, so that he in turn can put them in Russian slave chains. We must avoid the well-laid Communist trap of surrender by cease-fire. We must never forget that when we entered into what we thought was a cease-fire in Korea, we opened the door to an all-out Communist war in Indochina.

Dr. O'CONNOR. Mr. FEIGHAN, I agree with you that Chou En-lai pulled a very clever stunt at Bandung, but it seems to me that our experience over the years should have taught our leaders to have all the facts at hand before giving a reaction to any proposal made by the Communists. I don't see how it would be possible for us from both the moral and legal point of view to attend any conference with Red China unless the free Chinese are sitting as coequals at the conference table.

Mr. FEIGHAN. Yes; we have made a treaty with free China, which has been ratified by the Senate, and should we sit down with the Russian stooge, Chou En-lai, we will, for all practical purposes, be abrogating that treaty. Also, I couldn't imagine us sitting down at a conference table at which we were going to give away some of the territory of the British or French or Italians without their representatives present. It is preposterous for anyone to propose that the United States give away the territory that belongs to another nation and that is exactly what Chou En-lai is proposing in his latest propaganda statement. To engage in such a conference has the effect of granting de facto recognition and therefore opening the door wide for admission of Red China into the councils of the U. N. I remain convinced that the American people oppose such foolhardy action.

Dr. O'CONNOR. Mr. FEIGHAN, all of us are very much concerned with the latest Communist maneuver on the peace treaty with Austria. Only last week, Chancellor Rabb was summoned to Moscow by the Kremlin leaders to discuss outstanding differences leading to such a treaty. How do you look upon this latest development?

Mr. FEIGHAN. In order to understand the Russian maneuver on the Austrian peace treaty, we have to recall to mind that for the past 9 years the United States has desperately sought to bring about the independence of Austria. The Russians have done everything imaginable in order to obstruct and to make impossible a real and decent treaty of peace with Austria. As you well know, we have had over 100 conferences with the Russians on this subject, none of which bore any fruit which is a good indication of Russian intentions with respect to Austria.

Dr. O'CONNOR. Yes, that's true, but do you think there are some special reasons why the Russians suddenly make what appears to be generous overtures to the Austrians and attempt to propagandize the whole world about their desire to give Austria its independence?

Mr. FEIGHAN. To me it is clear that the latest Russian propaganda maneuver on Austria is calculated to prevent the rearmament of Germany, to prevent the admission of a free Germany into the North Atlantic Treaty Organization and finally the destruction of the North Atlantic Treaty Organization which we have labored so hard to create as our common defense against the red aggressor. The Russians know that a Germany able to defend itself, a Germany granted its sovereignty and admitted into the great alliance of peace and freedom of the West, will immeasurably strengthen our chances for peace. What the Russians are trying to do by using Austria as a guinea pig, is to convince the German people that they can be free and united only if they will plead their cause in Moscow.

Dr. O'CONNOR. Congressman, in light of your practical analysis of this Russian maneuver, do you think that the Western leaders should sit down with the Russians on such a treaty when we know in fact that it is no treaty at all, but merely a propaganda weapon?

Mr. FEIGHAN. I believe that before we sit down either with our Allies or with the Russians, either the President or Secretary of State should, in a public statement, make it clear to the whole world just who has been seeking a treaty of peace and independence for Austria during these past 9 years. The record of events pertaining to the efforts of the United States should be brought out in the public light as well as the Russian obstructionism and Russian thievery of the natural resources of Austria. We should also warn in advance our Allies and our enemy that we will not be a party to any so-called treaty of peace which requires the Austrians to deny the principle of political and religious asylum which is so basic to our civilization.

Dr. O'CONNOR. Congressman, there has been a great deal of talk here in Washington about a clause in the Russian version of the treaty which in effect, would require the Austrians to turn back to the Russians all those freedom-loving people who have managed to escape into Austria from behind the Iron Curtain. I can't help but recall that we got burned very badly before in a deal very much like this, entered into at Yalta, which brought about the forced repatriation of approximately 4 million people to the slavery of communism.

Mr. FEIGHAN. That is the very thing we have got to avoid in the future. We will never find the key to peace and freedom unless we get across to all the people enslaved by communism that we in the West will never be a party to turning back those heroic souls who escape from Russian communism. As a special warning to the administration, I would like to point out that if we ever enter into a treaty which requires the Austrians in any way to deny the right of political and religious asylum, the Russians will have scored their greates propaganda victory since World War II. By this maneuver they will be able to convince all the resistance forces behind the Iron Curtain that their cause is hopeless and that the United States is a party to tyranny.

Dr. O'CONNOR. It seems to me that you have presented in our discussion the most convincing arguments I have yet heard on the need for programs and policies which best defend and advance the interest and security of the American people. I can well understand why so many people here at home as well as in other parts of the world have such great admiration for the foresight and leadership you have demonstrated for the cause of human freedom and individual liberty.

Mr. FEIGHAN. Ladies and gentlemen: The issues which we in Washington must resolve in order to preserve our American way of life and to keep the spark of liberty and freedom alive elsewhere in the world require all of us to work together. Thank you, Dr. O'Connor, for appearing with me on this program.

Who Reduced Taxes?

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. MACK of Washington. Mr. Speaker, the Santa Monica (Calif.) Evening Outlook recently published an interesting editorial on tax cuts and tax increases.

The editorial, which reveals the Democratic Party as the tax-increase party and the Republicans as the only party from which real tax reductions can be expected, follows:

ADLAI, HARRY MUFFED THIS

Some things Messrs. Truman and Stevenson didn't tell the public in their recent addresses, especially about taxes which affect every American's pocketbook:

During the 41-year history of the income-tax laws there have been 13 increases under Democratic administrations, and only 2 under the Republicans.

Of the 10 tax reductions, 9 were made by Republicans and only 1 by the Democrats.

When the Democrats took over in 1933 the exemption for a married couple was $2,500. These exemptions were steadily cut down by Democratic administrations until 1948, to an all-time low of $500 for an individual, $1,000 for a couple.

The Republican 80th Congress increased these exemptions to $600 and $1,200, and had to pass it over a Truman veto to do so. But they balanced the budget then, though only for a short time, and could relieve income-tax payers without adding to inflation.

The Republicans raised the exemption for people over 65 from $500 to $1,200, taking more than 1,400,000 persons off the tax rolls entirely.

During 24 of the 26 years the Democrats had control of Congress they failed to live within their income. In the last 20 years they were in power the Democrats raised the income tax of the lowest income groups from 4 percent to 22 percent.

Messrs. Truman and Stevenson didn't mention these facts, but the people should know and remember them.

The Political Tricksters

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. HAGEN. Mr. Speaker, the newspaper, Labor's Daily, in its issue of February 26, 1955, carried a worthwhile editorial entitled "The Political Tricksters," dealing with income-tax relief. Under leave to extend my remarks, I am including it in the RECORD as an enlightening treatise on the tax cut controversy:

THE POLITICAL TRICKSTERS

(By Wallace Shelton)

The toughest blow Mr. Eisenhower's one-party press has taken in many a day is the rude shock of the Democratic move to cut every person's income tax by $20 a year. And, one and all, they are echoing the President's charge of "fiscal irresponsibility." The Democrats, they say, are engineering political trickery.

Let's examine this trickery and irresponsibility claim again.

The GOP won the 1952 election by promising, in deluges of speeches and last-minute recorded radio and TV transcriptions, to balance the budget with heavily slashed taxes. Mr. Eisenhower hasn't balanced the budget yet, and he won't balance it during any year of his 4, with or without further tax reductions.

The Republicans last year went about campaigning with a claim they had cut taxes

more than $7 billion in their first 2 years in office—"the biggest tax cut in history."

Well, it was the "biggest tax cut in history," for the simple reason that taxes had never previously been at a level from which reductions would produce such relief. But the GOP made these tax cuts, and the President signed the bills, with his eyes wide open to the red ink on the Federal ledgers.

Democrats lack courage, suggested the President himself, because they decided to try to put through their relief for the little fellow by attaching the proposal as an amendment to other revenue measures Mr. Eisenhower favors.

House Republicans called this amendment proposal a blackjack, and implied that it was an unworthy device. Yet GOP Congressmen themselves last year forced the President to swallow amendments he opposed in order to get an extension of some excise levies.

It is a common, familiar device in American politics, arising from the inevitable occasional conflicts between Executive wishes and legislative desires, for Congress to protect itself by combining two proposals—one which the White House wants, another which Congress wants.

There is nothing indecent or improper about this device. It is simply a practical manifestation of compromise—one of the few genuine essentials of our form of Government—by which Congress makes it harder, rather than easier, for the President to kill something he dislikes by a veto.

But the White House always possesses the ultimate power of veto, and any time a President feels strongly enough about a so-called bad section of a bill, he can veto the whole thing and demand repassage without the offending elements. Mr. Roosevelt and Mr. Truman used this power on several occasions, and made the fights that were necessary to rally public opinion to their support.

The use of the power, however, requires courage, and a comprehension of how to compete for public support. The White House can decide for itself whether the President wishes to fight the proposed tax cut to this extent—granting it ever reaches the point of a veto. The congressional device, in any event, is wholly proper.

What is eating the Republicans is that they desperately wanted to advance a tax cut themselves next year, an election year, and had Mr. Eisenhower's half promise of backing. Their complaint is that they are being denied a chance to play their own brand of politics, but they express it by shouting "trickery" and "irresponsibility."

Tax Deductions for Care of Mentally and Physically Handicapped Dependents

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. ASHLEY. Mr. Speaker, today I have introduced a bill which would provide tax deductions for expenses incurred in the care of mentally and physically handicapped dependents. This would amend the present provisions of the Internal Revenue Code which limit these deductions to a woman or a widower or to a husband who is legally separated from his wife.

Under the present regulation, a man either has to be divorced or legally separated from a mentally or physically disabled wife or else a widower in order to qualify for deductions for expenses incurred in the care of his children. I cannot believe that it was the intent of Congress to discriminate in favor of either death or divorce. A taxpayer having dependents who are mentally or physically incapable of caring for themselves often find it impossible to provide this care personally and maintain his or her employment at the same time. In such a situation, it seems to me that a taxpayer is entitled to relief. By amending section 214 (C) of the Internal Revenue Code, my bill provides this relief not only to women, widowers, and divorcees, but also to those who have maintained their matrimonial ties.

Everyone Is Hard Up

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, with prosperity—if determined by dollars in hand—not just around the corner—not sitting on the doorstep—but inside, right at the elbow, practically everyone is having money trouble. It will increase when money becomes tight.

INDIVIDUALS' TROUBLES

An industrial executive had a yearly salary of $75,000; an annual income of an equal amount from dividends. He did not drink, gamble, entertain socially, nor spend his money foolishly. He had a good but modest home in a comparatively small city. He had a summer place in the West; tried to get a month's annual vacation.

However, the demands made upon him for contributions for charitable and other purposes, and which he felt he could not resist, kept him in a financially tight situation where he had to take a look at his checking account before deciding upon any sizable expenditure. His salary and dividends came from a business which he had created, which gave employment to upward of 3,000 people at above the average wage scale. He was as hard pressed for current funds as the lowest paid employee.

Another acquaintance, a professional man in a small community, makes between 30 and 40 thousand a year and though his tastes are moderate, is always hard up when income tax day rolls around.

Then, I know many conservative, would-be industrious citizens who, because they are past 45, find it difficult to get a job. Others, older—notwithstanding social security or other Government payments, find it extremely difficult to get their hands on funds enough to enable them to live comfortably, even though they have no expensive habits. They suffer more than any other group.

THE FEDERAL GOVERNMENT

The Federal Government, which collects billions of dollars from the taxpayers—it has no other source of revenue—makes no serious effort to live within its income.

The Government on just one item alone—storage of farm surpluses—each day adds $1 million to its national debt—the annual interest charge on which is now upwards of $6.4 billion—but there is still no solution of the farm problem. Farm prices, notwithstanding rigid support, continue to drop.

Municipalities, as well as individuals, seem to have accepted literally the biblical statement "Ask and ye shall receive"—forgotten that the Federal Government, which sometimes collects $2.19 for each dollar it passes out, does not have creative power—forgotten that "The Lord helps those who help themselves."

THE ANSWER?—IT IS OBVIOUS

Our creative and productive ability has increased far beyond our dreams, but we follow the methods of the Prodigal Son; waste our priceless inheritance. Spend beyond our needs—for things desirable but not strictly necessary. Buying but not paying—postponing to future generations whose welfare we seem to have forgotten the day of reckoning.

Unpleasant as it may be, consideration for those we bring into the world demands that as individuals, as government, we limit our spending to the purchase of necessities—to what we earn or have ability to repay—in the near future.

Unless we do, some of us may live to regret it. Certainly those who come after will have cause to condemn us.

Bank Holding Company Legislation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 11, 1955

Mr. MULTER. Mr. Speaker, in connection with the House Banking and Currency Committee's consideration of H. R. 2674, to regulate bank holding companies, I am pleased to direct the attention of our colleagues to the following two telegrams I have received urging support of this legislation:

MAY 6, 1955.

Representative ABRAHAM J. MULTER,
House Office Building, Washington, D. C.:

Members of Independent Shoemen, Inc., an organization representing independents in all segments of the shoe industry believe favorable action on H. R. 2674 extremely important not alone to banking business but to all of us who cherish individual freedom. Urge your active support on this much-needed legislation.

SAM SULLIVAN,
President, Independent Shoemen.

MAY 6, 1955.

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.:

On behalf of 23,000 retail hardware merchant members located in communities throughout the country, we urge your sup-

port of H. R. 2674. Local bankers know local conditions and render service needed by local merchants. Holding companies of banking interests invading local business fields should be governed by same rules applying to these local banks.

RUSSELL R. MUELLER,
Managing Director, National Retail Hardware Association.

More Important Than Cuts Is Ending Tax Inequalities

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a fine editorial which appeared in the Fresno (Calif.) Bee on February 23, 1955, entitled "More Important Than Cuts Is Ending Tax Inequalities":

MORE IMPORTANT THAN CUTS IS ENDING TAX INEQUALITIES

Congress is going to be the scene of some feuding during this and no doubt several succeeding weeks over the Democratic-sponsored move to put through a $20-income-tax reduction for every taxpayer and each of his dependents.

The Republicans are shouting "irresponsible" and "politics" in describing the Democratic maneuver and in a limited sense of the words they are correct on both counts.

With the administration's budget already $2.4 billion out of balance, this seems an inappropriate time to discuss tax cuts. And insofar as the proposed income-tax reduction is concerned, to suppose there is not politics involved is to play blind to realities.

Yet it is no deep secret the Republicans were looking forward to making tax cuts in 1956, a national election year, and the Democrats merely beat them to the punch. In that respect it is a case of the pot calling the kettle black.

To the criticism by the GOP Congressman JOHN W. MCCORMACK, of Massachusetts, the House Democratic leader, retorted that whenever "anything is done for the average person the Republicans oppose it and cry politics."

Attempts to draw a line between the Democratic and Republican Parties do not hold up completely.

The scandalous 27 percent depletion allowance principally for the benefit of the oil millionaires is kept alive largely by the votes of the Democratic Congressmen and Senators from Texas, Louisiana, and Oklahoma.

More important than cutting taxes is to correct tax inequities.

The Democratic leaders may claim that is what they are trying to do by the proposed income-tax reduction. But the overall situation is not going to be improved if cuts are made here and there at the cost of a bigger Federal deficit which everyone ultimately will have to make up.

Nor can relief be given to the average taxpayer if the corporation taxes are going to be increased to make up the difference so the housewife will be paying more taxes in the bread she buys at the grocery store, in her utility bills or on the appliances for her kitchen.

Government tax structures at all levels, from Federal to local, have grown haphazard and the permanent solution does not rest with equally haphazard or rule-of-thumb cuts and raises. Correcting one set of inequities can lead to worse ones. A need transcending party lines is that for a courageous and comprehensive overhauling of the whole tax setup.

Hon. James M. Mead

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1955

Mr. ROONEY. Mr. Speaker, by unanimous consent of the House, I include with these remarks the following editorial contained in the issue of the national weekly newspaper, Labor, dated Saturday, May 14, 1955. It refers to our good friend, a distinguished former Member of this House of Representatives and a distinguished former Senator from the State of New York, the Honorable James M. Mead. It reads as follows:

IKE OUSTING ANOTHER FRIEND OF PEOPLE

When voting for a President, it's important to remember that, by his power of appointment, he can enforce or nullify laws passed by Congress to protect the people. He can make those laws serve either the public interest or greedy special interests. No law is any better than the men who administer it. They are picked by the President, and they hold office even after he leaves the White House.

That is strikingly illustrated by what is going on now. As Labor has reported, President Eisenhower has packed the Government regulatory agencies with reactionaries who are undoing great historic reforms. They are giving to the power trust, natural-gas trust, oil trust, and other big business, and Wall Street interests just about everything they have long wanted but couldn't get before. Few regulators are left to protect the public interest, and they are being ousted as fast as possible.

This week, for example, it was announced that Eisenhower will not reappoint Federal Trade Commissioner James M. Mead when his term expires next September. The man picked to replace Mead is William C. Kern. Back of that is this story:

The FTC was created as one of the great reforms of President Woodrow Wilson's time. It is Uncle Sam's business policeman. Its job is to protect both consumers and honest businessmen against business crooks, to enforce some of the laws against monopoly and price fixing, and to keep big business from destroying small businessmen by unfair methods.

The Commission has five members. No more than 3 can be of 1 political party. Three are now Republicans and the other two Democrats. One of the later is "Big Jim" Mead.

He began life as a waterboy on the Lackawanna, worked at other railroad jobs, and still carries his card in the switchmen's union. He became a Democratic Congressman and Senator from New York, was chairman of the FTC under Truman and since then has been a member. Always he stood up for the people and the public interest, and thus incurred the enmity of powerful special interests.

In particular, Mead has proved himself a stanch friend of little and independent businessmen, both as a member of House and Senate small business committees, and on the FTC. That's not the kind of man the present big business administration wants on that or any other commission.

Ike could not replace Mead with a Republican, because the law says "No." Kern wears the Democratic label. Who is he? Why was he picked? Which side will he take as a member of the FTC?

Since 1941, Kern has been an FTC lawyer. About a year ago, he was selected for promotion by the Commission's Chairman, Edward F. Howrey, a Republican corporation lawyer appointed by Eisenhower and applauded by big business interests.

To promote Kern, Howrey demoted Everette MacIntyre, a top FTC lawyer with a long and devoted record of enforcing the antitrust laws for the protection of consumers and small business.

Kern will be an FTC member for 7 years, regardless of who is elected President next year. It seems sure he will follow the policies set by the man who made him, Chairman Howrey.

Experienced Washington observers were struck by the extraordinary fact that, although Mead's term does not expire until September, selection of Kern to replace him was announced way ahead of time, in May, and Howrey apparently began preparing Kern for that spot about a year before it would be available. The administration knew "Big Jim" was not its kind of man, and lost no time in greasing the skids for him.

One of the next regulators to go is Paul R. Rowen, member of the Securities and Exchange Commission. He was the only member who dared to vote against approving the financial setup of the scandalous Dixon-Yates deal. Rowen did so on the ground that the deal violates the Utility Holding Company Act, which the SEC is sworn to enforce.

Another slated to be ousted soon is Thomas E. Murray, the only Atomic Energy Commission member who disapproved the Dixon-Yates deal.

Still another is Frieda B. Hennock, the only Federal Communications Commission member who has championed the public interest and small independent radio and television stations against the "giant chains" which seek more and more control of the people's air waves.

And so it goes. Few friends of the people are left in top posts of the regulatory commissions and other Government agencies, and those few are disappearing fast. Think about that, next time you vote for a President.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Address Before Cleveland World Trade Association by Director of Export-Import Bank of Washington

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Vance Brand, Director of the Export-Import Bank of Washington, before the Cleveland World Trade Association at Cleveland, Ohio, on April 22, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY VANCE BRAND, DIRECTOR, EXPORT-IMPORT BANK OF WASHINGTON, BEFORE CLEVELAND WORLD TRADE ASSOCIATION AT CLEVELAND, OHIO, APRIL 22, 1955

When I spoke at a luncheon meeting of the Cleveland World Trade Association over a year ago, little did I dream that one day I would return as a member of the official family. Nor did I have the slightest anticipation that the first official address I might make would be in the home city of our great Secretary of the Treasury. Cleveland has a right to be justly proud of Secretary Humphrey. He not only has made an indelible mark upon the pages of history but he continues to make a bigger mark every day. Other than our fine President, no man receives higher acclaim than George M. Humphrey in Washington.

Your invitation is very much appreciated by me. As a fellow Ohioan, I am glad to come home to make my first report.

Some of you good friends will recall that when I spoke to you as a member of the Capehart Advisory Committee to the Senate Banking and Currency Committee, I had before me the biggest crystal ball I could find. Remember I looked into it and predicted that Congress would provide the means for the intensification and expansion of the program of the Export-Import Bank and the results would be very beneficial for our export trade. I told you you could count on some meat and potatoes and not just dressing.

The Senate Banking and Currency Committee under the able leadership of Senator HOMER E. CAPEHART of Indiana, made an exhaustive study of the bank's history and of the present world trade conditions. As a part of this study, Senator CAPEHART, accompanied by Senator BRICKER, Senator FREER, Congressman SPENCE, and officials from the Export-Import Bank, spent 52 days in Latin America. During this time they had 163 meetings with the businessmen and officials in the respective countries. It was my privilege to accompany Senator CAPEHART on this trip.

Substantial expansion of the bank's financing of American exports was the congressional mandate. This mandate is expressed in Public Law 570 passed by the 2d session of the 83d Congress in August 1954, as well as in the reports of the Committees of Banking and Currency of both Houses.

This act constitutes an unmistakable congressional determination that American producers are in need of and are to be afforded credit facilities by the Export-Import Bank sufficient to enable them to compete in the present highly competitive world market. The intent of Congress is clearly expressed in one phrase, to be found in the report of the Senate Committee on Banking and Currency:

"The bank should sympathetically consider kinds and types of proper loan applications irrespective of the term which would aid and facilitate in the exports of the United States, maintain our industrial potential, and provide continuing employment in our country."

The expansion and financing of United States exports decreed by the Congress is taking place, as the following data from the records of the bank will disclose.

During the 6 months period immediately preceding the enactment of the new legislation the bank extended credits of approximately $77 million. Between July 1 and December 31, 1954, the bank had extended credits of more than $290 million. During the first 2½ months of 1955 the credits totaled $184 million. Thus you see the total for the first 8½ months of this fiscal year is almost a half billion dollars.

The horizon of the bank is not limited to assisting the financing of exports, thereby facilitating the foreign trade of the United States, but we have learned, as all of you have, that this function is more likely to result in continuing good commercial relations and the further expansion of foreign trade if the exports financed are the type that will produce wealth for the importing country, increase employment and generally improve the standard of living in the foreign country.

I can well remember that as a boy my horizon was limited to Champaign County here in Ohio; then it stretched to Columbus and it was an important day when it included Cleveland to watch Tris Speaker play baseball. As time went on, Washington and New York were included, then Europe and Latin America.

I learned as a boy of 9 that people had to have money or credit to buy the papers I sold and that if I gave credit for one of my papers to a fellow who was already overly extended on the installment plan, I generally did not get paid. As a lawyer, banker, and farmer, I learned in later business life in my own community that my own prosperity was in direct ratio to the prosperity of others with whom I transacted business. As the people with whom I dealt prospered and expanded their operations, I, too, prospered and expanded my operations.

I watched the automobile, the paved street, electricity, and many other luxuries of my boyhood days become the necessities of today. I do not recall a single instance of having seen a salesman try to sell electric appliances in Champaign County prior to the time we had adequate power facilities and distribution of electricity in the county. I saw farmers buy tractors long before they had fine automobiles, a radio, television, and many more of the things we find so necessary in our homes today.

The point is that as a boy and a young man in business I found that we first procured productive goods. We still do. But we now have become so successful in the production of goods and in the handling of our general economy that we can afford to buy almost anything we want. But remember in this country there is always adequate financing for productive and all other goods and there is no question about it.

Thus as my own horizon expanded the fundamental principles remained the same.

Is it surprising to you that the Export-Import Bank follows the same policies? In general, the loans of the Export-Import Bank have been to finance the importation from the United States of materials, equipment, and services required for the establishment or expansion of productive enterprises that will add to the national income of the importing country, increase the standard of living of its people, improve its economy, and expand its production and buying power.

This is borne out by the following examples of exports to Latin America that have been financed by the Export-Import Bank:

Construction machinery and American engineers and contractors' services for the construction or improvement of highways, railways, harbors, and airports that are important to the transportation and introduction into commerce of the country's agricultural, mineral, and fabricated products.

Electric power generating machinery, and related services for the construction and installation of hydroelectric, thermoelectric and diesel powered plans.

Machinery, equipment, and related services for the construction or expansion of steel mills, textile and yarn mills, cement plants, fertilizer plants, chemical plants, sugar mills, and telecommunications systems.

Therefore, the bank has given preference to the financing of those projects and the exports of those products which will assist in the development of the foreign country and will enable it to earn or, in some instances, to save dollars to the mutual advantage of trade between the two countries. There must always be a direct relation between the volume we buy and the amount we can sell. This does not mean that the project or the product must of itself directly produce or save the dollars required to pay for it. It is sufficient that the incorporation of the product in the economy of the other country should contribute to the development of the other country ultimately, even though indirectly, to the improvement of the foreign exchange position of the country.

Such an approach does not admit of hard and fast rules which determine that certain items are always eligible and others never eligible to be financed. The extent, however, to which assistance can be given in the financing of the sale of products which do not make a direct contribution to the dollar position of the importing country or are not of a productive character must be determined on the basis of the facts existing in the country of the prospective buyer at the time of the request. During periods of acute dollar shortage in a particular country, it may be necessary to limit assistance of public funds to the export of those items which will make a direct and early contribution to the country's dollar exchange position.

Our problems, and those of many countries which are our competitors, are vastly different. Great Britain must sell enough abroad to earn foreign exchange with which to purchase food, raw materials, and other products. To the extent the British can promote the sale of consumer goods on relatively short terms, they will more quickly acquire the currency of the countries that can sell them food. The problem of Great Britain is to sell enough abroad so that it may increase its purchases abroad. Our problem is to assist the importing countries to earn the dollars they must have if they are to buy more of our exports.

It is for these reasons that the management of the bank has always questioned the advisability of establishing in the United States a system of export credit insurance which would provide general export financing without adequate regard to the type of goods sold in a particular market.

Where a medium of long-term credit is required, the Export-Import Bank extends assistance at least equal to that offered by any other government under export credit insurance or other plans. We do not, however, offer short-term credit of 30, 60, 90, or up to 180 days. Such credit is available through normal commercial channels. I do not know of a bank with an active foreign department that will not extend such credit in appropriate cases.

The bank is prepared to assist in the field of medium and long-term credit defined generally as credit of 1 year or more. The terms for which credit is to be extended must be appropriate to the type of equipment to be sold. Accordingly, the assistance of the bank is generally extended only in connection with the export of capital equipment as distinguished from so-called consumer-type goods and appliances.

As I stated previously, the position and problems of the United States in foreign trade require that the bank give preference to the financing of that type of capital goods which will improve the exchange position of the importing country and thus serve the interests of all United States exporters. It is important to note that there are limited areas of the world into which practically all types of capital goods may be financed without special concern for the ability of such areas to repay in dollars. There are from time to time other areas into which we must limit the extension of credit only to the sale of equipment that will make a direct contribution to the dollar exchange position of the importing country. Between these two extreme situations are countries into which capital equipment of a productive character such as that required for transportation, power, communications, construction, agriculture, and industrial development may usually be financed in reasonable amount to the mutual advantage of the United States and the importing country.

Loans of the bank are of many types, but for the purposes of this discussion they may be broadly grouped into two classes: First, there are those made by the bank upon application of the United States exporter for assistance in financing a particular sale abroad. Such loans have generally been referred to as exporter credits. These I will presently discuss in some detail.

In addition, loans are made upon the application of the foreign buyer, which may be a private entity or another government. Without exception, however, all loans of the bank have served the interests of our foreign trade and have been designed to assist in creating sound and expanding markets of mutual advantage to the United States and our customers abroad.

There has been some misunderstanding about these loans authorized in favor of the foreign buyer or the foreign government. We hear it said that the Export-Import Bank should finance United States exports but should not finance these government-to-government or, as they are generally called, economic development loans. With only minor exceptions, such loans may be used only to purchase in the United States the machinery, equipment, materials, and services required to carry out abroad a project of sound economic value.

The bank, in its operations covering over 20 years, has experienced varied and rapidly changing conditions. It started its operations in a sellers' market, continued through a worldwide depression, a World War, a period of large-scale reconstruction and development, which consisted of a buyers' market, and finally back into the realm of a sellers' market.

From 1934 until the beginning of the war in 1939, the great majority of the loans of the bank were made at the request of the United States exporter and for the purpose of enabling him to meet competition from abroad. During this period, a relatively small number of loans were extended directly to the foreign purchasers.

With the advent of war in Europe, the United States exporter entered upon a new and, for him, unprecedented era. He had practically no competition and the demand for civilian goods far exceeded the supply. During this period it was not the exporter but the foreign buyer who sought credits from the bank to finance the purchase of United States goods and products. Credits were extended to governments and private entities to assist in financing capital equipment for development programs which would stimulate the production of strategic materials and otherwise aid in the common defense of the war effort.

At the present time, a civilian production has been resumed throughout the world and the United States exporter is again, and for the first time since 1939, faced with active and effective competition in world markets. We have moved again from the sellers' to a buyers' market. In the meantime, the productive capacity of our industry has been greatly expanded so that we are dependent more than in former times upon the retention and expansion of our foreign markets. It is the United States exporter that is again seeking the assistance of the Export-Import Bank.

I have mentioned that loans of the bank may be broadly grouped into two classes: (1) Those considered on application of the United States exporter and known as exporter credits, and (2) those considered on application of the foreign buyer.

The case-by-case or individual transactions—generally referred to as "exporter credits" have proved hlepful for many years and continue to constitute the most active field of the bank's operations. Each prospective sale has been the subject of individual application by the exporter to be approved or disapproved on an ad hoc basis. After consideration of all risks of both a commercial and political nature, the bank in appropriate cases has agreed to purchase from the exporter, or guarantee a portion of the drafts, promissory notes or other obligations of the foreign consumers.

Sales eligible to be financed should provide for payment in cash of at least 20 percent of the invoice value prior to the delivery of the equipment. Of the remainder, or financed portion, the exporter is expected to carry at least one-fourth of the financed portion or 20 percent of the invoice value, with or without the assistance of his commercial bank. The Export-Imports Bank will purchase or guarantee the remaining 75 percent of the obligation or up to 60 percent of the contract price of the equipment, without recourse to the exporter. The obligations or part thereof retained by the exporter should have the same maturities as those purchased or guaranteed by the Export-Import Bank.

The bank always prefers to guarantee the obligations for purchase by a commercial bank or other financial institution selected by the exporter instead of making the purchase with public funds. This procedure is not only convenient for all parties but also continues customary commercial relations between the exporter and his bank.

In addition, however, the bank has recently undertaken to establish lines of credit in favor of individual exporters to assist in financing the sale of productive capital goods. Before adoption, this method of assistance was subject to careful study and discussion between the bank and representatives of numerous trade and financial groups.

The amount of the line of credit is based upon the record of the individual exporter's past operations. The line will not be expected to finance more than a portion of the business of the exporter. Existence of such a line, however, enables him to know the extent of financing he may expect from the bank over a given period and thus enable him to plan the extension, where necessary, of credit terms to foreign dealers or customers. Moreover, a line of credit from the bank can be arranged and used effectively to supplement and complement the exporter's own resources and other public credit available to him.

After approval of a line of credit in his favor, the exporter will make application on a case-by-case basis for assistance under the line on sales in any friendly country. The individual transactions are then carried out as in the case of any exporter credit, the bank assuming the obligations representing up to 60 percent of the sales price of the equipment and the exporter retaining at least 20 percent with 20 percent paid down.

Where the nature of the goods permits of repetitive sales to the same customer abroad, provision can be made for utilization of the line without prior approval by the bank of each transaction. Upon request the bank will designate from time to time the countries in which transactions may be financed automatically and, based upon the average of business previously done by the exporter in a given country, the amount of credit which may be outstanding at any one time. Upon receipt of appropriate credit information regarding a particular customer, the bank will designate the amount of credit which may be outstanding at any one time to that customer.

The bank will not authorize automatic use of the line of credit in a country suffering severe dollar-exchange difficulties. The financing of sales to such a country would not be barred, but each transaction should be subject to careful study and prior approval of the bank.

While the lines of credit are based solely upon the record of the exporter's past operations, it is not true that the bank will assist an exporter only to the extent of his past business. Whenever the exporter presents evidence of additional firm or prospective orders on a case-to-case basis after he has utilized the line of credit, he will receive careful consideration by the bank.

I want to make it plain that exporters without previous records are not barred from the bank's assistance. Such an exporter must apply on a case-by-case basis method for assistance to finance actual or prospective orders. After he has established a position in the market, he may apply for a line of credit.

The bank will consider any bona fide potential transaction as the basis for a credit commitment, but the bank will not set aside funds for the use of a particular exporter on a purely speculative basis.

It is believed that a line of credit can be of value to an exporter even though all transactions thereunder are handled on a case-by-case rather than an automatic basis. The Export-Import Bank will have full information regarding the exporter's past oper-

ations. At the same time, the exporter will be aware of the type of credit information which the bank will require with respect to each transaction. This should expedite the presentation of applications by the exporter and the decision by the bank with respect to each such transaction.

To the extent practicable, actual operations under these lines of credit are to be carried out by commercial banks or other suitable institutions selected by the exporter. On notes guaranteed for retention by the exporter or purchase by a commercial bank, the Export-Import Bank receives 2 percent of the first 5 percent of interest borne by the obligation and at least one-fourth of any interest in excess of 5 percent. On notes which it may be called upon to purchase with its own funds, the Export-Import Bank receives the interest collected. In addition to its share of the interest, the Export-Import Bank receives a commission on obligations purchase or guaranteed by it in the amount of 1½ percent flat on those having a final maturity of 3 years or less. The commission is increased by one-half percent for each year or portion thereof by which the last maturing obligation exceeds 3 years.

Some exporters of capital goods are prepared to assume all commercial risks involved in their sales abroad on credit, but have indicated a desire that the bank issue its guaranty against so-called political risks, such as the risk of inconvertibility, war, cancellation of an import permit, or other act beyond the control of both the exporter and the foreign importer. In any situation in which the bank would be prepared to carry both the commercial and political risk for a transaction, it would be prepared as well to limit its coverage to the so-called political risks involved. The coverage in such cases has extended to 85 percent of the financed portion of the transaction and the cost to the exporters somewhat less than coverage for all risks.

An important point is often raised as to whether the facilities of the Export-Import Bank are designed to assist the small, the medium, and the large exporter. The answer is emphatically "Yes." Many small and medium companies engage successfully in the field of capital goods. We have assisted several companies in the establishment of lines of credit whose annual foreign businesses average less than $200,000. No transaction has ever been rejected because it was too small, provided it was shown that private capital was not available to finance it.

There is a typical illustration right here in Ohio of the availability of the bank's services. One of your fine neighboring manufacturers, the Thew Shovel Co., asked for and received a line of credit. Of the first 16 credit commitments under lines of credit, the Thew Shovel Co. had five commitments. This is really more important when you consider the fact that Thew was among the first 16 when the bank's line of credit activity was not in the category of small or medium business. At the time these five credits were extended to Thew under its line of credit, the total of lines of credit outstanding exceeded $100 million.

Our policy will continue to be that of extending to small, medium, and large exporters and importers—and in similar categories to those abroad—and primarily those engaged in free enterprise—assistance with due regard to sound principles of finance and for the purpose of permitting importing countries to accelerate the development of their resources. Credits so extended can serve as one of the most useful instruments of expanding the world's markets for the mutual benefit of all countries.

It is my firm conviction that by adhering to such a course the Export-Import Bank can best assist the efforts of you who are engaged in foreign trade and in finance to serve well the interests of the United States.

American Foreign Policy

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered last night before the convention of the Tax Executives Institute, Inc., at New York City.

There being no objection; the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. WILLIAM F. KNOWLAND, OF CALIFORNIA, BEFORE THE CONVENTION OF THE TAX EXECUTIVES INSTITUTE, INC., WALDORF-ASTORIA HOTEL, NEW YORK, THURSDAY, MAY 12, 1955

Mr. Chairman, distinguished guests, and fellow Americans, American foreign policy is the people's business. There is no American man, woman, or child who will not be affected directly or indirectly by the present and future aspects of our foreign policy.

Our basic foreign policy is and should be peace with honor. This is far different from a policy of peace at any price.

As an example of our ultimate objective, I would point to our great neighbor of Canada to the north where for a long period of our history neither that country nor ours has found it necessary to have forts or military establishments for the purpose of defending one country against the other along the entire international frontier of 3,000 miles stretching from the Atlantic to the Pacific.

We certainly hope that in our lifetime or the lifetime of our children all other nations not only in the Western Hemisphere, but also in Europe, Asia, and the Middle East, might live together as good neighbors as we do with Canada.

If we are half as prudent as those who gave us this Republic and later ones who preserved the Union or helped to win and develop the great West, we will continue to work, hope, and pray for peace but we will keep our powder dry.

A climate is being promoted—in the Communist propaganda broadcasts, by party-line followers overseas and within the United States and by many good people who may honestly believe that even a survival under Communist tyranny would be preferable to the risk of no survival at all in the event of World War II—that anyone who questions Soviet good intentions is a warmonger.

According to this line of reasoning, George Washington would be considered a warmonger for having joined our other Founding Fathers in striking a blow for freedom.

Abraham Lincoln would fall into the same category for having taken the provocative step of supplying the Federal garrison at Fort Sumter.

And as for Patrick Henry—he, too, would be muzzled for his speech wherein he said:

"Is life so sweet and peace so dear as to be purchased at the price of chains and slavery? Forbid it, almighty God. I care not what course others may take, but as for me, give me liberty or give me death."

On Wednesday, May 11, the Soviet Union proposed three resolutions in order to retain the initiative in carrying out their long-term policies.

When the veneer of propaganda and doubletalk is removed we can see the customary Communist technique of using words to confuse and obstruct rather than to clarify and expedite. The Soviet proposal is a fraud.

Let us examine their so-called disarmament proposal:

1. It would destroy freedom of the press, radio, speech, and public discussion in the free nations of the world relating to warning the public against the homicidal mania of communism against human freedom. It would gag the opponents of communism in the free world as they have been gagged behind the Iron Curtain. Since the Communist totalitarian governments already have complete control over such media of public information they have nothing to lose.

2. The proposal claims a success for the Korean and Geneva armistice agreements both of which have been flagrantly violated by the Chinese Communists. In Korea there is still a divided country despite pledges of 10 years ago, in which the Soviet Union joined, that it would be united and free. In Vietnam the Geneva Conference turned over half of the country and 15 million people to the Communists. This is their standard of a successful conference.

3. It provides for the immediate withdrawal of United States forces in Germany back across the Atlantic Ocean to the United States (approximately 3,600 miles), whereas if the Soviet Union lived up to their agreement (it would be the first time in a quarter of a century that they would have) their forces would only be approximately 600 miles from the Elbe.

Such a withdrawal would at first also contemplate two Germanys—like divided Korea and Vietnam—each with its own police force. It would also require the withdrawal of the Republic of Germany from the Western NATO defense alliance.

4. Our overseas bases would have to be dismantled as a requisite for discontinuing the arms race. We would trade a bird in hand for several in flight.

5. Our industrial and scientific atomic know-how to be made available on an extensive basis to all Communist countries.

6. The proposal contemplates yielding to Chinese Communist demands for Quemoy, Matsu, Formosa, the Pescadores, Chinese Communist membership in the United Nations and removal of the provocative 7th Fleet from the Far East, all of which contribute in Communist eyes to the existing tense situation in certain areas of the Far East.

7. It would eliminate all trade restrictions with the Soviet Union, Communist China and their satellites, including trade in strategic materials.

8. All the above steps to be carried out prior to getting down to the problems of an effective disarmament with adequate safeguards against Soviet deception.

During 1956, according to the Security Council resolution, the nations "agree not to increase their armed forces and conventional armaments above the level of armaments and armed forces on December 31, 1954."

Since the free-world forces as of that date are known and the Communist forces are not, it sets as the starting point for future moves a topheavy Communist base.

In free countries the limitations on forces and appropriations is subject to debate and vote in parliament and congress and can be readily checked now.

In the Communist world this is not t[he] case and we would have to rely on th[e] official figures 1 month after the Conventio[n] enters into force.

Unless and until Communist China becomes a permanent member of the United Nations Security Council, the proposal is not meant to be effective.

Since without the balancing factor of the atomic weapon communism could already have overrun all of Europe and Asia, any limitation upon our development of this

weapon and the testing of the same works to Communist advantage.

This is covered by the Soviet language in paragraph 5 wherein it states "simultaneously with the commencement of measures for reduction of armaments and armed forces • • • the states • • • assume a solemn obligation not to use nuclear weapons."

In the first phase of 1956, we are to abandon and dismantle all our air and naval bases abroad and return 3,600 miles across the Atlantic, and 5,000 or more miles across the Pacific, whereas the Soviet Union pulls back 600 miles at the most.

The production of all atomic weapons to cease in 1957. Since the location of our atomic plants and facilities are known and the Soviet locations are not known, and there is no adequate inspection system provided, this proposal is all to the advantage of Soviet military supremacy.

The subsequent assembly resolution makes clear that the effective inspection proposals of the United States in the atomic- and conventional-weapon field is still not acceptable to the Soviet Union.

With apparently no embarrassment, the Soviet proposal then sets up a limited type of inspection and control similar to that established by the terms of the Korean armistice. Since this system has prevented any real inspection in North Korea, it is understandable why the Soviet Union now advises it in the highly sensitive field of atomic and armament inspection.

History teaches us that prior experience of great powers negotiating in the absence of small allies has not reflected great credit upon the large nations, and has been disastrous to the small ones. For reference, I refer to Munich and its impact upon Czechoslovakia, to Yalta, and its impact upon Poland and the Republic of China, and to Geneva and its impact upon Vietnam.

The heads of the free governments will be accountable and responsible to their people and to their Parliaments or Congress.

To whom will Bulganin be accountable? To the presidium or to Khrushchev? If Bulganin is indeed himself at the summit today, will he be there when the Big Four meet in June or July?

Are our western allies prepared to stand against a condemnation to perpetual slavery behind the Iron Curtain of the people of Poland, Czechoslovakia, Latvia, Lithuania, Estonia, Rumania, Bulgaria, Hungary, North Korea, and China?

Are we to insist on previous agreements being honored before we take the Soviet's word on a new scrap of paper?

Will plans for the Republic of Germany's part in a western defense be scrapped to placate the Russian bear?

We might recall Kipling's The Truce of the Bear. While this was written concerning the Imperial Russia of the Czar, it is more applicable to Soviet Russia today.

"When he stands up like a tired man, tottering near and near;
"When he stands up as pleading in wavering, man-brute guise,
"When he veils the hate and cunning of his little, swinish eyes;
"When he shows as seeking quarter, with paws like hands in prayer;
"That is the time of peril—the time of the truce of the bear."

Will we insist on the Soviet Union withdrawing, as pledged, their troops from Rumania and Hungary when the Austrian Treaty is signed? Their only excuse for being in those two countries was to keep open lines of communication to their troops in Austria. Or will this promise also be overlooked in order not to offend the Muscovites?

There is no real reliable evidence to date that would warrant a prudent person in believing that the Soviet Union or international communism have changed their basic long-term strategy for the destruction of human freedom. In discussing American foreign policy before the American Society of Newspaper Editors in Washington, D. C., on April 22, Mr. George Meany, president of the American Federation of Labor, said:

"The Communist enemy, regardless of any momentary change of tactics, regardless of any treaty the Kremlin may sign, is bent on conquering the entire world—the United States not excluded—and remolding it in the form of the totalitarian dictatorship and slave economy imposed on the people behind the Iron Curtain, in Russia, Rumania, Outer Mongolia, and on the Chinese mainland. American labor never can be, and never will, be submissive or neutral toward such a total menace."

Certainly, American businessmen and the public generally should be no less alert to the dangers of communism than is the American Federation of Labor, as so ably and courageously expressed by the president of that great organization.

International treachery, individual and collective deception, high-level assassination, and rank and file cold-blooded murder have been, and are, today accepted Communist doctrine. The Communist leopard has not changed its spots, because Chou En-lai and Molotov happen to smile rather than to frown on any given day.

Our foreign policy should be based on human freedom. What advances it we should support, and what retards it we should oppose.

The age of colonialism in Asia is dead. The people in that part of the world want no part of it. Any American policy in that part of the world will suffer a handicap if it is tied directly or indirectly to European colonialism.

Nowhere in the long history of Russia under the Czars or under the Commissars is there anything equal to the United States establishing the free and independent Philippine Republic nor, for that matter, is there anything equal to Great Britain setting up a free and independent India, Pakistan, and Burma.

To the contrary, during the same period the Soviet Union was destroying the independence of Latvia, Lithuania, and Estonia, though they had signed treaties of friendship and nonaggression with all three of those Baltic Republics.

Americans must never lose sight of the fact that ours—at the time of our independence and today—is the authentic revolution. It not only freed us from colonial rule, but it developed a charter of liberty which established a constitutional form of government to serve us for all time to come.

Other nations have had their revolutions, but either immediately or in the not distant future the people found they had supplanted one ruler for an even more despotic one.

We should be proud of our revolutionary past and help to encourage in the oppressed people behind the Iron Curtain the revolutionary zeal for freedom which won us a nation.

At the time of Yalta, just 10 years ago, less than 200 million people were behind the Communist Iron Curtain. Today, over 800 million people are enslaved by the most godless tyranny the world has ever known.

Despite the fact that the Soviet Union has violated its treaties of friendship and nonaggression with Finland, Poland, Latvia, Lithuania, Estonia, Hungary, Rumania, Bulgaria, Czechoslovakia, and the Republic of China, there are still some who believe that the way to deal with an international bully is by more appeasement.

At Munich the world should have learned that the road to appeasement is not the road to peace, it is surrender on the installment plan.

The Soviet Union is an admitted violator of the United Nations Charter and the resolutions in support of the Republic of Korea, a victim of communistic aggression on June 25, 1950. Yet now the Soviet Union is supporting the admission of the agressor, Communist China, into that organization.

Such action would violate the moral foundation upon which the United Nations is supposed to rest. It would be putting a premium on aggression. It would serve notice that the quickest way to membership is by shooting your way in. It would be a betrayal of the 140,000 American casualties, including 35,000 of our dead.

The Chinese Communists, in violation of the armistice, admit they hold 15 American airmen. There is strong reason to believe they hold several hundred other United States and United Nations military prisoners. We know they hold over 30 American civilians who have been in jail for several years.

As long as one American in the armed services or in civilian life is unjustly held I shall not remain silent.

How can our associates even consider compromising principle and honor to that extent? What does the United Nations intend to do about it? What are the American people going to do about it?

How long is the United Nations going to pussyfoot on this question of American prisoners of war being held in violation of the terms of the Korean armistice? Of the 15 the Chinese Communists admit holding, 11 have been sentenced to prison terms of from 4 to 10 years.

These men were shot down in January of 1953. Last fall it was suggested in Government quarters than public discussion be held down until Mr. Hammarskjold had completed his mission to Peiping.

He came back in January and held a press conference in New York on January 14 in which he admitted that the prisoners had not been released nor did he have any firm commitment as to when they would be released.

It was suggested again in Government and United Nations quarters that the American Congress and the American people be patient and that perhaps Chou En-lai would release them prior to the Bandung Conference.

The Bandung Conference has now come and gone and the prisoners have not been released.

Are we expected to wait until these prisoners have been completely brainwashed and then released to serve the Communist propaganda purposes as has been the case of some of the civilians?

It is time for Mr. Hammarskjold to make his report to the United Nations and to the people of America.

What is intended to be done about Communist failure to comply with the terms of the Korean armistice?

If the United Nations as an organization is paralyzed from taking action, then the Government of the United States has an obligation to men wearing the uniform of this country to take some effective steps in getting our men released.

There was a time at the turn of the century when a single American civilian held as a captive brought from President Theodore Roosevelt the effective ultimatum: "Perdicaris alive or Raisuli dead."

Now our associates want to reward the Communists with membership in the United Nations.

Have we forgotten the bibilical injunction in Second Corinthians:

"Be ye not unequally yoked together with unbelievers; for what fellowship has righteousness with unrighteousness? And what communion has lgiht with darkness?"

There are many persons at home and abroad who believe the Chinese Communists are now merely following a long-established

technique to use negotiations (as at Panmunjom) for the purpose of building up their striking power.

Their minimum price will be a downpayment of the offshore island groups of Quemoy and Matsu and admission into the United Nations. Their ultimate price, which they will hope to get by negotiation or through the United Nations, or by armed conflict, will be Formosa and the Pescadores.

In the long history of the Soviet Union or the shorter history of Communist China, there is nothing to demonstrate that the Communist-pledged word is worth the paper on which it is written.

The bones of the repudiated Soviet treaties and agreements with Latvia, Lithuania, Estonia, Poland, Hungary, Rumania, Bulgaria, Czechoslovakia, Finland, and the Republic of China, together with the 1933 Litvinov compact with the United States are there for all to see.

More recently the violations of the Korean and Geneva armistice agreements by Communist China are an additional warning signal against placing either our faith or the survival of our friends and allies on the cynical smiling facade of a brutal Chou en-lai.

Just recently, I had a letter from an Air Force pilot in Formosa. In his letter to me of February 12, this pilot wrote:

"As an Air Force jet pilot assigned to this island for the next 2 years, I am sure my interest in lasting world peace is as acute as is any American's.

"The presence here of my wife and children tends to intensify my natural desire that no one toss any atom or hydrogen bombs this way.

"I am quite convinced that my best chances as well as those of my country and the entire free world rest with the firm 'stop the Communist march' movement which you so forcibly represent. I have flown 400 combat missions and would rather fly 400 more than to see my kind of a world go down the drain 1 island or 1 small country at a time.

"America must wake up to the real intentions of communism and take real and purposeful steps to frustrate those intentions."

Delays in Processing Patent Applications

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Inventors Face 3-Year Wait for Patents, Watson Reports," published in the Washington Evening Star of April 1, 1955. This article deals with delays incident to the processing of applications for patents.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INVENTORS FACE 3-YEAR WAIT FOR PATENTS, WATSON REPORTS

CINCINNATI, April 1.—If you've invented that "better mousetrap"—or anything else for that matter—you'd better plan on a wait of over 3 years before receiving a patent on it.

That was the word today from Robert C. Watson, United States Commissioner of Patents, who told the 127th national meeting of the American Chemical Society:

"The average time during which an application remains pending in the Patent Office before issuance of a patent is today in the neighborhood of 3½ years."

Lack of a sufficiently large staff at the Patent Office—together with an ever-growing library of existing patents through which searches must be made when a new application comes up—are among reasons for such slow handling, Mr. Watson asserted.

He called for a comprehensive, factual study of the United States patent system to determine its full impact on the Nation's economy.

Mr. Watson declared the Patent Office has an "overall backlog of 210,000 applications," and that this has recently been increasing at the rate of about 10,000 applications per year.

Also, new applications are pouring in at the rate of 75,000 a year.

He told the chemists that in the chemical divisions of the Patent Office, new applications must now remain pending nearly 10 months in most cases before action is even started on them.

Abundant Reasonable Land

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Abundant Reasonable Land," published in the Columbia State, under date of May 7, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABUNDANT REASONABLE LAND

A survey by Government agencies shows that if and when additional cropland is needed to produce field, truck and pasture land for feed, food, beef, milk and vegetables, South Carolina has 400,000 acres of coastal marshes alone that could be reclaimed and put to work for these purposes along with improved wildlife habitat, which likewise has a considerable economic value.

As we understand it the survey covered only the fresh and salt water marshes of the coast. It did not include the upland areas of fertile lands on our sea islands and in adjacent territory which is so fertile it grows up in jungle when not cultivated or planted in forest trees.

This information is particularly pertinent at a time when certain elements are seeking to spend billions of taxpayer dollars to water 200,000 arid western acres, at over $900 an acre, which would produce farm land worth only $150 an acre.

The cost of reclaiming the South Carolina land would be $100 an acre if prepared for farm crops or $25 an acre for intensive wildlife management.

Some research remains to be done to determine the capabilities and salinity hazards of each particular tract, the engineering needs for establishing adequate water control systems, the agronomic considerations for establishing and maintaining adapted crops and the requirements for establishing and maintaining wet areas for waterfowl, fur-bearers, fish and other esthetic wildlife. But technicians have learned enough to indicate the possibilities.

Since 1947 soil conservation districts, with technical assistance from the Soil Conservation Service, have given planning and other assistance to 81 district cooperators who own 85,000 acres of marshland. Of this total, 25,000 acres of marsh will be managed for wildlife, and 18,000 acres developed for crops and pastures. The estimated cost will be $2,500,000.

Although it is found that soil types in marshlands are generally favorable for agricultural crops in wide variety, the salinity of the soil and the pH content are limiting factors. The necessary water control involves diking, installing gates, internal drainage and pumps. Much the same type of preparation is required for development of marshlands for wildlife, along with control of undesirable vegetation and the establishment of high-yielding food plants.

The plans that are now being made are based on the land capabilities as determined by soil surveys. The farm plan, worked out with the farmer, establishes how each acre is to be used for best results. Engineering assistance for determining feasibility and approximate cost of proposed projects is provided by Soil Conservation Service engineers. If the farmer decides the costs are within reach and worthwhile, detailed plans and specifications are prepared, and, SCS technicians help plan and manage crops for maximum production, without cost.

Already practical solutions to many problems have been worked out through these operations and further research is expected to provide additional informatoin on the salinity tolerance of various crops, control of vegetation in canals, drainage coefficients for proper root development and specialized equipment for land development.

It has also been found that after construction work is completed salt can be leached from the soil of salt marshes by repeated flooding and draining. The pH of such lands is usually low especially where organic matter is heavy, as is available phosphate, but the potash content is moderate to high, especially on salt marsh. Infiltration and permeability are high on newly developed lands, but decrease as the organic content is reduced. This might be remedied, when necessary, by the use of cover crops, and by a modification of the water-control system.

This system must also provide protection for growing crops against storm tides, high river stages and excessive rains, all of which often come at once. The old rice-field system of perimeter dikes give protection against 9-foot tides and provide roadways on top. Material excavated for the dikes is usually taken from the fieldside to form a large canal in which runoff water from rains is stored.

Much more information has been learned about our available marshlands, but this is enough for the present to give a sample of what can be done in the South to provide additional food and fiber for the Nation without investing $15 million of South Carolinians' taxes in crackpot schemes for "making the desert bloom."

Fifty Years of Forestry

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STAT.,
Friday, May 13, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most timely editorial entitled "Fifty Years of Forestry," published in the Minneapolis (Minn.) Star of May 9, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIFTY YEARS OF FORESTRY

The United States Forest Service is celebrating its golden anniversary this year and now, the start of the growing season, is a good time to extend congratulations.

Some people wonder why a National Forest Service is needed when the States have their own forest services. There is a strong movement in some places to move out the national service, or to curtail its activities.

That would be a tragedy for conservation. For the Federal Government in general has greater determination to preserve natural resources such as trees than have State governments. Interests which would exploit all resources, regardless of their scenic and recreational values, seem to have more success dealing with State agencies.

Guarding the roadless wilderness area of northern Minnesota has been easier because it is part of a national forest. If the United States Forest Service were to withdraw from some Western States much of the acreage now in national forests would receive less protection.

In Minnesota the Federal and State Forest Services perform similar duties—fire protection, planting, and so forth. But they cooperate wholeheartedly, supplement each other splendidly with a minimum of overlapping of functions.

All America can be thankful that 50 years ago President Theodore Roosevelt and his chief forestry aid, Gifford Pinchot, had the foresight to get the Forest Service underway.

Increased Labor-Farmer Cooperation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news column from the April 18, 1955, issue of the Trainman News, the organ of the Brotherhood of Railroad Trainmen.

It is a column which reports an address made by a distinguished Minnesotan, my good friend the president of the brotherhood, Mr. W. P. Kennedy, in support of increased labor-farmer cooperation. I am convinced that the best interests of both labor and agriculture depend upon mutual association and cooperation. The farmers are major consumers of industrial goods, and the industrial and commercial workers are, after all, the major consumers of what the farmer produces. High wages and high farm prices are essential to the prosperity and well-being of the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIRMER FARMER-LABOR TIE SEEN—KENNEDY AVERS EACH DEPENDS ON THE OTHER—HE EXPRESSES HIGH HOPES FOR UNITY ON THE LEGISLATIVE FRONT

President W. P. Kennedy told a Nebraska brotherhood audience last Thursday that he had high hopes for enhanced labor-farmer cooperation on Federal legislation designed to promote national prosperity.

The brotherhood chieftain, addressing the Nebraska State Association of the BRT and Ladies Auxiliary at Hastings, revealed that an increasing number of Senators and Congressmen from agricultural areas was beginning to realize that liberal labor policies "are vital to farm prosperity" and had indicated their intention to support some union-sponsored legislation.

He pointed out that organized labor is solidly behind a liberal price-support program for the farmers and emphasized that "farm prosperity makes more and better jobs for city workers and for railroadmen."

President Kennedy called upon Nebraska members "to appoint themselves as ambassadors of good will from labor to the farmers to help promote an intelligent common attack on economic factors which jeopardize national well-being."

"If the city worker doesn't make enough money to feed and clothe his family adequately," he maintained, obviously the farmer feels the pinch in lessened demand for his products."

"Farmers," Mr. Kennedy continued, "are major consumers of industrial goods which keeps our railroadmen working. They buy 12.7 percent of all rubber products, 16.6 percent of all petroleum products, 10 percent of all chemicals, and 9 percent of all steel products. With the drop in farm income, such as has occurred since 1952, every production and transportation worker in the Nation feels the effect."

President Kennedy declared that "by now the farm interests should understand that the unions are their real friends if only because the workers' welfare is so dependent upon how their country cousins are faring.

"High wages mean more farm products sold in the cities, and high farm income means more city products sold in the country. It's that simple, although some of the big city corporate interests, with only selfish motives and no vision, continue to sow seeds of mistrust and resentment between farmer and worker."

Mr. Kennedy said he expected many farm district Congressman to back a substantial boost in the minimum-wage law and to "lose misguided enthusiasm for legislation aimed against the unions." Labor is seeking a minimum wage of $1.25.

Labor's Daily reported recently that labor backing of the farmers' rigid price-support program reflects the long-standing contention of union leaders that there is a direct relationship between prosperity for farmers and industrial workers.

But this year is the first time that labor's top brass has gone before congressional committees in support of this theory. CIO president Walter Reuther made a personal appearance before a House committee to urge rigid supports. AFL president George Meany has also thrown his hat directly into the scrap.

In turn, there are indications that the traditionally antilabor farm bloc will give its support in the fight for a higher minimum wage. This is one of the big labor issues before the present Congress.

NATO Versus Communism

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "NATO Versus Communism," published in the Memphis (Tenn.) Press-Scimitar of May 9, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATO VERSUS COMMUNISM

Communism's aim is domination of the world. Communism expects an ultimate showdown with capitalism—but not necessarily in a hot war. The Kremlin knows its victory could be just as great and complete by winning the cold war.

The framers of the North Atlantic Treaty Organization foresaw this nonmilitary threat from communism as well as the military one. They provided for a military alliance—an attack on one is an attack on all. But they also provided for collaboration in the cold war.

Article two of the NATO treaty, pieces signatories to develop peaceful and friendly relations by strengthening their free institutions by bringing about better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being.

Little has been done to use that article. Our Canadian friends, led by Foreign Minister Lester B. Pearson, have tried at each NATO meeting to get action in nonmilitary fields.

Now, under Norwegian initiative, a first step is to be taken. A parliamentary conference of NATO countries will meet in Paris in July. Representatives of parliaments from 15 countries will discuss common problems.

This will be a big step toward better understanding. Without the goals listed in article 2 of the NATO Treaty it may not matter in the long run—how many divisions, tanks, airplanes, or nuclear weapons we have.

Better understanding among NATO nations can help win the cold war against communism. Lack of understanding could bring cold war defeat and make our weapons worthless.

Resolutions calling for participation of Members of the United States Senate and House are pending and, we trust, will get early approval. May we express the hope that when the 14 American Senators and Congressmen are selected, they will be chosen primarily because of what they can contribute to understanding and not because it will be a nice junket to Paris in July.

Cadet-Midshipman Service Should Be Credited for Longevity Pay Purposes

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cadet-Midshipman Service Should Be Credited for Longevity Pay Purposes," which was published in the March-April 1955 issue of the Retired Officer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CADET-MIDSHIPMAN SERVICE SHOULD BE CREDITED FOR LONGEVITY PAY PURPOSES

From all indications an error of 13 years' standing may be rectified during this session of Congress.

The introduction of H. R. 2213, by Representative CARL VINSON, Democrat, of Georgia, suggests that equal credit be granted for cadet-midshipman service. This is an executive measure, sponsored by the Defense Department, and approved by the Bureau of the Budget. A companion bill, S. 1201, was

introduced in the Senate February 23 by Senator FRANCIS CASE, Republican, of South Dakota, and was referred to the Senate Armed Services Committee. The enactment of either of these bills will accomplish this just objective.

Since 1942, when the Career Compensation Act became law, full-time credit for longevity pay purposes has been awarded for the following types of service (many of which do not require active duty for such credit):

1. For all periods of active service as commissioned officer, commissioned warrant officer, warrant officer, Army field clerk, flight officer, and enlisted person in any Regular or Reserve component of any of the uniformed services.

2. For all periods during which members were enlisted or held appointments as commissioned officers, commissioned warrant officers, warrant officers, Army field clerks, or flight officers, in any of the Regular companents of the uniformed services, the Regular Army Reserve, the Organized Militia prior to July 1, 1916, the National Guard, the National Guard Reserve, the National Guard of the United States, the Organized Reserve Corps, the Enlisted Reserve Corps, the Medical Reserve Corps, the Medical Reserve Corps of the Navy, the Dental Reserve Corps of the Navy, the Navy Militia, the National Naval Volunteers, the Naval Reserve Force, the Naval Reserve, the Air National Guard, the Air National Guard of the United States, the Air Force Reserve, the officers' section of the Air Force Reserve, the enlisted section of the Air Force Reserve, the Air Corps Reserve, the Army of the United States, the Air Force of the United States, the Marine Corps Reserve Force, the Marine Corps Reserve, the Coast Guard Reserve, the Reserve Corps of the Public Health Service, the Philippine Scouts, and the Philippine Constabulary.

3. For periods during which members held appointments as nurses, reserve nurses, or commissioned officers in the Army Nurse Corps, the Navy Nurse Corps, the Nurse Corps of the Public Health Service, or the reserve components thereof.

4. For periods served as deck officers or junior engineers in the Coast and Geodetic Survey.

This is not the first time that the matter of giving the same credit for cadet-midshipman service as has been given for the abovementioned services has been under consideration in the Congress. In 1948 a bill (S. 657) was passed by the Senate and favorably reported by the House Committee on Armed Services, but failed of enactment in the closing days of the 80th Congress.

General Paul, at that time the Army's personnel chief, testified before the Senate committee:

"Cadets and midshipmen are members of their respective services and are at all times on actual active duty. Their training is rigorous and they are subject to military discipline and control throughout such service. Accordingly it is believed that service as cadets and midshipmen should be credited for pay purposes and that the existing denial thereof constitutes an unwarranted discrimination."

During the same hearing, the Chief of Naval Operations, Admiral Denfeld, told the committee:

"Both justice and a healthy state of morale require that the treatment of all personnel, as determined by the governing laws and regulations, be on a fair and equiable basis."

On behalf of the Coast Guard, Admiral Farley, then Commandant, testified as follows:

"Insofar as counting of cadet service itself is concerned, the Coast Guard sees no justification for failing to include such service for the purpose of longevity, particularly in view of the fact that the Pay Act of 1942 liberalized the law with respect to those types of military service which can be counted for longevity and pay.

"In fact, as has been indicated by previous witnesses, time at our service Academies, whether Annapolis, West Point, or the Coast Guard Academy, is practically the only military service now excluded for computational purposes."

There was a day when the crediting of this service might well have been questionable. By the Joint Service Pay Act of 1922, Congress required that officers thereafter appointed could count only active commissioned service for pay purposes. Therefore, until 1942, there was no question of the congressional intent to count only active commissioned service.

That concept was entirely altered by the Pay Readjustment Act of 1942, when Congress provided that all prior and subsequent periods of active or inactive service, including that in any of the Reserve components of the Armed Forces and in either enlisted or commissioned status, could be counted in computing service for pay purposes. But it failed to include active service performed by cadets and midshipmen.

Thus, all service performed in either an active or an inactive status by both active and Reserve components, prior to or subsequent to 1942, was authorized by the 1942 act to be credited for pay purposes and in many cases for retirement purposes as well.

Two sidelights indicating how far discrimination can go, which will surprise even those familiar with the problem, are that (1) service as a cadet or as a midshipman is credited to one who later becomes an enlisted man (and there are examples) and (2) these services are creditable for both pay and retirement to civil-service employees. Thus, we have the astounding situation that such service is creditable to everyone except those for whom the military status of cadet and midshipman exists.

Contrast to these phenomena the fact that the service of cadets and midshipmen cannot be credited to officers, even for pay purposes—service which is in fact full-time, day to day, exacting military service, so recognized judicially and administratively throughout our history and, until comparatively recent times, by Congress itself.

The bill as written contemplates allowing credit only for the service performed by cadets and midshipmen. It does not allow credit for service training in the ROTC program. We believe the bill should be amended to include an appropriate credit for this service as well. This would provide additional incentives for young men to prepare for commissions in the armed services. Under present circumstances these young men, for the most part, do not decide to make military service a career. This, after all, is one of the aims of the ROTC program.

At long last the compelling reasons for the enactment of appropriate legislation to rectify the existing undesirable situation are clear to all who are aware of it. The legislation should, of course, be forthwith amended to include the service of cadets of the Air Force and ROTC service and be speedily enacted.

"Equal and exact justice to all men, of whatever state or persuasion, religious or political."—Thomas Jefferson.

Microwave Radio Relay Experiments

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story about results of microwave radio relay experiments which appeared in the March-April issue of Television Opportunities Newsletter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RCA SENDS LOW-POWER UHF SIGNAL 290 MILES—NEW MICROWAVE RADIO RELAY DEVELOPMENTS THE FIRST PRACTICAL STEP TO NORTH AMERICA-EUROPE LINKUP FOR TV AND GENERAL COMMUNICATIONS—NEW COMMUNICATIONS SYSTEM NOW IN USE IN COLOMBIA, THE AMERICAS—SIMILAR OPERATIONS PLANNED IN OTHER PARTS OF THE WORLD

(By Lawrence Levey)

NEW YORK.—The United States and Europe are being brought closer for purposes of improved telecommunications as a result of microwave radio relay experiments conducted by the David Sarnoff Research Laboratories of the Radio Corporation of America and RCA-Victor Co., Ltd., Montreal, Canada, it was recently revealed.

Following more than two decades of experimentation and testing, RCA, by means of low-power ultra high frequency, has succeeded in transmitting the signal 290 miles between Riverhead, Long Island, N. Y., and Covey Hill, Quebec, Canada. The distance covered is equivalent to the greatest water hop between the Faeroe Islands and the Shetlands. While range and mileage are coincidental, the experiments have overcome the widest water gap.

The successful experiments also mean that many of the terrain and geographic obstacles have been surmounted, also the elimination of innumerable, hops with subsequent reduction in costs of relay towers and equipment. It means paving the way to practical fulfillments of greatly improved communications between the Western Hemisphere and all European countries and eventually those in the Near East.

LOW-POWER TRANSMISSION

The RCA radio relay system uses a parabolic antenna reflector, 40 feet in diameter, mounted on short towers about 100 feet high. The transmitter power is 1 kilowatt. The apparatus was constructed and made with the objective of establishing operating conditions similar to those required for commercial operations in all branches of microwave radio relay.

Success of the experiments resulted in constructing a multihop microwave radio relay in Colombia, South America, with multiple telephone and telegraph channels. It is now operating commercially. Similar construction and operations are being planned in other parts of the world.

The radio-relay system also includes channels for black-white and color television, facsimile, teletype, FM and AM, and other forms of broadcasting now in operation in the United States.

GLOBAL ELECTRONIC MISSION

The United States-Western Europe linkup by radio relay, was first promulgated by Maj. Henry F. Holthusen, veteran international electronics consultant, diplomat, and presently consultant to the United States Senate Committee Studying the Technical Cooperation Program for the Senate Foreign Relations Committee.

During the past 5 years, Holthusen headed electronic missions throughout the world, at times accompanied by William S. Halstead, electronics engineer, who envisioned the communications route across the North Atlantic to Europe.

Holthusen's mission also stressed the need for uniform transmission standards along United States lines, because of its tried and efficient operation in the Americas. As a result of these efforts, which involved convincing foreign government top officials, leaders of industry, and electronic engineer-

ing experts, three countries in the Far East—Japan, Thailand, Philippines—adopted United States technical standards for television and auxiliary services, and it is believed that countries in the Middle East will do likewise.

(Reports of the results of the electronic mission were first published by Television Opportunities about 4 years ago; and progress of international TV and general communications has been published exclusively in all subsequent issues, circulated throughout the world, and translated into many languages.)

POWER NEEDED

The RCA microwave radio relay experiments also mean that TV and telecom linkup of all countries in the Caribbean and the rest of the Americas is approaching realization.

Recently, Major Holthusen returned from an extensive survey of all Latin American countries to determine their present and future power resources and requirements. Obviously, without increased power, there can be no expansion of telecommunications, nor improvements in existing facilities. This tends to impair closer contacts with our neighbors.

Also, expansion of power facilities would enable every country in the Americas to expand its economy, raise standards of living, and quell subversion. It would percolate through all levels of society, to the mutual economic and political advantages of all neighbor countries.

PIONEERING EFFORTS

In being the first to pioneer transatlantic microwave radio relay, the RCA experiments indicate a gradual technological crystalization of the electronic crusading efforts and plans projected by the Holthusen global missions, and the eventual fulfillment of what has long been the dream of electronic engineers, communications authorities, and many countries.

Interconnecting all countries of the free world by means of the latest and farthest advanced forms of communications, embodying all the electronic developments, from sound to sight broadcasting, is future bound to show beneficial impacts of tremendous import in the social, economic, and political lives of nations.

Further, it means that all free peoples of Europe will have access to the benefits of electronics and improved communications.

Television alone, has unlimited potentials for carrying democracy's pictorial language showing how a free people live in a free hemisphere, under a free system of government.

Farm Support Prices

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram regarding farm support prices, signed by Martin Byrne, president, and other officers of the Kansas State Farmers Union.

This telegram is timely, in that we are approaching the annual election on wheat quotas. The telegram reads in part as follows:

Unless the sliding scale the same pattern will undoubtedly unfold as regards wheat. The application of the sliding scale on this year's crop may cause farmers to ditch marketing quotas and take the gamble on all-out production at a lower price in the hope of maintaining their level of income.

In Kansas we have reduced our wheat acreage from 17 to 18 million acres of a few years ago to the 1954 planting of 11 million acres. This is a serious reduction in acreage and one that is causing farmers much concern.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

TOPEKA, KANS., *May 10, 1955.*

Senator FRANK CARLSON,
Senate Office Building,
Washington, D. C.:

Last week's House action to reenact high level supports on basic crops and milk is a clearcut reflection of the concern of Congressmen over the drastic curtailment of farm income and the continuing high level of farm living and production costs.

Evidence is continuing to appear that farm production volume and oversupply cannot be managed by the reduction in price levels. The individual farmer's only alternative in anticipation of lower commodity prices and inflexible high level production costs is to do a maximum job of production in the hope of maintaining his level of income.

The fallacy of the theory that reduction of price will cut production in agriculture is readily apparent in the handling of the dairy problem during the past year.

Price reductions given dairy farmers a year ago have served only to reduce the farmers' income by millions of dollars. Consumers have received little or no reduction in retail prices. The processor has been the benefactor. Additionally our past year's dairy production is the largest in history, consumption has increased very little, and our dairy herd has been increased by one-half million cows.

Unless the sliding scale, the same pattern will undoubtedly unfold as regards wheat. The application of the sliding scale on this year's crop may cause farmers to ditch marketing quotas and take the gamble on all-out production at a lower price in the hope of maintaining their level of income.

Wheat production, unshackled by acreage controls and without price supports, will drive the price down and drag all farm prices with it as wheat is channeled into feed use. The whole farm economy will rock to its foundations, forcing thousands from the land.

Farmers are willing to accept acreage controls in line with consumer demand provided price at near parity levels is assured.

We insist farmers are entitled to fair and equitable prices. The full parity price concept for farm commodities has on many occasions attracted the endorsement of both major political parties as being fair and just. Supports at the 90-percent level are reasonable and justified when coupled with production controls.

We wish to emphasize that full parity prices are flexible in that they rise and fall as items used in farm production rise and fall.

Unless the flexible price sliding scale program is abandoned and 90-percent supports reinstated thousands of Kansas farmers will suffer income losses from which they cannot recover.

As the board of directors and as officers of the Kansas Farmers' Union, it is our firm belief that Kansas farmers generally are in accord and heartily applaud the action of 5 of their 6 Congressmen in voting for House Resolution 12, to restore 90-percent supports to the 6 basic crops and the increased level of support for the dairy industry.

We appeal to you now to use your great influence to secure favorable action on the provisions of House Resolution 12 is passed by the House in the Senate Agriculture Committee and to bring the proposal before the full Senate at the earliest possible moment. We urge that you work and vote for reenactment of the 90-percent supports on basics and be counted among those realistically advocating full parity of income for farmers.

Respectfully submitted.

Address by Director of Export-Import Bank of Washington Before Association of Bankers of Mexico

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Mr. Vance Brand, Director of the Export-Import Bank of Washington, before the Association of Bankers of Mexico, in Torreon, State of Coahuila, Mexico, on April 27, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY VANCE BRAND, DIRECTOR, EXPORT-IMPORT BANK OF WASHINGTON, BEFORE ASSOCIATION OF BANKERS OF MEXICO, IN TORREON, STATE OF COAHUILA, MEXICO, ON WEDNESDAY, APRIL 27, 1955

When I crossed the Rio Grande, it was not with a feeling of mixed emotions. On the contrary, I experienced a feeling of great expectancy, that of renewing my friendship with many of you fine people. I regret very much that I do not speak your language. But what we say and think is well understood by both of us because we speak an international language, the language of sincere friendship. I welcome the opportunity and appreciate the invitation to return to your great country.

You and I as individuals have a common interest in the development of Mexico. Both of us—Mexican Bankers and the Export-Import Bank—are influenced by reasons of good sound business. You want financially strong responsible customers at home. We need strong neighbors and customers. Only if the development of Mexico is to your best advantage, can it also be to our advantage.

I have engaged in private banking for 20 years and in Government finance for 6 months. For 20 years I learned by experience that the success of my private bank was in direct ratio to the prosperity of the people who dealt with the bank. The horizon of the bank was limited to the immediate territory but as all the people of that territory prospered, the bank enlarged and expanded and grew healthier. As a private banker and a public banker I know now full well that as the horizons of Mexico and the United

States expand, and our people in both countries become more prosperous, the trade between us will continue to expand and grow in a very healthy manner.

The prime requisite of economic growth and development is adequate credit on reasonable terms. This is the field in which we each must function and will cooperate.

A policy of cooperation must be embraced by joint action before such policy can really become effective. What is the joint action which is so necessary to make effective our friendship and cooperation? I refer to both of us—the Mexican bankers and the Export-Import Bank.

Let us discuss for a moment the types of loans made by the Export-Import Bank and how the Mexican bankers may facilitate by their action and cooperation not only the extension of these loans but the operation of the loans.

The Export-Import Bank generally and broadly extends two types of loans: (1) loans made upon application of the buyer abroad, (2) loans made upon the application of the United States exporter to assist him to extend credit in connection with a single transaction. This latter type of loan is especially helpful to the individual buyer abroad and particularly to the smaller businesses. It may aid the foreign business to expand its plant or may replace old equipment. It may make it possible for the farmer to obtain new and improved machinery for the development of your agriculture. Many other examples are applicable. In such cases—although the Export-Import Bank acts upon the application of the United States exporter—it is in reality extending credits to the purchaser in Mexico.

Our greatest problem is to obtain adequate credit information concerning the purchasers. Whether the loan is made upon the application of the buyer abroad or upon the application of the United States exporter, we have exactly the same problem of obtaining credit information concerning the ultimate purchaser abroad. In this respect you may be of great assistance both to your customers and to the Export-Import Bank. We are located thousands of miles away from the purchaser in Mexico. On the other hand, he is your next-door neighbor. You are not solely confronted with the problem of looking at information on a piece of paper and making a determination as to the credit risk involved. You know intimately all the facts. In business I have found when you have all the facts it is sometimes quite difficult to make the correct decision, but when you have only part of the facts, it is almost impossible.

Furthermore, in many cases the Mexican buyer may become a good risk by pledging security or giving liens on existing and new equipment imported. It is often difficult for the Export-Import Bank to rely on such security in another country and given by a customer many thousands of miles away. To the extent that Mexican banks can adequately secure themselves and therefore guarantee the obligations of the Mexican purchaser at a reasonable charge, you will be helping yourselves by making it possible for us to assist in the development and growth of your customers, your community, and your country.

In adidtion, such activity on your part helps you to maintain good customer relationship and may from time to time add good local loans to your portfolio. It is not uncommon for the purchaser abroad to need financing for local costs, as well as for imports from the United States.

One of the greatest assurances for the success of the program is being constantly alert to keep the rates reasonable. The bank fixes its interest rates on the basis of the cost of the money, plus a reasonable sum for maintenance of a proper reserve and the cost of operation of the bank. This policy in itself facilitates the flow of trade because the financing is not expensive. I am confident that if you maintain low rates for your guaranties it will soon be evident that you can render greater assistance to the businessmen here in Mexico. You will not only influence the increase in the flow of exports which you need in the capital-goods field, but this policy will be most beneficial to general business conditions in your communities because as the capital goods go to work for you, all business in your community will be benefited by the resultant increases.

We look upon ourselves as your partners in the growth of Mexico and all of Latin America.

Our bank has demonstrated its great faith in Mexico and in Latin America. During the past two decades the bank has loaned more than $1.7 billion in Latin America. Certainly the influx of private capital in Latin America has been a major factor, but $1.7 billion, principally in capital goods, is also an important contributing factor.

Our faith in Latin America has been fully justified. Let us examine a few co[illegible]isons. Per capita consumption in Latin [illegible]rica increased 26 percent from 1945 [illegible] 1953. Telephones in use in Latin America as a whole more than doubled from 1940 to 1954, as did automobiles.

Truck and bus registrations tripled and the number of tractors on the farms rose five times.

United States cement production went from 24 million tons in 1939 to 47 million tons in 1952—an increase of 96 percent. But in the same period, cement production in just 1 country in Latin America increased 2,088 percent.

In the postwar period Latin America's gross product—measured in constant prices—has increased from 27.3 billion to 41.6 billion, or 52 percent. In this same period the United States gross product increased from 263 billion to 307 billion, also measured in constant prices, or by 17 percent.

Secretary of the Treasury Humphrey announced at Rio that the partnership policy between the Latin Americas and the United States would be implemented by the intensification and expansion of the Export-Import Bank. Let us examine the record. In the first 6 months of 1954 this bank extended approximately $77 million in credits. During the last 6 months of 1954 the Congress of the United States made the bank an independent agency and expanded its borrowing power. During the 6 months from July 1 to December 31, 1954, the credits of the bank exceeded $290 million. In the first 2½ months of operations in 1955 the bank extended over $184 million in credit, and I want to point out that all but $17 million of those credits were in Latin America. Thus, during the first 8½ months of the United States Government's fiscal year the bank has extended credits approximating one-half billion dollars.

Latin America is on the march. It is the responsibility of the bankers to keep in step.

I am convinced that by adhering to such a course those of us engaged in finance will serve well the interests of our respective countries.

The Indian Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials from the Devils Lake (N. Dak.) Journal regarding the Indian problem.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Devils Lake (N. Dak.) Journal of March 22, 1955]

INDIAN SCHOOL THREATENED

Apologists for the Bureau of Indian Affairs may deny it, but a great danger still exists that Fort Totten Indians may lose their school.

The Bureau allegedly has been working undercover to close the school and it was only by accident that money was made available last year to continue classes.

Bureau of Indian Affairs officials contacted groups at Bismarck to say that it would be impossible to continue operating the school because of a lack of funds. When the matter was finally investigated, it was found that no request had ever been made to Congress for the money.

That is the story told by a responsible official.

By the convenient method of failing to ask for an appropriation, the Bureau was trying to strangle the school on the Fort Totten reservation.

North Dakota would be willing to take over operation of Indian schools, providing the Federal Government would reimburse the State on a cost-per-pupil basis. So far, the Bureau of Indian Affairs has refused to do that in North Dakota, although it was borne out in a recent Senate hearing that such an arrangement has been made in other States.

If the Bureau of Indian Affairs will shell out funds to run Indian schools in one part of the country, there is no reason why North Dakota Indians should not receive equal treatment. Now that the matter has been bared in Congress, it may be that something will be done to correct the situation.

Until the Federal Government agrees to reimburse the States for Indian education, however, it will be necessary for State officials to keep a close watch on the Indian Bureau. North Dakotans will want to urge their Senators and Representatives to carefully examine each budget which the Indian Bureau submits to make sure that provision is made for operation of the Fort Totten school.

Few persons would question but what North Dakota could do a better job of operating the Fort Totten school, but the State first wants assurances that it will receive financial repayment from the Federal Government, which has responsibility for the Indian.

Unaware of the policies of the Bureau of Indian Affairs, people of the Devils Lake area watched as the hospital was closed over the objections of the Fort Totten Indians. Similar action can be expected in the case of the Fort Totten school, unless the people wake up to what the Bureau is trying to do.

Because they fail to ask for money to operate the school, the Bureau has shown again that it wants to divest itself of further Indian responsibilities. It's about time that the American people set up a few roadblocks, or they will find a bureau in operation without any Indian affairs.

[From the Devils Lake (N. Dak.) Journal of March 23, 1955]

AGENCY MAY GET LAW'S HELP

Law enforcement on the neighboring Fort Totten Indian Reservation may be forthcoming, according to a spokesman for the Department of the Interior.

The Federal Government, seeking to justify itself in the matter, maintains that it was caught off guard by the action of Benson

County in appealing a case to the State supreme court for settlement of a dispute over jurisdiction.

Since the supreme court ruled, by a margin of 3 to 2 that Benson County lacks jurisdiction over the reservation, there has been no law enforcement for anyone, white or Indian, who happens to live in that area.

Recognizing the serious nature of the problem, the North Dakota Legislature passed a resolution to place the question of jurisdiction over Indians on reservations before voters in the 1956 primary election.

Glenn Emmons, United States Indian commissioner, said that if action was taken by the legislature to put up a constitutional amendment, permitting the State to assume jurisdiction over Indians, at the next election, he would recommend that money be appropriated to take care of the problem.

Inasmuch as an election is more than a year away, the next move must be made by the Federal Government. It may be that the stalemate will be broken soon and that the amenities of civilization will again return to the reservation.

From all appearances, it would seem that it is the white persons on the reservation who are in most serious jeopardy because of the squabble. The Federal Government can be expected to take some action in the case of the 10 major crimes, where they involve Indians, but who is going to act to insure protection for the other residents?

Since the dispute apparently concerns only Indians, it would seem that Benson County should at least take over responsibility for its own non-Indian residents.

Fort Totten officials maintain that non-Indians pay real-estate taxes to Benson County, so it would seem that they are entitled to the services which accrue to those who may happen to live off the reservation.

At any rate, it is time that steps were taken to return law enforcement to the reservation. Benson County probably weakened its case when it assumed jurisdiction in 1946, but it has finally brought the issue to the fore.

The Bureau of Indian Affairs has anything but a good record as far as treatment of the Indian is concerned, but it is hopeful that the Department of the Interior may be at least partially alerted to the deterioration which has occurred south of Devils Lake.

It will take a lot of doing to restore confidence in the bureaucrats who have made such a mess of Indian affairs, but one foot forward is better than many steps backward which have been taken in recent months on the Fort Totten Reservation.

[From the Devils Lake (N. Dak.) Journal of March 24, 1955]

LAW ENFORCEMENT BUDGET FOR INDIAN AGENCIES IS BOOSTED

During recent discussions before the Senate subcommittee on appropriations in Washington, D. C., the Bureau of Indian Affairs presented a revised proposed budget calling for about $120,000 expenditure for law enforcement among North Dakota Indians as compared with $15,000 spent last year.

The information was given in a report on the discussions by John B. Hart, executive director of the North Dakota Indian Affairs Commission.

Sufficient money would be available under the proposed budget for construction of a jail on the Turtle Mountain Indian Reservation and for sufficient personnel to give adequate law enforcement to all reservations in North Dakota, including supervision for juvenile work, Hart said.

Since a Supreme Court decision that North Dakota lacks jurisdiction over Indians on the Fort Totten Reservation, it has been without law enforcement. Orme Lewis, Assistant Secretary of the Interior, indicated the Federal Government would take over law enforcement for the time being, but no arrangements have been reported as yet from the reservation.

"We supported the position that law and order would be most effective if transferred to the State and local political subdivisions with adequate guarantees for financial reimbursement until such time as the Indian people, as a race, did not constitute a financial burden on the community greater than the non-Indian people of the same community," Hart said.

He pointed out that the Bureau of Indian Affairs does not have authority at present to contract for reimbursement of political subdivisions which would be willing to render services to reservation Indian people in the field of law enforcement.

Senator O'MAHONEY, of Wyoming, suggested that the Senate Subcommittee on Indian Affairs should explore the question and probably recommend legislation to permit the Bureau of Indian Affairs to make provisions for reimbursement, Hart reported.

[From the Devils Lake (N. Dak.) Journal of March 25, 1955]

NAME POLICEMAN FOR FORT TOTTEN

Law enforcement will return to the Fort Totten Indian Recreation Monday with the arrival of a policeman from Belcourt, it was announced today by Harold Schunk, superintendent of the Turtle Mountain Consolidated Indian Agency.

Lee Gourneau will arrive at Fort Totten over the weekend with his family to assume responsibilities for law enforcement. His services are being provided by the Bureau of Indian Affairs.

The Fort Totten Reservation has had no enforcement since a State supreme court decision that Benson County lacks jurisdiction over Indians.

Schunk said that Eli Morin, who serves as judge for the Turtle Mountain Reservation, will act in a similar capacity at Fort Totten, until a permanent judge has been appointed.

Morin, who has been a judge on the Belcourt Reservation for 15 years, was appointed by the Bureau of Indian Affairs to serve the Belcourt Indians.

Gourneau, who has eight children, will live in Government quarters at Fort Totten. He was one of two policemen at Belcourt, the other being Theodore (Red) Tibbits. Gourneau's title at Belcourt will be chief of police, and he will headquarter at the subagency office, Schunk said.

Salaries of the policeman and judge will be paid by the Bureau. Funds are lacking to set up a tribal council at Fort Totten to handle law enforcement, Schunk explained.

Non-Indians on the Fort Totten Reservation remain under the jurisdiction of Benson County, according to Schunk.

Action by the Bureau of Indian Affairs follows a recent announcement in Washington by Orme Lewis, Assistant Secretary of the Interior, that the Federal Government would take over responsibility for law and order. He made the statement at a recent hearing of the Senate Subcommittee on Juvenile Delinquency in Washington, D. C.

Lewis claimed there is a serious legal question whether or not the Federal Government can take over jurisdiction on the reservation, but said he had decided that the responsibility for enforcement should be assumed until the issue has been decided in court.

Benson County had assumed jurisdiction in 1946 after Congress had ceded it to the State.

[From the Devils Lake (N. Dak.) Journal of March 25, 1955]

THE LAKE LOOKOUT

Devils Lake may have set some kind of a record Tuesday night in the amount of snow to fall during a 1-hour period. One inch of new snow fell during the hour before midnight as the spring's first snowstorm invaded the lake region. Remarking that the fall was unusually heavy, Earl Hoffman, the local weatherman, said he didn't recall that it had ever snowed any harder here.

Not only law enforcement, but almost every other phase of Indian service, has been the subject of argument between the State of North Dakota and Uncle Sam. The North Dakota Indian Affairs Commission recommended that the State legislature investigate the possibility of excluding from the State-aid-to-dependent-children program persons who reside in an area not subject to State jurisdiction, which would include the Indians. In Arizona and New Mexico, home of the Navaho-Hopi Indians, 92 percent of such aid is borne by the Federal Social Security Administration, which may be in violation of the Social Security Act. Now the attorney general's office at Bismarck has been asked for the legal position of North Dakota on the matter.

Some States also have been receiving per pupil payments from Uncle Sam for Indian children attending the public schools. John Hart, of Rolla, in his recent visit to Washington, found considerable support among United States Senators for the idea that the Federal Government should pay the per pupil cost of Indian children in public schools. It was not without some embarrassment to the Bureau of Indian Affairs that it was revealed that Uncle Sam already was discriminating between States on the question of per capita cost payments. This was being done while the Bureau of Indian Affairs was seeking to close the Fort Totten school and making no provision for education of the Indian children. By failing to ask for the necessary appropriations to run the school, the Bureau was seeking to transfer the burden to the State.

Persons close to the Indian problem in North Dakota, and that includes every resident of Devils Lake, can hope that justice will be forthcoming with regard to reimbursement to the State in the matter of Indian services.

Today's Challenge to Public Power

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. NEUBERGER. Mr. President, the role of public power agencies in maintaining an adequate supply of electricity to meet our Nation's energy requirements was never greater than it is today. The leadership of these agencies, which are owned by the people they serve, in bringing the benefits of low-cost power to the farms, homes, and business life of the Nation, are well known.

But the present administration's power policies have presented publicly owned agencies with new challenges. At a recent meeting of the Tennessee Valley Public Power Association, Mr. Alex Radin, general manager of the American Public Power Association, outlined some of the past accomplishments of public power agencies. He also discussed the problems of the future. I ask consent to have printed in the Appendix of the RECORD portions of the able speech delivered by Mr. Radin.

There being no objection, the portions of the spech were ordered to be printed in the RECORD, as follows:

TODAY'S CHALLENGE TO PUBLIC POWER

(Address by Alex Radin, general manager, American Public Power Association, Washington, D. C., presented April 25, 1955, at annual convention of Tennessee Valley Public Power Association, Memphis, Tenn.)

* * * * *

Although we are all impressed with the statistics showing the increase in employment opportunities, the expansion of industries, the higher standard of living, the better farm practices, the greater use of electric power, and many other benefits of TVA, only those who have lived through the TVA experience can, I believe, really appreciate what this agency has meant to the people of the Tennessee Valley. To us, TVA has been more than a means for providing a better standard of living. TVA lifted the gloom and depressed attitude from the people of this area, and has projected on the horizon a new hope for the future. It is in this transformation of the spirit of a region that the real significance of TVA lies. And it is for this reason that the people of this area fight with such bitter determination whenever TVA is attacked. Such deep-seated loyalty to a concept is something which other people of other areas often find difficult to understand. But we who have lived through the TVA experience can well appreciate why we must fight to the end for an agency which has brought new life and hope to the people of the valley.

In view of this experience, is there any wonder why the people of the Tennessee Valley have become so aroused against the Dixon-Yates contract? For you well know that Dixon-Yates is more than a plan which ultimately would bring higher electric rates to the TVA area. The far greater danger from Dixon-Yates is that it is the plan which, carried to its ultimate conclusion, would plunge a dagger in the heart of TVA.

* * * * *

What I would like to discuss with you this afternoon is some of the reasons why Dixon-Yates is a matter of such national concern; how the philosophy inherent in Dixon-Yates is pervading so many other spheres within the field of development of our natural resources, and how this Dixon-Yates philosophy presents such a challenge today to our national welfare.

During the past few months I have had the occasion to speak in the States of California, Missouri, and Nebraska, and everywhere I have gone there has been a keen interest in the Dixon-Yates contract.

Why this interest in sections so removed from TVA? First, I believe, because TVA itself is a symbol dear to people all over the country, and the many admirers of TVA see Dixon-Yates as an opening wedge to the destruction of TVA.

A second reason why I believe Dixon-Yates has become a national issue is that it is representative of evil principles of Government. The people of the Nation not only are rightly suspicious of the secretive manner in which this contract was negotiated, but they also don't like the fact that the execution of this contract has been ordered over the objections of independent boards such as the TVA and the Atomic Energy Commission.

Moreover, it is bad administrative policy to have the Atomic Energy Commission involved in the first instance in this nefarious affair. The Atomic Energy Commission was established to build nuclear weapons, promote the peacetime utilization of atomic energy and to conduct research in the field of atomic energy. The Dixon-Yates contract does not contribute one iota to the advancement of any of these purposes. In fact, it is destructive and disruptive of the work of the Commission.

A third reason, in my opinion, why the people of America have become so concerned about this contract is that the American people don't like monopolies, or great concentrations of power in any form. As a result of the revelations of the Federal Trade Commission and congressional investigations, the American people got their fill of monopoly abuses in the late twenties and early thirties, and as a result Congress adopted the Holding Company Act in 1935.

* * * * *

I will not go further into the evils of the Dixon-Yates contract, for I know that I am covering ground that is all too familiar to you. But I would like to discuss what I would refer to as the Dixon-Yates philosophy, or, in the context of these times, Dixon-Yatesism. For Dixon-Yates is not only bad within itself; it is not only a threat to the entire TVA area; it is a prototype for arrangements which are being proposed in many other sections of the country.

I have referred to Dixon-Yates as a philosophy. What is this underlying philosophy? Basically, it is that the national debt can be reduced and that it is to the Government's advantage if the Government does not supply some of its own needs, or the needs of the people of the Nation, and instead fills those needs by contracting with private companies.

Applied on the local level, the Dixon-Yates philosophy would work something like this: A city needs an expensive new fire engine for its municipal fire department. But the city council decides that it could spare itself the large expenditure for this piece of equipment by hiring a private company to come in and supply its own fire engine, with its own crew, and with the city paying the fire company an annual rental. I don't have to cover the obvious and tell you what is wrong with this proposition. Certainly no well-managed municipal government would ever think of entering into such an arrangement.

Yet, on a larger scale, that is precisely the same principle involved in the Dixon-Yates contract: The Government avoids the expenditure of about $90 million for the Fulton steam plant, and instead contracts with private power companies for an equivalent amount of power.

On the face of it, the argument may sound appealing. All of us want lower taxes; all of us want a lower national debt. But the argument in favor of the Dixon-Yates concept falls down in that it is based upon certain fallacious assumptions: (1) It doesn't recognize that expenditures for power projects are returned in full to the Federal Treasury; (2) that Government investments in sound natural resource developments create new wealth both for a broad base of private citizens as well as for the Government itself; and (3) that over the life of the contract the costs to the Government far exceed those which the Government would bear if it built the project in the first instance.

I have said that the Dixon-Yates philosophy has pervaded the thinking behind projects proposed in other sections of the country. Let us examine some specific examples of this.

First, there is the shining example in the Pacific Northwest, where the Idaho Power Co. has proposed a plan for three small dams as a substitute for the Hells Canyon Dam. The argument there is that local private enterprise is willing to build these dams, so why should the Federal Government make this expenditure. A familiar argument, for it is basically the same as that used in justifying Dixon-Yates.

But let us see how it works in reality. Yes, the Idaho Power Co. does propose to build three small dams. But the Idaho Power Co. plan would add prime power at site and at downstream projects of only 680,000 kilowatts, as compared with 1,124,000 kilowatts of prime power that would be added by construction of the high Hells Canyon Dam.

We talk in such big figures these days that we might tend to minimize the 444,000 kilowatt differential in these two projects. But remember, these 444,000 kilowatts are roughly equivalent to the installed capacity of Kentucky, Chickamunga, Norris and Douglas Dams. And this loss in power will be felt year after year, for many scores of years into the future.

And, of course, the Government would not lose if it invested money in the high Hells Canyon Dam. To the contrary, the funds would be repaid in full to the Federal Treasury, many new jobs would be created and the economy of the entire area would be improved.

High Hells Canyon Dam also would provide more flood storage, and additional benefits. But, under the Dixon-Yates philosophy, we could forget about this; after all, see how much the Government would save by not having to build this project in the first instance.

We find this same Dixon-Yates philosophy expressed in the Trinity River project in California. There, the Bureau of Reclamation has proposed a project which would have an installed generating capacity of 233,000 kilowatts. The Pacific Gas & Electric Co. steps forward, though, and says, in effect: "We'll be generous. We will save the Government $64,876,000 by installing the power features of this project. Then the Government only has to spend the money to build the dam itself."

Sounds like a great scheme. The Government saves money and the national debt is reduced. In fact, it is a great scheme—for P. G. & E., but not for the Government, and not for all the people of the United States—for under this bit of Dixon-Yates philosophy the Government is left holding the bag with the non-profit-making features of the project while P. G. & E. takes the cash register. This scheme also provides a neat device for circumventing the preference clause—a fundamental part of our Federal power marketing program which has resulted in bringing the benefits of public power to the largest number of people.

We find the Dixon-Yates philosophy being expressed in many other sections of the country—in connection with the Niagara project, for example—but I will not belabor the point by going into the details of these projects.

I do believe it is noteworthy, though, to observe that this frame of mind also is prevalent in connection with the development of atomic power for peacetime utilization. The philosophy of the present Chairman of the Atomic Energy Commission and other officials is that the Federal Government should get out of this field as rapidly as possible and that the initiative should now be taken by private enterprise.

No one will quarrel with the fact that atomic energy should not be a Government monopoly; nor will we argue that private enterprise should not be permitted to assist in the development and to share in the benefits of this new resource.

But the fact of the matter is that, in our eagerness to delegate the responsibility for this development to private enterprise, we are prematurely trying to ease the Government out of responsibilities it rightfully owes to the American people. For it was the Federal Government, through the expenditure of about $13 billion of tax funds, which brought into being the peaceful, as well as the wartime uses of atomic energy, and the Government therefore has an obligation not only to bring about the full development of this resource for its peacetime utilization but to safeguard its investment and prevent

the creation of private monopolies upon the basis of Government expenditures.

Is the Government adequately discharging these responsibilities? I do not believe so. It has been almost a year now since the Atomic Energy Act of 1946 was drastically revamped upon the pleas of private industrial groups that they would carry forward the progress in this field if some of the restrictions were removed. But now that the door has been opened to private enterprise, has there been any rush through this door?

• • • • •

Having seen some of the problems confronting us in the publicly owned portion of the electric industry, I would like to turn now to the challenges which lie ahead—for all of these problems present challenges for the future.

1. Abundant supply for the future: In my estimation, the most important challenge facing us in the future is to continue to provide more power at lower rates. Providing leadership in this regard represents one of the great contributions of TVA and public power generally to American life, and maintaining this leadership is a goal for which all of us in public power must continually strive.

• • • • •

As we face the future, public power must continue to show the way to imaginative, aggressive planning that will not only anticipate electric power needs, but will provide a reservoir of power that will encourage the expanded use of electricity in the home, on the farm, in commercial establishments, for municipal use, and in the Nation's factories. With a constantly expanding population, and having our eyes fixed on the goal of a constantly rising standard of living, we cannot afford to stand still.

2. Atomic energy: Earlier, I have related how the Dixon-Yates philosophy has pervaded the development of atomic energy for peacetime production of electric power. Just as we must break the Dixon-Yates contract itself, so also must we break through the Dixon-Yates philosophy in developing peacetime utilization of atomic power. Only several weeks ago an official of the Atomic Energy Commission admitted that, proportionately, our program of developing atomic power producing facilities is not proceeding as rapidly as the British program.

• • • • •

Nothing would be more fitting than to have the Government construct, at the site of the Nation's first atomic energy plant, a demonstration power reactor which would serve as an electric power yardstick in an area which is most notable for serving this function.

3. Development of natural resources: Public power has led the way in providing comprehensive, multi-purpose development of our natural resources, and one of the challenges facing us in the future is to continue to provide leadership in this field.

• • • • •

The problem facing all Americans in the future is not only one of developing these resources as rapidly as possible, but insuring that such development is not piece-meal. This means that we have an obligation to prevent the Dixon-Yates philosophy from being followed in Hells Canyon, in the Trinity River, in the Niagara Falls redevelopment, and in all other water resource projects.

We have no right to short-change future generations by permitting short-sighted North ng or selfish actions today.

veni) • • • • •

The record today is clear that the very existence of public power is being threatened in many sections of the country, and the Dixon-Yates contract is but one example and a symbol of a nationwide campaign which is being waged by private power interests to cripple or eliminate many public power systems. Though the private interests contend that their campaign is directed only against the Federal power program, the evidence is abundant that the municipally owned systems, public-utility districts, State-owned utilities, and rural electric cooperatives likewise are being subjected to this attack.

The fact that all levels of public power in all sections of the country are being subjected to this attack makes it more imperative than ever before that all of us in public power—in the Tennessee Valley, in the Pacific Northwest, in the Northeast, in the Southwest, and other sections of the Nation—work together to protect our common interests.

We must meet this challenge not only by constantly improving our own utilities so that they are not vulnerable to attack but also by exposing this campaign for what it is—an effort to destroy the competitive force of the publicly and cooperatively owned electric utilities.

Proposed Change in the American Electoral System

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles and an editorial, published in the New Bedford (Mass.) Standard Times of March 31, 1955, relating to a proposal to change the American electoral system.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

SIMPLICITY OF PLANS TO ALTER VOTING SYSTEM IS DECEIVING

WASHINGTON, March 29.—The presidential election system, under which the Republic has chosen its leaders for 155 years, is again a target in the Congress. At the last count, 13 proposed amendments to the Constitution calling for a change in the election procedure had been submitted to the House and Senate.

The proposals have a deceptively simple appeal. In few words, they suggest replacing the present method with "direct election by the people," or "division of the electoral votes in accordance with the popular vote," or "dividing the electoral vote according to the popular vote in each congressional district."

IS NOT SPELLED OUT

The simplicity of the language conceals probable far-reaching changes in the election procedure, however, and almost certain dilution of the intent of the Constitution. The present election system is not spelled out in the Constitution. It has developed through usage, has been hammered out by experience, and follows the spirit, if not the letter, of the Constitution.

The Constitution provides that the President and Vice President will be named by the members of the electoral college, the electors. The latter are to be chosen in such manner as the legislatures of the various States may decide. Each State is given a number of electors equal to the total of its Representatives and Senators in Congress.

Beginning in 1800, States adopted the method of having a slate of electors for each accredited presidential candidate, with the people of the State to elect one slate of electors by a statewide plurality vote. To simplify the ballot, certain States print the names of the presidential and vice presidential candidates on the ballot, and not the names of the electors representing them. Other States have continued printing the names of the full slates of electors with party designated, and not the names of the candidates for President and Vice President.

In any event, the presidential candidate winning a plurality of the popular vote in a State—under his own name or through a slate of electors representing him—is given all of the State's votes in the electoral college. Every State follows this practice, which has become known as the unit rule, or all-or-nothing system, of allocating electoral votes.

UNIT RULE IS TAUGHT

Most efforts at constitutional amendment of the election system have sought to end the unit rule. It has been claimed that giving all of a State's electoral votes to one candidate disfranchises the persons who voted for the loser, because their candidate had nothing to show for his popular votes.

This argument ignores, of course, the fact that in any Presidential election, regardless of what system is employed, the persons voting for the loser are eventually disfranchised.

It also has been argued that under the unit-rule system a man can be elected President with fewer popular votes than his opponent. This has happened three times in the Nation's history, but not since 1888. It should be remembered, moreover, that such a situation is possible under any election procedure except direct voting for President.

A direct election system is 1 of the 3 major election changes proposed in the legislation before Congress. It has little chance of approval, however, because by abolishing the electoral system entirely, it favors populous States.

SECOND MAJOR CHANGE

Under the present system, Nevada has 3 electoral votes for its 2 Senators and 1 Congressman, giving it one-fifteenth the influence of New York, which has 45 electoral votes. In a direct popular vote election, New York's population would give it approximately 80 times the influence of Nevada.

A second major change proposed would divide a State's electoral votes in proportion to the popular vote received by the Presidential candidate in that State. This change, known as the Lodge-Gossett plan, would dissolve the physical being of the electoral college but retain the present electoral vote rating of the States.

The Lodge-Gossett plan was approved by the Senate in 1950, but was overwhelmingly rejected by the House. The then Republican minority leader, JOSEPH W. MARTIN, JR., of Massachusetts, led the opposition, calling the proposal a political Pandora's box that would encourage splinter parties and could lead to the loss of our two-party system of Government.

The third major change proposed in current legislation is embodied in the Mundt-Coudert plan. No proposal uses fewer words for what would be a complete facelifting on the election system.

The language of the Mundt-Coudert bill says that a State's "electors * * * shall be chosen * * * in the same manner in which its Senators and Representatives (for Congress) are nominated and elected."

IT SEEMS EASY

Superficially it all seems so easy, and in accord with democratic processes, even in accord with the Constitution, itself. The electoral college and the electoral vote system would not be abolished. The only change, it would seem, would be to elect the electors just as the people elect their Congressmen and Senators.

Prof. Ruth C. Silva, of the department of political science, Pennsylvania State University, in a report on the Mundt-Coudert plan last year, said the "formula would not have

changed the outcome of a single election since 1916. In every case, the Mundt-Coudert plan would have given the victorious candidate at least the necessary 266 electoral votes."

She added that it would make the presidential elections closer by enlarging the electoral vote of the defeated candidate.

Yet the change would be far reaching. The Mundt-Coudert plan means that a presidential candidate would receive an electoral vote for each congressional district he carried. The unit rule would be abolished. The only advantage in winning a statewide plurality would be to obtain the two electoral votes represented by the State's Senators.

VIRTUALLY IMPOSSIBLE

In order to receive all of a State's electoral votes, a candidate would have to carry every congressional district, a virtual impossibility except in the solid South.

Representative FREDERIC R. COUDERT, JR., (Republican, New York), the principal sponsor, has been offering his amendment since 1949. Since 1953, Senator KARL MUNDT (Republican, South Dakota) has submitted a companion bill in the Senate.

The so-called district system, which the Coudert plan proposes, was considered by Congress four times in the early 1800's. Four times it was rejected. The original States voluntarily tried, then abandoned, this system.

Since those early years there have been many changes in the voting habits of the American people. The Civil War has brought a one-party voting tradition to a large area of the Nation, the solid South.

Today, the Mundt-Coudert district system would threaten the strong two-party tradition, the majority vote and the State autonomy which are the basic characteristics of the form of government that makes this Nation a republic.

MUNDT-COUDERT PLAN SEEN BLOW TO TWO-PARTY SYSTEM

WASHINGTON, March 30.—Few will deny that, on the whole, the election process in the United States has been a model for the world. There have been troubles, of course. Three times Presidents have been elected with fewer popular votes than their opponents. But the last such occasion was more than 75 years ago.

The electoral college, men who cast their electoral votes in accord with a decision already determined by the people, seems an outmoded institution. Some States have had more "native son" Presidents than others, demonstrating, it is said, that some States have more than their share of influence in the election process.

SYSTEM SURVIVES

Minority parties have risen. But they have gone, leaving no permanent footprint.

Despite frailties, the system of 48 State contests in the presidential election, with all of a State's electoral votes going to the popular vote winner in the State, has survived many bitter campaigns and many unexpected developments, such as the growth and preeminence of one party in a large section of the Nation, the solid South.

Nobody has suggested substituting any other country's election system for that in the United States. But there have been changes proposed from the Congress, all of which have been put aside after study.

The Mundt-Coudert plan would supplant the present unit rule by allocating a State's electoral votes under a method known as the district system. A candidate for President would receive an electoral vote for each congressional district in which he obtained a popular vote plurality. The only reward for statewide popular vote victory would be the 2 electoral votes allotted a State for its 2 Senators.

SEEKS EQUALITY

The district system would, in effect, replace a 48-State election with four-hundred-odd contests, 1 for each congressional district in the Nation.

Congressman FREDERICK R. COUDERT, JR., Republican, of New York, has said his plan would "restore the system as designed by the Constitution," citing Hamilton, Jefferson, and Madison to the effect that the district system is what the founding fathers had in mind.

"At present, the center of political gravity rests with the big metropolitan centers," COUDERT has stated, "whereas my plan would reinstitute equality of election power all over the country."

The Coudert plan would lessen indeed, the impact of metropolitan centers by confining their influence to a district or two, and a corresponding number of electoral votes, instead of letting their weight be felt in the statewide, all-or-nothing procedure.

LIABILITIES LISTED

In exchange for this improvement, the Mundt-Coudert plan offers these liabilities:

It would encourage one-party voting in the South by increasing that section's influence on national elections.

It would diminish the influence of States where there is a balance of political sentiment by dividing their electoral votes.

It would arbitrarily balance one congressional district against another, despite great disparity in population.

It would arbitrarily balance one electoral vote against another, although one may represent four times the popular votes of the other.

It would permit States which elect their Congressmen at large to continue the all-or-nothing system, while other States changed to a district system.

It would offer minority parties a chance to obtain electoral vote recognition, an inducement to their growth.

SOUTH BROKE RANKS

An estimate of the effect of the Mundt-Coudert district system on the solid South, as contrasted with its effect elsewhere, may be had from examining the two most recent elections.

In 1952, the solid South broke ranks as never before, except in the campaign of 1928, and 4 of the 11 States of that region gave popular vote pluralities to Eisenhower. This gave the Republican 57 electoral votes, to 71 for his Democratic opponent, Adlai Stevenson, under the present unit rule system.

In congressional district voting for Members of Congress, the one-party tradition had a strong hold in 1952, however. The solid South elected only 6 Republicans among its 104 Congressmen.

In Texas, for instance, where the Republican presidential candidate received all 24 electoral votes on the basis of a statewide victory, no Republican was elected to Congress in the 21 districts.

Prof. Ruth C. Silva, of the department of political science, Pennsylvania State University, writing on the Mundt-Coudert plan last year said.

OTHER EXAMPLES

"It would tend to favor the party which failed to carry the State in the popular election. For example: In 1952, the GOP carried Tennessee but the Democrats would have had a margin of one electoral vote. In 1948, the Democrats carried California and Ohio; but the Republicans would have captured more electoral votes in each of these States.

"Application of the Mundt-Coudert formula to the statistics for the last 10 elections produces dozens of anomalies similar to these examples."

The Mundt-Coudert plan would relegate the presidential contest to the district basis.

Outside the solid South it was another story in 1952.

Three States, Illinois, New York, and Pennsylvania, having a more balanced political sentiment and with a total electoral vote approximately equal to that of the 11 States of the solid South, gave statewide pluralities to the Republican candidate for President. He received all of the electoral votes, 104.

In their congressional elections, however, the three States chose 36 Democrats among their 98 Congressmen.

The 1954 congressional election again demonstrated that the South is strongly one-party on a district basis, while elsewhere support is more evenly divided. The 11 Southern States elected 7 Republicans of 106 Congressmen; the three Northern States of Illinois, New York, and Pennsylvania chose 43 Democrats in 98 contests.

WOULD DIVIDE NORTH

The net result of the district system would be to encourage 1-party domination in the South, while emphasizing 2-party division in the North. The political advantage of one-party unity in the South, while the rest of the Nation divided its support, would be enormous.

The present unit rule, using blocs of electoral votes by States, has enabled the 2-party system to withstand the effect of 1-party voting as practiced in some sections of the country.

The Mundt-Coudert plan arbitrarily gives each district, regardless of voter turnout or population, equal voice in the Presidency.

In some areas, approximately 40,000 persons go to the polls for each electoral vote to which the State is entitled. In Illinois, an electoral vote represents approximately 140,000 popular votes. The Mundt-Coudert district system permits the 40,000 to cancel the wishes of the 140,000.

Populationwise, the district system balances one district against another in the presidential election scales, even though a congressional district in New York, or some other populous area, may contain 20 times the population of a district in a sparsely-settled area of the Nation.

DISPARITY IN STATE

In Massachusetts, there is disparity; the 10th district, for instance, contains 106,000 more persons than the seventh.

Under the Mundt-Coudert plan, however, the 1 electoral vote of the seventh district would have exactly the influence of the 1 electoral vote of the 10th district.

The present unit rule method is not affected by this unbalance. The vote of one person counts no more than the vote of any other person in a statewide tabulation.

There is no provision in the Mundt-Coudert plan for applying the district system to the six States that have no congressional districts. These States elect their Congressmen at large—by statewide vote.

Three other States choose one or more of their Congressmen by the at-large method.

WOULD DIVIDE 39 STATES

Under the present unit rule method, each of the six States that have no congressional districts gives all its electoral votes to the presidential candidate winning a statewide plurality. Under the district system, they would continue to do so, but 39 other States would be dividing their influence and voting by districts.

The 3 States which elect 1 or more Congressmen by the at-large method would be forced to operate with two methods—electing by districts and at large.

Congressman COUDERT has claimed the district plan would minimize the influence of splinter parties. He has cited the 1948 election in New York, where Henry Wallace's Progressive Party took enough popular votes

from Truman to enable Governor Dewey to gain a plurality and all the State's electoral votes.

However, under the unit rule system, the record shows that splinter parties do not gain a permanent foothold, their real threat. The same Progressive Party received 500,000 votes in New York, alone, in 1948; yet in 1952 it received fewer than 135,000 votes in the entire Nation.

The Mundt-Coudert plan offers a minority or splinter party a chance for electoral vote stature, virtually impossible under the present system. By concentrating in a district or districts, the Progressives, Socialists, or even the Communists might obtain district electoral votes.

ASSUMES CHANGE IN HABITS

In essence, the Mundt-Coudert plan, like the earlier Lodge-Gossett proposal, is based on an assumption that American voting habits will change. It offers no guaranty they will change and no inducement for their changing.

Meanwhile, the effect of the district system advocated by this proposal would be to discourage two-party voting. The 16 million voters of Illinois, Pennsylvania, and New York would see their influence canceled out in a division of political support; while a candidate would come from the 9,000,000-vote Solid South with a one-sided electoral vote advantage gained with far fewer popular votes.

Under the present system, the possibility exists that a President could be elected with fewer popular votes than an opponent. Under the proposed district system, as embodied in the Mundt-Coudert method and with the present voting habits, such a possibility becomes almost a certainty. With the Mundt-Coudert system in effect, it is doubtful that the two-party plan of Government in the United States would continue to exist.

AN UNSOUND PROPOSAL

For more than a century and a half, the two-party political system has given the Government of the United States strength and stability unequaled by any in the world.

Yet this system has been under continuous attack by lawmakers who, in an effort to correct minor defects in the American electoral plan, have proposed constitutional amendments that would destroy it.

In the present Congress, 13 amendments have been filed calling for a change in the system of electing the President and Vice President of the United States.

One of these, the Lodge-Gossett plan, would divide the electoral votes of each State in proportion to the popular votes received by the candidates in the State. In the 1950 session of Congress, the Lodge-Gossett bill was overwhelmingly defeated in the House, but it is back again for consideration this year.

The amendment receiving the most serious attention in the present Congress is the Mundt-Coudert bill. This would abolish the unit system under which all of the electoral votes of a State are given to the presidential candidate who wins a Statewide plurality. It would substitute for the present system a plan that would treat each congressional district as a separate voting unit. It would give a presidential candidate an electoral vote for each congressional district in which he won the popular vote. Only two electoral votes in each State would be awarded on the basis of a statewide plurality, except in the nine States which have congressmen-at-large.

Adoption of this proposal would give an advantage to one-party States, and it could eliminate Republican Party candidates as serious contenders for national elective office. The "solid South" would continue to give virtually all of its electoral votes to the Democratic Party. In the big-population States of the Northeast and Midwest, where Republicans have much of their strength, the electoral votes would be divided.

For example, it is inconceivable that either party, under the Mundt-Coudert plan, could win all the electoral votes in any of the heavily-populated States where Republicans and Democrats are almost equal in strength, such as New York, Pennsylvania, Ohio, Illinois, Michigan, and Massachusetts, to mention only a few. Under the district system, candidates of both parties would get a large number of electoral votes in each of these States and the margin of victory always would be relatively small. Only in the one-party Southern States, where the voters are overwhelmingly Democratic, would there be large electoral margins in favor of one candidate.

It should be emphasized, however, that the Mundt-Coudert proposal is not a sectional issue, for its adoption would be equally disastrous to all parts of the country. One-party control of the executive branch of the Federal Government would shake the foundations of the Republic. State and individual rights would be seriously endangered because a one-party system tends to produce a more dominant national leadership, less responsive to trends in public opinion.

There are many more inequities in the Mundt-Coudert plan. It would arbitrarily assign one electoral vote to every congressional district, although there is wide divergence in their populations. States in which all Congressmen are elected at-large would retain the unit system because they have no congressional districts and their electoral votes consequently could not be divided under the Mundt-Coudert proposal. This amendment also would encourage the formation of minority or "splinter" parties by increasing their chance to win electoral votes.

These and other undesirable features of the Mundt-Coudert plan would weaken, rather than strengthen, the national election system. The unit electoral method now in effect is time-tested and has proved to be a fair means of electing a President. It is the electoral college, not the electoral system, which has become obsolete.

Congress well might consider an amendment which would eliminate presidential electors, since their formal election of the President merely records a decision already made by the people. But there should be no tampering with the unit electoral system. National elections should be decided wholly on the basis of statewide pluralities, with the winner in each State receiving electoral votes equal in number to the State's congressional delegation.

Under the unit electoral system the United States has grown and prospered, and the rights of free men have been preserved. Two-party Government must be continued if our great national heritage is to survive. It is to the best interests of every American, wherever he may live or whatever his party preference, that the Mundt-Coudert proposal be defeated and the unit electoral system retained.

To Save the Constitution, Pass the Bricker Amendment

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Broadcast No. 17 by Dean Clarence E. Manion entitled "To Save the Constitution, Pass the Bricker Amendment."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

TO SAVE THE CONSTITUTION, PASS THE BRICKER AMENDMENT

What is the most important material thing in the world today? Electrical energy? Medical science? Uranium? More important to the world than all or any of these is the Constitution of the United States. Splitting and harnessing the atom was a breathtaking turning point in the history of physical science, but dividing and harnessing man's civil government into the effective checks and restraints of the American constitutional system was, and still remains, the most serviceable and revolutionary achievement ever recorded.

The Constitution of the United States is the highest peak of human accomplishment. When it is destroyed, the cause of human freedom will be set back 5,000 years. The Constitution is the first and only man-made establishment in human history which has effectively checked and limited man's government in the interest of man's God-given freedom. Under its protection the free American people quickly developed the greatest material civilization that the world has ever seen. Its beneficial effects were so obvious that the Constitution was revered and venerated by each succeeding American generation.

Nevertheless, the very effectiveness of these constitutional restraints upon governmental power was a sharp thorn in the side of ambitious political demagogs. It was in their political interest to widen the area of governmental activity so that voters could be bought with the taxpayers' money. As one of them later expressed it, they wished "to tax and tax and spend and spend and elect and elect." Such political opportunists build up pressures against the firmness of constitutional restraints. In time these pressures drastically reduced the strength and dimensions of constitutional protections against governmental excesses.

But extensive and dangerous as it undoubtedly is, this erosion of the Constitution by misconstruction and misrepresentation is a gradual process. It is far too slow to satisfy those who are now determined to merge all mankind into that giant monopoly of absolute power known as world government. Even a mangled and misconstrued Constitution of the United States is a barrier to the complete execution of this treasonable design. Consequently, the one-worlders demand quick and conclusive action for the complete removal of our Constitution as the supreme law of the United States. They confidently plan to supplant our Constitution with some sort of world charter under which we, along with all other people of other countries, will be brought into a direct line of firm allegiance and complete obedience. For convenience, the one-worlders propose to approach their ultimate goal through preliminary, regional mergers of separate nations beginning in the Atlantic area.

Here is a news dispatch from Ottawa, Canada, as it appeared in the Kansas City Star last December 13th. Here is the quotation: "Creation of a super Atlantic community agency to merge the economic, defense, and foreign policies of the United States with other countries, will be recommended to members of the North Atlantic Treaty Council in Paris this week." Says the recommendation: "This is no time for half-hearted measures; while welcoming the progress made toward European union, we believe that nothing less than an effectively integrated Atlantic community will in the end,

adequately meet the challenge of the times. Defense in today's terms extends beyond military requirements and into the political, economic, and cultural aspect of our lives." It calls for "the development of NATO as a central agency to coordinate the political trade and defense policies of the member nations. NATO already has authority to adopt the proposed program under article 2, commonly called the Canadian clause, which provides for economic development of the member countries." The dispatch concludes: "Among prominent Americans endorsing the idea are Harry Truman, Adlai Stevenson, Gen. George C. Marshall, Norman Cousins, Owen J. Roberts, Will L. Clayton, Clarence K. Streit, Chester Bowles, Senator Humphrey, Senator Kefauver, Senator Lehman, William V. Griffin, Edward Murrow, and Elmer Davis."

Observe that the proposal for this international merger of our political, economic defense and foreign policies was to be made, not to the American people, or to their Congress, or to their President, but to the members of the North Atlantic Treaty Council in Paris. It is contended that the North Atlantic Treaty to which the United States is a party, now authorizes the adoption of such a program without further reference to the constituent individual nations.

If this interpretation is correct, then the fate of the Constitution of the United States no longer rests with the people of this country or with their Supreme Court but with the North Atlantic Treaty Council. This situation underscores the seriousness of the prevailing legal theory that a treaty between the United States and foreign nations supersedes the Constitution and thus becomes the supreme law of the land.

Please recall that the basic purpose of our Constitution is to preserve the sovereign independence of these United States and to provide for their common defense. The Constitution delicately balances the governmental relationships and obligations of American citizens between the State of their residence and the Federal Government. Under the Constitution, we are thus primarily responsible to our State governments for the observance of general laws protecting life, property, and privacy. We are protected in all contacts with both State and Federal Government by separate, detailed Bills of Rights and numerous other State and Federal constitutional provisions. Above all, and against both State and Federal Governments, we are constitutionally protected against violation, by arbitrary governmental action, of our liberty and property. This is the finely balanced reciprocating area of our protection and allegiance that is now alleged to have been transferred lock, stock, and barrel to the North Atlantic Treaty Organization.

Does it sound somewhat fantastic that this radical shift in the area of your personal rights and responsibilities could have taken place without your prior knowledge and consent? The people of the Thirteen Original American States were asked to approve, and the people in each State, one after another, did approve of our present responsibility to State and Federal Government respectively. This was accomplished, according to the direction of the Constitution itself, by the ratification of the Constitution by conventions of the people in each of the new "United States."

If transfer of part of our allegiance from one sovereign to another required such specific, separate approval of the American people in 1789, what has happened since which enables the President, with the approval of two-thirds of the Senators who happen to be present and voting, to make you a subject of France, England, Italy, and other countries in an international combination known as the North Atlantic Treaty Organization?

If such a transfer of your allegiance and duty of obedience has been so accomplished—and there is a formidable body of law and fact to support the foregoing published contention that it has been, then the Constitution of the United States has not merely been bypassed, it has been destroyed. The one worlders are confidently relying upon this alleged treaty supremacy principle to sell out our national sovereignty behind your back.

A year ago, I left my post in Washington as Chairman of the Commission on Intergovernmental Relations in a snowstorm of publicity concerning the then pending Bricker amendment to the Constitution of the United States. Unofficially, I was told repeatedly that my advocacy of the Bricker amendment was embarrassing the Presidential administration. What I was told officially was shorter and more pointed.

Subsequently, the Bricker amendment which was originally coauthored with Senator BRICKER, of Ohio, and two-thirds of the Senate membership, was amended and later defeated by the narrow margin of one Senate vote. All of the sustained, and sometimes frantic opposition of the high Presidential office against this proposal was able to produce but one vote more than a mere third of the United States Senate. Among those who voted to defeat this necessary reinforcement of our national independence and constitutional integrity were Senators who were persuaded to stultify their previously expressed approval of its principle and purpose.

Why did the Bricker amendment generate such bitter opposition? It was a simply stated direction that treaties between the United States and foreign nations could not override the Constitution of the United States; that treaties could not automatically change the internal law of the United States, our labor laws, property laws, game laws, education laws, traffic laws, crime laws, and criminal procedures. The Bricker amendment only reaffirmed what the average American feels and believes our constitutional law to be. Unfortunately, that feeling and belief has recently been shattered by decisions of our courts.

Nobody has stated the present situation more clearly than John Foster Dulles, who said: "The treatymaking power is an extraordinary power liable to abuse. Treaties make international law and also they make domestic law. Under our Constitution, treaties become the supreme law of the land. They are indeed more supreme than ordinary laws, for congressional laws are invalid if they do not conform to the Constitution, whereas treaty laws can override the Constitution. Treaties, for example, can take powers away from Congress and give them to the President; they can take powers from the State and give them to the Federal Government or to some international body; and they can cut across the rights given the people by the constitutional Bill of Rights."

Why should the President and Mr. Dulles now fight so hard to retain this power to cut across the Bill of Rights? Why do they wish supreme authority to take powers from the States and give them to some international body? Specifically, what is it that the President and Mr. Dulles plan to do that the Bricker amendment will prevent them from doing? What undisclosed emergency now requires us, in their judgment, to scrap the greatest discovery of all history, the Constitution of the United States?

Have we already surrendered our sovereignty in the 10,000 unpublished international agreements to which Mr. Dulles says we are now a party? The President and Mr. Dulles must answer these questions now because Senator BRICKER has reintroduced his proposed amendment in the present Congress. If we are to regain our national independence, retain our sovereignty and preserve our constitutional freedom, there is a critical necessity for the immediate passage of this new Bricker amendment.

From 1789 until 1953 no President of the United States has ever actively interferred with a proposal to amend the Constitution, a procedure which under the Constitution itself, is the exclusive concern of Congress and the States. Will the President now respect this long established precedent or will he renew his bitter fight to keep all present and future international agreements above the restraints of the Constitution? We shall soon know the answer.

Arrest of Polish Underground Leaders 10 Years Ago

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. POTTER. Mr. President, Dr. Jerzy J. Lerski, editorial director of the Polish Daily News, a very old newspaper printed in Detroit, has sent me 2 tearsheets from his newspaper containing a recital of the facts connected with the seizure and imprisonment of 16 Polish underground leaders by the Communists. These Polish patriots were enticed to a meeting with their Communist captors 10 years ago to discuss the future of a free Poland. Representations looking to the liberation of these men have been made by our own State Department without avail. Because I believe these 2 articles will be of interest to all Members of the Congress, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

REDS' BROKEN PROMISES, TRICKERY LED TO ARREST OF UNDERGROUND LEADERS IN POLAND 10 YEARS AGO

(This is the first part of a two-part article giving all the details on the arrest and imprisonment of 16 Polish underground leaders by the Communists in Russia 10 years ago.)

On March 29, 1945, the Polish Government in London received the following radio message from its plenipotentiary in Poland:

"On March 28, three ministers and the representatives of political parties proceeded to a place fixed for their meeting with General Ivanow.

"No one of these 15 persons has returned, and until today none has given a sign of life either to us or to their families.

"Probably they left Pruszkow by cars on the 29th of March. We presume that they went either to London or to Moscow. It may well be that their further negotiations are proceeding under duress, or that they have been treacherously arrested. We request an immediate intervention with the allied governments."

The intervention was made. The governments of Great Britain and United States addressed questions to Moscow and received no reply. On April 11, the British Parliament gave expression of its anxiety in a public debate. On May 2, a spokesman of the foreign office informed Parliament that no explanation from the Soviet Union had yet been received.

A peace conference was opened in San Francisco.

During this conference, Minister Molotov dropped a by-the-way remark that the Polish leaders had been arrested on a charge of subversive activities against the Red army.

After this statement which caused general indignation among the delegates, Ministers Eden and Stettinius at once interrupted discussions on Poland's future with the Soviet delegation and demanded a full explanation.

On May 11, Mr. Eden made the following statement to the press:

"The list of 16 Poles who were reported missing and about whom we made inquiries with the Soviet Government over a month ago, comprises nearly all leading personalities of the Polish underground movement.

"These men have an excellent record in anti-German resistance throughout the war. Most of them are just the sort of people who in our opinion should be consulted on the matter of a new government of Poland."

On 18th of May, Mr. Stalin stated in his interview with a reporter of the London Times that the 16 Poles had been arrested by Soviet military authorities for subversive activity in the rear of the army, and the information that they had been invited to talks with Soviet representatives, was quite untrue.

Soon afterwards, Tass agency announced that the trial of the 16 Poles would be held before a military court in Moscow.

The 16 men captured were:

1. Leopold Okulicki, brigadier general, born 1898, Commander in Chief of the Polish Home Army.

2. Jan Stanislaw Jankowski, born 1882, Vice Premier of the Polish Government, former parliament deputy and former minister.

3. Adam Bien, born 1899, member of the Home Council of Ministers, former judge, leader of the Peasant Party.

4. Stanislaw Jasiukowicz, born 1882, member of the Home Council of Ministers, former parliament deputy, member of the Executive of the National Party.

5. Kazimierz Puzak, born 1883, chairman of the Council of National Unity, former parliament deputy, member of the authorities of the Polish Socialist Party.

6. Aleksander Zwierzynski, born 1880, former chairman of the Council of National Unity, former deputy speaker of the parliament, member of the Executive of the National Party.

7. Kazimierz Baginski, born 1890, former chairman of the Council of National Unity, former parliament deputy, delegate of the Peasant Party.

8. Stanislaw Mierzwa, born 1905, delegate of the Peasant Party.

9. Zbigniew Stypulkowski, born 1904, former parliament deputy, delegate of the National Party.

10. Eugeniusz Czarnowski, born 1904, delegate of the Democratic Party.

11. Jozef Chacinski, born 1889, former parliament deputy, delegate of the Christian Labor Party.

12. Franciszek Urbanski, born 1891, secretary of the Council of National Unity, delegate of the Christian Labor Party.

13. Stanislaw Michalowski, born 1903, former vice mayor of the town of Grudziadz, delegate of the Democratic Party.

14. Kazimierz Kobylanski, born 1892, delegate of the National Party.

15. Antoni Pajdak, member of the Home Council of Ministers, delegate of Polish Socialist Party.

16. Jozek Stemmler, born 1892, chairman of a Polish educational organization, interpreter of the delegation.

What were the circumstances of the arrest of the 16 Polish leaders?

At the time when the Soviet troops entered Poland, the Polish Government in London was still recognized by all the Allies, with the exception of the Soviet Union.

While those troops were moving deeper into Polish territory, the agreement at Yalta was signed. This, however, was not immediately followed by a withdrawal of official recognition from the Polish Government by Great Britain, the United States, and other Western countries.

The act of withdrawal took place in July, 1. e., not only after the arrest but also after the trial of the 16 Polish leaders.

In the second phase of the war, the Polish Government was only partially resident in London. A vice premier and several ministers, constituting the so-called Home Council of Ministers, worked on Polish territory.

Although they had received their nominations from London, they acted under democratic control in the form of the Council of National Unity, composed of representatives of all Polish political parties of the underground.

The members of the Home Council of Ministers and of the Council of National Unity were therefore recognized as legal authorities of Poland, not only by the Polish nation but also by Poland's Western allies.

The Soviet Union refused them recognition, since she had already prepared a puppet body of her own for taking over the rule of Poland.

Having thus no direct relations with the Soviet Union, the authorities of Underground Poland, in accordance with the point of view of the Polish Government in London, looked upon the Soviets as "allies of our allies."

As long as the Polish territories were under German occupation, the Polish Underground was giving most useful assistance to the Soviet military campaign by sabotage activities in the rear of the German armies and impeding German operations on the eastern front.

As the Soviet troops progressed towards the west, units of the Polish Home Army joined forces with them. Such for instance was the position during the storming of the Polish cities Lwow and Wilno.

As soon as the cities were taken, however, the Soviet army disarmed Polish units, shot their commanders, and sent most of the soldiers to the depths of Russia, to concentration camps from which many of them have not yet returned.

The officials of underground administration, in charge of counties and districts, were instructed by the Home Council of Ministers to reveal their identity to the entering Soviet troops and to strive toward establishing some forms of cooperation with Soviet commanders. All who obeyed the instructions were arrested.

Agents of Soviet intelligence who had penetrated the organization of the Polish underground administration and army had prepared lists of names of underground politicians, functionaries, and officers.

According to these lists, the Soviet authorities carried out a wide campaign of arrests and deportations.

This action was conducted under the orders of the MVD General Ivanov-Sierov—a fact still unknown in Poland at that time. He is at present chief of security in the Soviet Union, appointed Minister after Malenkov's downfall.

The behavior of the Soviet armies in Poland was like that of an army occupying enemy territory.

Mass looting, not only of industrial equipment but also of private property of the population, and—in the western Polish territories—mass raping of women, marked the Soviet progress.

When the Warsaw uprising fell, bringing about a complete destruction of the capital and the death in action of many of the most active underground fighters, the authorities of the underground Polish state did not interrupt their activities, though these became extremely difficult.

The Home Council of Ministers and the Council of National Unity deemed it to be their most urgent duty to alleviate the tragic misery of the nation and to work out some directives with regard to the international situation. They were practically cut off from the outside world, and radio communication with London did not suffice.

It was absolutely necessary to talk over the problems of future activities and to seek the intermediary of the Western Allies for an approach to the Soviets.

It was equally important to protect the Polish population and, by means of some agreement with the Soviet military authorities, to obtain for it at least a minimum of security.

Even though the bad will of the Soviets was perfectly obvious, and the possible effect of an intervention most doubtful, the authorities of the Polish underground deemed it their duty to undertake a last endeavor of arranging Polish-Soviet relations on the spot and of making the situation clear to the outside world. They felt responsible for the fate of Poland and of the Poles.

In these circumstances, the Soviets took initiative. On March 6, 1945, a Guard Colonel Pimonov wrote to Vice Premier Jankowski, proposing talks with Colonel-General Ivanov as a representative of the Soviet command of the front.

The talks were to be held "in an atmosphere of mutual understanding and trust, which would permit taking decisions on most important matters and prevent a sharper conflict."

World Awaits Information on 16 Imprisoned Poles

(This is the second of a two-part article dealing with the arrest and imprisonment of 16 Polish underground leaders 10 years ago. Last week the United States Government sent Russia a note requesting information on the 16 men. The Russians have as yet failed to answer the note.)

After unofficial negotiations conducted by Mr. Jozef Stemmler on the Polish side, and a certain Chodkiewicz on the Soviet side, Colonel Pimonov for the second time gave his word of honor as an officer that the Polish negotiators would be completely safe.

Between March 17 and 27, Pimonov had further conversations with Vice Premier Jankowski and prominent leaders of the Polish parties. He declared that he spoke on behalf of Marshal Zhukov, commander of the front. The main topic was the security of the rear of the Soviet armies.

Pimonov stated that the Soviet-promoted puppet government in the form of the so-called Lublin Committee was unable to guarantee this security, having no support at all in the country. He also promised that previously arrested leaders of the Polish underground would be released, and that a Soviet plane would be provided to take eight authorized Polish representatives to London to meet the Polish Government.

Before that, however, an official meeting with Marshal Zhukov must be arranged, and the marshal would invite the Poles to a luncheon. General Okulicki, commander of the Polish Home Army, should also attend this lunch.

Considering the great unrest among the Polish population—the Russians said—it was absolutely necessary to demonstrate the good will of both parties.

On March 28, 1945, 16 representatives of underground Poland arrived in the headquarters of the Soviet high command near Pruszkow.

They were greeted in a most friendly way by a large group of higher Soviet officers, and for a long time awaited Marshal Zhukov's arrival.

Finally they were informed that the marshal was expecting them in another nearby locality. They were driven to a building in Wlochy, occupied by the Soviet MVD.

There, they were told again that the marshal apologized for a further delay, but was yet unable to leave the front.

On the following morning, a Soviet general declared that Marshal Zhukov could not come, but had sent his private plane to fetch the Poles.

They were taken to the airfield of Okecie; Soviet generals and colonels bid them a hearty farewell.

The plane landed near the town Ivanovo, east of Moscow. From that place, the Polish delegates were taken by railway and by cars directly to the notorious prison at Lubianka.

In his press interview on May 18, 1945, Stalin stated: "It is not true that the arrested Poles were invited to negotiate with Soviet authorities."

During the trial of the 16 men, 1 of the accused argued that he had made the journey on Marshal Zhukov's invitation.

The president of the court, Colonel General Ulrych, exclaimed: "You have simply fallen for an MVD trick," and burst in jovial laughter.

The Poles imprisoned in the Lubianka were subjected to a Soviet investigation lasting 70 days. During that period every one of them was subjected to more than a hundred questionings and to psychological, and even physical, tortures.

They were accused of most improbable crimes, blackmailed with the situation of their families; attempts to bribe them with promises of wonderful careers were followed by threats of death or of life imprisonment in a labor camp.

Details of this investigation were described by Zbigniew Stypulkows—one of the prisoners who later succeeded in escaping to the West (invitation to Moscow).

What legal basis did the Soviet law provide for the arrest and accusation of the kidnaped Poles?

Article 58 of the Soviet penal code begins with the following words:

"A counterrevolutionary act is an act directed toward overthrowing, undermining, or weakening the authority of the Soviets of Workers and Peasants, of the Governments of Workers and Peasants of the U. S. S. R., or toward undermining or weakening the external security of the U. S. S. R. and of the basic economic, political, and national achievements of the proletarian revolution.

"On the grounds of the international solidarity of interests of all working people, such acts are also recognized as counterrevolutionary if they are directed against any other state of the working people, even if this state does not belong to the Union of Soviet Socialists Republics."

And article 16 of the same code says: "If a specific, socially dangerous, act is not directly covered by this code, then the basis and extent of responsibility arising from it shall be determined in a proper way in accordance with the articles of this code which concern a crime most similar to it in its kind."

On the grounds of these two articles, every act committed anywhere on earth, at any time, by a citizen of any country of the world, may be recognized by a Soviet court of justice as a crime, and may be judged and punished even by the "highest measure of social defense," with death.

A Soviet court of justice, holding such power in its hands, does not have to prove any real crimes; it only seeks for some additional accusations which may be of greatest propaganda value at a given moment.

Following this interpretation of the law, the Soviet indictment drawn against the leader of underground Poland we based on the factual state of affairs described in the following way:

"During the German occupation of the territories of Poland, Lithuania and of western districts of Ukraine and Byelorussia, the Polish emigre government formed an underground military organization named the Home Army. * * *

"The activities of this illegal organization were conducted by the accused Okulicki, together with Jankowski using the title of a president of the underground Council of Ministers, and with its ministers.

"Simultaneously, an illegal organization under the name of Council of National Unity was set up and acted on the Polish territory; this was headed by Puzak, general secretary of the Polish Socialist Party."

Thus, the Russians who during the years 1941–43 had recognized the Polish Government in London, now came to consider the activity of the part of this government residing in Poland, as criminal—even though it had place under German occupation.

This was the third occasion on which they accepted a point of view fully concordant with that of the Nazis. The first occasion had been in 1939, when they joined in the German aggression of Poland, by an attack from the east, and later partitioned Polish territories in full agreement with the Nazis.

The second time came in 1944 when they made it impossible for the Western Allies to succour the Warsaw rising and thus helped the Germans to squash it.

Now, on the third occasion, they publicly endorsed the Hitlerite conception of legality and illegality with regard to Poland.

Having recognized the activity of the Polish underground state as criminal, the Soviet prosecution did not have to add much to its accusation.

Some charges were added, however: that of sabotage in the rear of the Soviet Army, and even of the intention to oppose the Soviets in complicity with the Germans.

The case was tried by the military collegium of the highest court of justice of the U. S. S. R. presided over by Colonel General Ulrych who had gained a wide reputation in the prewar show trials connected with mass purges within the Soviet Communist Party.

Major General Afanasiev, military prosecutor general, and the prosecutor, Rudenko, at present attorney general of the U. S. S. R., acted for the prosecution.

A large number of arrested Polish people were brought from Soviet prisons to testify as witnesses. Testimony of witnesses called by some of the accused, was not admitted.

The trial was conducted in the usual atmosphere of Soviet court procedure, with prosecutors using offensive and malicious language, and official witnesses giving damning evidence against the accused.

A certain snag in the traditional routine was, that one of the accused (Stypulkowski) refused to plead guilty; it is doubtful, however, if this was of any consequence, since the sentence had bee determined beforehand.

As the trial of 16 Poles provoked a great stir everywhere in the world, and was taking place in a period when negotiations with the Western Allies had not yet been concluded, it was decided to impose European penalties, which would be considered as rather mild in Soviet conditions. Prosecutor Afanasiev explained this decision in the following way:

"Since we have victoriously completed the most just of all just wars, and the enemy has been trampled in the dust, people like these criminals here are no longer so dangerous that a penalty of shooting would have to be imposed on them."

The court issued its sentence after 3 days' procedure. Four of the accused were pronounced guilty of inimical activity in the rear of the Soviet Army, of planning to form a Polish-German military bloc against the Soviet Union, and of spying for foreign powers.

Eight were pronounced guilty of having failed to report these inimical activities to the Soviet authorities.

Three of the accused, who had pleaded guilty under the threat of a death sentence were released. The case of one who had fallen seriously ill under investigation was executed.

Individual sentences were: Gen. L. Okulicki, 10 years imprisonment; Vice Premier A. S. Jankowski, 8 years; ministers: A. Bien and S. Jasiukowicz, each 5 years; Chairman A. Puzak, 18 months; Deputy Speaker A. Zwierzynski, 8 months; Parliament Deputy K. Baginski, 18 months; Deputies I. Chacinski, A. Czarnowski, S. Mierzwa, S. Stypulkowski, and F. Urbanski, each to 4 months; K. Kobylanski, S. Michalowski, and J. Stemmler were released.

The period of sentence ran from the day of the arrests.

A. Pajdak who was tried separately out of court was sentenced to 3 years.

The sentences indicate that General Okulicki, whose sentence was the longest should have been free the 28th of March, 1955, and all others should have regained their freedom much earlier. What is the real state of affairs?

Okulicki, Jankowski, Jasiukowicz, and Pajdak have not returned to Poland and their fate is unknown. Their families have no news from them and do not even know whether the men are still alive.

Bien, allegedly, came back to Poland a short time ago.

Puzak and Mierzwa were released, but after their return to Poland they were again arrested and sentenced to long-term imprisonment. Both have since died in prison.

Czarnowski, Urbanski, and Chacinski all died after returning to Poland, in consequence of the sufferings they had undergone while in Soviet hands.

Michalowski and Kobylanski, after returning to Poland, were arrested and sentenced to long terms in prison.

Baginski, after serving several years' prison in Poland and Stypulkowski, succeeded in escaping to the West.

Zwierzynski and Stemmler (interpreter of the Polish delegation) live in Poland and probably are free.

In short, out of the 16 arrested Poles, 5 are dead, the fate of 4 is unknown, 2 are in prison, 3 are free in Poland, and 2 in the West.

Such was the practical result of an attempt at arranging relationships with the Soviet Union in an atmosphere "of mutual understanding and trust" to which the Poles were so warmly encouraged by their Western Allies.

On the 10th anniversary of the arrest of 16 leaders of underground Poland, the Polish people request that the Governments and nations of the free world give their full support to the following demands:

1. That the present fate of Okulicki, Jankowski, Jasiukowicz, and Pajdak, missing somewhere in the Soviet Union, be made known;

2. That those among them who are still alive be set free without delay;

3. That Kobylanski and Michalowski, imprisoned in Poland, be released.

General Okulicki, Ministers Jankowski, Jasiukowicz, and Padjak, and all others were either members of the recognized Allied Government of Poland or fought under its orders in the time when the entire free world was engaged in a deadly struggle with nazism.

If Allied nations were unable to bring them a political support, let them now extend a purely humanitarian help to prevent at least further sufferings.

This is a moral obligation, for the execution of which existing international law provides a formal basis.

To Restore Home Rule in America, Pass the Bricker Amendment

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Broadcast No. 18 in the series of weekly radio programs of Dean Clarence E. Manion. The title of the broadcast is "To Restore Home Rule to America, Pass the Bricker Amendment."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

TO RESTORE HOME RULE TO AMERICA, PASS THE BRICKER AMENDMENT

Have you ever read this provision in the Constitution of the United States? Listen to it: "Any power which is not conferred upon the President by this Constitution, or which this Constitution denies to him, may, nevertheless, be freely exercised by the President if the exercise of such power is authorized by the terms of any international agreement to which the United States is a party." By this provision the President of the United States is given power to do anything which any international agreement directs him to do, Constitutional restraints to the contrary notwithstanding.

Are you startled? You have never seen this provision in our Constitution? Of course you haven't seen it because it isn't there. The inclusion of such language by the Founding Fathers would have made ridiculous shambles of their whole historic, carefully contrived effort. Their purpose was strictly to limit the power of every officer, department, and division of Government, in the overall interest of your personal liberty. The Constitution does not give the President the power to do whatever an international agreement directs him to do—far from it. Nevertheless, the fact remains that the President has that power now. Furthermore, pursuant to the direction of international agreements, President Eisenhower and his immediate predecessors have acted upon the authority of international agreements to do what the Constitution forbids.

Last April, on the floor of the British House of Commons, Mr. Churchill disclosed that President Roosevelt had entered into a secret, but nevertheless binding agreement with Great Britain, whereby that country was given a continuing veto over the use of our atomic weapons in the execution of our international policies. Mr. Churchill insists that the agreement is still binding. In the Korean War, pursuant to international agreements, President Truman put American forces into battle at the disposal and direction of an international authority which included Soviet Russia, in spite of the fact that Congress had not then and has not yet exercised its exclusive Constitutional power to declare war in Korea.

At a press conference last March 16, Mr. John Foster Dulles stated that under the North Atlantic Alliance, as well as under the Rio Pact, President Eisenhower now has the right to put the country into war without consulting Congress.

Pursuant to the NATO Status of Forces Treaty, ratified during the first year of President Eisenhower's administration (July 15, 1953), American military servicemen now stationed in foreign countries are stripped of their established American constitutional and legal rights. By the terms of this vicious and unprecedented agreement, these soldiers are subjected to the laws of France, Turkey, Japan, or of any one of a score of countries in which American boys are now stationed around the world. Uncounted numbers of them are presently languishing in foreign jails, after conviction in unfamiliar foreign tribunals of violating curious and often cruel laws of the faraway places that Uncle Sam drafted these American youngsters to defend. Under this treaty the soldier's only recourse is a difficult diplomatic appeal through the American State Department, whose Foreign Service civilian employees, by the way, still enjoy all the constitutional protections which have been taken away from our soldiers.

How did the President acquire this treaty power which the Constitution denies to him? Years ago Justice Charles Evans Hughes truly said that, in the last analysis, "The Constitution is what the Judges say it is." Fifteen years ago the Supreme Court Judges said, in effect (*U. S.* v. *Curtiss-Wright Corporation* (299 U. S. 304)), that the treaty power is separate, apart, and above the Constitution; that the treaty power of the United States was inherited from the King of England and may be exercised to the same extent that it is exercised by other governments of the world. In this spirit the Supreme Court has never declared a treaty to be unconstitutional.

A college professor who is reliably reputed to be President Eisenhower's top adviser on constitutional procedures, has written this: "The question whether the United States should enter an international organization • • • and of what pledges it should give • • • is one which the appropriate agencies of the National Government are free to decide • • • substantially unfettered by constitutional limitations of any kind." (Edward S. Corwin, the Constitution and World Organization, 1944, p. 30.)

The Supreme Court has decided that the doctrine of treaty supremacy over the Constitution applies equally to private agreements between the President and foreign nations. Such binding agreements may be entirely secret, like Churchill's agreement with President Roosevelt giving Britain a veto on the use of our atomic weapons (*United States* v. *Pink* (315 U. S. 203)).

This brings us back to where we started. Thus, the Constitution to the contrary notwithstanding, treaties, and/or secret international agreements, can and do give the President the power to do things which the Constitution forbids him to do. Let us take a practical example. Even in a war emergency, no President may constitutionally establish price, rent, manpower, and wage controls throughout the United States. In normal times these matters are within the area of powers reserved to the individual States under the 10th article of the Bill of Rights. These subjects are brought within the war powers of Congress; however, when the Nation is engaged in, or threatened with, hostilities. In such a war emergency Congress may confer upon the President power to control these things within congressionally prescribed limitations.

But let us suppose that in time of peace, the President agrees with Canada that he will immediately impose such economic controls throughout the United States. Such an agreement automatically becomes binding upon every employer, employee, landlord, producer, and merchant throughout this country, war or no war, the Constitution to the contrary notwithstanding. In the same way, by international agreement, the President could outlaw ownership of certain types of property, atomic materials, for instance, and authorize an international police force to search for them in your home without a warrant. In like manner, the President, in concert with some foreign government or governments, could establish uniform game laws, labor laws (including the closed or open union shop), crop controls, fluoridation of all drinking water, a common educational curriculum, speed and weight limits on the highways or anything else that he and the foreign ministers thought good for you and the country.

If, as the courts now declare, our Presidents have always had this extraordinary treaty power, why have we waited so long to get excited about it? The answer is the United Nations Charter.

At the time the Constitution was written, and for much more than 100 years thereafter, treaties were simply contracts between nations concerning international matters, such as war, peace, boundary lines, oceanic fishing rights, navy ratios and so forth. In our generation however, treaties began to be used to arrange the relationships, not from government to government merely, but between a government and its own subjects.

Treaties, in other words, became the instruments by which one country reformed the economic, political or social conditions within another country. Treaties thus began to be used to modify the internal laws of a country, including the internal laws of the United States. This drive for internal reform through treaties, is a prime principle of the United Nations Charter and the execution of that principle has been the chief, if not the exclusive accomplishment of the United Nations organization since its inception.

For instance there is now a treaty, signed by many countries, including the United States, and pending ratification by the United States Senate, which is known as the Genocide Pact. This treaty coins an entirely new international crime called genocide, that is group-killing. But, according to this pending treaty, it is not necessary to kill a group of people in order to be guilty of genocide. You may be guilty if you cause serious mental or bodily harm to members or a member of a national, racial or religious group—; or if you conspier with others to do so; or attempt to do so even if you fail. Persons charged with genocide may be tried by such international penal tribunal as may have been accepted by the nations who are parties to the agreement.

Now stop and think for a moment. Every injured party in every criminal proceeding in the United States is certainly a member of some national, racial, or religious group. Thus, if we adopt the Genocide Pact, practically every criminal case now on the court dockets in this country becomes automatically transferable to an international tribunal. There, like our soldiers under the NATO Forces Treaty, the accused could be tried without a jury or any of the safeguards with which our Federal and State constitutions now protect every person accused of crime within the limits of the United States.

Stripped to its revealing bones, the Genocide Pact is disclosed as a scheme to liquidate our Bill of Rights, along with the inherent jurisdiction of our American courts, in any case where racial or religious prejudice or Communist-inspired class hatred moves into an American legal proceeding. At the present time the Genocide Pact is in the files of the Senate Judiciary Committee. By Senate ratification or Executive action it may become the supreme law of the land before you know it.

Another sideshow of the U. N. is the International Labor Organization, which has ground out more than 100 socialistic conventions which would radically change our labor, insurance, agricultural, and other American laws the minute they are ratified by the United States Senate. Discussion of the revolutionary United Nations Covenant on Human Rights, paraphrased from the so-called constitution of Soviet Russia, will have to be deferred until another time.

What does all this add up to? It adds up to a critical, urgent need for a positive corrective, constitutional amendment. Aided by the American Bar Association and encouraged by the repeated approving resolutions of the American Legion and more than 100 other patriotic organizations, Senator JOHN BRICKER, of Ohio, has been pushing for such a corrective amendment for years. The principle of his reform was defeated by the narrow margin of one vote short of the necessary two-thirds in the United States Senate last year. Only the shameless unprecedented pressure of the White House, brandishing the power and prestige of a then new and popular President prevented the Bricker amendment from sweeping through both Houses of Congress and from there to certain and prompt ratification by the States of the Union.

Why should any President of the United States, by agreement with a foreign government, acquire power over you which the Constitution forbids the President to exercise by himself? In effect, this subjects you to the control of unconstitutional legislation passed by foreign governments. All provisions of the pending Bricker amendment are vitally important but here is the section necessary to restore home rule to America:

SECTION 2: "A treaty or other international agreement shall become effective as internal law in the United States only through legislation valid in the absence of international agreements."

In the critical interest of our national independence and your time-honored constitutional rights this langauge must be added to the Constitution right now. Don't permit any internationalist to doubletalk you out of it.

Export of Scrap Iron and Steel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. HUMPHREY. Mr. President, whatever may be the intentions, some of our shortsighted policies are actually helping Soviet Russia. There seems to be considerable confusion between the Department of Commerce and the Department of State over the matter of the export of scrap iron from the United States. I do not think it is too much to ask that the Department of Commerce and the Department of State pass 1 or 2 resolutions, first, that they are part of the same Government; and, second, that it might be well, since they might agree that they are part of the same Government, to have a uniform policy on a matter which affects our foreign trade and foreign policy.

Our domestic steel industry is trying to compel Western Europe to buy semi-finished steel or finished steel. They are trying to prohibit export of scrap iron and seem to have the blessing of the Department of Commerce in doing so. As a result, they are unknowingly or otherwise providing Russia with a powerful lever to force Western Europe to ship copper to them, despite the free world shortage of copper and the fact that it is a strategic material badly needed in Russia.

I respectfully suggest it is time for the White House to take a look at conflicting viewpoints between the Department of State and the Department of Commerce on this issue, and establish an American policy that takes into account what Russia is doing to take advantage of the present situation.

Mr. President, I ask unanimous consent to have printed in the Appendix, an article from the Pittsburgh Post-Gazette of Wednesday, April 13, telling of a talk on this situation by Eliot Janeway, a recognized authority on economic research.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCRAP EXPORT IMPASSE SEEN AIDING RUSSIA—REDS GETTING COPPER IN DEAL WITH BRITAIN, ECONOMIST REPORTS

The problem of export of scrap iron and steel to Europe is tied in with Russian procurement of copper and presents a knotty problem to the administration in Washington, in the opinion of a New York economist.

Eliot Janeway, of New York, editor of Janeway's Memos, an economic service to business, was in Pittsburgh last night to address the advance management group of the School of Industrial Administration of Carnegie Institute of Technology in Webster Hall Hotel.

DECISION UP TO WHITE HOUSE

Many of the ideas discussed with a reporter were touched upon in the economist's address.

It is his opinion that the White House will have to decide the question of whether unrestricted scrap exports to Europe shall be permitted. At present, there is a trickle of scrap exports under license.

The State Department has decided there is no scrap shortage in the United States, while the Commerce Department is in the corner of steel producers, who wish scrap exports to be prohibited. The steel industry says, in effect, that if Europe needs metals, it should buy semi-finished or finished steel.

RUSSIA SHIPPING TO ENGLAND

During the impasse, according to Janeway, Russia is shipping pig iron to England at a delivered price slightly under the delivered price of American steel scrap there. As part of the pig iron deal, there is a reciprocity arrangement, he said, whereby England supplies Russia with badly needed copper.

Janeway said that the decision on larger scrap steel exports should be made on a basis of the least cost to the American economy. In any event, he is in favor of permitting scrap exports only if the steel made from it is used by Western Europe for defense purposes.

The Bill of Rights and the Bricker Amendment

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD broadcast No. 19 in Dean Manion's series of weekly radio programs. The title of the broadcast is "To Protect the Bill of Rights, Pass the Bricker Amendment."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

TO PROTECT THE BILL OF RIGHTS, PASS THE BRICKER AMENDMENT

In one respect, Mr. John Foster Dulles was wrong when he said that treaties between the United States and foreign nations can cut across the rights given to the people by their constitutional Bill of Rights. In this statement Mr. Dulles was correct about the devastating effect of treaties, but he was wrong about the Bill of Rights. In the United States, rights are not given to the people by our constitutional Bill of Rights. Neither the Constitution of the United States in general, nor its Bill of Rights in particular, gives us any right whatsoever. Our Constitution is not a giver of rights. It is merely a protection for those natural rights which come to each man from his Creator.

With the first heart-beat of the new American Republic, our Declaration of Independence proclaimed that to secure, that is, to protect and safeguard these God-given rights, governments are instituted among men, deriving their just powers from the consent of the governed. Thus the entire constitutional structure of American Government is merely the people's agent—or their servant in other words—for the protection of God's gifts. In it's origin, operation, and object our American constitutional system is not the source, but the shield of our rights.

From other things that he has said and written, I am sure that Mr. John Foster Dulles appreciates this distinction. I am therefore confident that his characterization of the Bill of Rights in his now famous quotation was a mere slip of tongue, pen, or both. Nevertheless, it was and is a very important slip. It is particularly important in a discussion concerning the effect of international treaties upon the internal law of the United States.

Ours is now one of the very few servant governments in the world. Elsewhere, government is not the servant but the master of its citizens. Outside of the United States, both east and west of the Iron Curtain, a personal right is something that government grants, but always subject to immediate withdrawal at the government's supreme will.

Let us take personal liberty as an instance. Philosophically, personal liberty is your right to do what you ought to do. Like all other rights, liberty is a moral claim. Thus, morally, you are never at liberty to perform any act which would violate the moral rights of your neighbor, whether the Government prohibits such an act or not. But only incidentally are treaties moral or immoral. For practical purposes, they are binding, legal obligations. If a treaty affects your personal conduct, you must obey it or go to jail. Let us therefore consider liberty in its practical aspect, with conscience, philosophy and theology to one side. Hereafter when I refer to liberty, I am talking about things you may do without violating valid, criminal laws.

Practically everywhere outside of the United States, personal liberty is merely what the government permits the citizens to do. In this country, on the contrary, liberty is something that the Constitution prevents government from doing to the citizen. Here, liberty takes the form of a positive enforceable limitation upon government. Elsewhere in the world, liberty, like other personal rights and immunities, is a grant or permission which the subject gets from his government. It is obvious therefore,

that when the United States makes treaties with foreign governments on the subject of personal liberty and other human rights, the United States and the involved foreign governments are not talking the same political or legal language. Mr. Dulles truly said that such treaties may cut across our Bill of Rights. In doing so, they would effectively turn our time-honored concept of liberty inside out, and release American Government thereafter to do whatever it pleases.

A graphic example of this danger to our liberty-protecting constitutional system is the so-called International Covenant on Human Rights. For the past 7 years in more than 450 meetings, the United Nations Commission on Human Rights has been debating and drafting this involved piece of international legislation. When and if it is accepted as a treaty by the United States, this covenant, so-called, will affect every citizen of this country as directly as a stop-light at his local street intersection. To supplant our constitutional Bill of Rights, which is concisely expressed in just 462 words, the pending international covenant now employs approximately 10,000 words. Here are some of its provisions:

"The states parties to the Covenant recognize: * * * the fundamental right of everyone to the opportunity, if he so desires, to gain his living by work which he fully accepts" (A, pt. 3, art. 6); "the right of everyone to social security" (A, pt. 3, art 9); "the right of everyone to adequate food, clothing, and housing" (A, pt. 3, art 11); the right "to the highest attainable standard of health" (A pt. 3, art. 13); the right "to freedom of thought, conscience, and religion" but, note this, "freedom to manifest one's religion or beliefs may be subject to such limitations as are prescribed by law" (B, pt. 3, art. 18).

The right to "hold opinions" and the right to "freedom of expression" are also recognized but, as is the case with all rights described in the Covenant, opinion and free expression are subject to such restrictions "as are provided by law" (B, pt. 3, art. 19). Freedom of association in trade unions is recognized too, but this, says the Covenant, "shall not prevent the imposition of lawful restrictions on the exercise of this right by members of the armed forces or the police" (B, pt. 3, art. 21).

These quotations are typical of the whole involved and bulky document. They illustrate the international, as distinguished from the American concept of human rights, namely, that these international rights are bestowed by the respective governments and that in every instance they are subject to restriction or extinction by governmental regulations.

The difference between this international concept and our tried and true American formula can be seen by a glance at standard provisions of our own Federal Bill of Rights. Listen to our article 1, for instance: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or of the right of the people peaceably to assemble" (amendment 1, Constitution of the United States). Observe that these important rights are not simply "declared," but are spelled out in terms of restrictions upon governmental action.

Now from article IV: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated and no warrants shall issue, but upon probable cause, supported by oath or affirmation and particularly describing the place to be searched and the person or thing to be seized" (amendment IV, Constitution of the United States). Here is no mere declaration of the right of privacy, but a positive restraint upon the power of the police, the courts, and the legislatures.

Listen to this typical companion piece from the Bill of Rights in the Indiana constitution: "No law shall, in any case whatsoever, control the free exercise and enjoyment of religious opinions or interfere with the rights of conscience" (art. 1, sec. 3, Indiana constitution). Here is another Indiana provision: "No man's particular services shall be demanded without just compensation. No man's property shall be taken by law without just compensation" (art. 1, sec. 1, Indiana constitution).

These citations illustrate the pattern of all American constitutions, State and Federal. Everywhere our rights are set forth in terms of specific firm restrictions upon the government, which every American can personally enforce in the courts. American history demonstrates that such unequivocal restrictions upon government are the only practical definitions of human rights.

Blasting the internationalist concept of government as the giver of rights is this article IX of our Federal Bill of Rights: "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people" (amendment IX, Constitution of the United States).

Then finally comes article X. As a protection for these retained and reserved rights against possible concentration of governmental power, this is the most important section of the entire Bill of Rights: "The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people" (amendment X, Constitution of the United States).

Against this effective protection for human rights in terms of strictly limited government, the international covenant now looms up as a dangerous and threatening menace. The covenant is a vital part of a well-financed, diabolically determined drive to sink our singular constitutional system in a mad merger with Old World despotism. The genocide pact, bad as it undoubtedly is, becomes relatively harmless when compared with the despotic ramifications of this 10,000-word International Covenant on Human Rights. The genocide pact would change our constitutional system in a limited number of instances, but our adoption of the international covenant would destroy our basic constitutional concept of unalienable God-given liberty.

In direct defiance of our own States rights article which was my last quotation, the Human Rights Commission has recently inserted this in their covenant: "The provisions of the covenant shall extend to all parts of federal states without any limitations or exceptions" (B. art. 52). And, during March of 1954, after years of consideration, the international Commission, by a vote of 12 to 2, defeated a motion by the United States representative that the covenant recognize the right of an individual to own property.

What is the sense of our lavish outlays of men and money to stop the spread of communism in Europe and Asia if we are to permit our Constitution to be rewritten by a commission which votes 12 to 2 against the right to private property? This international body refuses to recognize your personal ownership of your home or your automobile. Once it is ratified, this vicious treaty will transform our land of the free into a home for the slave. And make no mistake about it, this treaty will be ratified unless you wake up and act. Because of prevailing judicial constructions by which treaties supercede the Constitution, the whole flank of our time-honored American freedom is now exposed to imminent destruction. Not merely the International Covenant and the Genocide Pact but literally thousands of international agreements now in effect, in the works, or awaiting ratification by the Senate will wreck our form of government and wipe out the last shred of protection for your God-given liberty.

To protect our constitutional system against existing and pending treaties we need the Bricker amendment now. That necessary protection was denied us last year because the internationalists and one-worlders were more active and influential in Washington than you were. It will be defeated again unless you decide to pass it.

Two hundred dedicated patriots in every congressional district of the United States can push this protection through the present Congress and insure its prompt ratification by the States. Are there 200 patriots in your congressional district who are willing to band together and stand together until this constitutional loophole is properly plugged? Get on the telephone now and find out.

Juvenile Delinquency

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article and an editorial from the St. Paul (Minn.) Catholic Bulletin of March 19, 1955, dealing with the subject of juvenile delinquency.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

HOME BLIGHTED BY SECULARISM, DELEGATES HERE TOLD—ARCHBISHOP CITES WANE OF RELIGION IN FAMILY CIRCLE—CHILD DELINQUENCY IS LAID TO BREAKDOWN OF CHRISTIAN HOUSEHOLD

There has been a progressive decline of religious influence in the American home, Archbishop Alter, of Cincinnati, said Wednesday at the opening of the 23d annual National Catholic Conference on Family Life in St. Paul.

The chairman of the administrative board of the National Catholic Welfare Conference preached the keynote sermon at a solemn mass celebrated in the cathedral by Archbishop Murray.

"Whether we realize it or not," said Archbishop Alter, "all of us in some measure have become victims of the secularist viewpoint current in the world about us.

"Without denying outright the existence of God and His plan of salvation, society at large has come to regard religion as irrelevant in the practical business of daily life."

Setting forth the object and purpose of the conference, which brought to the city delegates from all sections of the country, Archbishop Alter recalled that in the days before the factory system replaced the family workshop, the home was the place where children received their vocational training, were prepared by imitating the examples of their parents for mature adult life.

The home was the recreational center, where parents and children with neighboring families gathered for relaxation and entertainment.

"Today many mothers have joined the ranks of wage earners," the archbishop said.

"Homes have grown smaller or have been replaced by efficiency apartments. Children in consequence are left more and more to their own devices, without adequate direction or supervision.

"The automobile has increased the range of movement of all members of the family. * * * In a word, the home has been frequently disrupted by centrifugal forces which break up its cohesion, its unity and stability.

"The school, the factory, the office, the community recreation center have tended to supplant the home as a center and focus of life and its activities."

A century ago, when schools were removed from the direction and care of the church and placed under the patronage of the State, the disastrous results were not apparent immediately, but now in the fifth generation since the change occurred religion almost is eliminated from daily life, the prelate said.

The archbishop pointed, too, to the problem of juvenile delinquency as a consequence of family life's breakdown.

He recalled that a United States Senate committee investigating youth delinquency reported that despite the expenditure of millions of dollars and the multiplication of child guidance clinics and other social agencies, the ratio of juvenile delinquency in the last 5 years had increased 45 percent.

"The chief cause," Archbishop Alter said, "is found to be the broken homes—broken by divorce, separation, desertion, physical, mental, and moral disabilities. This is not a new discovery."

Several practical recommendations were made by Archbishop Alter to cope with the situation. He reminded that from its earliest days the church has impressed upon the faithful the value of family prayer.

"Children will never forget the example of their parents kneeling with them in prayer."

He urged that the home be used to introduce children to a knowledge and love of the sacred liturgy and that Catholic families celebrate the anniversaries of children's baptisms, the feast days of the church, make the advent wreath familiar to children, and in other ways dramatize the role of religion in the minds of the children.

"If parents will see to it that religious events are made an occasion of joy in the home; if they will help the children to understand the mass, the sacraments, the ritual feasts, by active and intelligent participation; if they will decorate their homes with objects of sacred art and place books and magazines breathing a Christian culture on the shelves of their libraries—they will have done much to remove the drab and dreary touch of secularism from their homes and will brighten the lives of their children as well as their own," he said.

"The position of the church is that of patron and protector of family life," he concluded.

"It is the champion of authority in the home, but it is also the champion of freedom as against the state. It is the champion of morality in public life and the best guarantee of national stability.

"Its only aim and purpose is to see each new generation grow in age, and grace, and wisdom before God and men."

In an address at the opening general session of the convention, Dr. Edward A. Huth, of Dayton, NCCFL president, said:

"The very existence of this Nation or any nation depends upon how all the Christian way of life is protected, defended, and promoted. * * *

"Of all the factors which lead to successful family life, religion, and morality are indispensable elements.

"Reason and experience indicate that national morality cannot prevail when religious principles are excluded from family life."

Mrs. August G. Desch, of Chicago, National Council of Catholic Women president, told the convention:

"From a better understanding of the sacrament of matrimony and of the church's teaching on Christian marriage will come a greater participation in the life of the church and an increase in the blessings that flow from closer union with God.

"As this family life centers more and more at the altar, the family will tend to become in itself a closer-knit unit.

"The holy family will become its ideal and life with the home will assume those characteristics which marked the little home at Nazareth."

A message from Archbishop Cicognani, apostolic delegate, imparted a special apostolic blessing from Pope Pius XII to "be shared by everyone participating in this year's conference."

A message from President Eisenhower lauding the aims of the convention also was read.

Msgr. Howard Carroll, Washington, general secretary of the NCWC, was Archbishop Murray's assistant priest at the opening mass.

Other officers were Msgr. John J. Cullinan, St. Paul, and Msgr. James Moynihan, Minneapolis, deacons of honor; Father Bernard C. Cronin, San Francisco, deacon of the mass; Father Maurice Mueller, Fargo, subdeacon; Father George Ziskovsky of the St. Paul Seminary and Father John Brandes of the Cathedral, masters of ceremonies.

Members of the hierarchy scheduled to be present at functions of the convention included Archbishop Binz of Dubuque, Bishop Peter Bartholome of St. Cloud, Auxiliary Bishop Leo Byrne of St. Louis, Auxiliary Bishop Leo Dworschak of Fargo, Bishop Joseph Annabring of Superior, Bishop Lambert Hoch of Bismarck, Bishop William T. McCarty of Rapid City, Bishop Joseph M. Mueller of Sioux City, Bishop Francis J. Schenk of Crookston, Bishop Thomas A. Welch of Duluth, Bishop Joseph C. Willging of Pueblo.

Bishop William T. Mulloy of Covington was to preach at the concluding family holy hour conducted by Bishop James J. Byrne of St. Paul in the Cathedral Friday evening.

General sessions were held in the municipal auditorium Wednesday and Thursday evenings.

Wednesday afternoon, all day Thursday, and all day Friday were occupied by 26 sectional meetings at the Hotel St. Paul.

President Eisenhower's message, sent to Father Edgar Schmiedeler, OSB, director of the NCWC Family Life Bureau, sponsoring the conference, said:

"The theme of your convention, The Family Together, suggests that you will consider ways to further happiness and unity within the family group—in play, in work, in social and religious life.

"The importance of such considerations becomes immediately clear when we remember that family environment is the first and most important influence in the formation of the character of our people.

"It is in the homes of the Nation that loyalty and integrity and devotion to the truth can first be taught to the young.

"Such ethical and spiritual qualities in individual Americans are fundamental to our continued progress as a nation."

WHO'S DELINQUENT?

(By Joseph Breig)

I grow weary of the everlasting talk about juvenile delinquency.

If there is one fact that is as plain as the nose on my face, it is this: the cure for juvenile delinquency lies in the home.

Good, happy family life can prevent juvenile delinquency. Nothing else can prevent it.

But does this country do the things that ought to be done to help parents? No.

Almost it seems that we do the opposite. Almost we seem sometimes to be plotting against the family.

Take a case in point—the income tax. In Washington, our representatives vie with one another in offering suggestions for tax reductions.

But does anybody propose increasing the exemptions for children? Does anybody say that we ought to grant progressively larger exemptions for, say, the third, the fourth, the fifth child?

Take another example—family allowances. In this matter, the United States today ranks as a backward country. More than 40 nations, including Canada and Australia, have family allowance systems.

Family allowances have proved invaluable. They have been magnificently successful in Canada, on our very doorstep. But all you hear about them in this country is an elaborate silence.

Family allowances work like this. A monthly sum, to help meet family expenses, is paid to the parents of, say, more than two children.

Let's suppose we instituted an allowance of $12 for the third child, $10 for the fourth, and $8 for each additional child.

What would that cost? Less than $2 billions annually.

Is that a lot of money? Well, Americans spend more than $9 billions annually for alcoholic beverages. And for juke-boxe music—if you can call it music—we spend $300 millions a year.

As for what we spend trying to combat juvenile delinquency—which family allowances would go a long way to prevent—well, your guess is as good as mine.

Why are family allowances needed?

Here are some statistics, compiled by Robert Cissell, director, Family Life Institute, Xavier University, Cincinnati.

In 1952, the median income for two-child families in the United States was $4,268.

For families with six or more children, it was only $3,045. And nearly one-third of the families with six or more children had yearly incomes under $2,000.

In the light of such facts, is juvenile delinquency surprising?

The best preventives for juvenile delinquency are decent, adequate housing, good food and clothing, home recreation, and the like—plus a religious, God-centered home atmosphere.

On $2,000 a year, how can parents provide the right home conditions for six or more children?

Is it any wonder that youthful energy bursts forth from crowded, squalid, depressing surroundings, and runs riot in misbehavior?

As for that vital matter of religious atmosphere in homes—

Well, there is a tremendous rising tide of demand for a return to America's religious roots. Organizations like the American Legion and the junior chamber of commerce are sponsoring "back to God" movements. President Eisenhower, in talk after talk, urges that we recover our religious heritage.

But when an administration bill is introduced in Congress for Federal aid to education, religious schools are carefully excluded. Religious parents are carefully discriminated against.

The very fathers and mothers who take the most effective step against juvenile delinquency by insisting that their children's education be God-centered, are consistently refused any share in the educational taxes they pay.

We cry out "back to God," but we penalize those who try hardest to rear future citizens whose lives will be motivated by obedience to God.

Isn't it all rather preposterous?

What's the PTA Fight About?

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I wish to insert the Editor's Notes by Walter Leckrone appearing in the May 8, 1955 edition of the Indianapolis Times:

EDITOR'S NOTES
(By Walter Leckrone)
WHAT'S THE PTA FIGHT ABOUT?

Parent-teacher associations are essentially private clubs, serving many good and useful purposes, but with no official public status.

So long as they remain that, it is clearly pretty much their own private business how they run their own affairs.

When, however, they constitute themselves a political lobby and align their mass membership behind demands for fundamental change in national policies that affect everybody, it seems to me they waive this privilege of privacy, and invite public inspection of the influence they assert.

Just now they are the principal citizen organization fighting for Federal aid to education—in fact, the only organization with any important membership. Quite a considerable number of these members, however, contend that they themselves are not for Federal aid—but on the contrary vigorously oppose it—although they are counted as part of the organization support. They charge, furthermore, that the membership has never been asked which side of this controversial issue it wishes to take, but has simply been herded into line.

That is the basis of the long-smoldering fight that flared up in Broad Ripple last week, and again in the State PTA convention—a dispute that gets no less bitter because of the presence of a good many fine, sincere, well-meaning people on both sides of it.

Ostensibly it's over the hot Federal-aid issue. But basically it is about how democratic—or undemocratic—PTA procedure is.

The question at hand is how many of the several million PTA members—who are also, of course, voters much respected by Congressmen—are actually in accord with the ardent campaign of their national organization for Federal aid, and ultimate Federal control, of local public schools.

The truth is—no members' vote on the issue, at any time. There has been indication of obvious effort, indeed, to prevent any membership vote on it, on either local, State, or National levels.

The National Congress of Parent-Teacher Associations insists that most of the State associations, of which it is composed, have indorsed the proposal, although it has firmly refused to reveal which States, or how many, or how they did it.

The indorsement was just renewed this week by Indiana, however, in an interesting manner. The convention was informed that local PTA units in the State had indorsed the national Federal-aid policy by a vote of 350 to 72. A motion for a convention vote of delegates present was then ruled out of order.

There are more than 1,100 local PTA units in Indina. So that fewer than one-third of them actually had indorsed Federal aid by this poll—although the entire State organization was thus considered bound to that policy. Even in those units, there had been no real vote on it by members. Ballots—one to each unit—had been sent to local secretaries to be acted upon at local PTA meetings.

The ballots—which were complicated multipage affairs containing 70 or 80 or 90 different questions and requiring reference to unavailable documents for intelligent understanding—provided no place where any member or any unit could vote for or against Federal aid. So far as these ballots were concerned that issue already had been settled and closed. The vote was only on how it was to be distributed.

Members were expected to act on it, nevertheless, at one unit meeting, along with whatever other business was current. The fact that even so 72 local units succeeded somehow in expressing disapproval seems significant of considerable active sentiment against the whole thing.

The conclusion is inescapable that PTA policies are determined by its officers, rather than by its members.

Even that could be somewhat representative if those officers were themselves freely elected by the members and responsible to them. They are not.

In Indiana's State organization no one is eligible for election to office except members of the board of directors.

Members of the board are appointed by the officers.

Thus no one can be elected to office except those chosen and appointed by incumbent officers, and the members have no voice in their selection.

Motions in the convention to elect, rather than appoint, nominating committees and to require more than one nominee for each office in elections, were defeated.

As the week ended members of the Broad Ripple PTA had voted overwhelmingly to withdraw from State and National associations—as several others previously have done. Under its rules, strengthened at this convention, however, the State association can still claim Broad Ripple as a member unit, without regard to this action.

All this is of any public concern only because of the pressure now being exerted on the Congress of the United States to enact legislation with the representation that it is backed by the several millions of individual Americans who are PTA members.

Until there has been a fair, free, open vote on the clear-cut issue involved by the membership represented as supporting it, this claim is entitled to no serious consideration by any Member of Congress.

Trade, Aid, and the Farmer

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Friday, May 13, 1955

Mr. AIKEN. Mr. President, in the April 22, 1955, issue of the Commonweal there was published an excellent article entitled "Trade, Aid, and the Farmer." With the understanding that my asking that the article be inserted in the RECORD does not mean I endorse every word of it, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE, AID, AND THE FARMER
(By Martin E. Schirber and Emerson Hynes)

The contrast between the policies of the past decade and those of the 10 years following World War I is most striking. The twenties saw the rejection of the League of Nations in a wave of shallow isolationism, the pious faith in paper disarmament and pacts of peace, the hard-boiled "they-hired-the-money-didn't-they?" international monetary policy and enthusiastic support for ever higher tariffs.

In comparison with that era of unenlightened nationalism, the past decade has been one of economic maturity. Historians will be hard-pressed to find a parallel of a victorious nation which engineered reconstruction so efficiently and generously for both her allies and conquered enemy as has the United States. Despite some blunders and hurried improvisations, the international policy turned out to be imaginative and canny. It worked. Our prodigious productive power and organizational ability were unleashed for the relief and rebuilding of other nations; full employment was maintained at home; communism was contained, and our military power strengthened.

It is true that some of the military and diplomatic endeavors were reluctantly undertaken, but in the field of economic policy the record is one of positive and sustained leadership. Either alone or in conjunction with the U. N. we initiated UNRRA, FAO, the World Bank, the International Monetary Fund, the Marshall plan, Point 4, ECA, and similar programs, to say nothing of private relief efforts such as CARE and the NCWC War Relief Services. From 1946 to 1953 the net economic aid given to foreign countries by our Government totaled $33 billion, while military aid amounted to another $8 billion; and expenditures for the Mutual Security program for 1954 and 1955 will add another $9 billion. These grants, appropriated with only minor dissent, stand in marked contrast with the mere $11 billion of war debts which became the subject of such acrid controversy in the thirties.

Moreover, as a result of the continued reduction in duties and the general rise in prices, the average level of our tariff is now so low that other countries would profit less by further reduction than they would from simplification of our customs procedure and from assurance that we will not invoke the escape clause of the Trade Agreements Act against imports which show signs of becoming competitive. We have also sought to conduct our foreign trade relations in an orderly and efficient manner by cooperating with the 34 nations which are participating in the General Agreement on Tariffs and Trade (GATT). Although Congress has not yet given formal approval to the GATT, American delegates took part in drafting the original agreement and have made use of the organization provided by GATT for the orderly negotiation of trade agreements with other countries.

It is true that it has been relatively easy for the United States to show such magnanimity in international affairs. Our countryside and cities escaped the devastation of war, and our problem today is one of overproduction and abundance. In 1954 our agricultural surpluses increased by $1.3 billion to an all-time high of $7.4 billion.

But now that the free world has reached and surpassed its prewar level of production, the time for outright grants has come to an end. To foreign producers who are back on their feet, such generosity is hardly distinguishable from dumping. Thus the National Cattle Breeding Association in Spain and its associated industries have branded the donation of powdered milk to Spanish children as disastrous to the sale of their milk products. And the recent offer of 10 million pounds of butter (out of our present hoard of butter—255 million pounds) on a competitive-bid basis brought howls of protest from butter-exporting countries. Meanwhile, many other countries are holding their breaths for fear that the competitive-bid idea

will spread to the remaining $7 billion worth of surplus commodities held by the Commodity Credit Corporation.

Even the more orderly methods of surplus disposal exemplified by the Agricultural Trade Development and Assistance Act have brought protests from competing exporters and from producers in importing countries. This act, which was passed in 1954 with the unanimous support of all farm groups, renews and extends the authority of the Mutual Security Act to permit the sale of a maximum of $700 million wort of surplus agricultural commodities abroad for foreign currencies over the next 3 years, and the outright donation of up to $300 million worth of commodities for famine or other emergency relief, and similar purposes.

While such sales are made only under agreement with the governments of importing countries and care is taken not to disrupt the ordinary channels of trade, the program has been branded as dumping by some exporting nations and accepted with obvious lack of enthusiasm by others. Thus Burma and Thailand have complained that our newfound method of scattering largesse abroad is raising havoc with their export markets for rice; and the subcommittee on trade of the U. N. Economic Commission for Asia and the Far East, while expressing appreciation for economic aid, has gently suggested that the normal flow of trade between countries in that part of the world could be seriously disturbed.

Thus the United States is clearly at the crossroads as regards foreign economic policy. The postwar decade of reconstruction is over, and we are now called upon for a new type of world leadership. That this is recognized by the President is evident from his January 10 message to Congress: "The Nation's enlightened self-interest and sense of responsibility as a leader among the free nations require a foreign economic program that will stimulate economic growth in the free world through enlarging opportunities for the fuller operaton of the forces of free enterprise and competitive markets."

The most direct and obvious way in which we can at this stage help to increase the economic strength of the free world is by stepping up the productivity of all countries falling under this designation. This can be accomplished most effectively by furnishing them with the modern tools of production and technical know-how. In some areas the greatest need may be for an all-steel plow; other countries may require textile machinery, mining equipment, or a cement plant. In any case, increasing productivity abroad means increased foreign investment and expansion of our technical-assistance program. That private investment is seeking outlets abroad is evident from the interest shown at the recent Inter-American Investment Conference at New Orleans. On the other hand, greater investment in foreign countries will entail the admission of a growing volume of imports with which debtor nations will wish to pay the interest and principal of their loans.

More imperative at the present time is the need of reversing the worldwide trend toward subsidization of exports and quantitive restrictions on imports. Almost every country has a number of pampered industries which they try to protect. For instance, in the case of wheat alone, with the world price (without allowing for transportation) about $1.70, the support price in Chile is $4.50; in Uruguay, $2.96; in France, $2.64; in the United States, $2.25; while England pays a producer subsidy of 60 cents per bushel. When prices are supported at such artificial levels nations are obliged to impose quotas and other restrictions on competitively priced imports. The next step is to push surpluses into world markets by means of export subsidies. The competition in granting "artificial aids to exports" has become so intense that it resembles in many ways the competitive devaluation of currency in the 1930's, and is equally self-defeating.

If we are sincere in our proposal to strengthen the free world by means of foreign investment, technical assistance, and other ways, it is highly inconsistent to weaken it by encouraging such beggar-my-neighbor policies as these. Yet it is just in this area that our failure in world leadership is most conspicuous. As a consequence of supporting the prices of agricultural commodities at levels entirely unrelated to costs of production, and the realities of world markets, we have not only accumulated the surpluses described earlier, but we have been forced to impose quotas on imports of wheat, dairy products, cotton, peanuts, barley, oats, rye, and other commodities, and to pay subsidies on the export of wheat. Wheat subsidies under the International Wheat Agreement totaled nearly $600 million from 1949 to 1953, and we are still paying over 60 cents a bushel on every bushel exported. This represents the amount by which our domestic price exceeds the world price.

That the world is looking for leadership out of this suicidal race is evident from the fact that three Cabinet Ministers from Canada flew to Washington in January to urge that we modify section 22 of the Agricultural Adjustment Act. This section authorizes the imposition of quotas to exclude imports which compete with commodities under control or disposal programs. And since the United States is the world's largest exporter and importer, the GATT agreement will amount to very little unless we join up. Nevertheless, we were unable to offer any assurances to the Canadian officials, and our delegates at Geneva had no alternative but to insist that the revised agreement contain loopholes large enough to accommodate our quota system and some type of subsidization of exports. In fact, so inhospitable is the climate in this country to such concessions, that the Trade Agreements Extension Act which barely squeaked by the House contains a clause declaring any action or agreement which conflicts with laws like section 22 will be without effect.

While it is true that we have used import restrictions and subsidies with restraint, it is difficult to induce smaller and industrially weaker nations to agree to banning such practices when they see the most powerful nation in the world insisting upon them whenever it seems convenient to do so.

Another example of the temptation to economic nationalism which is endangering our foreign economic leadership is the two-price system. A two-price system for wheat was written into the Agricultural Act of 1954 but was removed in conference with the Senate. It has again been included in the 1955 Agricultural Act now before the House, and a similar plan has been proposed for cotton and rice.

A two-price plan is a seductively simple way out of our difficulties. Under such a plan as it appears in the House draft of the 1955 Agricultural Act, the Secretary of Agriculture would, before planting time, determine the quantity of wheat which will be consumed as food in the United States during the coming marketing year. For the past 10 years domestic consumption has been highly stable and has averaged about 500 million bushels a year, or, roughly, half the annual output. This domestic food quota would be apportioned among the States, counties, and farms in accordance with their production in the preceding 5 years.

The Secretary would issue marketing certificates aggregating the total domestic food quota, e. g., 500 million bushels. He would then determine the value of the certificates as equal to the difference between 100 percent of parity and the estimated actual farm price per bushel. Each farmer would receive certificates in an amount equal to the domestic food quota established for his farm. The farmer would harvest his crop and sell it at the going market price. He would then sell his marketing certificates to the Commodity Credit Corporation, to a wheat processor, or to some intermediary. The proceeds therefrom, when added to the market price for the wheat sold for food, would result in full parity price on his share of the domestic food quota.

Flour millers and other processors would be obliged to purchase enough certificates to equal the volume of wheat processed for food for domestic consumption. The resulting increase in their costs of production would presumably be passed on in whole or in part to the consumer in the form of higher prices. Wheat produced in excess of the domestic food quota would not entitle the grower to wheat certificates but could be sold for feed or export at the going world price.

Space does not permit an extended discussion of the pros and cons of the two-price system. It is essentially a form of dumping, which is defined as selling abroad at prices below the domestic price. Secondly, if the blended price received by the farmer is anywhere near present levels, it will result in a continuation of the present high levels of production (unless acreage controls, even more drastic than those now in effect, are forced upon farmers), and a large proportion of that supply will seek foreign outlets. Here it will run up against the traditionally inelastic import demand of deficit countries and the typically inelastic supply of other exporting countries. The increased exports will therefore tend to force down world prices, and will be met by antidumping measures on the part of importing countries, and by various countermeasures, ranging from multiple exchange rates to outright price war on the part of exporting countries in whose balance of trade wheat is an important item.

If we wish to do our part in eliminating such cutthroat policies, the course to be followed is obvious. The first step will be to retain the agricultural act of 1954, which permits considerable flexibility in support prices, and return as soon as feasible to the full flexibility originally provided for in the act of 1949. Then as conditions permit, supports can be removed altogether. Taken in conjunction with measures to be suggested below, this will be a benefit to farmers and to society as a whole, because support prices tied to an arbitrary level like parity are a most capricious way to redistribute income. They take no account of reductions in cost due to technological improvements or of differences in costs in different parts of the country. Thus horses today are selling at 13 percent of parity, while citrus growers are doing nicely with grapefruit selling at 22 percent of parity and oranges at 40 to 60 percent. Likewise, the support price for wheat is now about $2.26 but the estimated costs of production range from 80 cents in western Kansas to $1.76 in Indiana and Michigan.

Moreover, it has been demonstrated that the lion's share of the alleged benefits of the program go to a minority of high-income farmers. This fact was brought out in a different way recently by Prof. D. Gale Johnson, of the University of Chicago. He has shown that the net income of the 1.23 million farmers who sold 73 percent of all farm products in 1940 averaged $6,350, as compared with an average of $5,100 for nonfarm families. Thus our price-support program tends to take income from the lower-income groups and distribute it to an aristocracy of farmers. In fact, although there may be some indirect benefits to low-income farmers, the disparity of direct benefits is most glaring. For instance, the average wheat loan for the State of North Dakota in 1953 was $2,890, while the average for the 5 highest was $71,253. The proportions were roughly similar for corn loans in Iowa, but in

Mississippi the average cotton loan for the State was $372, while the average of the 5 highest loans was $479,535.

If in the interest of an enlightened foreign-economic policy it will be necessary to abandon or modify our present price-support program, what can we put in its place? In a previous article on agricultural policy (the Commonweal, November 27, 1953), we outlined various constructive proposals which have been advanced from time to time by students of the farm problem. Three of them are particularly applicable to the present discussion. However, a basic prerequisite for the success of any plan for improving farm welfare is the maintenance of a high level of employment in the economy as a whole. It is worth repeating that the farmer will be better off with 90 percent of full employment in the economy as a whole than with price supports at 90 percent of parity on a few of his products.

Since the farmer is so exposed to the impact of economic forces, he quite properly has a deep-seated fear of depression. One of the reasons he clings so relentlessly to a patently ineffective price-support program is that it seems to offer one element of stability in a situation of constant and unpredictable change. Understandably enough, he will not let go of what he has unless he is offered a better insurance against catastrophic price declines such as he experienced in the 1930's. So if, despite all efforts to the contrary, a real depression does develop, it would simply be the part of wisdom to have ready a variety of specially designed measures to meet it on all fronts. Such an antidepression measure on the farm front would be supplementary income payments, which could be considered as a reward to the farmer for maintaining production as he typically does during depressions.

Various methods have been suggested for putting such a plan into operation. The one essential is that the payments should not be tied to a rigid standard like parity prices as in the case of the wool program; rather they should be designed to offset the difference between depression prices and the normal price of a given number of predepression years. Once the depression is over, the payments should cease.

A second hazard inherent in farming is uncertainty. Not only does the farmer have no control over total output or price, but he is subject to all the vagaries of weather and pests and the uninformed guesses of several million other farmers. Therefore, to take some of the guesswork out of farming and to make it easier to plan production wisely, many economists advocate shifting some of the uncertainty to society through forward prices. Under such a plan, a Government agency would forecast future demand and supply conditions and estimate the equilibrium price which would result from the free play of economic forces. Then a few months before farmers make their production plans for the coming year the agency would announce this price for each product as a minimum to be maintained or changed gradually throughout the production and marketing period. Each farm would then be able to compare alternatives with complete security and produce the combination of crops and animal products which in view of the relative prices would be most suited to the resources at his command. Thus, society would gain through more efficient production and lower costs, which would be reflected in lower prices.

Thirdly, as indicated earlier, there are many low-income farm groups which receive almost no benefit from the present price-support program because of the meagerness of the resources at their command. For instance, price support at even 200 percent of parity would be of little value to the cotton farmers in the Southern Piedmont, where despite a good crop in 1953, the average labor return per family was $459, or 17 cents an hour. The figures for 1954 would undoubtedly be even lower. That similar conditions exist in other areas is evident from the fact that the 1950 census revealed that there are 1,500,000 farmers (28 percent) who receive incomes of less than $1,000 a year.

A program designed to help low-income farmers is now under study by the President's Advisory Commission on Agriculture. Such a program will have to take account of the surplus farm population in many areas, while the solution will lie along lines of providing employment opportunities in industry and in reorganizing uneconomic farming units into genuine family-sized farms which will make full use of the family labor at satisfactory rates of return.

To fit farm people for jobs in industry may require a system of vocational education in depressed rural areas, together with low-cost loans to cover expenses of migrating to places where jobs are available. Similarly, low-cost loans and farm management assistance will be necessary to enable farmers who remain on farms to bring their farms up to the size and efficiency comparable to that attained in more progressive areas. A solution of this sort merely recognizes that in view of the constant advance in productivity, our food and fiber can be produced with a constantly smaller number of farmers. This has been going on for over a century. The net migration from farms in the United States since 1945 has totaled over 8 million and the farm population now comprises only 13.8 percent of the total population, as compared with 23.2 percent in 1940. And there are still millions of farm people whose level of living could be improved if they could secure off-the-farm employment. It must be noted, however, that moving from an underemployed position on an undersized farm does not necessarily imply abandoning rural living. It is now well established that with modern means of transportation and a 40-hour week, or less, a rural home, complete with smokehouse and cow, is entirely compatible with a full-time urban job.

Role Played by Linfield College (Oregon) in Natural Science

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. NEUBERGER. Mr. President, Linfield College, at McMinnville, Oreg., is one of the outstanding small colleges of the United States, and is playing an important part in advancing the frontiers of science.

Linfield College is conducting the largest physics research program being carried on in any small United States college, and is receiving wide scientific notice, as well as doing important work for the Office of Naval Research and the Air Force. Linfield College is exploring new electronic frontiers.

Under the able presidency of Dr. Harry Dillin, Linfield College is playing a significant role in the educational and cultural development of Oregon and the United States. Dr. Walter P. Dyke is well qualified to direct the important research being conducted at Linfield.

It is with a great deal of pleasure that I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Harold Hughes, paying tribute to Linfield College, published in the Sunday Oregonian of May 8, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPLORING ELECTRONIC FRONTIERS

(By Harold Hughes)

It's no longer a Defense Department secret—the coldest spot in Oregon (minus 454° F.) has got plenty of nothing and is busily turning out the sharpest needles in this or any other State.

These seemingly unrelated phenomena are among the least amazing things that now can be revealed at McMinnville by the Linfield College department of physics.

For centuries, the sport of philosophers and theologians was to argue about the number of angels that could be crowded on the point of a needle.

The question was never settled, but at Linfield the physics research staff has succeeded in producing, in a square centimeter space, over the tip of a needle, 100,000,000,000,000,000,000,000,000 electrons.

This is a solid scientific accomplishment in the field of electron emissions. It puts little Linfield (about 500 students) at the threshold of revolutionary developments in television, radar, radio, high-fidelity record players and in hundreds of other electronic devices, most of which are vital to the national defense.

It is the largest physics research program being carried on in any small United States college, and one of which a major institution could well be proud. It appears certain that the program, which soon will have 17 people on its research staff, will continue to expand, bringing wide scientific fame and acclaim to the small private school.

When the Defense Department recently reclassified many of the mysterious electronics capers being cut at Linfield, it made possible a public report of 9 years of work directed by Dr. Walter P. Dkye, a 1938 graduate of the McMinnville College.

Back in 1946, Dr. Dyke's ability to make electrons behave attracted funds from the Research Corp., a nonprofit firm founded on money made from smoke eliminators and used to help small colleges get into the rarefied research air formerly enjoyed only by large and wealthy institutions.

The electrons danced so well at Linfield that the Office of Naval Research and the Air Force got excited and began emitting money for equipment and staff expansions.

Soon, chunks of air were floating around the Linfield laboratory like icebergs, frozen by the 454-degrees-below-zero temperatures created by liquid helium in an expensive rig provided by the federals.

A device that produces nothing but nothing, but does it better than any in the entire State, arrived and was soon producing vacuums that approach the best man has been able to create.

The department is now bulging with a maze of glass-blowing equipment, meters, wires, flashing lights, and tiny electrodes sealed inside glass tubes, and all presided over by an electron microscope which sees things down to atomic size.

The electron eye is needed to inspect the supersharp needles—needles so sharp that the best lens powered microscope will hardly pick up their points.

It is from these little needles that many electrons grow. They are the cathodes that are used in a new type electron tube developed at Linfield, which appear to have wide applications in radio, television, and countless related fields. Patents are being obtained on it.

Except for the tiny transistors, which the Linfield tube can rival in size and far exceed in the handling of high voltages, the average

radio tube emits electrons from the application of heat, or added energy.

This new tube, called a thermal field emission tube, operates when an electrical field causes the electrons to hop off the tiny needle of tungsten in high concentrations.

It is the stabilization of these electron emissions which has brought Linfield wide scientific notice and promises to revolutionize electronic devices.

The supersensitivity of the Linfield tube may well provide far better thermostats for home heating. It could solve the problem of maintaining a more uniformly bright picture on TV sets. It might make possible better seismographs for recording earthquakes. It could well reduce the size and weight of all types of electronic devices.

It is theoretically possible that some day its principle might eliminate the need for a heavy amplifier in a radio-phonograph or public address system.

In the realm of medicine, it may be possible to swallow the tiny tube and get X-ray pictures of the inside of the stomach.

Due to its unique properties, it can be used to take fast-action X-ray pictures, perhaps someday giving doctors moving X-ray pictures of various organs, such as the heart and lungs.

It can provide frequencies above the ultra-high frequencies now being used in television.

The device has military uses that can't be discussed because of security rules, but its value in cutting weight and size of electronic devices is an apparent asset in missile and rocket work, this reporter believes.

A similar emitter is used in the electron microscope, which was invented by Dr. E. W. Mueller, a German scientist now doing work in this country.

What Linfield physicists have done is take Mueller's device and apply its principles in new directions. In fact, one of the major Linfield accomplishments has been to prove a Mueller theory that a layer of atomic atoms can be seen with the Mueller scope.

ATOM MAY BE VISIBLE

Mueller went further, and said it is possible to see an atom, which would be the smallest thing man has ever seen electrically. Linfield's Dr. Dyke believes "we have the techniques for eventually proving this also."

Hundreds of thousands of dollars have gone into the Linfield laboratory since 1946, allowing men like Dr. Kenneth Trolan, assistant director, to help Dr. Dyke keep the projects pulsating.

The program has drawn in Dr. W. W. Dolan, mathematics departmental head, to direct calculations; Dr. John Boling, head of the biology department, to direct operations of the electron microscope, and Dr. George Barnes, who is currently examining a new wire made of rhenium, with an eye to using it as a needle cathode.

Students, even entering freshmen, are given a chance to take part in the complicated research, which deals at times with problems on the frontiers of science—and the sharpening of needles.

This tedious job is done with a common household bleach—sodium hydroxide. You hook a potential needle, a tungsten wire in most cases, to a battery, wire the other battery terminal to a piece of nickel, dip both tungsten and nickel into the sodium hydroxide solution. The etching away of the tungsten by electrolysis produces a needle, the point of which is so sharp that the electron microscope is needed to inspect it closely.

An important part of the job of inspecting needle points is done by photography, an operation that Dr. Dyke is well qualified to direct.

The Linfield electron master is so good at color photography that he has sold many of his pictures to national publications and to this magazine.

The friendly, easy-going Dr. Dyke, who worked on radar electronics at the Massachusetts Institute of Technology, built his own parabolic TV antenna in order to get the ultra-high-frequency channel in Portland.

But what does this electronic scientist do when his own television set fails to keep the electrons dancing happily?

"I call in a television repairman," he explains.

The Partnership Policy—Power Issue Proves Political Powerhouse

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1955

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks, I should like to place in the RECORD the second of two articles by Joseph A. Fox on the administration's so-called partnership policy for power development. This article appeared in the May 12 issue of the Evening Star:

THE PARTNERSHIP POLICY—POWER ISSUE PROVES POLITICAL POWERHOUSE

(By Joseph A. Fox)

John Q. Public is going to learn some more geography when the congressional battle over the Eisenhower power-partnership program warms up.

Such unfamiliar names as Green Peter, Priest Rapids, John Day and Cougar, for example, will be bobbing up in the news along with the better-known Hells Canyon.

They represent a controversial lineup of hydroelectric dam sites in the Columbia River Basin, over which public power forces and administration-supported advocates of private power development are warring.

The Columbia Basin, however, will not be the only battleground.

The fencing-in process to which the Republicans have subjected, the Tennessee Valley Authority already has stirred trouble in the Southeast. And other sore spots can be expected to develop wherever President Eisenhower's opposition to public-power expansion continues to interfere with the ambitious plans of its disciples.

SHARP CLEAVAGE

The great debate, however, will swirl around the Pacific-Northwest. That region contains 40 percent of the hydroelectric resources of the country and is feeling the full impact of the Eisenhower power policy. The issue has produced the sharpest cleavage between Democrats and Republicans.

The Democrats want water-power development left up to the Government as it was during the New Deal-Fair Deal days, because it means cheap rates to consumers. The GOP slogan is let business do it.

The big stake is Hells Canyon on Snake River, principal tributary of the Columbia. Forming a part of the Idaho-Oregon boundary, this 7,000-foot chasm is the deepest gorge on the continent. It is bounded on the West by the 10,000-foot Wallowa Mountains, and on the East by the forbidding Devil peaks comprising the Seven Devils Mountains.

The Democrats—with an insurgent or so from the opposition—had this one staked out as part of the Columbia Basin development. The Republicans, however, have given a big private utility—Idaho Power—an opportunity to take it over. Some lesser hydro sites formerly included in the Columbia Basin also are headed for private operation if the administration view prevails.

DEMOCRATS FIGHT POLICY

Democrats are sparing no efforts to block such an eventuality.

Hells Canyon has been a fighting phrase in the Northwest for years as public and private power interests sought a foothold there. Both the Bureau of Reclamation and the Corps of Engineers recommended in 1947 that this valuable site be meshed into the Columbia Basin power system. But Congress never got around to recommending that, and Idaho Power tried to cut in.

The Truman administration fought the private concern, and in his last budget message—which the Republicans junked—President Truman asked for funds to start the project, provided enabling legislation were obtained.

Then the Eisenhower administration adopted a hands-off policy. It left it up to the Federal Power Commission either to grant the license sought by Idaho Power, or, as an alternative, recommend Government development.

The Commission now is studying a report by an examiner who conducted a year-long inquiry and recommended private development, but with modifications in the Idaho Power proposal. Public power advocates insist that the Commission has been "packed" and will grant the license.

CONGRESS ACTS

In the meantime, however, 30 Senators and 4 House Members are backing legislation for Federal construction without regard to what the Power Commission might decide.

Proponents of the Federal dam, which would be the keystone in a half-billion-dollar Columbia Basin development, say that a single 720-foot concrete structure is needed to take full advantage of the Snake River's resources.

They contend it would add 1,124,000 kilowatts of capacity to the Columbia Basin system—enough for the maximum needs of a community of 2,250,000 people. They argue it would shore up downstream flood control in Idaho and Oregon, improve navigation possibilities, create a huge recreational area and furnish funds for irrigation projects in Idaho that would not pay out without subsidization.

As a clincher, public-power advocates hold out the lure of low-cost power in a growing country.

IDAHO POWER'S ANSWER

Idaho Power counters by arguing that the three small dams it proposes, while short of the generating capacity of the Federal plan, would accomplish everything that high-dam advocates talk about—without costing the Government a dime.

Idaho Power says, too, that the 3 dams can be built for $133 million—less than a third of the proposed Federal outlay. And it promises that consumers would get their power for less than the national-average cost.

The administration's indirect espousal of Idaho Power's proposal has caused critics to ask pointedly why the President is willing to let private industry have the Hells Canyon site but wants to commit the Government to a billion-dollar expenditure in the upper Colorado. They point out that power can be produced at Hells Canyon for about 2.5 mills per kilowatt, while the cost in the upper Colorado will range as high as 6 mills a kilowatt. And the market for the Government to sell the power will be a poor one.

Administration spokesmen rationalize this apparent paradox by explaining that the Colorado Basin project, which the Senate has approved and sent to the House, is essentially for water storage and irrigation, which are of prime interest to the Government. The power phase is incidental, they say.

Hells Canyon, to the contrary, they contend, is largely a power-generating undertaking which the President feels should be in private hands.

SIMILAR SITUATION

A situation akin to that in the upper Colorado prevails in the proposed Fryingpan-Arkansas River development on the eastern slope of the Continental Divide, the only other all-Federal project endorsed by the administration.

There, too, power production is rated of secondary importance to the control of the waterways at which the Government aims.

While Hells Canyon is stirring the biggest fight, a half dozen other scraps are brewing on the westernmost reaches of the Columbia and its tributaries, where private utilities want in on partnership deals. Public power forces have been fighting this war for years, and they now are digging in against a new assault.

One utilities group is trying to cut in on the John Day dam side in Oregon, located strategically in the stretch of the Columbia which contains such big Federal operations as McNary, The Dalles, and Bonneville.

John Day has been authorized for Federal development, but the administration has sought no funds to start construction. Republican-sponsored legislation has been introduced to "deauthorize" the project so the utilities can move in.

DEMOCRATIC LOSS

The Priest Rapids project in Washington, also designed formerly as a Federal undertaking was "deauthorized" last year, and Democrats in the Senate lost their battle to have public agencies get preference in buying the power there when the generators begin turning.

A Grant County power unit wants the site.

When the deauthorization legislation was passed, Senator MORSE, Democrat, of Oregon denounced it as a "stick of dynamite" under the whole Federal power program.

President Eisenhower has estimated that the partnership program contemplated right now will cost the Government about $200 million. He has said that private investors will put some $800 million into the half-dozen projects of which John Day and Priest Rapids are most important.

Under the Eisenhower plan the Government also has given up on a Coosa River project in Alabama, turning it over to the Alabama Power Co., which spearheaded the fight against the TVA.

Under the administration's policy, Federal power development is in a dead-end street, but the Democrats are operating on such a narrow majority in Senate and House that there is little chance they can do anything about it.

Whether the situation can be translated into an effective issue in next year's political campaign is a guess. Some Democrats are convinced it can. Republicans dissent.

From Amherst to Korea

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article entitled "From Amherst to Korea," written by Eugene G. Wanger, and published in the Amherst Alumni News of October 1954. The article describes a trip with a group of students putting on theatricals and entertainment in Korea last summer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM AMHERST TO KOREA: THE KIDS FROM HOME ON ORIENTAL TOUR

(By Eugene G. Wanger, 1955)

The Kids From Home, a college variety show of which I was lucky to be a member, flew over 30,000 miles this summer covering one-third of the United States Far East Command. In less than 50 performances we entertained nearly 100,000 American servicemen in Korea and Japan. But these figures are a very small part of the story. The most interesting part is written in our memories: How we lived, whom we met, and what we encountered there.

It was April 7 when Amherst's band director, Dr. J. Clement Schuler, phoned me at Theta Xi to ask if I would be interested in spending my vacation without pay by entertaining American troops in the Far East. Would I be interested? Ten weeks later, after much planning, the 17 college and high-school students invited to participate in Dr. Schuler's fourth Kids From Home variety show arrived at College Hall to rehearse. Amherst could claim all but 2 of the 8 men chosen, while the girls, who, like most of us, had participated in at least 1 of our 3 previous tours, came from various schools in the South, East, and Middle West.

Irv Milheim, 1956, from Sharon, Pa., played string bass and was once again managing the moving and staging of our 2 tons of show equipment and baggage. Our pianist, Stan Ginsberg, 1955, from Far Rockaway, N. Y., shared Irv's job of manager and assisted Dr. Schuler with the financial details involved in obtaining equipment and travel. Charles Pease, 1957, from Hartford, Conn., held down lead tenor sax and oboe, while Bill Cole, 1955, an Amherst resident, specialized in baritone sax and clarinet. An Amherst High School junior played lead trumpet. He was Tom Sullivan, Jr., whose grandfather was a member of the class of 1884. There was an alumnus along too: trombonist Rudy von Unruh, 1949, from Lakewood, Ohio, who was chosen to be assistant director. I was given the job of master of ceremonies.

At Amherst the show had 2 weeks of writing, rehearsing, and testing under the able direction of Dr. Schuler and with the invaluable assistance of Jack Dolph, chief producer for Fred Waring.

On July 7 we flew from Hartford and arrived that night at Travis Air Force Base in Calif., where we played the first show of the tour 48 hours later and took off immediately thereafter in a Stratocruiser for Tokyo, Japan.

Having lost a day at the international dateline, we arrived at Tokyo International Airport on the 12th. The fueling stops at Hawaii and Wake Island afforded little time to wash or rest, so it was 65 hours since we had bathed or slept in a bed when we gathered in the billiard room of the Dai Iti Hotel to begin the briefings which were to prepare us for Korea.

Four days later we had been processed, decked out in insecticide-impregnated GI uniforms, and loaded aboard a C–124 Globemaster which was to fly past Mount Fujiyama, across the Sea of Japan, over the mountains of South Korea and land us at Seoul City Air Base just 19 miles from the wstrn end of the demilitarized truce zone established at the end of the fighting in 1953.

For the next 2 weeks our itinerary would lead us 300 miles south and east to the city of Pusan before making a 3-week sweep across the Eighth Army area which extended above the 38th parallel.

Although our Army and Air Force audiences were the largest, noisiest, and most enthusiastic we had ever seen, the United States Marines at K–6 made one of the most heart-warming impressions of all. Their hospitality was boundless from the very beginning as they provided for all our needs and toured us through their installation. After our performance on their outdoor stage for an audience of over 3,000, the base commander came back and gave Dr. Schuler a copy of the letter he had written to Far East Headquarters requesting that we return to his installation before our tour was over. Even though the schedule could not be changed to permit our return, several of his officers obtained permission to follow our tour by jet. They met us at Taegu, Seoul, and even Tokyo, giving us dozens of pictures from our visit and extending their aid in every way.

We will always remember our performance given in the small assembly room of the Christian orphanage which those Marines helped maintain. When we had finished, all the orphans rose—80 tiny children whose poor homes, families, and identities had been destroyed by war—and sang for us, raising their small Korean voices in the unmistakable notes of "Jesus Loves Me."

Since we traveled mostly by plane and train during the southeastward swing of the tour, we got an extensive birdseye impression of the land our troops had so recently fought over. When open trucks and ambulances became our mode of transportation with the Eighth Army—and we saw much of this rugged terrain at close hand—it was easy to see why the endless rocky mountains and foul-smelling rice paddies made fighting so difficult. We moved from day to day along narrow dirt roads so dusty that we were given gauze face masks to keep from choking.

By the first of August advance word of the show was preceding us by the grapevine wherever we went. Consequently we met men from our home towns and from Amherst at almost every installation. We would often see them first when they came backstage as we were packing after the show. It was thus that we renewed our acquaintance with George Hibbard, 1952, and John Snell, 1951. When the commander of the 25th infantry division entertained us at tea on August 1, we found Pfc. Mike Palmer, 1951, who was the general's personal secretary. Frank Mainzer, 1952, and Fred Luddy, 1951, were also on hand to greet us during the next 2 days before we moved north to perform at the 7th division in the Chorwan valley above the 38th parallel. It was there that Maj. Gen. E. B. Seebree and his staff royally treated us to a champagne supper, so excellently prepared and served that it would surpass all but the most exclusive American restaurants. To top it all off, the general made all our troupe honorary members of his division, giving each an engraved cigarette lighter and shoulder patches as mementos of the occasion. When we forded a nearby stream to return to our tents that night we found that Joe Knight, 1954, had heard about the show and had come over to welcome us.

After our usual two performances the next morning and afternoon, the division provost marshal provided an armed escort to take us in jeeps through the frontlines to a forward outpost where we could watch the Chinese Communist forces across the demilitarized zone. Dr. Schuler, who was given the general's helicopter for the afternoon, had some of our cameras aloft and took some of our most treasured snapshots of the summer.

The most exciting and truly remarkable welcome of the tour occurred when we worked our way to the 2d Infantry Division some days later. As we came jolting over the dusty roads into division headquarters we were amazed to hear the rousing music of Lord Jeffrey Amherst not far

away. When we climbed out of our assorted ambulances and trucks there was a 40-piece brass band playing every college song in the books. Smoke bombs suddenly went off around us and through a purple and white haze we saw Somers White, 1953, leading six cheerleaders in plaid jackets and beanies as they gave us a hearty "Jeff! Rah! Rah! Kids From Home!" A group of GI's waving flash cards, "Welcome College Show," appeared on one side of us, while on the other the division special services officer, complete with mortarboard and tassel, made a short speech of welcome from a specially constructed "football rally" platform. He was cut short as a helicopter landed noisely behind him and commanding general, "Big Jeff" Seitz, climbed out, stepped to the microphone, and presented each of us with the honorary membership of the 2d Division. As jets swept back and forth overhead, Howie Ziff, 1952, led us across the dirt road to our "campus" of five canvas quonset huts, each bearing the name of a fraternity or sorority. A sign dominating the scene reassured the girls that there were "positively no pantie raids allowed."

Following our performance the next afternoon, Howie Ziff arranged for us to visit a detachment of United Nations troops from Thailand. Here the tables were turned as they performed for us, demonstrating amazing grace, strength, and coordination in the execution of a ceremonial fencing match. When each of the fencers had laid his two heavy swords aside, he returned to give an exhibition of Siamese boxing in which his bare feet proved as potent a weapon as his fists. If you've ever seen a cross to the body quickly returned by a staggering kick to the side of the head you have a fair idea of how rough that sport is.

When we finished performing at the central front we were shuttled east by 6 passenger aircraft to the 24th Division headquarters at Yanggu. Here, for the first time in the tour, the commanding general of the division attended the performance with his entire staff. He sat on a hillside with 5,000 of his men while we presented our 2-hour show of music and variety acts from a covered wooden platform under the usual illumination of truck headlights and a few very scarce 100-watt bulbs powered by a temperamental gasoline generator. Such conditions were typical.

After finishing with the eastern front, we flew west, back to the capital city of Seoul, to wind up our Korean tour and be flown to the northern island of Hokkaido, Japan. While at Seoul several of us had the pleasure of visiting the home of Kong-Ki Min, 1957.

Our final performance in Korea was broadcast over the Armed Forces Korea Network from Seoul military post. On coming offstage after introducing our Glenn Miller band arrangement of Little Brown Jug, I was enthusiastically greeted by Lt. Col. Hartwell C. Lancaster, the former head of Amherst's Air Force ROTC program. Having driven by jeep all the way from his squadron command at Kimpo, he arrived late and came backstage because there were no more seats or standing room left in the quonset theater's auditorum. Before he left the colonel asked us to take his very best wishes back to the men at Amherst.

We arrived in Hokkaido on August 19 and found that a less strenuous schedule made it possible to relax and do a little sightseeing between performances. Before moving south we ran into Lt. Sandy Lobrano, 1951, who was the first to inform us that our troops were pulling out of Hokkaido to leave the protection of that large island to the Japanese.

Another C–47 flew us back to Tokyo where we turned in the GI clothes, were at last able to have our perspiration-soaked costumes cleaned for the first time in 4 weeks, and gave our farewell performance on August 23 to a capacity house in the famous Ernie Pyle theater. At a farewell banquet the general in charge of Far East Special Services gave us engraved gold and silver medals of appreciation. We were also presented with engraved statues from the K–6 Marines.

A week of sightseeing followed before our plane left for home and our friends in Tokyo helped us take every advantage of it. Our scrapbooks are filled with postcards and snapshots of the magnificant shrines at Nikko and Kamakura, the quiet majesty of Mount Fuji, and the beautiful simplicity of Japanese art and architecture. We also have many treasured pictures and memories of the Japanese people. While we knew that they could not help but resent us as conquerors, they were polite and made no outward show of the resentment they must feel.

At our departure from Tokyo International Airport the marines were once again on hand—this time with bouquets, leis, and a huge wreath of flowers to wish us farewell and bon voyage.

It was hard to realize that the tour had ended. We were weary at times but the genuine applause, the helpfulness of both the GI's and the generals was ample reward for what fun and entertainment we were able to bring to a grand bunch of men who are doing all they can to prepare the Koreans and the Japanese to defend themselves.

Among our mementos is a letter from a marine private. He wrote: "This was the finest show I've seen since I arrived here. I can't get home, but for 2 hours tonight you brought home to me." What more could The Kids From Home have asked?

COMMENTS FROM THE AUDIENCE

Since his return, Dr. Schuler has received many letters of thanks from Japan and Korea. Excerpts from a few of these notes follow:

"The reception given the show was more enthusiastic and spontaneous than that accorded any group of entertainers it has been my pleasure to observe during my 12 months in Korea. The behavior of the cast as individuals and as a group deserves much applause on their outstanding performance." (An infantry officer.)

"We wish to express our heartfelt appreciation of, and gratitude for, the musical entertainment you gave the patients and personnel of this hospital." (Six hospital patients.)

"I personally thank you and all those involved for a truly wonderful show. It was the best I've ever seen, the very thing we've been yearning for." (A soldier in Korea.)

"On behalf of the officers and men of this command, I want to thank you for providing us with such clean, refreshing entertainment. During my 11 months in Korea I have seen many shows. Even the better of them can't compete with your contingent. The troupe conducted itself in a way that reflects the highest standards of college training and your supervision." (A group chaplain.)

"It was terrific, outstanding, the greatest, and all the other descriptive words that could be used. You and your troupe have done an outstanding job for the morale of the men in Korea." (A soldier in Korea.)

Letters of praise were also received from Thomas H. Wyman, 1951; Roger Marshall, 1953; and Michael C. Palmer, 1953, who saw the Kids in Korea.

Repair the Broken Chain, Pass the Bricker Amendment

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, May 13, 1955

Mr. BRICKER. Mr. President, on February 13 last Dean Clarence E. Manion made his 20th broadcast in his series of weekly radio programs. The title of the broadcast was "Repair the Broken Chain, Pass the Bricker Amendment."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

REPAIR THE BROKEN CHAIN, PASS THE BRICKER AMENDMENT

For a final analysis of our critical need for the Bricker amendment we must now back away from it and get perspective. Momentarily, let us forget laws, executive agreements, states' rights, and international covenants. Why do we need any part or provision of the Constitution at all? Great Britain gets along without a constitution and is therefore untroubled by controversy over proposed constitutional amendments. How do we happen to have Federal and State constitutions? What is the scope, purpose and justification for our peculiar unprecedented constitutional system?

When we view it as a whole, we see that constitutional government in the United States is rooted in the self-evident truths of the Declaration of Independence. As the very predicate of our revolution we declared that government is man's agent for the protection of God's inalienable gifts of life, liberty, and the right to pursue happiness. Then and there, for the first time in human history, government was logically and definitely reduced from its traditional role of tyrannical mastery, to the simple service and deliberate will of human nature. Then and there, we tied the governmental tyrant down with constitutional chains of checks, balances, divisions, and enforceable restraints. This achievement is the climax of American history. It is the basic cause of all of our subsequent power, achievement, and material prosperity.

From immediate, practical experience, our revolutionary forefathers verified the historical fact that government, although useful and necessary, is perpetually dangerous, and the most difficult force on earth to harness and control. In a healthy, understandable spirit of fear the Founding Fathers cut American Government up into pieces and copperriveted each part of it down with positive, enforcible restraints. They understood what Woodrow Wilson so well said more than a hundred years later, namely, that "the history of liberty is the history of the limitation of governmental power."

Every line of every State and Federal Constitution that the Founding Fathers made, was a limitation—a strong restraining chain upon the power of some part of American Government. Seeing that constitutional system in perspective, we observe it as a balanced pattern of restrictions upon every officer and department of American Government. When he takes his constitutional oath of office, every governmental official in this land puts on his own particular consti-

tutional ball and chain. This goes for, and from, the traffic cop on the corner, on up to and including the President of the United States.

Our constitutional system gives no State or Federal official a free, roving commission to wander at will over the field of American Government. Such a license would condemn to death the very personal liberty which it is the dedicated object of American Government to preserve.

So much for the general, overall view. Now let us step up close and take a good look at article VI of the Constitution which the Bricker proposal is designed to amend. First of all, this article reminds us that our present Constitution did not create the United States of America. Our present Constitution was drafted in 1787 and became effective in 1789. The United States was created by the Declaration of Independence in 1776. Our first Federal Constitution was called the Articles of Confederation, which became effective in 1781. When our present Constitution began to operate with the first inauguration of President George Washington, our national history was nearly 13 years old. This being so, article VI begins this way: "All debts contracted and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution as under the Confederation." Observe that the obligations of existing private and public debts are made to carry over without any attempt at repudation.

Now watch this next sentence: "This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made under the authority of the United States, shall be the supreme law of the land." Observe that legislation is now valid as the law of the land only when it conforms to the Constitution, but that treaties, in existence when the Constitution was adopted or to be made thereafter, are the supreme law of the land when made merely, under the authority of the United States."

Now, it doesn't take a constitutional lawyer to see the explosive nature of this distinction between the requirement for supreme laws on the one hand and for supreme treaties on the other. Why didn't the framers say that laws and treaties shall be made in pursuance of the Constitution? One reason is obvious. In our then 13-year-old national history, we had already made a number of treaties with France, Spain, Holland, and finally an involved peace treaty with England. The framers wished to reaffirm the binding quality of these existing treaties. They could not be made pursuant to the Constitution because they were made before the Constitution existed. (As was the case with existing debt obligations.)

But whatever their motive for the distinction, it is inconceivable that the framers intended to lift treaties above the very Constitution which made the negotiation of those treaties possible. When the Constitution was written, a treaty was merely a contract between sovereign governments. Treaties were not then, as they are now, a regulation to be enforced by government against the citizen. (Alexander Hamilton, Federalist 75.) This constitutional provision was adequate for the old-fashioned 18th century type of treaty, but it is woefully inadequate protection against the modern type—the United Nations type of treaty, which now threatens to destroy the Constitution altogether.

The pending Bricker amendment will protect the Constitution as a whole by the following language:

Section 1: "A provision of a treaty or other international agreement which conflicts with this Constitution, or which is not made in pursuance thereof, shall not be the supreme law of the land nor be of any force or effect."

Ask the opponents of the Bricker amendment to explain why they object to that simple protection for the Constitution.

Setcion 2. "A treaty or other international agreement shall become effective as internal law in the United States only through legislation valid in the absence of international agreement."

This is the section which protects the American home rule. Why should our internal law (of the United States) be made at London, Paris, or Geneva instead of at Washington, Indianapolis, or Austin, Tex.? What is the alternative to the Bricker amendment? What, in other words, do we have now?

Modern writers, including some present Supreme Court Justices, tell us in substance that the existing treaty power in the Constitution amounts to a separate, superior governmental agency that can accomplish anything, including the things which the Constitution forbids. The possibility for such a construction was suggested to Jefferson when the Constitution was up for ratification. He laughed it off as fantastic saying, "If the treaty power is unlimited, then we don't have any Constitution." "Surely," he wrote, "the President and the Senate cannot do by treaty what the whole Government is interdicted from doing in any way." (Jefferson Manual of Parliamentary Practice.) But Jefferson did not envision articles 55 and 56 of the United Nations Charter—now binding upon us a duly ratified treaty.

Listen to these provisions:

Article 55: "The United Nations shall promote, (a) higher standard of living, full employment and conditions of economic and social progress and development; (b) Solutions of international, economic social health and related problems and international cultural and educational cooperation; and (c), universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion."

Article 56: "All members pledge themselves to take joint and separate action (in cooperation with the organization) for the achievement of these purposes set forth in article 55."

Under our Constitution, the achievement of these purposes is left to the individual citizen or to State action under the 9th and 10th article of the Bill of Rights. Have these reservations now been lost by our ratification of the United Nations Charter? Years ago Mr. Justice Black and Mr. Justice Douglas of the United States Supreme Court joined in this expression: "There are additional reasons now why that (State of California) law stands as an obstacle to the free accomplishment of our policy in the international field. One of these reasons is that we have recently pledged ourselves to cooperate with the United Nations to promote universal respect for and observance of human rights and fundamental freedoms for all, without distinction as to race, sex, language or religion. How can this Nation be faithful to this international pledge, if State laws, which bar land ownership and occupancy by aliens on account of race, are permitted to be enforced?" (*Oyama* v. *California* (332 U. S. 633).)

This was in 1948. Incidentally, in a Supreme Court case decided the same year (*Shelly* v. *Kramer* (344 U. S. 1)) exactly the same argument was made. It appeared in a brief filed by the American Association for the United Nations and it was signed by Alger Hiss. It should be easy to guess where Justices Black and Douglas stood in the recent case of Rice versus Sioux City Memorial Park, in which the Supreme Court recently announced itself deadlocked 4 to 4. In that case the United Nations Charter was invoked to reverse a decision of the Supreme Court of Iowa, in a suit for damages because of alleged racial discrimination against an Indian.

The Iowa court held that under Iowa law and the 10th article of the Bill of Rights, there was no cause of action. The plaintiff appealed to the Supreme Court on the ground, that there was racial discrimination and for that reason the United Nations Charter superceded Federal and State constitutions. From the Supreme Court's announcement that it was divided evenly, we may assume that four of its Justices think that the plaintiff is correct. At the moment therefore, we may be just one Supreme Court Justice short of substituting the United Nations Charter for the sovereignty, independence and constitutional government of the United States.

During his United Nations "police action" in Korea, President Truman seized the steel mills. When the case reached the Supreme Court, 3 Justices joined in a dissenting opinion which upheld the presidential seizure under the provisions of the United Nations Charter (*Sawyer* v. *Youngstown etc.* (343 U. S. 479)). In that case the Constitution survived its test with the U. N. Charter with 2 votes to spare. The margin of victory is now down to 1.

At the moment Justice Douglas makes no attempt to disguise his predilection for a constitutional world order. According to their college newspaper (Law Association News, December 1954, Notre Dame Law Association), he recently told a group of law students: that "The Communist press has long advocated world government." "They have done," he continues, "what we should have done years ago, the single, most important thing, improving understanding between different peoples."

Apparently, according to Justice Douglas, perfect understanding will come only when we have drowned the Constitution in a world charter. According to prevailing law, which Justice Douglas' decisions have helped to make, the process is ready-made for us. It was Justice Douglas who gave us the famous Pink decision (*U. S.* v. *Pink* (315 U. S. 203, 1942)) wherein he said: "A treaty is a 'law of the land' under the supremacy clause (art. VI, clause 2) of the Constitution. Such international compacts and agreements as the Litvinov assignment have a similar dignity." And again in the same opinion, "State law must yield when it is inconsistent with, or impairs the policy provisions of a treaty or of an international compact or agreement. Then the power of a State to refuse enforcement of rights based on foreign law, which runs counter to the public policy of the former, must give way before the superior Federal policy evidenced by a treaty or international compact or agreement."

Notice that the Senate need not even be consulted. According to this decision, the President can amputate the Bill of Rights all by himself. But you can trust our great President not to do it, you say? Thomas Jefferson was also a great President. He told us this: "In questions of power, let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution." Good advice.

The pending Bricker amendment well may be your last chance to mend the broken chain.

Power Document Disclosed

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. METCALF. Mr. Speaker, the power policies of this administration are of major economic concern to the people

of the Pacific Northwest who for years have been working partners with the Federal Government in multipurpose development of our vital water resources.

During the past 2 years, these policies have been changed. They are being changed away from the historic partnership with the people—the public-utility districts and the Rural Electrification Administrative cooperatives—toward a partnership with big, big business—the commercial power companies.

That far-reaching changes have been made with a minimum of publicity and apparently without consulting interested parties is pointed out in the following article by Staff Correspondent Richard L. Strout in the May 12 issue of the Christian Science Monitor:

POWER DOCUMENT DISCLOSED

WASHINGTON.—Photostatic copies of a hitherto unpublished letter in the files of the Department of the Interior indicate that officials of the Department first solicited, and then followed, the recommendations of big private utilities of the Pacific Northwest as to changes in power policies.

The letter was written by James D. Geissinger, special assistant to the Solicitor of the Interior Department, April 9, 1954. Mr. Geissinger is now regional solicitor of the Department at Denver.

Mr. Geissinger speaks of recommendations for major policy changes by the Department confidentially submitted by "the utilities," and he gives his own support for most of the changes which are recommended.

Subsequent developments indicate that out of 1 batch of 13 recommendations from spokesmen of the utilities, 10 were adopted verbatim by the Department of the Interior.

HEARINGS HELD

A Subcommittee of the House Government Operations Committee is now holding public hearings on the matter.

Presumably, the Geissinger letter, whose existence was determined by a correspondent of the Christian Science Monitor, will figure in the development of the House inquiry.

The Interior Department's power policies are of major economic and political concern to the Pacific Northwest. In fiscal year 1954, the Department sold over 46.5 billion kilowatt-hours of electric power from its dams, with sales revenues of $108,722,975.

The policy changes adopted by Douglas McKay's Department of the Interior were made with a minimum of publicity and apparently without consulting other interested parties in the Federal power system, such as farm cooperatives and individual localities buying and distributing Government-produced power.

Mr. Geissinger informed the Solicitor of the Interior Department, in his April 9, 1954, letter:

"For some time the Department has been considering the possibility of amending or eliminating some of the present right-of-way regulations governing electric transmission lines.

"Informal requests have been made of the various utilities in the Western States to make suggestions concerning such changes. Of the controversial regulations, the utilities have suggested modifications as to paragraphs (1) of 244.9 and (B) of 244.44, and elimination of paragraphs (M) of 244.9 and (D) of 244.44."

SUGGESTED CHANGES

"Changes have been suggested in other regulations to negative possible arbitrary action and to remove language which has become obsolete.

"Special suggestions have been made by the Pacific Gas & Electric Co. attorneys, and I am advised these suggestions have the approval of attorneys representing other of the Western States utilities."

Mr. Geissinger sets forth the regulations as they then existed, followed by changes recommended allegedly by the big utility companies, and followed in turn by his own recommendations, most of which approve the proposed changes.

"The suggested changes," he wrote, "have been considered in the order and manner presented. The company quotes the regulation, crosses out objectionable language, and underlines new language. This is followed by comment by the utility counsel. For easy reference, I will first set forth each section; this will be followed by the company's comments and finally by my comments * * *."

What is now one of the most controversial of the changes reportedly recommended by the Pacific Gas & Electric Co., and subsequently adopted by the Interior Department, dealt with the question of private company transmission lines crossing Government-owned land.

The department had demanded for such privileges that a system of interconnection of powerlines, known as "wheeling," be set up for joint use of facilities to avoid the cost of duplications.

DELETION FAVORED

This policy, put into effect in 1948, was carried to the courts by the Idaho Power Co., where it lost.

Mr. Geissinger's statement on this as prompted by the private utilities, apparently became the basis for the Department's subsequent reversal of policy:

"It would appear that the regulation is not in harmony with the present power policy, and in view of the fact that it is being avoided anyway, I would recommend its deletion."

At a later point Mr. Geissinger wrote:

"Generally, and with the exception of paragraph (M), which must be retained in its present form because of Federal statutes, it is my opinion that the suggested changes, with the exceptions noted, would be in the public interest.

"If the changes are made, then the legal questions raised in the pending cases would become academic and the Pacific Gas & Electric Co. would undoubtedly withdraw its present appeals and make new applications for rights-of-way in accordance with the amended regulations."

ASSAILED BY DEMOCRATS

Democrats on the House subcommittee attack the Department's reversal of the wheeling arrangement.

Chairman EARL CHUDOFF, Democrat, of Pennsylvania, charged: "The abolished regulations afforded a means whereby the Government could utilize the idle, unused capacity of privately owned powerlines crossing public lands to bring cheap Government power to statutory preference-right customers.

"The regulation was designed to carry out the policies established by Congress without a wasteful and expensive duplication of facilities."

So far as is known here, the Department's reversal of policy, following consultation with private-utility representatives, received no publicity at the time other than publication of the little-read Federal Register.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).
